in consequence of the complaints made to him upon that occasion, went to Ptolemais, and commanded Jonathan to attend him there, to give an account of that affair. Jonathan gave orders for pushing the siege vigorously in his absence, and set out to meet him with some of the priests and principal persons of the nation. He carried with him a great quantity of magnificent presents, and appeased the king and his ministers so successfully, that he not only caused the accusation which had been formed against him to be rejected, but even obtained great honours and new marks of favour. The whole country under his government was discharged from all duties, customs, and tributes, for the sum of 300 talents,³ which he agreed to pay the king by way of equivalent.

The king being returned to Antioch,⁴ and continuing to give himself up immoderately to all kind of excesses, violence, and cruelty, the people's patience was entirely exhausted, so that the whole nation was disposed for a general revolt.

Diodotus, afterwards surnamed Tryphon, who had formerly served Alexander, and had shared the government of Antioch with Hierax, seeing the people in this disposition, found the occasion favourable for attempting a bold enterprise, which was to set the crown upon his own head, by taking advantage of these disorders. He went into Arabia to Zabdiel, to whom the person and education of Antiochus, the son of Alexander Bala, had been intrusted. He laid the state of the affairs of Syria before him, informed him of the discontent of the people, and of the soldiery in particular, and strongly represented, that there could not be a more favourable opportunity for setting Antiochus upon the throne of his father. He demanded that the young prince should be put into his hands, in order that he might enforce his rights. His view was to make use of the pretensions of Antiochus till he had dethroned Demetrius, and afterwards to rid himself of the young prince, and assume the crown himself, as he did. Zabdiel, whether he penetrated his real design, or did not entirely approve his scheme, did not accede to it at first. Tryphon was obliged to continue a considerable time with him to solicit and press him. At length by force of importunity or presents, he gained Zabdiel's consent, and obtained what he demanded.

Jonathan carried on the siege of the citadel of Jerusalem with vigour: **A. M. 3860.** but seeing that he made no progress, **Ant. J. C. 144.** he sent deputies to Demetrius, to desire that he would withdraw the garrison which he could not drive out by force. Demetrius, who found himself involved in great difficulties from the frequent tumults which happened at Antioch, where the people had conceived an invincible aversion for his person and government, granted Jonathan all he demanded, upon condition that he would send troops to chastise the mutineers. Jonathan sent him 3000 men immediately. As soon as the king had them, believing himself sufficiently strong to undertake every thing, he resolved to disarm the inhabitants of Antioch, and gave orders accordingly that they should all deliver up their arms. Upon this they rose, to the number of 120,000 men, and invested the palace, with design to kill the king. The Jews immediately flew to disengage him, dispersed the multitude with fire and sword burnt a great part of the city, and killed or destroyed very near 100,000 of the inhabitants. The rest, intimidated by so great a misfortune, demanded a peace, which was granted them; and the tumult ceased. The Jews, after having taken this terrible revenge for the wrongs which the people of Antioch had done to Judea and Jerusalem, principally during the reign of Antiochus Epiphanes returned into their country laden with honour and booty.

Demetrius still continuing his cruelty, tyranny, and oppression, put many more persons to death for the

last seditious, confiscated the estates of others, and banished a great number. All his subjects conceived such a hatred and animosity against him, that there wanted nothing but an opportunity for displaying it, and making him experience the most dreadful effects of their vengeance.

Notwithstanding the promises he had made to Jonathan, and the great obligations he had to him for the aid which had preserved him, he behaved no better towards him than he did to others. Believing he could do without him for the future, he did not observe the treaty he had made with him. Though the sum of 300 talents had been paid, he did not desist from demanding all the usual imposts, customs, and tributes, with the same rigour as before, and with menaces to Jonathan of making war upon him if he failed.

Whilst things were in this unsteady condition, Tryphon conducted Antiochus, the son of Alexander, into Syria, and caused his pretensions to the crown to be declared by a manifesto. The soldiers who had been disbanded by Demetrius, and a great number of other malecontents, came in crowds to join the pretender, and proclaimed him king. They marched under his ensigns against Demetrius, defeated him, and obliged him to retire into Seleucia. They took all his elephants, made themselves masters of Antioch, placed Antiochus upon the throne of the kings of Syria, and gave him the surname of Theos, which signifies "the God."

Jonathan, disgusted at the ingratitude of Demetrius, accepted the invitation made him by the new king, and engaged in his party. Great favours were heaped upon him and Simon his brother. A commission was sent them, whereby they were empowered to raise troops for Antiochus throughout all Coele-syria and Palestine. Of these troops they formed two bodies, with which they acted separately, and obtained several victories over the enemy.

Tryphon, seeing all things brought to the desired point for executing the project he had formed of destroying Antiochus, and of possessing himself of the crown of Syria, found no other obstacle to his design than on the part of Jonathan, whose probity he knew too well even to sound him upon entering into his views. He resolved therefore to rid himself, at any price, of so formidable an enemy; and accordingly entered Judea with an army in order to take him and put him to death. Jonathan came also to Bethshan at the head of 40,000 men. Tryphon perceived that he should get nothing by force against so powerful an army. He endeavoured therefore to amuse him with fine words, and the warmest assurances of a sincere friendship. He gave him to understand, that he was come thither only to consult him upon their common interests, and to put Ptolemais into his hands, which he was resolved to make him a present of as a free gift. He deceived him so well by these protestations of friendship and obliging offers, that he dismissed all his troops, except 3000 men, of which he kept only 1000 about his person. He sent the rest towards Galilee, and followed Tryphon to Ptolemais, relying upon the traitor's oath, that he should be put into possession of it. He had no sooner entered the place, than the gates were shut upon him. Jonathan was immediately seized, and all of his followers put to the sword. Troops were also detached directly to follow and surprise the 2000 men who were upon their march to Galilee. They had already received advice of what had happened to Jonathan and his troops at the city of Ptolemais; and having exhorted one another to defend themselves well, and to sell their lives as dear as possible, the enemy were afraid to attack them. They were suffered to proceed, and arrived all safe at Jerusalem.

The affliction there for what had befallen Jonathan was extreme. The Jews, however, did not lose courage. They chose Simon by universal consent for their general, and immediately, by his orders, set themselves at work with all possible speed to complete the fortifications begun by Jonathan at Jerusa-

lem. And when advice came that Tryphon approached, Simon marched against him at the head of a fine army.

Tryphon did not dare to give him battle, but had again recourse to the same artifices which had succeeded so well with Jonathan. He sent to tell Simon, that he had only laid Jonathan under an arrest, because he owed the king 100 talents; that if he would send him that sum, and Jonathan's two sons as hostages for their father's fidelity, he would cause him to be set at liberty. Though Simon saw clearly that this proposal was no more than a feint, nevertheless that he might not have reason to reproach himself with being the occasion of his brother's death, by refusing to comply with it, he sent him the money and Jonathan's two children. The traitor, notwithstanding, did not release his prisoner, but returned a second time into Judea, at the head of a greater army than before, with design to put all things to fire and sword. Simon kept so close to him in all his marches and countermarches, that he frustrated his designs, and obliged him to retire.

Tryphon, on his return into winter-quarters in the country of Galaad, caused Jonathan to be put to death; and believing after this that he had nobody to fear, gave orders to kill Antiochus secretly. He then caused it to be given out that he was dead of the stone, and at the same time declared himself king of Syria in his stead, and took possession of the crown. When Simon was informed of his brother's death, he sent to fetch his bones, interred them in the sepulchre of his forefathers at Modin, and erected a magnificent monument to his memory.

Tryphon passionately desired to be acknowledged by the Romans.² A. M. 3861. His usurpation was so unsteady with-
Ant. J. C. 143
out this, that he perceived plainly this was absolutely necessary to his support. He sent them a magnificent embassy, with a golden statue of Victory of 10,000 pieces of gold in weight. He was cheated by the Romans. They accepted the statue, and caused the name of Antiochus, whom he had assassinated, to be inserted in the inscription, as if it had come from him.

The ambassadors⁴ sent by Simon to Rome were received there much more honourably, and all the treaties made with his predecessors were renewed with him.

Demetrius in the mean time amused himself with diversions at Laodicea,⁵ and abandoned himself to the most infamous debauches, without becoming more wise from adversity, and without so much as seeming to have the least sense of his misfortunes. As Tryphon had given the Jews just reason to oppose him and his party, Simon sent a crown of gold to Demetrius, and ambassadors to treat with him. They obtained from that prince a confirmation of the high-priesthood and sovereignty to Simon, exemption from all kinds of tributes and imposts, with general amnesty for all past acts of hostility; upon condition that the Jews should join him against Tryphon.

Demetrius⁶ at length recovered a little from his lethargy upon the arrival of deputies from the East, who came to invite him thither. The Parthians, having overrun almost the whole East, and subjected all the countries of Asia between the Indus and Euphrates, the inhabitants of those countries, who were descended from the Macedonians, not being able to endure that usurpation, and the haughty insolence of their new masters, were extremely urgent with Demetrius, by repeated embassies, to come and put himself at their head; assured him of a general insurrection against the Parthians; and promised to supply him with a sufficient number of troops to expel those usurpers, and recover all the provinces of the East.

Full of these hopes, he at length undertook that expedition, and passed the Euphrates, leaving Tryphon in possession of the greatest part of Syria. He conceived that, having once made himself master of the East, with that increase of power he should be in a better condition to reduce that rebel at his return.

As soon as he appeared in the East, the Elymeans, Persians, and Bactrians declared in his favour; and with their aid he defeated the Parthians in several engagements, but at length, under pretence of treating with him, they got him into an ambuscade, where he was made prisoner, and his whole army cut in pieces. By this blow the empire of the Parthians took such firm footing, that it supported itself for many ages afterwards, and became the terror of all its neighbours, so as to be considered equal even to the Romans themselves, as to power in the field and reputation for military exploits.

The king who then reigned over the Parthians was Mithridates, son of Priapatus, a valiant and wise prince. We have seen in what manner Arsaces founded this empire, and his son Arsaces II. established and confirmed it, by a treaty of peace with Antiochus the Great. Priapatus was the son of the second Arsaces, and succeeded him; he was called also Arsaces, which became the common name of all the princes of this race. After having reigned fifteen years, he left the crown at his death to his eldest son Phraates, and he to Mithridates his brother, in preference to his own children, because he had discovered more merit and capacity in him for the government of the people; convinced that a king, when it is in his own power, ought to be more attentive to the good of the state than the advancement of his own family; and to forget, in some measure, that he is a father to remember solely that he is a king. This Mithridates was that king of the Parthians, into whose hands Demetrius had fallen.

That prince, after having subdued the Medes, Elymeans, Persians, and Bactrians, extended his conquests even into India, beyond the bounds of Alexander's; and when he had defeated Demetrius, subjected also Babylonia and Mesopotamia; so that his empire was bounded at that time by the Euphrates on the west, and the Ganges on the east.

He carried Demetrius his prisoner into all the provinces that still adhered to the king of Syria, with the view of inducing them to submit to him, by showing them the person they had looked upon as their deliverer, reduced to so low and shameful a condition. After that, he treated him as a king, sent him into Hyrcania, which was assigned him for his place of residence, and gave him his daughter Rhodoguna in marriage. However, he was always regarded as a prisoner of war, though in other respects he had all the liberty that could be granted him in that condition. His son Phraates, who succeeded him, treated him in the same manner.

It is observed particularly of this Mithridates, that having subjected several different nations, he took from each of them whatever was best in their laws and customs, and out of them composed an excellent body of laws and maxims of state, for the government of his empire. This was making a glorious use of his victories; by so much the more laudable, as it is uncommon and almost unheard of, for a victor to be more intent upon gaining improvement from the wise customs of conquered nations, than upon enriching himself out of their spoils. It was by this means that Mithridates established the empire of the Parthians upon solid foundations, gave it a firm consistency, effectually attached the conquered provinces to it, and united them into one monarchy, which subsisted many ages without change or revolution, notwithstanding the diversity of nations of which it was composed. He may be looked upon as the Numa of the Parthians, who taught that warlike nation to temper a savage valour with discipline, and to blend the wise authority of laws with the blind force of arms.

At this time happened a considerable change in affairs of the Jewish nation. They had contended long with incredible efforts against the kings of Syria not only for the defence of their liberty, but the preservation of their religion. They thought it incumbent on them to take advantage of the favourable opportunity of the king of Syria's captivity, and of the civil wars with which that empire was continually torn, to secure both the one and the other. In a general assembly of the priests, the elders, and the whole people of Jerusalem, Simon was chosen general, to whose family they had most essential obligations, and they gave him the government, with the title of sovereign, as well as that of high-priest: and declared this double power, civil and sacerdotal, hereditary in his family. These two titles had been conferred on him by Demetrius, but limited to his person. After his death, both dignities descended jointly to his posterity, and continued united for many generations.

When queen Cleopatra saw her husband taken and kept prisoner by the Parthians, she shut herself up with her children in Seleucia, where many of Tryphon's soldiers came over to her party. That man, who was naturally brutal and cruel, had industriously concealed those defects under appearances of lenity and goodness, as long as he believed it necessary to please the people, in order to be successful in his ambitious designs. When he saw himself in possession of the crown, he quitted an assumed character that laid him under too much constraint, and gave himself up entirely to his bad inclinations. Many therefore abandoned him, and came over in no inconsiderable numbers to Cleopatra. These desertions did not, however, sufficiently augment her party to put her into a condition to support herself. She was also afraid, lest the people of Seleucia should choose rather to give her up to Tryphon, than support a siege out of affection for her person. She therefore sent proposals to Antiochus Sidetes, Demetrius's brother, for uniting their forces; and promised on that condition to marry him, and procure him the crown. For when she was informed that Demetrius had married Rhodoguna, she was so much enraged, that she no longer observed any measures, and resolved to seek support in a new marriage. Her children were yet too young to support the weight of a tottering crown, and she was not of a character to pay much regard to their rights. As Antiochus, therefore, was the next heir to the crown after them, she fixed upon him, and took him for her husband.

This Antiochus was the second son of Demetrius Soter, and had been sent to Cnidus with his brother Demetrius, during the war between their father and Alexander Bala, to secure them against the revolutions he apprehended, and which actually happened, as has been said before. Having accepted Cleopatra's offers, he assumed the title of king of Syria.

He wrote a letter to Simon, wherein he complained of Tryphon's unjust usurpation, for which he promised to take speedy vengeance. To engage him in his interests, he made him great concessions, and gave him hopes of much greater when he should ascend the throne.

And in fact, in the beginning of the following year, he made a descent into Syria with an army of foreign troops, which he had taken into his pay in Greece, Asia Minor, and the islands; and after having espoused Cleopatra, and joined what troops she had with his own, he took the field, and marched against Tryphon. The greatest part of that usurper's troops, weary of his tyranny, abandoned him, and came over to the army of Antiochus, which amounted at that time to 120,000 foot and 8000 horse.

Tryphon could not make head against him, and retired to Dora, a city in the neighbourhood of Ptolemais in Phenicia. Antiochus besieged him there by sea and land with all his forces. The place could not hold out long against so powerful an army. Tryphon escaped by sea to Orthosia, another maritime city of

* Non multò post decessit, multis filiis relictis: quibus præerit, fratris potissimum Mithridati, insignis virtutis viro, reliquit imperium: plus regio quam patrio deberi nomini ratus, potiusque patriæ quam liberis consulendum. *Justin.*

* 1 Maccab. xv. 1—41. xvi. 1—10. *Joseph. Antiq. l. xiii. c. 12, 13.*

Phœnicia, and from thence proceeding to Apamea, where he was born, he was there taken and put to death. Antiochus thus terminated the usurpation, and ascended his father's throne, which he possessed nine years. His passion for hunting occasioned his being called *Sidetes*, or "the hunter," from the word "Zidah," which has the same signification in the Syriac language.

Simon, established in the government of Judæa by the general consent of the nation, thought it necessary to send ambassadors to Rome, in order to his being acknowledged under that title, and to renew the ancient treaties. They were very well received, and obtained all they desired. The senate, in consequence, caused the consul Piso to write to Ptolemy king of Egypt, Attalus king of Pergamus, Ariarathes king of Cappadocia, Demetrius¹ king of Syria, Mithridates king of the Parthians, and to all the states of Greece, Asia Minor, and the islands, with whom the Romans were in alliance, to notify to them, that the Jews were their friends and allies, and that consequently they should not undertake any thing to their prejudice.

As Antiochus had granted Simon so advantageous an alliance solely from the necessity of his present circumstances, and contrary to the interests of the state, as well as to the policy of his predecessors, the letter from the Romans did not prevent him from declaring against Simon, notwithstanding all the magnificent promises he had made him, and from sending troops into Judæa, under the command of Cendebeus, who was overthrown in a battle by Judas and John, the sons of Simon.

Physon had reigned seven years
A. M. 3866. in Egypt.² History relates nothing
Ant. J. C. 138. of him, during all that time, but monstrous vices and detestable cruelties.

Never was there a prince so abandoned to excesses, and at the same time as cruel and sanguinary. All the rest of his conduct was as contemptible as his vices were enormous; for he both said and acted in public the extravagances of an infant, by which he drew upon himself both the contempt and abhorrence of his subjects. Without Hierax, his first minister, he had infallibly been dethroned. This Hierax was a native of Antioch, and was the same to whom, in the reign of Alexander Bala, the government of that city had been given in conjunction with Diodotus, afterwards surnamed Tryphon. After the revolution which happened in Syria, he retired into Egypt, entered into the service of Ptolemy Physcon, and soon became his captain-general and prime minister. As he was valiant in the field and able in council, by causing the troops to be well paid, and amending the faults which his master committed, by a wise and equitable government, and by preventing or redressing them as much as possible, he had been till then so fortunate as to support the tranquillity of the state.

But in the following years, when Hierax was dead, or the prudent and ability of that minister were no longer capable of restraining the folly of this prince, the affairs of Egypt went on worse than ever. Physcon, without any reason, caused the greatest part of those to be put to death, who had expressed the most zeal in procuring him the crown after his brother's death, and maintaining it upon his head. Athenæus places Hierax in this number; but without mentioning the time. He also put to death, or at least banished, most of those who had been in favour with Philometor his brother, or had only held employments during his reign; and by permitting his foreign troops to plunder and murder at discretion, he terrified Alexandria so much, that the greatest part of the inhabitants, to avoid his cruelty, thought it necessary to retire into foreign countries, and the city remained almost a desert. To supply their places, when he perceived that nothing remained but empty houses, he caused proclamation to be made in all the

neighbouring countries, that whosoever should come and settle there, of whatsoever nation they were, should meet with the greatest encouragement and advantages. There were considerable numbers whom this proposal suited very well: the houses that had been abandoned were given to them, and all the rights, privileges, and immunities, granted them, which had been enjoyed by the ancient inhabitants; by this means the city was repopled.

As amongst those who had quitted Alexandria there was a great number of grammarians, philosophers, geometers, physicians, musicians, and other masters in the liberal sciences, it happened from thence, that the polite arts and sciences began to revive in Greece, Asia Minor, and the islands; in a word, in every place where these illustrious fugitives carried them. The continual wars between the successors of Alexander, had almost extinguished the sciences in all those countries; and they would have been entirely lost in those times of confusion, if they had not found protection under the Ptolemies at Alexandria. The first of those princes, by founding his museum for the entertainment of the learned, and erecting his fine library, had drawn about him almost all the learned men of Greece. The second and third following the founder's steps in that respect, Alexandria became the principal city in the world where the liberal arts and sciences were most cultivated, whilst they were almost absolutely neglected every where else. Most of the inhabitants of that great city studied or professed some or other of those polite arts, in which they had been instructed in their youth. So that when the cruelty and oppression of the tyrant, of whom I speak, obliged them to take refuge in foreign countries, their most general recourse for subsistence was to make it their business to teach what they knew. They opened schools for that purpose; and as they were pressed by necessity, they taught at a low price, which very much increased the number of their disciples. By this means the arts and sciences began to revive, wherever they were dispersed; that is to say throughout what we call the whole East, exactly in the same manner as they took new birth in the West, after the capture of Constantinople by the Turks.

Much about the time that strangers came in crowds to repeople Alexandria,³ P. Scipio Africanus the younger, Sp. Mummianus, and L. Metellus, arrived there as ambassadors from Rome. It was a maxim with the Romans to send frequent embassies to their allies, in order to take cognizance of their affairs, and to accommodate their differences. It was with this view, that three of the greatest persons in the state were sent at this time into Egypt. They had orders to go into Egypt, Syria, Asia, and Greece; and to see in what condition the affairs of those countries were; to examine in what manner the treaties made with them were observed; and to remedy whatever they should find amiss. They acquitted themselves of this commission with so much equity, justice, and address; and rendered such great services to those to whom they were sent, in restoring order amongst them, and in accommodating their differences; that as soon as they returned to Rome, ambassadors came from all parts through which they had passed, to return the senate thanks for having sent amongst them persons of such extraordinary merit, and whose wisdom and goodness they could never sufficiently admire.

The first place they went to, according to their instructions, was Alexandria. The king received them with great magnificence. As to themselves, they affected state so little, that at their entry, Scipio, who was the greatest personage of Rome, had only one friend with him, which was Panætius the philosopher, and five domestics.⁴ Not his domestics, (says an historian,) but his victories, were considered: he

¹ This letter was addressed to Demetrius, though prisoner amongst the Parthians, because the Romans had neither acknowledged Antiochus Sidetes nor Tryphon.

⁴ Cum per socios et externas gentes iter faceret, non mancipia sed victoria numeralia; nec quantum aurum argenti, sed quantum amplitudinis onus secum ferret estimabatur — Val. Max.

was not esteemed for his gold or his silver, but for his personal virtues and qualities. Though during their whole residence at Alexandria, the king caused them to be served with whatever was most delicate and exquisite, they never touched any thing but the most simple and common meats; despising all the rest, as serving only to enervate the mind as well as the body. So great, even at that time, were the moderation and temperance of the Romans; but luxury and pomp quickly assumed their place.

When the ambassadors had fully viewed Alexandria, and regulated the affairs which brought them thither, they went up the Nile to visit Memphis and the other parts of Egypt. They saw with their own eyes, or by statements drawn up upon the spot, the infinite number of cities, and the prodigious multitude of inhabitants contained in that kingdom; the strength of its natural situation; the fertility of its soil, and all the other advantages it enjoyed. They found that it wanted nothing to render it powerful and formidable, but a prince of capacity and application; for Physcon, who then reigned, was nothing less than a king. Nothing was so wretched as the idea he gave them of himself in all the audiences they had of him. Of his cruelty, luxury, barbarity, and other vices, I have already made mention, and shall be obliged to give farther proofs of them in the sequel. The deformity of his body sufficiently corresponded with that of his mind: nothing more hideous was ever seen. His stature was of the smallest, and with that he had a belly of so enormous a size, that there was no man could embrace him in his arms. This largeness of his belly occasioned his being called by the nick-name of Physcon. Upon this wretched person he wore so transparent a stuff, that all his deformity might be seen through it. He never appeared in public but in a chariot, not being able to carry the load of flesh, which was the fruit of his intemperance, unless when he walked with Scipio. So that the latter, turning towards Panætius, told him in his ear, smiling, "The Alexandrians are obliged to us for seeing their king walk on foot."

We must confess, to the reproach of royalty, that most of the kings of whom we now speak, dishonoured not only the throne, but even human nature itself, by the most horrid vices. It is dreadful to see, in that long list of kings whose history we have related, how few there are who deserve that name. What comparison is there between those monsters of dissoluteness and cruelty, and Scipio Africanus, one of the three Roman ambassadors, who was a prodigy of wisdom and virtue, as far as they could be found amongst the Pagans? Justin accordingly says of him, that whilst he visited and considered with curiosity the rarities of Alexandria, he was himself a sight to the whole city. *Dum inspicit urbem, ipse spectaculo Alexandrinis fuit.*

Attalus king of Pergamus, died A. M. 3866. about the time of which we now speak. His nephew, who bore the same name, and was also called Philometor, succeeded him. As the latter was very young when his father Eumenes died, he had been under the tuition of his uncle, to whom the crown was also left by the will of Eumenes. Attalus gave his nephew the best education he could, and at his death bequeathed the throne to him, though he had sons of his own; a proceeding as rare as it was laudable; most princes thinking no less of transferring their crowns to their posterity, than of preserving them to themselves during their lives.

This prince's death was a misfortune to the kingdom of Pergamus. Philometor governed it in the

most extravagant and pernicious manner. He was scarce upon the throne before he stained it with the blood of his nearest relations, and the best friends of his family. He caused almost all who had served his father and uncle with extreme fidelity, to be murdered, under pretence that some of them had killed his mother Stratonice, who died of disease in a very advanced age, and others his wife Berenice, who died of an incurable distemper, with which she had been seized very naturally. He put others also to death upon suspicions entirely frivolous; and with them, their wives, children, and whole families. He caused these executions to be committed by foreign troops whom he had expressly sent for from the most savage and cruel nations, to make them the instruments of his enormous barbarity.

After having massacred and sacrificed to his fury in this manner, the most deserving persons of his kingdom, he ceased to show himself abroad. He appeared no more in the city, and ate no longer in public. He put on old clothes, let his beard grow, without taking any care of it, and did every thing which persons accused of capital offences used to do in those days, as if he intended thereby to acknowledge the crimes which he had just perpetrated.

From hence he proceeded to other species of folly. He renounced the cares of state, and retired into his garden, and engaged in digging the ground himself, and then sowed all sorts of venomous, as well as wholesome, herbs; then poisoning the good with the juice of the bad, he sent them in that manner as presents to his friends. He passed all the rest of his reign in cruel extravagances of the like nature, which happily for his subjects, was of no long duration, for it lasted only five years.

He had taken it into his head to practise the trade of a founder, and formed the model of a monument of brass to be erected to his mother. Whilst he was at work in casting the metal, on a hot summer's day, he was seized with a fever, which carried him off in seven days, and freed A. M. 3871. his subjects from an amonishable tyrant. Ant. J. C. 133.

He had made a will, by which he appointed the Roman people his heirs. Eudemus of Pergamus carried this will to Rome. The principal article was expressed in these terms, LET THE ROMAN PEOPLE INHERIT ALL MY EFFECTS.³ As soon as it was read, Tiberius Gracchus, tribune of the people, always attentive to conciliate their favour took hold of the occasion; and ascending the tribunal, proposed a law to this effect: that all the ready money which should arise from the succession to this prince, should be distributed amongst the poor citizens, who should be sent as colonies into the country bequeathed to the Roman people, in order that they might have wherewithal to support themselves in their new possessions, and to supply them with the tools and other things necessary in agriculture. He added, that as to the cities and lands, which were under that prince's government, the senate had no right to pass any decree in regard to them, and that he should leave the disposal of them to the people: which extremely offended the senate. That tribune was killed some small time after.

Aristonicus, however, who reported himself of the blood royal, was A. M. 3872. actively employed in preparing to Ant. J. C. 132. take possession of Attalus's dominions. He was indeed the son of Eumenes, but by a courtesan. He easily engaged the majority of the cities in his party, because they had been long accustomed to the government of kings. Some cities, through fear of the Romans, refused at first to acknowledge him, but were compelled to it by force.

As his party grew stronger every day, the Romans sent the consul, A. M. 3873. Licinius Crassus, against him. It Ant. J. C. 131. was observed of this general, that he was so perfectly master of all the dialects of the

³ Quam cruentus civibus, tam ridiculus Romanis fuit. Errat enim et vultu deformis, et statura brevis, et saginâ ventris, non homini sed belluis similis. Quam fuditatem nimia subtilitas perlicue vestis augebat, prorsus quasi aëtu insipientia præberetur, quæ omni studio occultanda pudibundo viro erant.—Justin. l. viii. c. 8.

⁵ Plut. in Gracch. Flor. l. ii. c. 20. Justin. l. xxxvi. c. 4. and xxxvii. c. 1. Veil. Patenc. l. ii. c. 4. Strab. l. xiv. p. 646. Oro. l. v. c. 8—10. Eutrop. l. iv. Val. Max. l. iii. c. 2.

Greek tongue which in a manner formed five different languages, that he pronounced his decrees according to the particular idiom of those who pleaded before him, which made him very agreeable to all the states of Asia Minor. All the neighbouring princes in alliance with the Roman people, the kings of Bithynia, Pontus, Cappadocia, and Paphlagonia, joined him with their troops.

Notwithstanding such powerful supports, having engaged in a battle
A. M. 3874. Ant. J. C. 130. with disadvantage, his army, which he commanded then in quality of proconsul, was defeated, and himself made prisoner. He avoided the shame of being put into the victor's hands by a voluntary death. His head was carried to Aristonicus, who caused his body to be interred at Smyrna.

The consul Perpenna, who had succeeded Crassus, soon revenged his death. Having made all haste into Asia, he gave Aristonicus battle, entirely routed his army, besieged him soon after in Stratonice, and at length made him prisoner. All Phrygia submitted to the Romans.

He sent Aristonicus to Rome, in
A. M. 3875. Ant. J. C. 129. the fleet which he loaded with Attalus's treasures. Manius Aquilius, who had lately been elected consul, was hastening to take his place, in order to put an end to this war and deprive him of the honour of a triumph. He found Aristonicus set out; and some time after, Perpenna, who had begun his journey, died of a disease at Pergamus. Aquilius soon terminated this war, which had continued almost four years. Lydia, Caria, the Hellespont, Phrygia, in a word, all that composed the kingdom of Attalus, was reduced into a province of the Roman empire, under the common name of Asia.

The senate had decreed, that the city of Phocæa, which had declared against the Romans as well in this last war as in that against Antiochus, should be destroyed. The inhabitants of Marseilles, which was a colony of Phocæa, moved as much with the danger of their founders as if the fate of their own city had been in question, sent deputies to Rome, to implore the clemency of the senate and people in their favour. Just as their indignation was against Phocæa, they could not refuse to pardon it, in consideration of the ardent solicitations of a people, whom they had always held in the highest consideration, and who rendered themselves still more worthy of it, by the tender concern and gratitude they expressed for their forefathers and founders.

Phrygia Major was granted to Mithridates Euergetes, king of Pontus, in reward for the aid he had given the Romans in that war. But after his death, they dispossessed his son, Mithridates the Great, of it, and declared it free.

Ariarathes, king of Cappadocia, who died during this war, had left six children. Rome, to reward in the sons the services of the father, added Lycaonia and Cilicia to their dominions. They found in queen Laodice not the tenderness of a parent, but the cruelty of a step-mother. To secure all authority to herself she poisoned five of her children; and the sixth would have shared the same fate, if his relations had not taken him out of the murderous hands of that Megæra, on whose crimes the people soon took vengeance by a violent death.

Manius Aquilius, at his return to
A. M. 3878. Ant. J. C. 126. Rome, received the honour of a triumph. Aristonicus, after having been shown there for a sight to the people, was carried to prison, where he was strangled. Such were the consequences of king Attalus's will.

Mithridates, in a letter which he wrote afterwards to Arsaces, king of Parthia, accuses the Romans of having forged a false will of Attalus's in order to deprive Aristonicus, the son of Eumenes, of his father's kingdom, which appertained to him of right: but it is an avowed enemy who charges him with this. It is

more surprising that Horace, in one of his odes, seems to make the Roman people the same reproach, and to insinuate that they had attained the succession by fraud.

Neque Attali
Ignotus hæres regiam occupavi.

Nor have I seiz'd, on heir unknown,
The Phrygian's kingdom for my own.*

However, there remains no trace in history of any secret intrigue or solicitation to that effect on the side of the Romans.

I thought it proper to relate all the consequences of this will without interruption. I shall now resume the thread of my history.

SECTION V.—ANTIOCHUS SIDETES BESIEGES JOHN HYRCANUS IN JERUSALEM. THAT CITY SURRENDERS BY CAPITULATION. HE MAKES WAR AGAINST THE PARTHIANS, AND PERISHES IN IT. PHRAATES, KING OF THE PARTHIANS, DEFEATED IN HIS TURN BY THE SCYTHIANS. PHYSCON COMMITS HORRID CRUELITIES IN EGYPT. A GENERAL REVOLT OBLIGES HIM TO QUIT IT. CLEOPATRA, HIS FIRST WIFE, IS REPLACED UPON THE THRONE. SHE IMPLORES AID OF DEMETRIUS, AND IS SOON REDUCED TO LEAVE EGYPT. PHYSCON RETURNS THITHER, AND REASCENDS THE THRONE. BY HIS MEANS ZEBINA DETHRONES DEMETRIUS, WHO IS SOON AFTER KILLED. THE KINGDOM IS DIVIDED BETWEEN CLEOPATRA, THE WIFE OF DEMETRIUS, AND ZEBINA. THE LATTER IS DEFEATED AND KILLED. ANTIOCHUS GRYPUS ASCENDS THE THRONE OF SYRIA. THE FAMOUS MITHRIDATES BEGINS TO REIGN IN PONTUS. PHYSCON'S DEATH.

SIMON having been slain by treachery, with two of his sons, John, A. M. 3869. another of them, surnamed Hyrcanus, was proclaimed high-priest and prince of the Jews in his father's stead. Here ends the history of the Maccabees. Ant. J. C. 135.

Antiochus Sidetes, king of Syria, made all possible haste to take the advantage which the death of Simon gave him, and advanced at the head of a powerful army to reduce Judea, and unite it to the empire of Syria. Hyrcanus was obliged to shut himself up in Jerusalem, where he sustained a long siege with incredible valour. Reduced at length to the last extremity for want of provisions, he caused proposals of peace to be made to the king. His condition was not unknown in the camp. Those who were about the king's person pressed him to take advantage of the present occasion for exterminating the Jewish nation. They represented to him, (recalling to past ages,) that they had been driven out of Egypt as impious wretches, hated by the gods, and abhorred by men; that they were enemies to all the rest of mankind, as they had no communication with any but those of their own sect, and would neither eat, drink, nor have any familiarity with other people; that they did not adore the same gods; that they had laws, customs, and a religion entirely different from that of all other nations; that therefore they well deserved to be treated by other nations with equal contempt, and to be rendered hatred for hatred; and that all people ought to unite in extirpating them. Diodorus Siculus, as well as Josephus, says, that it was from the pure effect of the generosity and clemency of Antiochus, that the Jewish nation was not entirely destroyed on this occasion.

He was well pleased to enter into a treaty with Hyrcanus. It was agreed, that the besieged should surrender their arms; that the fortifications of Jerusalem should be demolished; and that a tribute should be paid to the king for Joppa, and for the other cities which the Jews had out of Judea; and peace was concluded upon these conditions. Antiochus also demanded that the citadel of Jerusalem should be rebuilt, and would have put a garrison into it; but Hyrcanus would not consent to that, upon account of the miseries which the nation had suffered

* Simulato impio testamento, filium ejus (Eumenis) Aristonicum, quia patrum regnum petiverat, hostium more per triumphum duxerit.—*Apud Salustium in Fragm.*

from the garrison of the former citadel, and chose rather to pay the king the sum of 500 talents,¹ which he demanded as an equivalent. The capitulation was executed, and for those articles which could not be immediately fulfilled, hostages were given, amongst whom was a brother of Hyrcanus.

Scipio Africanus the younger, A. M. 3870. having gone to command in Spain,² Ant. J. C. 134. during the war with Numantia, Antiochus Sidetes sent him rich and magnificent presents. Some generals would have appropriated them to their own use. Scipio received them in public, sitting upon his tribunal in the view of the whole army, and gave orders that they should be delivered to the questor,³ to be applied in rewarding the officers and soldiers who should distinguish themselves in the service. By such conduct a generous and noble soul is known.

Demetrius Nicator⁴ had been A. M. 3873. kept many years in captivity by the Ant. J. C. 131. Parthians in Hyrcania, where he wanted nothing except liberty, without which all else is misery. He had made several attempts to obtain it, and to return into his own kingdom, but always without success. He was twice retaken in the midst of his flight, and punished only with being carried back to the place of his confinement, where he was guarded with more care, but always treated with the same magnificence. This was not the effect of mere goodness and clemency in the Parthians; interest had some share in it. They had views of making themselves masters of the kingdom of Syria, however remote they were, and waited a favourable opportunity, when, under color of going to re-establish Demetrius upon his throne, they might take possession of it for themselves.

Antiochus Sidetes, whether apprized of this design or not, thought proper to prevent it, and marched against Phraates at the head of a formidable army. The Parthians' late usurpation of the richest and finest provinces of the East, which his ancestors had always possessed from the time of Alexander, was a strong inducement to him for uniting all his forces for their expulsion. His army consisted of upwards of 80,000 men, well armed and disciplined. But the train of luxury had added to it so great a multitude of sutlers, cooks, pastry-cooks, confectioners, actors, musicians, and infamous women, that they were almost four times as many as the soldiers, for they were reckoned to amount to about 300,000. There may be some exaggeration in this account, but, if two-thirds were deducted, there would still remain a numerous train of useless mouths. The luxury of the camp was in proportion to the number of those who administered to it. Gold and silver glittered in all parts,⁵ even upon the boots of the private soldiers. The instruments and utensils of the kitchen were silver, as if they had been marching to a feast, and not to a war.

Antiochus had great success at first. He beat Phraates in three battles, and retook Babylonia and Media. All the provinces of the East, which had formerly appertained to the Syrian empire, threw off the Parthian yoke, and submitted to him, except Parthia itself, where Phraates found himself reduced within the narrow bounds of his ancient kingdom. Hyrcanus, prince of the Jews, accompanied Antiochus in this expedition, and having had a share in all these victories, returned home laden with glory at the end of the campaign and the year.

The rest of the army passed the A. M. 3874. winter in the East. The prodigious Ant. J. C. 130. number of the troops, including the train before mentioned, obliged

them to separate, and to remove so far from each other, that they could not easily rejoin and form one body in case of an attack. The inhabitants, whom they plundered extremely in their quarters, to be revenged upon them, and to get rid of troublesome guests, whom nothing could satisfy, conspired with the Parthians to massacre them all in one day in their quarters, without giving them time to assemble; which was accordingly executed. Antiochus, who had kept a body of troops always about his person, marched to assist the quarters nearest him, but was overpowered by numbers, and perished himself. All the rest of the army were either massacred in their quarters the same day, or made prisoners; so that out of so great a multitude, scarce any escaped to carry the sad news of this slaughter into Syria.

It occasioned great grief and consternation there. The death of Antiochus, a prince estimable for many excellent qualities, was particularly lamented. Plutarch⁶ relates a saying of his very much to his honour. One day having lost himself a hunting, and being alone, he retired into the cottage of some poor people, who received him in the best manner they could, without knowing him. At supper, having himself turned the conversation upon the person and conduct of the king, they said, that he was in every thing else a good prince, but that his too great passion for hunting made him neglect the affairs of his kingdom, and repose too much confidence in his courtiers, whose actions did not always correspond with the goodness of his intentions. Antiochus made no answer at that time. The next day, upon the arrival of his train at the cottage, he was known. He repeated to his officers what had passed the evening before, and told them by way of reproach, "Since I have taken you into my service, I have not heard the truth concerning myself till yesterday."

Phraates, thrice beaten by Antiochus, had at last released Demetrius, and sent him back into Syria with a body of troops, in hopes that his return would occasion such troubles as would compel Antiochus to follow him. But after the massacre, he detached a party of horse to retake him. Demetrius, who apprehended a countermand of that nature, had marched with so much diligence, that he had already passed the Euphrates before that party arrived upon the frontier. In this manner he recovered his dominions, and made great rejoicings upon that occasion; whilst all the rest of Syria were in tears, deploring the loss of the army, in which few families had not some near relation.

Phraates caused the body of Antiochus to be sought for amongst the dead, and put it into a coffin of silver. He sent it into Syria to be honourably interred with his ancestors; and having found one of his daughters amongst the captives, he was struck with her beauty, and married her.

Antiochus being dead,⁷ Hyrcanus took advantage of the troubles and divisions which happened throughout the whole empire of Syria, to extend his dominions, by making himself master of many places in Syria, Phœnicia, and Arabia, which lay commodiously for him. He laboured also at the same time to render himself absolute and independent. He succeeded so well, that from thenceforth neither himself nor any of his descendants were dependent in the least upon the kings of Syria. They threw off entirely the yoke of subjection, and even that of homage.

Phraates,⁸ flushed with his great successes and the victory he had A. M. 3875. gained, designed to carry the war Ant. J. C. 129. into Syria, in revenge for Antiochus's invasion of his dominions. But, whilst he was making his preparations for that expedition, an unexpected war broke out with the Scythians, who found him employment enough at home, to remove all thoughts of disquieting others abroad. Finding himself vigorously pressed by Antiochus, as we have seen, he had demanded aid of that people. When they arrived,

the affair was terminated; and having no farther occasion for them, he would not give them the sums he had engaged to pay them. The Scythians immediately turned their arms against himself, to avenge themselves for the injustice he had done them.

It was a great error in this prince to have disgusted so powerful a nation by a mean and sordid avarice; and he committed a second, no less considerable, in the war itself. To strengthen himself against that nation, he sought aid from a people to whom he had made himself more hateful than to the Scythians themselves; these were the Greek foreign troops, who had been in the pay of Antiochus in the last war against him, and had been made prisoners. Phraates thought proper to incorporate them into his own troops; believing that he should considerably reinforce them by that means. But when they saw themselves with arms in their hands, they were resolved to be revenged for the injuries and ill-treatment they had suffered during their captivity; and as soon as the armies engaged, they went over to the enemy, and gave such a turn to the battle, whilst the victory was in suspense, that Phraates was defeated, with a great slaughter of his troops. He perished himself in the pursuit, and almost his whole army. The Scythians and Greeks contented themselves with plundering the country, and then retired to their several homes.

When they were gone, Artaban, Phraates's uncle, caused himself to be crowned king of the Parthians. He was killed some days after in a battle with the Thogarians, another Scythian nation. Mithridates was his successor, who for his glorious actions was surnamed the Great.

During all these revolutions in the A. M. 3874. Syrian and Parthian empires, Pto- Ant. J. C. 130. lemy Physcon did not alter his conduct in Egypt. I have already observed, that on his marriage with his sister Cleopatra, who was his brother's widow, he had killed in her arms the son she had by his brother, on the very day of their nuptials. Afterwards, having taken a disgust for the mother, he fell passionately in love with one of her daughters by Philometor, called also Cleopatra. He began by violating her, and then married her, after turning away her mother.

He soon made himself hated also by the new inhabitants of Alexandria, whom he had drawn thither to repeople it, and supply the places of those whom his former cruelties had obliged to abandon their country. To put them out of a condition to do him hurt, he resolved to have the throats cut of all the young people in the city, in whom its whole force consisted. For that purpose, he caused them to be invested one day by his foreign troops in the place where the exercises were performed, when the assembly there was most numerous, and put them all to the sword. The whole people ran in a fury to set fire to the palace, and to burn him in it: but he had quitted it before they arrived there, and made his escape into Cyprus, with his wife Cleopatra, and his son Memphitis. Upon his arrival there, he was informed that the people of Alexandria had put the government into the hands of Cleopatra, whom he had repudiated. He immediately raised troops to make war upon the new queen and her adherents.

But first, apprehending that the A. M. 3875. Alexandrians would make his son Ant. J. C. 129. king, to whom he had given the government of Cyrenaica, he caused him to come to him, and put him to death as soon as he arrived, only to prevent a pretended danger, which had no foundation but in his falsely-alarmed imagination. That barbarity enraged every body the more

against him. They pulled down and dashed to pieces all his statues in Alexandria. He believed that Cleopatra, whom he had repudiated, had induced the people to this action; and to be revenged of her, ordered the throat of Memphitis to be cut, a young prince whom he had by her, of great beauty and hopes. He afterwards caused the body to be cut in pieces, and put into a chest, with the head entire, that it might be known, and sent it by one of his guards to Alexandria, with orders to wait till the birth-day of that princess, which was approaching, and was to be celebrated with great magnificence, and then to present it to her. His orders were obeyed. The chest was delivered to her in the midst of the rejoicings of the feast, which were immediately changed into mourning and lamentations. The horror cannot be expressed which the view of that sad object excited against the tyrant, whose monstrous barbarity had perpetrated so unnatural and unheard-of a crime. The abominable present was exposed to the view of the public, with whom it had the same effect as with the court, who had first seen that sad spectacle. The people ran to arms; and nothing was thought of, but how to prevent that monster from ever reascending the throne. An army was formed, and the command of it given to Marsyas, whom the queen had appointed general, and all the necessary precautions were taken for the defence of the country.

Ptolemy Physcon having raised A. M. 3876. an army on his side, gave the com- Ant. J. C. 128. mand of it to Hegelochus, and sent him against the Alexandrians. A battle was fought and gained by Hegelochus. He even took Marsyas prisoner, and sent him loaded with chains to Physcon. It was expected that so bloody a tyrant would have put him to death in the most exquisite torments; but the contrary happened. He gave him his pardon and set him at liberty. For finding by experience, that his cruelties only drew misfortunes upon him, he began to abate in them, and was for doing himself honour by his lenity. Cleopatra, reduced to great extremities by the loss of her army, which was almost entirely cut to pieces in the pursuit, sent to demand aid of Demetrius, king of Syria, who had married her eldest daughter by Philometor, and promised him the crown of Egypt for his reward. Demetrius, without hesitation, accepted that proposal, marched with all his troops, and laid siege to Pelusium.

That prince was no less hated by the Syrians for his haughtiness, tyranny, and excesses, than Physcon by the Egyptians. When they saw him at a distance and employed in the siege of Pelusium, they took up arms. The people of Antioch began, and after them those of Apamea; many other cities of Syria followed their example and joined with them. Demetrius was obliged to leave Egypt, in order to reduce his own subjects to obedience. Cleopatra, destitute of the aid she expected from him, embarked with all her treasures, and took refuge with her daughter Cleopatra, queen of Syria.

This Cleopatra, the daughter, had been first married to Alexander Bala, and afterwards to Demetrius, in the life-time of her father Philometor. But Demetrius, having been taken prisoner by the Parthians, and detained amongst them, she had married Antiochus Sidetes, Demetrius's brother. After the death of Sidetes, she returned to Demetrius, her first husband, who being set at liberty by the Parthians, had repossessed himself of Syria: she kept her court at Ptolemais, where her mother came to her.

Physcon, as soon as Cleopatra had abandoned Alexandria, returned thither, and reassumed the government. A. M. 3877. Ant. J. C. 127. For after the defeat of Marsyas, and the flight of Cleopatra, there was nobody in a condition to oppose him. After having employed some time in strengthening himself, to revenge the invasion of Demetrius, he set up against him an impostor called Alexander Zebina. He was the son of a broker of Alexandria. He gave himself out for the son of Alexander Bala, and pretended, in that quality, that the crown of Syria was his right. Physcon lent him an army to put him in possession of it. He was no sooner

1 [These Thogarians were a tribe of those Scythians who had conquered the Greek kingdom of Bactria. It is not true that Artaban was succeeded, as Rollin says, by Mithridates the Great; for this latter was he who had defeated Demetrius Nicator, and taken him prisoner twelve years before. Artaban was the successor of Phraates, the son of that Mithridates, and could not therefore be succeeded by him. He was brother to that Mithridates, and was succeeded by Pacorus I.]

* Justin. l. xxxviii. c. 8. 9. xxxix. c. 1. Val. Max. l. ix. c. 2-7. Oros. l. v. c. 10. Epit. Liv. l. lix. ix. Diod. in Excerpt. Vales. p. 374-376. Joseph. Antiq. l. xiii. c. 17.

in Syria, than, without examining the justice of his pretensions, the people came in crowds to join him, out of their hatred to Demetrius. They cared not who was to be their king, provided they got rid of him.

At length a battle decided the affair. It was fought near Damascus, in Coele-syria. Demetrius was entirely defeated, and fled to Ptolemais, where his wife Cleopatra was. She, who had always at heart his marriage with Rhodoguna amongst the Parthians, took this occasion to be revenged, and caused the gates of the city to be shut against him. Would not one think, that in the age of which we now treat there was a kind of dispute and emulation between the princes and princesses, who should distinguish themselves most by wickedness and the blackest crimes? Demetrius was obliged to fly to Tyre, where he was killed. After his death, Cleopatra preserved for herself part of the kingdom: Zebina had all the rest; and to establish himself the better, made a strict alliance with Hyrcanus, who, as an able statesman, took the advantage of these divisions to strengthen himself, and to obtain for his people the confirmation of their liberty, and many other considerable advantages, which rendered the Jews formidable to their enemies.

He had sent the preceding year an embassy to Rome to renew the treaty made with Simon his father. The senate received those ambassadors very graciously, and granted them all they demanded. And because Antiochus Sidetes had made war against the Jews, contrary to the decree of the Romans, and his alliance with Simon; had taken several cities; had made them pay tribute for Gazara, Joppa, and some other places which he had ceded to them; and had made them consent by force to a disadvantageous peace, by besieging the city of Jerusalem;—upon what the ambassadors represented to the senate on these heads, they condemned all that had been done in such manner against the Jews from the time of the treaty made with Simon, and resolved that Gazara, Joppa, and the rest of the places taken from them by the Syrians, or which had been made tributary, contrary to the tenor of that treaty, should be restored to them, and exempted from all homage, tribute, or other subjection. It was also decreed that the Syrians should make amends for all the losses that the Jews had sustained from them in contravention to the senate's regulations in the treaty concluded with Simon: in fine, that the kings of Syria should renounce their pretended right to march their troops into the territories of the Jews.

At the time of which we speak,²
A. M. 3879. incredible swarms of locusts laid
Ant. J. C. 125. Africa waste in an unheard-of manner. They ate up all the fruits of the earth; and afterwards being carried by the wind into the sea, their dead bodies were thrown by the waves upon the shore, where they rotted, and infected the air to such a degree, that they occasioned a pestilence, which carried off in Libya, Cyrenaica, and some other parts of Africa, more than 800,000 souls.

We have seen that Cleopatra had
A. M. 3880. possessed herself of part of the kingdom of Syria,³ at the death of Demetrius Nicator, her husband. He left two sons by that princess, the eldest of whom, called Seleucus, conceived hopes of ascending the throne of his father, and accordingly caused himself to be declared king. His ambitious mother was anxious to reign alone, and was very much offended at her son's intention to establish himself to her prejudice. She had also reason to fear that he might desire to avenge his father's death, of which it was well known she had been the cause. She killed him with her own hands, by plunging a dagger into his breast. He reigned only one year. It is hardly conceivable, how a woman and a mother could be capable of committing such horrid excesses: but when some

unjust passion takes possession of the heart, it becomes the source of every kind of guilt. However gentle it may appear, it is not far from arming itself with poniards, and from having recourse to poison; because, being anxious to attain its ends, it has a natural tendency to destroy every thing which opposes that view.

Zebina had made himself master of part of the kingdom of Syria. Three of his principal officers revolted against him, and declared for Cleopatra. They took the city of Laodicea, and resolved to defend that place against him. But he found means to bring them to reason. They submitted, and he pardoned them with the most uncommon clemency and greatness of soul, and without doing them any hurt. This pretended prince had in reality an exceeding good heart. He received all who approached him in the most affable and engaging manner, so that he acquired the love of all men, and even of those who abhorred the imposture by which he had usurped the crown.

Mithridates Euergetes, king of Pontus, died this year; he was assassinated by his own servants. His son, who succeeded him, was the famous Mithridates Eupator, who disputed so long the empire of Asia with the Romans, and supported a war of almost thirty years' duration against them. He was but twelve years of age when his father died. I shall make his history a separate article.

Cleopatra, after having killed her eldest son, believed it for her interest to make a titular king, under whose name she might conceal the authority which she intended to retain entirely to herself. She well knew that a warlike people, accustomed to be governed by kings, would always regard the throne as vacant whilst filled only by a princess, and that they would not fail to offer it to any prince that should set up for it. She therefore caused her other son, Antiochus, to return from Athens, whither she had sent him for his education, and ordered him to be declared king as soon as he arrived. But that was no more than an empty title. She gave him no share in the affairs of government; and as that prince was very young, being no more than twenty years of age, he suffered her to govern for some time with patience enough. To distinguish him from other princes of the name of Antiochus, he was generally called by the surname of Grypus,⁴ taken from his great nose. Josephus calls him Philometor; but that prince in his medals took the title of Epiphanes.

Zebina having well established himself, after the death of Demetrius Nicator, in the possession of part of the Syrian empire, Physcon, who looked upon him as his creature, insisted upon his doing him homage for it. Zebina refused in direct terms to comply with that demand. Physcon resolved to throw him down as he had set him up; and having accommodated all differences with his niece Cleopatra, he sent a considerable army to the assistance of Grypus, and gave him his daughter Tryphena in marriage. Grypus, by the means of this aid, defeated Zebina, and obliged him to retire to Antioch. The latter formed a design of plundering the temple of Jupiter, to defray the expenses of the war. Upon its being discovered, the inhabitants rose, and drove him out of the city. He wandered some time about the country from place to place, but was taken at last, and put to death.

After the defeat and death of Zebina, Antiochus Grypus, believing himself of sufficient years, resolved to take the government upon himself. The ambitious Cleopatra, who saw her power diminished, and grandeur eclipsed by that measure, could not suffer it. To render herself again absolute mistress of the government of Syria, she resolved to rid herself of Grypus, as she had already done of his brother Seleucus, and to give the crown to another of her sons by Antiochus Sidetes, under whom, being

⁴ Grypus; in Greek signifies a man with an aquiline nose

an infant, she was in hopes of possessing the royal authority for many years, and of taking such measures as might establish her in it during her life. This wicked woman prepared a poisoned draught for that purpose, which she presented to Grypus one day as he returned very hot from some exercise. But that prince having been apprized of her design, desired her first, by way of respect, to drink the cup herself; and upon her obstinate refusal to do it, having called in some witnesses, he gave her to understand, that the only means she had to clear herself of the suspicions conceived against her, was to drink the liquor she had presented to him. That unhappy woman, who found herself without evasion or resource, swallowed the draught. The poison took effect immediately, and delivered Syria from a monster, who, by her unheard-of crimes, had been so long the scourge of the state. She had been the wife of three kings of Syria,¹ and the mother of four. She had occasioned the death of two of her husbands; and as to her children, she had murdered one with her own hands, and would have destroyed Grypus by the poison which he made her drink herself. That prince afterwards applied himself with success to the affairs of the public, and reigned several years in peace and tranquillity, till his brother Antiochus of Cyzicum occasioned the troubles we shall relate hereafter.

Ptolemy Physcon, king of Egypt,²

A. M. 3887. after having reigned twenty-nine years from the death of his brother Philometor, died at last in Alexandria. No reign was ever more tyrannical, nor abounded with more crimes than his.

SECTION VI.—PTOLEMY LATHYRUS SUCCEEDS PHYSCON. WAR BETWEEN GRYPUS AND HIS BROTHER ANTIOCHUS OF CYZICUM, FOR THE KINGDOM OF SYRIA. HYRCANUS FORTIFIES HIMSELF IN JUDEA. HIS DEATH. ARISTOBULUS SUCCEEDS HIM, AND ASSUMES THE TITLE OF KING. HE IS SUCCEEDED BY ALEXANDER JANNEUS. CLEOPATRA DRIVES LATHYRUS OUT OF EGYPT, AND PLACES ALEXANDER, HIS YOUNGEST BROTHER, ON THE THRONE IN HIS STEAD. WAR BETWEEN THAT PRINCESS AND HER SONS. DEATH OF GRYPUS. PTOLEMY APION LEAVES THE KINGDOM OF CYRENAICA TO THE ROMANS. CONTINUATION OF THE WAR IN SYRIA AND EGYPT. THE SYRIANS CHOOSE TIGRANES KING. LATHYRUS IS RE-ESTABLISHED UPON THE THRONE OF EGYPT. HE DIES. ALEXANDER HIS NEPHEW SUCCEEDS HIM. NICOMEDES, KING OF BITHYNIA, MAKES THE ROMAN PEOPLE HIS HEIRS.

PHYSCON at his death left three

A. M. 3887. sons.³ The first, named Apion, was Ant. J. C. 117. a natural son, whom he had by a concubine. The two others were legitimate, and the children of his niece Cleopatra, whom he married after having repudiated her mother. The eldest was called Lathyrus, and the other Alexander.

He left the kingdom of Cyrenaica by will to Apion, and Egypt to his widow Cleopatra, and to whichever of his two sons she should think fit to choose. Cleopatra believing that Alexander would be the most complaisant, resolved to choose him; but the people would not suffer the eldest to lose his birth-right, and obliged the queen to recall him from Cyprus, whither she had caused him to be banished by his father, and to associate him with her on the throne. Before she would suffer him to take possession of the throne at Memphis according to custom, she obliged him to repudiate his eldest sister Cleo-

patra, whom he passionately loved, and to take Seleue, his youngest sister, for whom he had no inclination. Arrangements of this kind promise no very pacific reign.

At his coronation he took the title of Soter. Some authors give him that of Philometor; but the generality of historians distinguish him by the name of Lathyrus.⁴ However, as that was but a kind of nickname, nobody dared to give it him in his own time.

Antiochus Grypus, king of Syria, was making preparations for invading Judea, when a civil war broke out to employ him, which was fomented by Antiochus of Cyzicum, his brother by the mother's side. He was the son of Cleopatra and Antiochus Sidetes, and born whilst Demetrius was prisoner amongst the Parthians. When Demetrius returned, and repossessed himself of his dominions after the death of Antiochus Sidetes, his mother, out of regard to his safety, had sent him to Cyzicum, a city situate upon the Propontis, in Mysia Minor, where he was educated by the care of a faithful eunuch named Craterus, to whom she had intrusted him. From thence he was called the Cyzicenian. Grypus, to whom he gave umbrage, wished to have him poisoned. His design was discovered, and the Cyzicenian was compelled to take up arms in his own defence, and to endeavour to make good his pretensions to the crown of Syria.

Cleopatra, whom Lathyrus had been obliged to repudiate, finding herself at her own disposal, married the Cyzicenian. She brought him an army for her dowry,⁵ to assist him against his competitor. Their forces by that means being very near equal, the two brothers came to a battle, in which the Cyzicenian having the misfortune to be defeated, retired to Antioch. He left his wife in that place, where he fancied she would be secure, and went himself to raise new troops for the reinforcement of his army.

But Grypus immediately laid siege to the city, and took it. Tryphena, his wife, was very earnest with him to put Cleopatra his prisoner into her hands. Though her sister by father and mother, she was so excessively enraged at her for having married their enemy, and giving him an army against them, that she resolved to deprive her of life. Cleopatra had taken refuge in one of the temples of Antioch; a sanctuary which was held inviolable. Grypus would not show a complaisance for his wife, which he saw would be attended with fatal effects from the violence of her rage. He alleged to her the sanctity of the asylum where her sister had taken refuge; and represented, that her death would neither be of use to them, nor of prejudice to the Cyzicenian; that in all the civil or foreign wars, wherein his ancestors had been engaged, it had never been known, that after victory any cruelty had been exercised against the women, especially against so near a relation; that Cleopatra was her sister, and his near relation; that therefore he desired her to speak no more of her to him, because he could by no means consent to her being treated with any severities. Tryphena, far from acquiescing in his reasons, became more violent, through sentiments of jealousy; imagining, that it was not through compassion, but love, that her husband thus took the part of that unfortunate princess. She therefore sent soldiers into the temple, who could not tear her in any other manner from the

¹ *Antiochus*; signifies a kind of pea, called in Latin *cicer*, from which came the surname of Cicero. Lathyrus must have had some very visible mark of this sort upon his face, or the name would have been still more offensive.

² We find in the latter editions of Justin the following words: *Exercitum Grypi sollicitatum, relut dotalem, ad maritum deducit*; which shows, that Cleopatra, having succeeded in corrupting part of Grypus's army, carried it to her husband. Several editions read *Cyri* instead of *Grypi*, which would imply that Cleopatra had an army in Cyprus.

³ Her father Physcon was the uncle of Cleopatra, Grypus's mother.

⁴ Sed quantum Grypus abnuet, tantò soror muliebri pertinacia accenditur, rata non misericordie hæc verba sed amoris esse.—Justin.

¹ The three kings of Syria who had been her husbands, were Alexander Bala, Demetrius Nicator, and Antiochus Sidetes. Her four sons were Antiochus, by Alexander Bala; Seleucus and Antiochus Grypus, by Demetrius; and Antiochus the Cyzicenian, by Antiochus Sidetes.

² Porphyry, in Græc. Euseb. Scal. Hieron. in Dan. ix. Justin. l. xxix. c. 4, 5. Appian. in Mithrid. sub finem, et in Syr. p. 132. Strab. l. xvii. p. 735. Plin. l. ii. c. 67, and l. vi. c. 30. Porphyry. Græc. Euseb. Scalig. Joseph. Antiq. d. xiii. c. 13. Diod. in Excerpt. Vales. p. 384.

altar, than by cutting off her hands with which she embraced it. Cleopatra expired, uttering a thousand curses against the parricides who were the authors of her death, and implored the god, in whose sight so barbarous a cruelty was committed, to avenge her upon them.

However, the other Cleopatra, the common mother of the two sisters, did not seem to be affected at all, with either the fate of the one or the crime of the other. Her heart, which was solely susceptible of ambition, was so taken up with the desire of reigning, that she had no other thoughts than of the means of supporting herself in Egypt, and of retaining an absolute authority in her own hands during her life. To strengthen herself the better, she gave the kingdom of Cyprus to Alexander her youngest son, in order to draw from him the assistance for which she might have occasion, in case Lathyrus should ever dispute the authority she was determined to keep.

The death of Cleopatra in Syria A. M. 3892. did not long remain unpunished. Ant. J. C. 112. The Cyziceniian returned at the head of a new army to give his brother battle a second time, defeated him, and took Tryphena, upon whom he inflicted the torments which her cruelty to her sister had well deserved.

Grypus was obliged to abandon A. M. 3893. Syria to the victor. He retired to Ant. J. C. 111. Aspendus in Pamphylia, which occasioned his being sometimes called in history the Aspendian, but returned a year after into Syria, and repossessed himself of it. The two brothers at length divided that empire between them. The Cyziceniian had Coele-syria and Phœnicia, and took up his residence at Damascus. Grypus had all the rest, and kept his court at Antioch. Both equally abandoned themselves to luxury, and many other excesses.

Whilst the two brothers were ex- A. M. 3894. hausting their forces against one another, indolently dozed after the Ant. J. C. 110. peace in luxurious sloth and ease, John Hyrcanus was augmenting his wealth and power; and seeing that he had nothing to fear from them, he undertook to reduce the city of Samaria. He sent Aristobulus and Antigonus, two of his sons, to form the siege of that place. The Samaritans demanded aid of the Cyziceniian, king of Damascus, who marched thither at the head of an army. The two brothers quitted their lines, and a battle ensued, wherein Antiochus was defeated, and pursued as far as Scythopolis, escaping with great difficulty.

The two brothers after this victory A. M. 3895. returned to the siege, and pressed Ant. J. C. 109. the city so vigorously, that it was obliged a second time to send to the Cyziceniian, to solicit him to come again to its aid. But he had not troops enough to undertake the raising of the siege; and the same request was made to Lathyrus, king of Egypt, who granted 6000 men, contrary to the opinion of Cleopatra his mother. As Chelcias and Ananias, two Jews, were her favourites, ministers, and generals, both the sons of Onias, who built the temple of Egypt, those two ministers, who entirely governed her, influenced her in favour of their nation; and out of regard for them, she would not do any thing to the prejudice of the Jews. She was almost resolved to depose Lathyrus for having engaged in this war without her consent, and even against her will.

When the auxiliary troops of Egypt arrived, the Cyziceniian joined them with his. He was afraid, however, to attack the army that formed the siege, and contented himself with ravaging the country, by flying parties and excursions, in order to form a diversion, and to induce the enemy to raise the siege, in order to defend themselves at home. But seeing that the Jewish army did not move, and that his own was much diminished by the defect of some detachments by desertion, and other accidents, he thought it improper to expose his person by continuing in the field with an army so much weakened, and retired to

Tripoli. He left the command of his troops to two of his best generals, Callimander and Epistrates. The first was killed in a rash enterprise, in which his whole party perished with him. Epistrates, seeing no hopes of success, had no farther thoughts but of serving his private interest in the best manner he could in the present situation of affairs. He treated secretly with Hyrcanus, and for a sum of money put Scythopolis into his hands, with all the other places which the Syrians possessed in the country, without regard to his duty, honour, and reputation; and all for a sum perhaps inconsiderable enough.

Samaria, destitute of all appearances of relief, was obliged, after having sustained a siege for a year, to surrender at last to Hyrcanus, who immediately ordered it to be demolished. The walls of the city, and the houses of the inhabitants, were entirely razed and laid level with the ground; and, to prevent its being rebuilt, he caused large and deep ditches to be cut through the new plain where the city had stood, into which water was turned. It was not re-established till the time of Herod, who gave the new city, which he caused to be rebuilt there, the name of Sebaste, in honour of Augustus.

Hyrcanus saw himself at that time master of all Judæa, Galilee, Samaria, and of many places upon the frontiers, and became thereby one of the most considerable princes of his time. None of his neighbours dared to attack him any more, and he passed the rest of his days in perfect tranquillity with regard to foreign affairs.

But towards the close of his life he did not find the same repose at home. The Pharisees, a violent and rebellious sect, gave him abundance of vexation. By an affected profession of attachment to the law, and a severity of manners, they had acquired a reputation which gave them great sway amongst the people. Hyrcanus had endeavoured, by all sorts of favours, to engage them in his interests. Besides having been educated amongst them, and having always professed their sect, he had protected and served them upon all occasions; and, to make them more firmly his adherents, not long before he had invited the heads of them to a magnificent entertainment, in which he made a speech to them, highly capable of affecting reasonable minds. He represented, that it had always been his intention, as they well knew, to be just in his actions towards men, and to do all things in regard to God that might be agreeable to him, according to the doctrine taught by the Pharisees: that he conjured them, therefore, if they saw that he departed in any thing from the great end he proposed to himself in those two rules, that they would give him their instructions, in order to his amending and correcting his errors. Such a disposition is highly laudable in princes, and in all men; but it ought to be attended with prudence and discernment.

The whole assembly applauded this discourse, and highly praised him for it. One man only, named Eleazar, of a turbulent and seditious spirit, rose up, and spoke to him to this effect: "Since you desire that the truth should be told you with freedom, if you would prove yourself just, renounce the high-priesthood, and content yourself with the civil government." Hyrcanus was surprised, and asked him what reasons he had to give him such counsel. Eleazar replied, "that it was known from the testimony of aged persons worthy of belief, that his mother was a captive, and that, as the son of a stranger, he was incapable by the law of holding that office." If the fact had been true, Eleazar would have been in the right; for the law was express in that point: but it was a false supposition, and a mere calumny; and all who were present extremely blamed him for advancing it, and expressed great indignation upon that account.

This adventure, however, occasioned great troubles. Hyrcanus was highly incensed at so insolent an attempt to defame his mother, and call in question the purity of his birth, and, in consequence, to inval-

• Joseph. Antiq. l. xlii.

• Σεβαστος; in Greek signifies Augustus. • Lev. xxi. 15.

date his right to the high-priesthood. Jonathan, his intimate friend and a zealous Sadducee, took advantage of this opportunity to incense him against the whole party, and to bring him over to that of the Sadducees.

Two powerful sects in Judæa, but directly opposite to each other in sentiments and interests, entirely divided the state; that of the Pharisees, and that of the Sadducees. The first piqued themselves upon an exact observance of the law; to which they added a great number of traditions, that they pretended to have received from their ancestors, and to which they much more strictly adhered than to the law itself, though often contrary to what the latter enjoined. They acknowledged the immortality of the soul, and, in consequence, another life after this. They affected an outside of virtue, regularity, and austerity, which gained them great consideration with the people. But under that imposing appearance they concealed the greatest vices: sordid avarice; insupportable pride; an insatiable thirst of honours and distinctions; a violent desire of ruling alone; an envy, that rose almost to fury, against all merit but their own; an irreconcilable hatred for all who presumed to contradict them; a spirit of revenge capable of the most horrid excesses; and what was still more their distinguishing characteristic, and outdid all the rest, a black hypocrisy, which always wore the mask of religion. The Sadducees rejected the Pharisaical traditions with contempt, denied the immortality of the soul, and the resurrection of the body; and admitted no felicity, but that which may be enjoyed in this life. The rich, the nobility, and most of those who composed the Sanhedrim, that is to say, the Great Council of the Jews, in which the affairs of state and religion were determined, were of this latter sect.

Jonathan, therefore, to bring over Hyrcanus to his party, insinuated to him, that what had passed was not the mere suggestion of Eleazar, but a trick concerted by the whole cabal, of which Eleazar had only been the tool; and that, in order to convince himself of the truth of this assertion, he had only to consult them upon the punishment which the calumniator deserved; that he would find, if he thought fit to make the experiment, by their conduct in favour of the criminal, that they were all of them his accomplices. Hyrcanus followed his advice, and consulted the chief men among the Pharisees upon the punishment due to the person who had so grossly defamed the prince and high-priest of his people, expecting that they would undoubtedly condemn him to die. But their answer was, that calumny was not a capital crime; and that all the punishment he deserved was to be scourged and imprisoned. So much lenity in so heinous a case, made Hyrcanus believe all that Jonathan had insinuated; and he became the mortal enemy of the whole sect of the Pharisees. He prohibited, by a decree, the observation of the regulations founded upon their pretended traditions; inflicted penalties upon such as disobeyed that ordinance; and abandoned their party entirely, to throw himself into that of the Sadducees their enemies.

Hyrcanus did not long survive this
A. M. 3897. storm; he died the year following,
Ant. J. C. 107. after having been high-priest and prince of the Jews twenty-nine years.

Not to interrupt the history of other kingdoms, I shall reserve the greatest part of what regards the successors of Hyrcanus for the article in which I shall treat the history of the Jews separately.

We have seen that Ptolemy Lathyrus had sent an army into Palestine to aid Samaria,¹ contrary to the advice of his mother, and notwithstanding her opposition. She carried her resentment of this and some other similar encroachments upon her authority so far, that she took his wife Selene from him, by whom he already had two sons,² and obliged him to quit Egypt. The method which she devised to effect her purpose was this. She procured some of her favourite eunuchs to be wounded, and then produced them in an assembly of the people of Alexandria. She

caused it to be reported that they had been used thus barbarously by her son Lathyrus for having endeavoured to defend her against his violence; and inflamed the people so much by this black fiction, which convinced them that he had designed to kill her, that they immediately rose universally against Lathyrus, and would have torn him in pieces, if he had not escaped from the port into a ship, which set sail as soon as he got on board. Cleopatra sent immediately after for Alexander, her youngest son, to whom she had given the kingdom of Cyprus, and made him king of Egypt in his brother's stead, whom she obliged to content himself with the kingdom of Cyprus, which the other quitted.

Alexander, king of the Jews, after having put the internal affairs of his kingdom in good order, marched
A. M. 3899. Ant. J. C. 105. against the people of Ptolemais, beat them, and obliged them to shut themselves up within their walls, where he besieged them. They sent to demand aid of Lathyrus, who went thither in person. But the besieged changing their sentiments, from the apprehension of having him for their master, Lathyrus dissembled his resentment for the present. He was upon the point of concluding a treaty with Alexander, when he was apprised that the latter was negotiating secretly with Cleopatra, to engage her to join him with all her forces in order to drive him out of Palestine. Lathyrus became his declared enemy, and resolved to do him all the injury in his power.

The next year he did not fail to carry his resolution into effect. He
A. M. 3900. Ant. J. C. 104. divided his army into two bodies, and detached one of them under the command of one of his generals, to form the siege of Ptolemais, with which place he had reason to be dissatisfied; and with the other marched in person against Alexander. The inhabitants of Gaza had supplied Lathyrus with a considerable number of troops. A bloody battle was fought between them upon the banks of the Jordan. Alexander lost 30,000 men, without including the prisoners taken by Lathyrus after the victory.

A most cruel and horrid action is related to have been committed by Lathyrus upon this occasion. The same evening that he gained this battle, ingoing to take up his quarters in the neighbouring villages, he found them full of women and children, and caused them all to be put to the sword, and their bodies to be cut in pieces and put into caldrons to be cooked, as if he intended to make his army sup upon them. His design was to have it believed that his troops ate human flesh, to spread the greater terror throughout the country. Could one believe such a barbarity possible, or that any man should ever conceive so wild a thought? Josephus reports this fact upon the authority of Strabo, and another author.

Lathyrus, after the defeat of Alexander, not having any enemy in the field, ravaged and laid waste all the flat country. Without the succours brought by Cleopatra the following year, Alexander would have been undone; for after so considerable a loss, it was impossible for him to retrieve his affairs, and make head against his enemy.

That princess saw plainly, that if Lathyrus made himself master of Judæa and Phenicia, he would be in
A. M. 3901. Ant. J. C. 103. condition to enter Egypt, and to dethrone her; and that it was necessary to put a stop to his progress. For that purpose she raised an army, and gave the command of it to Chelcias and Ananias, the two Jews of whom we have spoken before. She fitted out a fleet at the same time, to transport her troops; and embarking with them herself, landed in Phenicia.³ She carried with her a great sum of money, and her richest jewels. In order to secure them in case of accident, she chose the isle of Cos for their repository, and sent thither at the same time her grandson Alexander, the son of him who reigned jointly with her. When Mithridates made himself master of that island, and of the treasures laid up there,

¹ Justin. l. xxxviii. c. 4.

² Those two sons died before him.

³ Joseph. Antig. l. xiii. c. 20, 21.

⁴ Appian. in Mithridat. p. 186, and de Bel. Civil. p. 414.

he took that young prince under his care, and gave him an education suitable to his birth. Alexander withdrew by stealth from Mithridates, some time after, and took refuge with Sylla, who received him well, took him into his protection, carried him to Rome, and at length set him upon the throne of Egypt, as we shall see in the sequel.

The arrival of Cleopatra made Lathyrus immediately raise the siege of Ptolemais, which he had continued till then. He retired into Coele-syria. She detached Chelcias with part of her army to pursue him, and with the other, commanded by Ananias, formed the siege of Ptolemais herself. Chelcias, who commanded the first detachment, having been killed in the expedition, his death put a stop to every thing. Lathyrus, to take advantage of the disorder occasion-

A. M. 3902. all his forces into Egypt, in hopes of
Ant. J. C. 102. finding it without defence in the absence of his mother, who had carried her best troops into Phenicia. He was mistaken. The troops Cleopatra had left there, made head till the arrival of those she detached to reinforce them from Phenicia, upon receiving advice of his design. He was compelled to return into Palestine, and took up his winter-quarters in Gaza.

Cleopatra, in the mean time, pushed the siege of Ptolemais with so much vigour, that she at last took it. As soon as she entered it, Alexander made her a visit, and brought rich presents with him to recommend himself to her favour. But what conducted most to his success, was his hatred for her son Lathyrus; which was alone sufficient to assure him of a good reception.

Some persons of Cleopatra's court pointed out to her the fair opportunity she now had of making herself mistress of Judæa, and all Alexander's dominions, by seizing his person: they even pressed her to take the advantage of it, which she would have done, had it not been for Ananias. But he represented to her, how base and infamous it would be to treat an ally in that manner, who was engaged with her in the same cause; that it would be acting contrary to honour and good faith, which are the foundations of society; that such a conduct would be highly prejudicial to her interests, and would draw upon her the abhorrence of all the Jews dispersed throughout the world. In fine, he so effectually prevailed by his arguments and influence, which he employed to the utmost for the preservation of his countryman and relation, that she came into his opinion, and renewed her alliance with Alexander. Of how great value to princes is a wise minister, who has courage enough to oppose their unjust undertakings with vigour; Alexander returned to Jerusalem, where he at length set another good army on foot, with which he passed the Jordan, and formed the siege of Gadara.

Ptolemy Lathyrus after having
A. M. 3903. wintered at Gaza, perceiving that his
Ant. J. C. 101. efforts would be ineffectual against Palestine whilst his mother supported it, abandoned that design, and returned into Cyprus. She, on her side, retired also into Egypt, and the country was divided between them both.

Being informed,¹ upon her return to Alexandria, that Lathyrus had entered into a treaty at Damascus with Antiochus the Cyziceniian, and that with the aid which he expected from him he was preparing to make a new attempt for the recovery of the crown of Egypt; that queen, to make a diversion, gave her daughter Selene, whom she had taken from Lathyrus, to Antiochus Grypus, and sent him at the same time a considerable number of troops, and great sums of money, to put him into a condition to attack his brother the Cyziceniian with vigour. The affair succeeded as she had intended. The war was renewed between the two brothers, and the Cyziceniian had so much employment upon his hands at home, that he was in no condition to assist Lathyrus, who was thereby obliged to abandon his design.

Ptolemy Alexander, his younger brother, whom she had placed upon the throne in conjunction with

herself, shocked by the barbarous cruelty with which she persecuted his brother Lathyrus, especially in depriving him of his wife to give her to his enemy; and observing besides, that the greatest crimes cost her nothing, when the gratification of her ambition was concerned; did not believe himself safe near her, and resolved to abandon the throne and retire; preferring a quiet life without fear in banishment, to reigning with so wicked and cruel a mother, with whom he was perpetually in danger. It was not without abundant solicitation he was prevailed upon to return: for the people were absolutely determined that she should not reign alone, though they well knew that she gave her son only the name of king; that since the death of Physcon she had always engrossed the whole royal authority; and that the real cause of Lathyrus' disgrace, which had cost him his crown and wife, was his having presumed to act in one instance without her.

The death of Antiochus Grypus
happened this year. He was
A. M. 3907. Ant. J. C. 97. assassinated by Heracleon, one of his own vassals, after having reigned twenty-seven years. He left five sons; Seleucus, the eldest, succeeded him; the four others were Antiochus and Philip, twins; Demetrius Eucherus, and Antiochus Dionysius. They were all kings in their turns, or at least pretended to the crown.

Ptolemy Apion, son of Physcon, king of Egypt, to whom his father
A. M. 3908. Ant. J. C. 96. had given the kingdom of Cyrenaica, dying without issue, left his kingdom to the Romans by will; who, instead of taking advantage of that legacy, gave the cities their liberty, which soon filled the whole country with tyrants; because the most powerful persons of each of those small states were for making themselves sovereigns of them. Lucullus, in passing that way against Mithridates, remedied those disorders in some measure; but there was no other means of re-establishing peace and good order, than by reducing the country into a province of the Roman empire, as was afterwards done.

Antiochus the Cyziceniian seized Antioch, after the death of Grypus, and used his utmost endeavours to dispossess Grypus' children of the rest of the kingdom. But Seleucus, who was in possession of many other strong cities, maintained himself against him, and found means to support his right.

Tigranes, son of Tigranes king of Armenia, who had been kept as a
A. M. 3909. Ant. J. C. 95. hostage by the Parthians during the life of his father, was released at his death, and set upon the throne, on condition that he should resign certain places to the Parthians which lay conveniently for them. This happened twenty-five years before he espoused the part of Mithridates against the Romans. I shall have occasion hereafter to speak of this Tigranes, and of the kingdom of Armenia.

The Cyziceniian, who saw that Seleucus was gaining strength every
A. M. 3910. Ant. J. C. 94. day in Syria, set out from Antioch to give him battle; but being defeated, he was made prisoner, and put to death.

Seleucus entered Antioch, and saw himself in possession of the whole empire of Syria; but could not keep it long. Antiochus Eusebes, son of the Cyziceniian, who made his escape from Antioch, when Seleucus took it, went to Aradus, where he caused himself to be crowned king.

From thence he marched with a considerable army against Seleucus, obtained a great victory over him, and obliged him to shut himself up in Mopsuestia, a city of Cilicia, and to abandon all the rest to the mercy of the victor.

⁵ An island and city of Phenicia

⁶ Justin. l. xxxix. c. 4.

In this retirement he oppressed the inhabitants so much by the heavy subsidies which he exacted from them, that at length they mutinied, invested the house where he resided, and set it on fire. Himself, and all who were in it, perished in the flames.

Antiochus and Philip, the twin A. M. 3912. sons of Grypus, to revenge the death Ant. J. C. 92 of their brother Seleucus, marched at the head of all the troops they could raise against Mopsuestia. They took and demolished the city, and put all the inhabitants to the sword. But on their return, Eusebes charged them near the Orontes, and defeated them. Antiochus was drowned in endeavouring to swim his horse over that river. Philip made a fine retreat with a considerable body of men, which soon increased to such a number, as enabled him to keep the field, and dispute the empire with Eusebes.

The latter, to strengthen himself upon the throne, had married Selene the widow of Grypus. That politic princess, upon her husband's death, had found means to secure part of the empire in her own possession, and had provided herself with good troops. Eusebes married her, therefore, in order to augment his forces. Lathyrus, from whom she had been taken, to avenge himself for this fresh insult, sent to Caidos for Demetrius Eucherus, the fourth son of Grypus, who was brought up in that place, and made him king at Damascus. Eusebes and Philip were too much employed against each other to prevent that blow. For though Eusebes had well retrieved his affairs, and augmented his power by his marriage, Philip, however, still supported himself, and at last so totally defeated Eusebes in a great battle, that he was reduced to abandon his dominions, and take refuge amongst the Parthians, whose king at that time was Mithridates II. surnamed the Great. The empire of Syria by this means became divided between Philip and Demetrius. Two years after, Eusebes, assisted by the Parthians, returned into Syria, repossessed himself of part of what he had before, and involved Philip in new difficulties. Another competitor fell also upon his hands, almost at the same time; this was Antiochus Dionysius, his brother, the fifth son of Grypus. He seized the city of Damascus, established himself there as king of Coele-syria, and supported himself in that city for three years.

Affairs were neither more quiet, nor crimes and perfidy more rare, in A. M. 3915. Egypt than in Syria. Cleopatra, not Ant. J. C. 89. being able to bear a companion in the supreme authority, nor to admit her son Alexander to share the honour of the throne with her, resolved to rid herself of him, in order to reign alone for the future. That prince, who was apprized of her design, prevented her, and put her to death. She was a monster of a woman, who had spared neither her mother, her sons, nor her daughters, and had sacrificed every thing to the ambitious desire of reigning. She was punished in this manner for her crimes, but by a crime equal to her own.

I do not doubt but the reader, as well as myself, is struck with horror at the sight of so dreadful a scene as our history has for some time exhibited. It furnishes us no where with such frequent and sudden revolutions, nor with examples of so many kings dethroned, betrayed, and murdered by their nearest relations, their brothers, sons, mothers, wives, friends, and confidants; who all in cold blood, with premeditated design, reflection, and concerted policy, employ the most odious and most inhuman means, to effect their purpose. Never was the anger of Heaven more distinctly visible, nor more dreadfully inflicted, than upon these princes and nations. We see here a sad complication of the blackest and most detestable crimes; perfidy, imposture of heirs, divorces, murders, poisoning, incest. Princes on a sudden become monsters, vieing in treachery and wickedness with each other; attaining crowns with rapidity, and disappearing as soon; reigning only to satiate their passions, and to render their people unhappy. Such

a situation of a kingdom, wherein all orders of the state are in confusion, all laws despised, justice abolished, all crimes secure of impunity, denotes approaching ruin, and seems to call for it with the loud-est exclamations.

As soon as it was known at Alexandria, that it was Alexander who had caused his mother to be put to death, that horrid crime made the parricide so odious to his subjects that they could not endure him any longer. They expelled him, and called in Lathyrus, whom they replaced upon the throne, in which he supported himself to his death. Alexander having got some ships together, endeavoured to return into Egypt the year following, but without success. He perished soon after in a new expedition which he undertook.

The Syrians, weary of the continual wars made in their country A. M. 3921. by the princes of the house of Se- Ant. J. C. 83. leucus for the sovereignty, and not being able to suffer any longer the ravages, murders, and other calamities, to which they were perpetually exposed, resolved at last to exclude them all, and to submit to a foreign prince, who might deliver them from the many evils which those divisions occasioned, and restore tranquillity to their country. Some had thoughts of Mithridates, king of Pontus: others of Ptolemy, king of Egypt: but the former was actually engaged in a war with the Romans, and the other had always been the enemy of Syria. They therefore determined upon electing Tigranes, king of Armenia: and sent ambassadors to acquaint him with their resolution, and the choice they had made of him. He agreed to it, came into Syria, and took possession of the crown, which he wore eighteen years. He governed that kingdom fourteen years together by a viceroy named Megadates, whom he did not recall from that office till he had occasion for him against the Romans.

Eusebes, being driven out of his dominions by his subjects and Tigranes, took refuge in Cilicia, where he passed the rest of his days in concealment and obscurity. As to Philip, it is not known what became of him. It is probable that he was killed in some action defending himself against Tigranes. Selene the wife of Eusebes, retained Ptolemais, with part of Phœnicia and Coele-syria, and reigned there many years after, which enabled her to give her own two sons an education worthy of their birth. The eldest was called Antiochus Asiaticus, and the youngest Seleucus Cibiassactes. I shall have occasion to speak of them in the sequel.

Some time after 4 Ptolemy Lathyrus had been replaced upon the throne of Egypt, a considerable rebellion broke out in the Upper Egypt. The rebels, being overthrown and defeated in a great battle, shut themselves up in the city of Thebes, where they defended themselves with incredible obstinacy. It was at length taken after a siege of three years. Lathyrus used it with so much rigour, that, from being the greatest and richest city till then in all Egypt, it was almost reduced to nothing.

Lathyrus did not long survive the ruin of Thebes. Reckoning from A. M. 3923. the death of his father, he had reigned Ant. J. C. 81. ed thirty-six years; eleven jointly with his mother in Egypt, eighteen in Cyprus, and seven alone in Egypt after his mother's death. Cleopatra, his daughter, succeeded him, who was his only legitimate issue. Her proper name was Berenice; but by the established custom of that family, all the sons were called Ptolemy, and the daughters Cleopatra.

Sylla, at that time perpetual dictator of Rome, sent Alexander to take possession of the crown of Egypt, after the death of his uncle Lathyrus, as the nearest male heir of the deceased. He was the son of that

Alexander who had put his mother to death. But the people of Alexandria had already set Cleopatra upon the throne, and she had been six months in possession of it when Alexander arrived. To accommodate the difference, and not to draw Sylla, the master of Rome, and, in consequence, dispenser of law to the universe, upon their hands, it was agreed that Cleopatra and he should marry, and reign jointly. But Alexander, who either did not approve of her for a wife, or would have no associate in the throne, caused her to be put to death nineteen days after their marriage, and reigned alone fifteen years. Murder and parricide were no longer reckoned as any thing in those times, and, if I may use that expression, were grown into fashion among princes and princesses.

Some time after, ¹ Nicomedes, king of Bithynia, died, having first made A. M. 3928. of his son the Roman people his heirs. His country by that means became a province of the Roman empire, as Cyrenaica did also the same year. The Romans, instead of appropriating the latter to themselves, had granted it liberty. Twenty years had since elapsed, during which time sedition and tyranny had occasioned infinite calamities. It is said, that the Jews, who had been long settled there, and composed a great part of the nation, contributed very much to those disorders. The Romans, to put a stop to them, were obliged to accept Cyrenaica, which had been bequeathed to them by the last king's will, and to reduce it into a Roman province.

SECTION VII.—SELENE, SISTER OF LATHYRUS, CONCEIVES HOPES OF THE CROWN OF EGYPT; SHE SENDS TWO OF HER SONS TO ROME FOR THAT PURPOSE. THE ELDEST, CALLED ANTIOCHUS, ON HIS RETURN PASSES THROUGH SICILY. VERRES, PRÆTOR OF THAT ISLAND, TAKES FROM HIM A GOLDEN CANDELABRUM, DESIGNED FOR THE CAPITOL. ANTIOCHUS, SURNAMED ASIATICUS, AFTER HAVING REIGNED FOUR YEARS OVER PART OF SYRIA, IS DISPOSSESSED OF HIS DOMINIONS BY POMPEY, WHO REDUCES SYRIA INTO A PROVINCE OF THE ROMAN EMPIRE. TROUBLES IN JUDÆA AND EGYPT. THE ALEXANDRIANS EXPEL ALEXANDER THEIR KING, AND SET PTOLEMY AULETES ON THE THRONE IN HIS STEAD. ALEXANDER, AT HIS DEATH, MAKES THE ROMAN PEOPLE HIS HEIRS. IN CONSEQUENCE, SOME YEARS AFTER, THEY ORDER PTOLEMY KING OF CYPRUS, BROTHER OF AULETES, TO BE DEPOSED, CONFISCATE HIS PROPERTY, AND SEIZE THAT ISLAND. THE CELEBRATED CATO IS CHARGED WITH THIS COMMISSION.

SOME troubles which happened in A. M. 3931. Egypt, ² occasioned by the disgust Ant. J. C. 73. taken against Alexander, made Seleene, the sister of Lathyrus, conceive thoughts of pretending to the crown. She sent her two sons Antiochus Asiaticus and Seleucus, whom she had by Antiochus Eusebes, to Rome, to solicit the senate in her behalf. ³ The important affairs which then employed Rome, at that time engaged in a war with Mithridates, and perhaps the motives of policy from which she had hitherto always opposed the kings who were desirous of joining the forces of Egypt with those of Syria, prevented the princess from obtaining what they demanded. After a residence of two years in Rome, and ineffectual solicitations, they set out upon their return to their own kingdom.

The eldest, ⁴ called Antiochus, resolved to pass through Sicily. He experienced an insult there,

which is hardly credible, and shows how much Rome was corrupted in the times we speak of; to what an excess the avarice of the magistrates, sent into the provinces, had risen; and what horrid rapine they committed with impunity, in the sight and with the knowledge of the whole world.

Verres was at that time prætor in Sicily. ⁵ As soon as he heard that Antiochus was arrived at Syracuse, as he had reason to believe, and had been told, that that prince had abundance of rare and precious things with him, he judged his arrival a kind of rich inheritance fallen to him. He began by sending Antiochus presents considerable enough, consisting in provisions of wine, oil, and corn. He then invited him to supper. The hall was magnificently adorned. The tables were set off with all his vessels of the most excellent workmanship, of which he had a great number. The feast was sumptuous and delicate, for he had taken care that nothing should be wanting to make it so. In a word, the king withdrew, well convinced of the prætor's magnificence, and still better satisfied with the honourable reception he had given him.

He invites Verres to supper in his turn, ⁶ exposes all his riches, a vast quantity of silver plate, and not a few cups of gold set with jewels, after the custom of kings, especially those of Syria. There was among the rest a very large vessel for wine, made out of one precious stone. Verres takes each of these vessels into his hand one after the other, praises and admires them, while the king rejoices that the prætor of the Roman people is so well pleased with his entertainment.

On retiring from this entertainment, ⁷ the latter had no other thoughts, as the sequel sufficiently showed, than how to rille Antiochus, and send him away fleeced and plundered of all his rich effects. He sent to desire that he would let him have the finest of the vessels he had seen at his house, under pretence of showing them to his workmen. The prince, who did not know Verres, complied without difficulty or suspicion. The prætor sent again to desire that he would lend him the beautiful vessel made of a single precious stone, that he might examine it more attentively, as he said. The king sent him that also.

But to crown all, ⁸ the kings of Syria, of whom we are speaking, had carried a candelabrum with them to Rome, of singular beauty, as well from the precious stones with which it was adorned, as its exquisite workmanship. With this they intended to adorn the capitol, which had been burned during the wars between Marius and Sylla, and was then rebuilding.

¹ Itaque isto (Verre) prætore venit Syracusas. Hic Verres hæreditatem sibi venisse arbitrat est, quod in ejus regnum ac manus venerat is, quem iste et audierat multa secum præclara habere, et suspicabatur. Mittit homini munera satis larga: hæc ad usum domesticum, vini, olei, quod visum erat, etiam tritici quod satis esset. Deinde ipsum regem ad cenam invitat. Exornat amplè magnificè, ut trichium. Exponit ea, quibus abundabat, plurima ac pulcherrima vasa argentea—Omni bus curat rebus instructum et paratum ut sit convivium. Quid multa? Rex ita discessit, ut et istum copiosè ornatum, et se honorificè acceptum arbitraretur.

² Vocat ad cenam deinde ipse prætor. Exponit suas copias omnes: multum argentum, non pauca etiam pecunia ex auro, quæ, ut mos est regibus et maxime in Syria, gemmis erant distincta clarissimis. Etiam vasa vinarum ex una gemmâ perarantur.—Iste unumquodque vas in manus sumere, laudare, mirari. Rex gaudere prætori populi Romani satis jucundum et gratum illud esse convivium.

³ Postea, quàm inde discessum est, coeclare iste nihil aliud quod ipse se declaravit, nisi quendam regem ex provincia spoliatum expulsumque dimittere. Mittit regem vasa ea, quæ pulcherrima apud illum viderat: ait se suis cæclariis velle custodire. Rex, qui istum non nosset, sine ullâ suspitione libentissimè dedit. Mitti etiam trullam gemmam rogatum: velle se eam diligentius considerare. Ea quoque mittitur.

⁴ Nunc reliquum judices attende—Candelabrum à gemmis clarissimis, opere mirabilè perfectum, reges hi, quos dico, Romanum cum attulissent, ut in capitolio ponerent; quod nondum etiam perfectum templum offerebant, neque ponere, neque vulgò ostendere ac proficere voluerunt: ut et magnificentius videretur, cum suo tempore in solâ Jovis Opt. Max. poneretur, et clarior, cum pulchritudo ejus recens ad oculos hominum atque integra perveniret. Statuerunt id secum in Syriam reportari, ut cum audisset simulacrum Jovis Opt. Max. dedicatum, legatos mitterent, qui cum cæclariis rebus illud quoque eximium atque pulcherrimum donum in capitolium afferrent.

¹ Appian. in Mithridat. p. 218. De Bel. Civil. l. i. p. 420. Liv. Ep. it. l. lxx. and xciii. Plut. in Lucul. p. 492.

² Cic. vi. in Ver. Orat. n. 61.—Plut.

³ Reges Syriæ, regis Antiochi filios pueros, scitis Romanis nuper fuisse; qui venerant, non propter Syriæ regnum, nam id sine controversâ obtinebant, ut à patre et à majoribus acceptarent: sed regnum Ægypti ad se et ad Seleene matrem suam pertinere arbitrabantur. Hi, postquam temporibus populi Romani exclusi, per senatum agere que voluerunt non potuerunt, in Syriam, in regnum patrum profecti sunt.

⁴ Eorum alter, qui Antiochus vocatur, iter per Siciliam facere voluit.

But that edifice not being finished, they would not leave it behind them, nor suffer any body to have a sight of it; in order that when it should appear, at a proper time in the temple of Jupiter, the surprise might add to the admiration of it, and the charm of novelty give new splendour to the present. They therefore chose to carry it back into Syria, resolving to send ambassadors to offer this rare and magnificent gift, amongst many others, to the god, when they should know that his statue was set up in the temple.

Verres was informed of all this by some means or other; for the prince had taken care to keep the candelabrum concealed; not that he feared or suspected any thing, but that few people might see it before it was exposed to the public view of the Romans. The prætor demanded it of the king, and earnestly entreated him to send it him, expressing a great desire to examine it, and promising to let nobody else see it. The young prince, with the candour and simplicity of whose youth the noble sentiments of his birth were united, was far from suspecting any bad design. He ordered his officers to carry the candelabrum secretly to Verres, well covered from sight; which was done accordingly. As soon as the wrappers were taken off, and the prætor beheld it, he cried out, This is a present worthy of a prince, worthy of a king of Syria; worthy of the capitol. For it was amazingly splendid, from the quantity of fine jewels with which it was adorned, and the variety of the workmanship, in which art seemed to vie with the materials; and at the same time of so large a size, that it was easy to distinguish it was not intended to be used in the palaces of men, but to adorn a vast and superb temple. The officers of Antiochus, having given the prætor full time to consider it, prepared to carry it back; but were told by him that he would examine it more at his leisure, and that his curiosity was not yet sufficiently gratified. He then bade them go home, and leave the candelabrum with him. They accordingly returned without it.

The king was not alarmed at first, and had no suspicion:—one day, two days, several days passed, and the candelabrum was not brought home. The prince therefore sent to demand it of the prætor, who put it off till the next day; but it was not returned then. At length he applied in person to him, and prayed him to restore it. Who would believe it? That very candelabrum, which, he knew from the prince himself, was to be set up in the capitol, and designed for the great Jupiter and the Roman people, Verres earnestly entreated the prince to give him. Antiochus excusing himself, both from the vow he had made

to consecrate it to Jupiter, and the judgment which the many nations that had witnessed the progress of the workmanship of it, and knew for whom it was designed, would pass upon such an action: the prætor began to threaten him in the sharpest terms: but when he saw his menaces had no more effect than his entreaties, he ordered the prince to quit his province before night; and alleged for his reason, that he had received advice from good hands that pirates from Syria were about to land in Sicily.

The king upon that withdrew to the public square,³ and, with tears in his eyes, declared with a loud voice, in a numerous assembly of the Syracusans, calling the gods and men to witness, that Verres had taken from him a candelabrum of gold, enriched with precious stones, which was to have been placed in the capitol, to be a monument in that august temple of his alliance and amity with the Roman people. That he cared little, and did not complain, for the other vessels of gold and the jewels which Verres had got from him; but that to see the candelabrum taken from him by violence, was a misfortune and an affront that made him inconsolable. That though by his intention, and that of his brother, that candelabrum was already consecrated to Jupiter; however, he offered, presented, dedicated, and consecrated it again to that god, in the presence of the Roman citizens, who heard him, and called Jupiter to witness to the sentiments of his heart and the piety of his intentions.

Antiochus Asiaticus, being returned into Asia, soon after ascended the throne; he reigned over part of the country for the space of four years. Pompey deprived him of his kingdom during the war against Mithridates, and reduced Syria into a province of the Roman empire.

What must foreign nations think, and how odious must the name of Roman be to them, when they heard it told, that in a Roman province a king had been so grossly injured by the prætor himself; a guest plundered, an ally and friend of the Roman people driven away with the highest indignity and violence! And what Cicero reproaches Verres with in this place, was not peculiar to him; it was the crime of almost all the magistrates sent by Rome into the provinces; a crime which the senate and people seem to approve, and of which they made themselves equally guilty by their weak and abject connivance. "We have seen for several years,"⁴ says the same Cicero, in another of his orations against Verres, "and have suffered in silence the wealth of all nations to be transferred into the hands of a few private persons. Athens, Pergamus, Cyzicum, Miletus, Chios, Samos, in short, all Asia, Achæia, Greece, Sicily, are now enclosed in some of the country-houses of those rich and unjust plunderers, whilst money is universally a prodigious rarity every where else. And we have just reason to believe, that we ourselves connive at all these flagrant and terrible disorders, since those who commit, take no manner of pains to conceal them, nor to hide their thefts and depredations from the eyes and knowledge of the public."

Such was Rome at the time we now speak of, which soon occasioned its ruin, and the loss of its liberty.

³ Rex maximo conventu Syracusis, in foro, flens, deos hominesque contestans, clamare cepit, candelabrum factum esse gemmis, quod in capitolium missum esset, quod in templo clarissimum populo Rom. monumentum sue societatis amicitieque esse voluisset, id sibi C. Verrem atulisse. De cæteris operibus ex auro et gemmis, quæ sua penes illum essent, se non labore: hoc sibi eripi miserum esse et indignum. Id etsi antea jam, mente et cogitatione sua fratrisque sui, consecratum esset; tamen tum se in illo conventu civium Romanorum dare, donare, dicare, consecrare, Jovi Opt. Max. istemque ipsum Jovem suæ voluntatis ac religionis adhibere.

⁴ Partim multos jam annos et silemus, cum videamus ad paucos homines omnes omnium nationum pecunias pervenisse. Quod id magis ferre æquo animo atque concellere videretur, quia nemo istorum dissimulat, nemo laborat, ut obscuro sua cupiditas esse vileatur. Ubi pecunias extrarum nationum esse arbitramini, quibus nunc omnes eorum, cum Athenas, Pergamum, Cyzicum, Miletum, Chium, Samum, totam denique Asiam, Achaiam, Græciam, Siciliam, jam in paucis villas inclusas esse videmus? Cic. in Ver. ult. de Suppl. n. 125, 126.

¹ Perventum res ad istius aures nescio quomodo. Nam rex id celatum voluerat: non quod quicquam metueret aut suspicaretur, sed ut ne multi illud ante perciperent oculis, quam populus Romanus. Iste petit a rege, et cum plurimi verbis rogat, ut ad se mittat: cupere se dicit inspicere, neque se alius videntem potestatem esse facturum. Antiochus, qui animo et puerili esset et regio, nihil de istius improbitate suspicatus est. Imperat suis, ut in prætorium involutum quam occultissime deferrent. Quod posteaquam attulerunt, involucrisque rejectis constituerunt, iste clamare cepit, dignam rem esse regno Syriæ, dignam regi munere, dignam capitolio. Etenim erat eo splendore, qui ex clarissimis et plurimis gemmis esse debebat: et varietate operum, ut ars cætere videretur cum copia: et magnitudine, ut intelligi pæset, non ad hominum apparatus, sed ad amplissimum templi ornamentum, esse factum. Quod cum per se jam perspexisse videretur, tollere incipiunt ut referrent. Iste ut se vel illud etiam atque etiam considerare: nequaquam se esse satiatum. Jubeat illud ducere, et candelabrum relinquere. Sic illi tum inanes ad Antiochum revertuntur.

² Rex primo nihil meture, nihil suspicari. Dies unus, alter, plures: non refert. Tum mittit rex ad istum, si sibi videatur, ut reddat. Jubeat iste postmodum ad se reverti. Mirum illi videri. Mittit iterum: non redditur. Ipse hominem appellat: rogat ut reddat. Os hominis insignemque impudentiam cognoscit. Quod sciret, quodque ex ipso rege audisset, in capitolio esse ponendum: quod Jovi Opt. Max. quod populo Rom. servari videret, id sibi ut donare, rogare et vehementer petere capiti. Cum illi se religione Jovis Capitolini et hominum exstimatione impediri diceret, quod multas nationes testes essent illius operis ac muneris, iste homini minari accipere coepit. Ubi videt cum nihilo magis minus quam precibus perterriti, repente hominem de provincia jubet ante noctem discedere. At se comperisse ex ejus regno piratas in Siciliam esse venturos.

And, in my opinion, to consider in this manner the failings and vices that prevail in a state, to examine their causes and effects, to enter thus into men's most secret retirements (if I may use that expression,) to study closely the characters and dispositions of those who govern, is a much more important part of history, than that which only treats of sieges, battles, and conquests: to which, however, we must return.

The reign of Alexander Jannæus in Judæa had always been involved in troubles and seditions, occasioned by the powerful faction of the Pharisees, that continually opposed him, because he was not of a disposition to suffer himself to be governed by them.

A. M. 3925. His death did not put an end to these disorders.¹ Alexandra, his wife, was appointed supreme administratrix of the nation according to the king's

Ant. J. C. 79. last will. She caused her eldest son Hyrcanus to be acknowledged high-priest. The Pharisees continually persisted in persecuting those who had been their enemies in the late reign. That

A. M. 3934. princess, at her death, had appointed Ant. J. C. 70. Hyrcanus her sole heir; but Aristobulus, his younger brother, had the strongest party, and took his place.

Nothing but troubles and violent agitations were to be seen on all sides.² In Egypt, the Alexandrians,

wary of their king Alexander, took up arms and expelled him, and called in Ptolemy Auletes. He was a bastard of Lathyrus, who never had a legitimate son. He was surnamed Auletes, that is to say, the player upon the flute, because he valued himself so much upon playing well upon that instrument, that he disputed the prize of it in the public games. Alexander, being driven out in this manner, went to Pompey, who was then in the neighbourhood, to demand aid of him: Pompey would not interfere in his affairs, because they were foreign to his commission. That prince retired to Tyre, to wait there a more favourable conjuncture.

But none offered, and he died there some time after. Before his death, he made a will, by which he declared the Roman people his heirs. The succession was important, and included all the dominions Alexander had possessed, and to which he had retained a lawful right, of which the violence he had sustained could not deprive him. The affair was taken into consideration by the senate.³ Some were of opinion that it was necessary to take possession of Egypt, and of the island of Cyprus, of which the testator had been sovereign, and which he had bequeathed in favour of the Roman people. The majority of the senators did not approve this advice. They had very lately taken possession of Bithynia, which had been left them by the will of Nicomedes; and of Cyrenica and Libya, which had been also given them by that of Apion; and they had reduced all those countries into Roman provinces. They were afraid, that if they also accepted Egypt and the isle of Cyprus in virtue of a like donation, that their facility in accumulating provinces upon provinces, might alienate men's minds from them, and indicate and express too clearly a fixed design to engross in the same manner all other states. They believed, besides, that this enterprize might involve them in another war, which would embarrass them very much, whilst they had that with Mithridates upon their hands. So that they contented themselves for the present with causing all the effects which Alexander had at his death to be brought from Tyre, and did not meddle with the rest of his estates. This proceeding sufficiently implied, that they did not renounce the will, as the sequel will fully explain.

This is the fourth example of dominions left to the Roman people by will; a very singular custom, and almost unheard-of in all other history, which undoubtedly does great honour to those in whose favour it

was established. The usual methods of extending the bounds of a state, are war, victory and conquest. But with what enormous injustice and violence are those methods attended, and how much devastation and blood must it cost to subject a country by force of arms? In this there is nothing cruel and inhuman, and neither tears nor blood are shed. It is a pacific and legitimate increase of power, the simple acceptance of a voluntary gift. Subjection here has nothing of violence to enforce it, and proceeds from the heart.

There is another sort of violence, which has neither the name nor appearance of being so, but it is no less dangerous on that account; I mean seduction: when to obtain the suffrages of a people, undermining arts, indirect means, secret artifices, and great donations of money are employed to corrupt the fidelity of the persons of the highest credit and authority in states and kingdoms, and events are influenced, in which the principal agents act at a distance, and do not seem to have any share. In this we now speak of, there was no visible trace of a policy so common with princes, and which, so far from making any scruple of it, they imagine for their glory.

Attalus, who was the first, if I am not mistaken, that appointed the Roman people his heirs, had not engaged in any strict union with that republic during the short time he reigned. As for Ptolemy Apion, king of Cyrenica, the Romans far from using any arts to attain the succession to his dominions, renounced it, left the people in the full enjoyment of their liberty, and would not accept the inheritance afterwards, till they were in some measure obliged to it against their will. It does not appear that they employed any solicitations, either public or private, towards Nicomedes, king of Bithynia, or Ptolemy Alexander, king of Egypt.

What motives then induced these princes to act in this manner? First, gratitude: the house of Attalus was indebted for all its splendour to the Romans; Nicomedes had been defended by them against Mithridates; and next, love for their people, the desire of procuring a lasting tranquillity for them, and the idea they entertained of the wisdom, justice, and moderation of the Roman people. They died without children or lawful successors; for bastards were not looked upon as such. They had only in view the future divisions and civil wars that might arise about the choice of a king, of which Egypt and Syria supplied them with dreadful examples. They saw with their own eyes the tranquillity and happiness enjoyed by many cities and nations under the shelter and protection of the Roman people.

A prince, in the situation of which we speak, had but three things to choose; either to leave his throne to the ambition of the grandes of his kingdom; to restore to his subjects their entire liberty, by instituting republican government; or to give his kingdom to the Romans.

The first choice undoubtedly exposed the kingdom to all the horrors of a civil war, which the factions and jealousies of the great would not fail to excite, and continue with heat and fury; and the prince's love for his subjects induced him to spare them misfortunes as fatal as they would be inevitable.

The execution of the second choice was impracticable. There are many nations, whose genius, manners, characters, and habit of living, do not admit their being formed into republics. They are not capable of that uniform equality, that dependence upon mute laws, which do not make an impression on their senses. They are made for monarchy; and every other kind of government is incompatible with the natural frame of their minds. Cyrenica, which has a share in the present question, is a proof of this; and all ages and climates supply us with examples of the same kind.

A prince, therefore, at his death, could not do more wisely than to leave his subjects the alliance and protection of a people, feared and respected by the whole universe, and therefore capable of defending them from the unjust and violent attempts of their neighbours. How many civil divisions, and bloody discord, did he spare them by this kind of testamentary disposition? This appears from the example of Cy

³ Cicero. Orat. ii. in Rullum. n. 41—43.

renaica. The Romans, out of a noble disinterestedness, having refused the legacy which the king had bequeathed to them at his death, that unhappy kingdom, abandoned to liberty and its own will, gives itself up to cabals and intrigues. Torn by a thousand factions, exasperated almost to madness against each other, and, in a word, become like a ship without a pilot in the midst of the most violent storms, it suffered many years the most incredible calamities; the only remedy of which was to pray, and in some manner to force, the Romans to vouchsafe to take the government of it upon themselves.

Besides this, a prince by such conduct did no more than prevent, and that advantageously for his people, what must necessarily have happened sooner or later. Was there any city or state capable of making head against the Romans? Could it be expected, that a kingdom, especially when the royal family was extinct, could support itself and its independence, long against them? There was an inevitable necessity, therefore, for its falling into the hands of that people; and for that reason it was highly consistent with prudence to soften the yoke by a voluntary subjection. For they made a great difference between those nations who submitted to them freely as to friends and protectors, and those who only yielded to them out of force, after a long and obstinate resistance, and being compelled, by reiterated defeats, to give way at last to a conqueror. We have seen with what severity the Macedonians, at least the principal persons of the nation, and after them the Achæans, were treated; especially during the first year of their subjection.

The other nations suffered nothing of that kind; and, generally speaking, of all foreign yokes none ever was lighter than that of the Romans. Scarce could its weight be perceived by those who bore it. The subjection of Greece to the Roman empire, even under the emperors themselves, was rather a means to ensure the public tranquillity, than a servitude heavy upon private persons, and prejudicial to society. Most of the cities were governed by their ancient laws, had always their own magistrates, and wanted very little of enjoying entire liberty. They were by that means secured from all the inconveniences and misfortunes of war with their neighbours, which had so long and so cruelly distressed the republic of Greece in the times of their ancestors. So that the Greeks seemed to be great gainers in ransoming themselves from these inconveniences by some diminution of their liberty.

It is true, the provinces sometimes suffered very much from the avarice of their governors. But those were only transient evils, which had no long effects, and to which the goodness and justice of a worthy successor applied a speedy redress; and which, after all, were not comparable to the disorders with which the wars of the Athenians, Thebans, and Lacedæmonians, against each other, were attended; and still less to the violence and ravages occasioned in many cities and states, by the insatiable avarice and barbarous cruelty of tyrants.

An evident proof of the wisdom of the plan adopted by princes, of leaving their dominions to the Romans after their death, is, that their people never exclaimed against that disposition, nor proceeded to any revolt of their own accord, to prevent its taking effect.

I do not pretend to exculpate the Romans entirely in this place, nor to justify their conduct in all things. I have sufficiently animadverted upon the interested views and political motives which influenced their actions. I only say, that the Roman government, especially with regard to those who submitted voluntarily to them, was gentle, humane, equitable, advantageous to the people, and the source of their peace and tranquillity. There were indeed some individual oppressors, who made the Roman people authorize the most flagrant injustice, of which we shall soon see an example; but there was always in that republic a considerable number of citizens, zealous for the public good, who rose up against those violence, and declared loudly for justice. This, however, was not the case in the affair of Cyprus, which it is now time to relate.

Clodius,† who commanded a small fleet near Cilicia, was defeated and taken prisoner by the pirates of that coast, against whom he had been sent. He caused Ptolemy, king of Cyprus, brother of Ptolemy Auletes, to be desired in his name to send him money to pay his ransom. That prince, who was a kind of prodigy in point of avarice, sent him only two talents. The pirates chose rather to release Clodius without ransom, than to take so small a one.

His thoughts were bent upon being revenged on that king as soon as possible. He had found means to get himself elected tribune of the people; an important office, which gave him great power. Clodius made use of it for the destruction of his enemy. He pretended that that prince had no right to the kingdom of Cyprus, which had been left to the Roman people by the will of Alexander, who died at Tyre. It was determined, in consequence, that the kingdom of Egypt, and that of Cyprus, which depended on it, appertained to the Romans in virtue of that donation; and Clodius accordingly obtained an order of the people to seize the kingdom of Cyprus, to depose Ptolemy, and to confiscate all his effects. To put so unjust an order in execution, he had sufficient influence and address to cause the justest of all the Romans to be elected, I mean Cato,‡ whom he removed from the republic, under the pretext of so honourable a commission, that he might not find in him an obstacle to the violent and criminal designs which he was meditating. Cato was therefore sent into the isle of Cyprus, to deprive a prince of his kingdom, who well deserved that disgrace, says an historian, for his many irregularities: as if a man's vices sufficiently authorized the seizure of all his property.

Cato, upon his arrival at Rhodes,§ sent to bid Ptolemy retire peaceably; and promised him, if he complied, to procure him the high-priesthood of the temple of Væus at Paphos, the revenues of which were sufficiently considerable to enable him to subsist honourably. Ptolemy rejected that proposal. He was not, however, in a condition to defend himself against the power of the Romans; but could not resolve, after having worn a crown so long, to live as a private person. Determined therefore to end his life and reign together, he embarked with all his treasures, and put to sea. His design was to have holes bored in the bottom of his ship, that it might sink with him and all his riches. But when he came to the execution of his purpose, though he persisted constantly in the resolution of dying himself, he had not courage to include his innocent and well-beloved treasures in his ruin; and thereby showed that he loved them better than he did himself;—king of Cyprus indeed in title, but in fact, the mean slave of his money. He returned to shore, and replaced his gold in his magazines, after which he poisoned himself, and left the whole to his enemies. Cato carried those treasures, the following year, to Rome. The sum was so large, that in the greatest triumphs the like had scarce ever been laid up in the public treasury. Plutarch makes it amount to almost 7000 talents (1,050,000*l.* sterling.) Cato caused all Ptolemy's precious effects and furniture to be sold publicly; reserving to himself only a picture of Zeno, the founder of the Stoics, the sentiments of which sect he followed.

The Roman people here throw off the mask, and show themselves not such as they had been in the glorious ages of the republic, full of contempt for riches and of esteem for poverty, but such as they were become, after that gold and silver had entered Rome in triumph with their victorious generals. Never was any thing more capable of disgracing and reproaching the Romans than this last action. “The Roman

out any formality, and all his effects sold by auction almost before his eyes, by order of the same Roman people. This," continues Cicero, "shows other kings, upon what they are to rely for their security: from this fatal example they learn, that amongst us, there needs only the secret intrigue of some seditious tribune, to deprive them of their thrones, and to plunder them at the same time of all their fortunes."

What I am most amazed at is, that Cato, the justest and most upright man of those times, (but what was the most shining virtue and justice of the Pagans!) should lend his name and service in so notorious an injustice. Cicero, who had reasons for sparing him and dared not blame his conduct openly, shows, however, in the same oration which I have now cited, but in an artful and delicate manner, and under the appearance of excusing him, how much he had dishonoured himself by that action.

During Cato's stay at Rhodes, Ptolemy Auletes king of Egypt, and brother to him of Cyprus, came thither to him. I reserve for a following book the history of that prince, which merits particular attention.

THE HISTORY OF ALEXANDER'S SUCCESSORS,

CONTINUED

BOOK XXI.

The twenty-first book is divided into three articles, which are all abridgments: the first, the history of the Jews, from the reign of Aristobulus to that of Herod the Great; the second, of the history of the Parthians, from the establishment of that empire to the defeat of Crassus; the third, of the history of the kings of Cappadocia, to the annexing of that kingdom to the Roman empire.

ARTICLE I.

ABRIDGMENT OF THE HISTORY OF THE JEWS, FROM ARISTOBULUS, SON OF HYRCANUS, WHO FIRST ASSUMED THE TITLE OF KING, TO THE REIGN OF HEROD THE GREAT, THE IDUMÆAN.

As the history of the Jews is often intermixed with that of the kings of Syria and Egypt, I have taken care, as occasion offered, to relate those circumstances of it which were most necessary and suitable to my subject. I shall add here what remains of that history to the reign of Herod the Great. The historian Josephus, who is in every one's hands, will satisfy the laudable curiosity of such as are desirous of being more fully informed. Dean Prideaux, of whom I have here made much use, may be also consulted for the same purpose.

SECTION I.—REIGN OF ARISTOBULUS THE FIRST, WHICH LASTED TWO YEARS.

HYRCANUS,¹ high priest and prince of the Jews, had left five sons at his death. The first was

Aristobulus, the second Antigonus, the third Alexander Jannæus, the fourth's name is unknown. The fifth was called Absalom.

Aristobulus, as the eldest, succeeded his father in the high-priesthood and temporal sovereignty. As soon as he saw himself well established, he assumed the diadem and title of king, which none of those

who had governed Judea since the Babylonish captivity had done besides himself. The circumstances of the times seemed favourable for that design. The kings of Syria and Egypt, who were alone capable of opposing it, were weak princes, involved in domestic troubles and civil wars, little secure upon the throne, and not maintaining themselves long in the possession of it. He knew that the Romans were much inclined to authorize the dismembering and dividing the dominions of the Grecian kings, in order to weaken and keep them low in comparison with themselves. Besides, it was natural for Aristobulus to take advantage of the victories and acquisitions made by his ancestors, who had given an assured and uninterrupted establishment to the Jewish nation, and enabled it to support the dignity of a king amongst its neighbours.

Aristobulus's mother, in virtue of Hyrcanus's will, pretended to the government; but Aristobulus was the strongest, and put her in prison, when he caused her to be starved to death. With respect to his brothers, as he very much loved Antigonus the eldest of them, he gave him at first a share in the government. He confined the other three in prison, and kept them there during his life.

When Aristobulus² had fully possessed himself of the authority A. M. 3898. Ant. J. C. 106. entered into a war with the Ituræans; and after having subjected the greater part of them, he obliged them to embrace Judaism, as Hyrcanus had compelled the Idumæans some years before. He gave them the alternative, either to be circumcised and profess the Jewish religion, or to quit their country and seek a settlement elsewhere. They chose to stay, and comply with what was required of them, and thus were incorporated with the

¹ Joseph. Antiq. xiii. 19, &c. Id. de Bell. Jud. l. 3.

² Joseph. Antiq. xiii. 19. Id. de Bell. Jud. l. 3.

Jews, both as to spirituals and temporal. This practice became a fundamental maxim with the Asmoneans. It shows, that they had not a just idea of religion at that time, which does not impose itself by force, and which ought not to be received but voluntarily and by persuasion. Iturea, which was inhabited by the people in question, formed part of Coele-syria, on the north-east frontier of Israel, between the inheritance of the half tribe of Manasseh on the other side of Jordan, and the territory of Damascus.

A distemper obliged Aristobulus to return from Iturea to Jerusalem, and to leave the command of the army to his brother Antigonus, to make an end of the war he had begun. The queen and her cabal, who envied Antigonus the king's favour, took advantage of this illness, to prejudice the king against him by false reports and vile calumnies. Antigonus soon returned to Jerusalem after the successes by which he had terminated the war. His entry was a kind of triumph. The feast of tabernacles was then celebrating. He went directly to the temple with his guards, completely armed as he had entered the city, without giving himself time to change any part of his equipage. This was imputed to him as a crime with the king; who, otherwise prejudiced against him, sent him orders to disarm himself, and come to him as soon as possible; conceiving, that if he refused to obey, it was a proof of some bad design; and in that case he gave orders that he should be killed. The person sent by Aristobulus was gained by the queen and her cabal, and told him the order quite differently; that the king desired to see him completely armed as he was. Antigonus went directly to wait on him; and the guards who saw him come in his arms, obeyed their orders, and killed him.

Aristobulus, having discovered all that had passed, was keenly affected with it, and inconsolable for his death. Tormented with remorse of conscience for this murder, and that of his mother, he led a miserable life, and expired at last in anguish and despair.

SECTION II.—REIGN OF ALEXANDER JANNEUS, WHICH CONTINUED TWENTY-SEVEN YEARS.

SALOME,¹ the wife of Aristobulus, A. M. 3899. immediately after his death, took Ant. J. C. 105. the three princes out of the prison, into which they had been put by her husband. Alexander Janneus, the eldest of the three, was crowned. He put his next brother to death, who had endeavoured to deprive him of the crown. As for the third, named Absalom, who was of a peaceable disposition, and who had no thoughts but of living in tranquillity as a private person, he granted him his favour, and protected him during his whole life. No more is said of him² than that he gave his daughter in marriage to Aristobulus the youngest son of his brother Alexander, and that he served him against the Romans at the siege of Jerusalem, in which he was made prisoner forty-two years after, when the temple was taken by Pompey.

Whilst all this was passing, the two kings of Syria, of whom Grypus reigned at Antioch, and Antiochus of Cyzicum at Damascus, made a cruel war upon each other, although they were brothers. Cleopatra, and Alexander the youngest of her sons, reigned in Egypt, and Ptolemy Lathyrus the eldest, in Cyprus.

Alexander Janneus, some time after he returned to Jerusalem, and had taken possession of the throne, had set a strong army on foot, which passed the Jordan, and formed the siege of Gadara. At the end of ten months, having made himself master of that city, he took several other very strong places, situated also on the other side of the Jordan. But not being sufficiently upon his guard on his return, he was beaten by the enemy, and lost 10,000 men, with all the spoils he had taken, and his own baggage. He returned to Jerusalem in the highest affliction for this loss, and the shame with which it was attended. He had even the mortification to see, that many people, instead of lamenting his misfortune, took a malignant joy in it.

For since the quarrel of Hyrcanus with the Pharisees, they had always been the enemies of his house, and especially of this Alexander. And as they had drawn almost the whole people into their party, they had so strongly prejudiced and inflamed them against him, that all the disorders and commotions with which his whole reign was embroiled, flowed from this source.

This loss, great as it was, did not prevent his going to seize Raphia A. M. 3904. and Anthoned, when he saw the Ant. J. C. 180. coast of Gaza without defence, after the departure of Lathyrus.

Those two posts, which were only a few miles from Gaza, kept it in a manner blocked up, which was what he proposed when he attacked them. He had never forgiven the inhabitants of Gaza for calling in Lathyrus against him, and giving him troops, which had contributed to his gaining the fatal battle of the Jordan; and he earnestly sought all occasions to avenge himself upon them.

As soon as his affairs would permit, he came with a numerous army A. M. 3906. to besiege their city. Apollodorus, Ant. J. C. 98. the governor of it, defended the place a whole year with a valour and prudence that acquired him great reputation. His own brother Lysimachus could not A. M. 3907. see his glory without envy; and that Ant. J. C. 97. base passion induced him to assassinate the governor. That wretch afterwards associated with some others as abandoned as himself, and surrendered the city to Alexander. Upon his entrance, it was thought by his behaviour and the orders which he gave, that he intended to use his victory with clemency and moderation. But as soon as he saw himself master of all the posts, and that there was nothing to oppose him, he let loose his soldiers with permission to kill, plunder, and destroy; and immediately all the barbarity that could be imagined was exercised upon that unfortunate city. The pleasure of revenge cost him very dear. For the inhabitants of Gaza defended themselves like men in despair, and killed almost as many of his people as they were themselves. But at length he satiated his brutal revenge, and reduced that ancient and famous city to a heap of ruins; after which he returned to Jerusalem. This war employed him a year.

Some time after the people affronted him in the most heinous A. M. 3905. manner.³ At the feast of tabernacles, whilst he was in the temple, offering the solemn sacrifice, in quality of high-priest, upon the altar of burnt-offerings, they threw lemons at his head, calling him a thousand injurious names, and amongst the rest giving him that of "Slave;" a reproach which sufficiently argued, that they looked upon him as unworthy of the crown and pontificate. This was a consequence of what Eleazar had presumed to advance; that the mother of Hyrcanus had been a captive. These indignities enraged Alexander to such a degree, that he attacked those insolent people in person, at the head of his guards, and killed 6000 of them. Seeing how much the Jews were disaffected towards him, he was afraid to trust his person any longer to them, and used foreign troops for his guard, whom he caused to come from Pisidia and Cilicia. Of these he formed a body of 6000 men, who attended him every where.

When Alexander saw the storm which had been raised against him A. M. 3910. a little appeased by the terror of the Ant. J. C. 94. revenge he had taken for it, he turned his arms against the enemy abroad. After having obtained some advantages over them, he fell into an ambuscade wherein he lost the greatest part of his army, and escaped himself with great difficulty. At his return to A. M. 3912. Jerusalem, the Jews, incensed at Ant. J. C. 92. this defeat, revolted against him. They flattered themselves, that they should find him so much weakened and dejected by his late loss, that they should experience no difficulty in completing his

¹ Joseph. Antiq. xii. 20. Id. de Bell. Jud. i. 3.

² Joseph. Antiq. xiv. 8.

³ Joseph. Antiq. xiii. 21.

destruction, which they had so long desired. Alexander, who wanted neither application nor valour, and who besides had a more than common capacity, soon found troops to oppose them. A civil war ensued between him and his subjects, which continued six years, and occasioned great misfortunes to both parties. The rebels were beaten and defeated upon many occasions.

Alexander, having taken a city A. M. 3918. wherein many of them had shut themselves up, carried 800 of them to Jerusalem, and caused them all to be crucified in one day. When they were fixed to the cross, he ordered their wives and children to be brought out, and to have their throats cut before their faces. During this cruel execution, the king regaled his wives and concubines in a place from whence they saw all that passed; and this sight was to him and them the principal part of the entertainment. Horrid gratification! This civil war, during the six years it lasted, had cost the lives of more than 50,000 men on the side of the rebels.

Alexander, after having put an end to it, undertook many other foreign expeditions with very great success. Upon his return to Jerusalem, he abandoned himself to intemperance and excess of wine, which brought a quartan ague upon him, of which he died at the end of three years, after having reigned twenty-seven.

He left two sons, Hyrcanus and Aristobulus; but he decreed by his will, that Alexandra his wife should govern the kingdom during her life, and choose which of her sons she thought fit to succeed her.

SECTION III. REIGN OF ALEXANDRA, THE WIFE OF ALEXANDER JANNÆUS, WHICH CONTINUED NINE YEARS. HYRCANUS HER ELDEST SON IS HIGH-PRIEST DURING THAT TIME.

ACCORDING to the advice of her husband,¹ Alexandra submitted herself and her children to the power of the Pharisees, declaring to them, that in doing so, she acted only in conformity to the law of her husband.

By this step she so well conciliated them, that, forgetting their hatred for the dead, though they had carried it during his life as far as possible, they changed it on a sudden into respect and veneration for his memory; and instead of the invectives and reproaches which they had always abundantly vented against him, nothing was heard but praises and panegyrics, wherein they exalted immoderately the great actions of Alexander, by which the nation had been aggrandized, and its power, honour, and credit, much augmented. By this means they brought over the people so effectually, whom till then they had always irritated against him, that they celebrated his funeral with greater pomp and magnificence than that of any of his predecessors; and Alexandra, according to the intent of his will, was confirmed sovereign administratrix of the nation. We see from hence, that a blind and unlimited conformity to the power and will of the Pharisees was with them a substitute for every kind of merit, and made all failings, and even crimes, disappear as effectually as if they had never been: which is very common with those who are fond of ruling.

When that princess saw herself well established, she caused her eldest son Hyrcanus to be received as high-priest: he was then near thirty-three years of age. According to her promise, she gave the administration of all important affairs to the Pharisees. The first thing they did was to repeal the decree, by which John Hyrcanus, father of the two last kings, had abolished all their traditional constitutions, which were afterwards more generally received than ever. They persecuted with great cruelty all those who had declared themselves their enemies in the preceding reigns, without the queen's being able to prevent them; because she had tied up her own hands, by

putting herself into those of the Pharisees. She had seen in her husband's time what a civil war was, and the infinite misfortunes with which it is attended. She was afraid of kindling a new one; and not knowing any other means to prevent it, than by giving way to the violence of those revengeful and inexorable men, she believed it necessary to suffer a less evil, in order to prevent a greater.

What we have said upon this head may contribute very much to our having a right notion of the state of the Jewish nation, and of the characters of those who governed it.

The Pharisees still continued their persecutions against those who A. M. 3931. had opposed them under the late king.² They made them accountable for all the cruelties and faults with which they thought proper to blacken his memory. They had already got rid of many of their enemies under this pretext, and invented every day new articles of accusation to destroy those who gave them most umbrage amongst such as still survived.

The friends and partizans of the late king, seeing that there was no end to these persecutions, and that their destruction was sworn, assembled at last, and came in a body to wait on the queen, with Aristobulus, her second son, at their head. They represented to her the services they had done the late king; their fidelity and attachment to him in all his wars, and all the difficulties in which he had been involved during the troubles. That it was very hard at present, that under her government, every thing they had done for him should be made criminal, and they should see themselves sacrificed to the implacable hatred of their enemies, solely for their adherence to herself and her family. They implored her either to put a stop to such sort of inquiries; or, if that was not in her power, to permit them to retire out of the country, in order to seek an asylum elsewhere: at least they begged her to put them into garrisoned places, where they might find some security against the violence of their enemies.

The queen was as much affected as it was possible to be with the condition she saw them in, and the injustice done them. But it was out of her power to do for them all she desired; for she had given herself masters, by engaging to take no steps without the consent of the Pharisees. How dangerous is it to invest such people with too much authority! They exclaimed, that it would be putting a stop to the course of justice to suspend the inquiries after the culpable; that such a proceeding was what no government ought to suffer, and that therefore they never would accede to it. On the other side, the queen believed that she ought not to give her consent, that the real and faithful friends of her family should abandon their country in such a manner; because she would then lie at the mercy of a turbulent faction, without any support, and would have no resource in case of necessity. She resolved therefore upon the third point they had proposed to her, and dispersed them into places where she had garrisons. She found two advantages resulting from that conduct: the first was, that their enemies dared not attack them in those fortresses, where they would have arms in their hands; and the second, that they would always be a body of reserve, upon which she could rely upon occasion in case of any rupture.

Some years after, queen Alexandra fell sick of a very dangerous distemper, which brought her to the point of death. As soon as Aristobulus, her youngest son, saw that she could not recover, as he had long formed the design of seizing the crown at her death, he stole out of Jerusalem in the night, with only one domestic, and went to the places, in which, according to a plan he had given them, the friends of his father had been placed in garrison. He was received there with open arms, and in fifteen days' time twenty-two of those towns and castles declared for him, which put him in possession of almost all the forces of the state. The people as

¹ Joseph. Antiq. xiii. 23, 24, and de Bell. Jud. l. 4.

² Joseph. Antiq. xiii. 24, and de Bell. Jud. l. 4.

well; as the army were entirely inclined to declare for him, being weary of the cruel administration of the Pharisees, who had governed without control under Alexandria, and were become insupportable to every one. They came therefore in crowds from all quarters to follow the standards of Aristobulus; in hopes that he would abolish the tyranny of the Pharisees, which could not be expected from Hyrcanus his elder brother, who had been brought up by his mother in a blind submission to that sect: besides which, he had neither the courage nor capacity necessary for so vigorous a design; for he was heavy and indolent, void of industry and application, and of a very mean capacity.

When the Pharisees saw that Aristobulus's party augmented considerably, they went with Hyrcanus at their head to represent to the dying queen what was going forward, and to demand her orders and assistance. She answered, that she was no longer in a condition to intermeddle in such affairs, and that she left the care of them to the Pharisees. However, she appointed Hyrcanus her heir, and expired soon after.

As soon as she was dead, he took possession of the throne, and the Pharisees used all their endeavours to support him upon it. When Aristobulus quitted Jerusalem, they had caused his wife and children, whom he had left behind him, to be shut up in the castle of Baris,¹ as hostages against himself. But seeing this did not stop him,² they raised an army. Aristobulus did the same. A battle near Jericho decided the quarrel. Hyrcanus, abandoned by most part of his troops, who went over to his brother, was obliged to fly to Jerusalem, and to shut himself up in the castle of Baris; his partisans took refuge in the temple. A short time after they also submitted to Aristobulus, and Hyrcanus was obliged to come to an accommodation with him.

SECTION IV.—REIGN OF ARISTOBULUS II., WHICH CONTINUED SIX YEARS.

It was agreed by this accommodation, that Aristobulus should have A. M. 3935. the crown and high-priesthood, and Ant. J. C. 69. that Hyrcanus should resign both to him, and content himself with a private life, under the protection of his brother, and with the enjoyment of his fortune. It was not difficult to reconcile him to this; for he loved quiet and ease above all things. Thus he quitted the government after having possessed it three months. The tyranny of the Pharisees ended with his reign, after having greatly distressed the Jewish nation from the time of the death of Alexander Jannæus.

The troubles of the state were not so soon appeased; these were occasioned by the ambition of Antipater, better known under the name of Antipater, father of Herod. He was by extraction an Idumean, and a Jew by religion, as were all the Idumeans, from the time that Hyrcanus had obliged them to embrace Judaism. As he had been brought up in the court of Alexander Jannæus, and of Alexandria his wife, who reigned after him, he had gained an ascendancy over Hyrcanus, their eldest son, with the hope of raising himself by his favour, when he should succeed to the crown. But when he saw all his measures defeated by the deposition of

A. M. 3939. Hyrcanus,³ and the coronation of Ant. J. C. 65. Aristobulus, from whom he had nothing to expect, he employed his whole address and application to replace Hyrcanus upon the throne.

The latter, by his secret negotiations, had at first applied to Aretas, king of Arabia Petraea, for aid to reinstate himself. After various events, which I pass over to avoid prolixity, he had recourse to Pompey, who, on his return from his expedition against Mithridates, was arrived in Syria.⁴ He there took cogni-

zance of the competition between Hyrcanus and Aristobulus, who repaired thither according to his orders. A great number of Jews went thither also, to request that he would free them from the government of both the one and the other. They represented that they ought not to be ruled by kings: that they had long been accustomed to obey only the high-priest, who, without any other title administered justice according to the laws and constitutions transmitted down to them from their forefathers: that the two brothers were indeed of the sacerdotal line; but that they had changed the form of the government for a new one, which would enslave them, if not remedied.

Hyrcanus complained, that Aristobulus had unjustly deprived him of his birthright, by usurping every thing, and leaving him only a small estate for his subsistence. He accused him also of practising piracy at sea, and of plundering his neighbours by land. And to confirm what he alleged against him, he produced almost a thousand Jews, the principal men of the nation, whom Antipater had brought expressly to support by their testimony what that prince had to say against his brother.

Aristobulus replied to this, That Hyrcanus had been deposed only for his incapacity: that his sloth and indolence rendered him entirely incapable of the management of public affairs; that the people despised him; and that he (Aristobulus) had been obliged to take the reins of the government into his own hands, to prevent them from falling into those of strangers. In fine, that he bore no other title than what his father Alexander had done before him. And in proof of what he advanced, he produced a great number of the young nobility of the country, who appeared with all possible splendour and magnificence. Their superb habits, haughty manners, and proud demeanour, did no great service to his cause.

Pompey heard enough to discern that the conduct of Aristobulus was violent and unjust; but would not, however, pronounce immediately upon it, lest Aristobulus, out of resentment, should oppose his designs against Arabia, which he had much at heart: he therefore politely dismissed the two brothers; and told them, that at his return from reducing Aretas and his Arabians, he should pass through Judæa, and that he would then regulate their affair, and settle every thing.

Aristobulus, who fully penetrated Pompey's sentiments, set out suddenly for Damascus, without paying him the least instance of respect, returned into Judæa, armed his subjects, and prepared for a vigorous defence. By this conduct, he made Pompey his mortal enemy.

Pompey applied himself also in making preparations for the Arabian war. Aretas till then had despised the Roman arms; but when he saw them at his door, and that victorious army ready to enter his dominions, he sent an embassy to make his submission. Pompey, however, advanced as far as Petra, his capital, of which he made himself master. Aretas was taken in it. Pompey at first kept him under a guard, but at length he was released upon accepting the conditions imposed on him by the victor, who soon after returned to Damascus.

He was not apprized till then of Aristobulus's proceedings in Judæa. He marched thither with his army, and found Aristobulus posted in the castle of Alexandrion, which stood upon a high mountain at the entrance of the country. This was an extremely strong place, built by his father Alexander, who had given his name to it. Pompey sent to bid him come down to him. Aristobulus was not much inclined to comply, but at last acceded to the opinion of those about him, who, dreading a war with the Romans, advised him to go. He did so; and after a conversation which turned upon his difference with his brother, he returned into his castle. He repented the same visit two or three times, in hopes by that civility to gain upon Pompey, and induce him to decide in his favour. But for fear of accident, he did not omit to put good garrisons into his strong places, and to make all other preparations for a vigorous defence, in case Pompey should decide against him. Pompey, who had advice of his proceedings, the last time he came

¹ Baris was a castle situate upon a high rock without the works of the temple, which were upon the same rock.

⁴ Joseph. Antiq. xiv. 5. Id. de Bell. Jud. l. 5.

to him obliged him to put them all into his hands, by way of sequestration, and made him sign orders for that purpose to all the commanders of those places.

Aristobulus, incensed at the violence which had been offered him, as soon as he was released, made all haste to Jerusalem, and prepared every thing for the war. His resolutions to keep the crown, made him the sport of two different passions, hope and fear. When he saw the least appearance that Pompey would decide in his favour, he made use of all the arts of complaisance to incline him to it. When, on the contrary, he had the least reason to suspect that he would declare against him, he observed a directly opposite conduct. This was the cause of the contrariety visible in the different steps he took throughout this affair.

Pompey followed him close. The first place where he encamped in his way to Jerusalem, was Jericho; there he received the news of Mithridates's death, as we shall see in the following book.

He continued his march towards Jerusalem. When he approached, Aristobulus, who began to repent of what he had done, came out to meet him, and endeavoured to bring him to an accommodation, by promising an entire submission, and a great sum of money to prevent the war. Pompey accepted his offers, and sent Gabinius, at the head of a detachment, to receive the money; but when that lieutenant-general arrived at Jerusalem, he found the gates shut against him; and, instead of receiving the money, he was told from the top of the walls, that the city would not stand to the agreement. Pompey thereupon, not being willing that they should deceive him with impunity, ordered Aristobulus, whom he had kept with him, to be put in irons, and advanced with his whole army against Jerusalem. The city was extremely strong by its situation and the works which had been made; and had it not been for the dissensions that prevailed within it, was capable of making a long defence.

Aristobulus's party was for defending the place; especially when they saw that Pompey kept their king prisoner. But the adherents of Hyrcanus were determined to open the gates to that general. And as the latter were much the greater number, the other party retired to the mountain of the temple, to defend it, and caused the bridges of the ditch and valley which surrounded it to be broken down. Pompey, to whom the city immediately opened its gates, resolved to besiege the temple. The place held out three whole months, and would have done so three more, and perhaps obliged the Romans to abandon their enterprise, but for the superstitious rigour with which the besieged observed the sabbath. They believed, indeed, that they might defend themselves when attacked, but not that they might prevent the works of the enemy, or make any for themselves. The Romans knew how to take advantage of this inaction upon the sabbath-days. They did not attack the Jews upon them, but filled up the fosses, made their approaches, and fixed their engines without opposition. They threw down at length a great tower, which carried along with it so great a part of the wall, that the breach was large enough for an assault. The place was carried sword in hand, and a terrible slaughter ensued, in which more than 12,000 persons were killed.

During the whole tumult, the cries, and disorder of this slaughter, history observes, that the priests, who were at that time employed in divine service, continued it with surprising calmness, notwithstanding the rage of their enemies, and their grief to see their friends and relations massacred before their eyes. Many of them saw their own blood mingle with that of the sacrifices they were offering, and the sword of the enemy make themselves the victims of their duty; happy and worthy of being envied, if they had been as faithful to the spirit as the letter of it!

Pompey, with many of his superior officers, entered the temple, and not only into the sanctuary, but into the holy of holies, into which, by the law, the high-priest alone was permitted to enter once a year, upon the solemn day of expiation. This was what most keenly afflicted the Jews, and enraged that people so bitterly against the Romans.

Pompey did not touch the treasures of the temple, which consisted principally in sums that had been deposited there by private families for their better security. Those sums amounted to 2000 talents in specie,¹ without reckoning the gold and silver vessels, which were innumerable, and of infinite value. It was not,² says Cicero, out of respect for the majesty of the God adored in that temple, that Pompey behaved in this manner; for, according to him, nothing was more contemptible than the Jewish religion, more unworthy the wisdom and grandeur of the Romans, nor more opposite to the institutions of their ancestors. Pompey in this noble disinterestedness had no other motive than to deprive malice and calumny of all means of attacking his reputation. Such were the thoughts of the most learned of the Pagans, with respect to the only religion of the true God. They blasphemed what they knew not.

It hath been observed, that till then Pompey had been successful in all things, but that after this sacrilegious curiosity, his good fortune abandoned him, and that the advantage gained over the Jews was his last victory.

SECTION V.—REIGN OF HYRCANUS II. WHICH CONTINUED TWENTY-FOUR YEARS.

POMPEY having thus put an end to the war, caused the walls of Jerusalem to be demolished, re-established Hyrcanus, and sent Aristobulus, with his two sons, Alexander and Antigonus, prisoners to Rome. He dismembered several cities from the kingdom of Judæa, which he united with the government of Syria, imposed a tribute upon Hyrcanus, and left the administration of affairs to Antipater, who was at the court of Hyrcanus, and one of his principal ministers. Alexander made his escape upon the way to Rome, and returned into Judæa, where he afterwards excited new troubles.

Hyrcanus finding himself too weak to take the field against him, had recourse to the arms of the Romans. Gabinius, governor of Syria, after having overthrown Alexander in a battle, went to Jerusalem, and reinstated Hyrcanus in the high-priesthood.³ He made great alterations in the civil government; for instead of monarchical, as it had been, he changed it into aristocratical: but those innovations were but of short duration.

Crassus, upon his march against the Parthians, always intent upon gratifying his insatiable avarice, stopped at Jerusalem, where he had been told great treasures were laid up. He plundered the temple of all the riches in it, which amounted to the sum of 10,000 talents; that is to say, about 1,500,000*l.* sterling.

Cæsar,⁴ after his expedition into Egypt, being arrived in Syria, Antigonos, who had made his escape from Rome with his father Aristobulus, came to throw himself at his feet, begged him to re-establish him upon the throne of his father, who was lately dead, and made great complaints against Antipater and Hyrcanus. Cæsar had two great obligations to both, to do any thing contrary to their interests; for, as we shall see in the sequel, without the aid he had received from them, his expedition into Egypt would have miscarried. He decreed that Hyrcanus should retain the dignity of high-priest of Jerusalem, and the sovereignty of Judæa, to himself and his posterity after him for ever, and gave Antipater the office of procurator of Judæa under Hyrcanus. By this decree, the aristocracy of Gabinius

² Cn. Pompeius, captis Hierosolymis, victor ex illo fano nihil audivit. In primis hoc, ut multa alia, sapienter, quod in tam suspiciosa ac malefica civitate locum sermoni obrectatorum non reliquit. Non enim credo religionem at Judæorum et hominum impedimento præstantissimam imperatori, sed pudorem fuisse—intorum religio sacrorum a splendore hujus imperii, gravitate nominis vestri, majorem institutis abhorrebat. *Cic. pro Flac.* n. 67—69.

³ Joseph. Antiq. xiv. 10. Id. de Bell. Jud. l. 6.

⁴ Joseph. Antiq. xiv. 15. Id. de Bell. Jud. l. 8.

was abolished, and the government of Judæa re-established upon the ancient footing.

Antipater caused the government of Jerusalem to be given to Phasaël his eldest son, and that of Galilee to Herod his second son.

A. M. 3960. In consideration of the services he **Ant. J. C. 44.** had rendered him in Egypt and Syria, permitted him to rebuild the walls of Jerusalem which Pompey had caused to be demolished. Antipater, without losing time, began the work, and the city was soon fortified as it had been before the demolition. Cæsar was killed this same year.

During the civil wars, Judæa, as well as all the other provinces of the Roman empire, was agitated by violent troubles.

Pacorus, son of Orodes, king of Parthia, had entered Syria with a powerful army. From thence he sent a detachment into Judæa, with orders to place Antigonus, the son of Aristobulus, upon the throne, who on his side had also raised troops. Hyrcanus, and Phasaël, Herod's brother, upon the proposal of an accommodation, had the imprudence to go to the enemy, who seized them and put them in irons. Herod escaped from Jerusalem the moment before the Parthians entered it to seize him also.

Having missed Herod, they plundered the city and country, placed Antigonus upon the throne, and delivered Hyrcanus and Phasaël in chains into his hands. Phasaël, who well knew that his death was resolved, dashed out his brains against the wall of his prison, to avoid the hands of the executioner. As for Hyrcanus, his life was granted him; but to render him incapable of the priesthood, Antigonus caused his ears to be cut off; for according to the Levitical law, it was requisite that the high-priest should be perfect in all his members. After having thus mutilated him, he gave him back to the Parthians, that they might carry him into the East, from whence it would not be possible for him to embroil affairs in Judæa. He continued a prisoner at Seleucia in Babylonia, till the accession of Phraates to the crown, who caused his chains to be taken off, and gave him entire liberty to see and converse with the Jews of that country, who were very numerous. They looked upon him as their king and high-priest, and raised him a revenue sufficient to support his rank with splendour. The love of his native country made him forget all those advantages. He returned the year following to Jerusalem, whither Herod had invited him to come; but some years afterwards he caused him to be put to death.

Herod had at first taken refuge in Egypt, from whence he went to Rome. Antony was then in the high degree of power which the triumvirate had given him. He took Herod under his protection, and even did more in his favour than he expected. For instead of what he proposed, which was at most to obtain the crown for Aristobulus, to whose sister Mariamne he had for some time been betrothed, with the view only of governing under him, as Antipater had done under Hyrcanus; Antony caused the crown to be conferred upon him, contrary to the usual maxim of the Romans in like cases. For it was not their custom to violate the rights of the royal houses, which acknowledged them for protectors, and to give the crown to strangers. Herod was declared king of Judæa by the senate, and conducted by the consuls to the capitol, where he received the investiture of the crown, with the ceremonies usual upon such occasions.

Herod passed only seven days at Rome in negotiating this great affair, and returned speedily into Judæa. He had employed no more time than three months in his journeys by sea and land.

SECTION VI.—REIGN OF ANTIGONUS OF ONLY TWO YEARS' DURATION.

It was not so easy for Herod to establish himself in possession of the kingdom of Judæa, as it had been to obtain his title from the Romans. **A. M. 3965. Ant. J. C. 39.**

Antigonus was not at all inclined to resign a throne which had cost him so much pains and money to acquire. He disputed it with him very vigorously for almost two years.

Herod, who during the winter had made great preparations for the following campaign, opened it at length with the siege of Jerusalem, which he invested at the head of a fine and numerous army. Antony had given orders to Sosius, governor of Syria, to use his utmost endeavours to reduce Antigonus, and to put Herod into full possession of the kingdom of Judæa. Whilst the works necessary for the siege were carrying on, Herod made a tour to Samaria, and at length consummated his marriage with Mariamne. They had been contracted for years to each other: but the unforeseen troubles which had befallen him, had prevented their consummating the marriage till then. She was the daughter of Alexander the son of king Aristobulus, and Alexandra the daughter of Hyrcanus the Second, and thereby granddaughter to those two brothers. She was a princess of extraordinary beauty and virtue, and possessed in an eminent degree all the other qualities that adorn the sex. The attachment of the Jews to the Asmonean family, made Herod imagine, that, by espousing her, he should find no difficulty in gaining their affection, which was one of his reasons for consummating his marriage at that time. **A. M. 3966. Ant. J. C. 38.**

On his return to Jerusalem, Sosius and he having joined their forces, pressed the siege in concert with the utmost vigour, and with a very numerous army, which amounted to at least 60,000 men. The place, however, held out against them many months with exceeding resolution; and if the besieged had been as expert in the art of war and the defence of places, as they were brave and resolute, it would not perhaps have been taken. But the Romans, who were much better skilled in those things than they, carried the place at length, after a siege of something more than six months.

The Jews being driven from their posts, the enemy entered on all sides, and made themselves masters of the city. And to revenge the obstinate resistance they had made, and the fatigue they had suffered during so long and difficult a siege, they filled all quarters of Jerusalem with blood and slaughter, plundered and destroyed all before them, though Herod did his utmost to prevent both the one and the other. **A. M. 3967. Ant. J. C. 37.**

Antigonus, seeing all was lost, came and threw himself at the feet of Sosius, in the most submissive and most abject manner. He was put in chains, and sent to Antony as soon as he arrived at Antioch. He designed at first to have reserved him for his triumph: but Herod, who did not think himself safe as long as that remnant of the royal family survived, would not let him rest till he had obtained the death of that unfortunate prince, for which he even gave a large sum of money. He was proceeded against in form, condemned to die, and had the sentence executed upon him in the same manner as common criminals, with the rods and axes of the lictor, and was fastened to a stake; a treatment with which the Romans had never used any crowned head before.

Thus ended the reign of the Asmoneans, after a duration of 129 years, reckoning from the beginning of the government of Judas Maccabeus. Herod entered by this means upon the peaceable possession of the kingdom of Judæa.

This singular, extraordinary, and, till then, unexampled event, by which the sovereign authority over

⁴ Levit. xxi. 16—24. Joseph. Antiq. xv. 2.

⁵ Aristobulus was the son of Alexandra, Hyrcanus's daughter; and his father was Alexander, son of Aristobulus, brother of Hyrcanus, so that the right of both brothers to the crown was united in his person.

⁶ Joseph. Antiq. xiv. 27. Id. de Bell. Jux. l. 13.

⁷ Joseph. Antiq. xiv. 27. Plut. in Antica p. 932. Dion. Cass. l. xlix. p. 406.

the Jews was given to a stranger, an Idumean, ought to have opened their eyes, and rendered them attentive to a celebrated prophecy, which had foretold it in clear terms; and had given it as the certain mark of another event, in which the whole nation was interested, which was the perpetual object of their vows and hopes, and distinguished them by a peculiar characteristic from all the other nations of the world, that had an equal interest in it, but without knowing or being apprized of it. This was the prophecy of Jacob, who at his death foretold to his twelve sons, assembled round his bed, what would happen in the series of time to the twelve tribes, of which they were the chiefs, and after whom they were called. Amongst the other predictions of that patriarch concerning the tribe of Judah, there is this of which we now speak; "The sceptre shall not depart from Judah,¹ nor a lawgiver from between his feet, until Shiloh come, and unto him shall the gathering of the people be." The sceptre, or rod, (for the Hebrew signifies both,) implies here the authority and superiority over the other tribes.

All the ancient Jews have explained this prediction to denote the Messiah: the fact is therefore incontestable, and is reduced to two essential points. The first is, that as long as the tribe of Judah shall subsist, it shall have pre-eminence and authority over the other tribes: the second, that it shall subsist, and form a body of a republic, governed by its laws and magistrates, till the Messiah comes.

The first point is verified in the series of the history of the Israelites, wherein that pre-eminence of the tribe of Judah appears evidently. This is not the proper place for proofs of this kind; those who would be more fully informed, may consult the explanation of Genesis lately published.²

For the second point, we have only to consider it with the least attention. When Herod, the Idumean, and in consequence a stranger, was placed upon the throne, the authority and superiority which the tribe of Judah had over the other tribes, began to be taken from it. This was an indication that the time of the Messiah's coming was not far off. The tribe of Judah has no longer the supremacy; it no longer subsists as a body, from which the magistrates are taken. It is manifest, therefore, that the Messiah is come. But at what time did that tribe become like the rest, and was confounded with them? In the time of Titus and Adrian, who finally exterminated the remnant of Judah. It was therefore before those times that the Messiah came.

How wonderful does God appear in the accomplishment of his promises! Would it be making a right use of history, not to dwell a few moments upon facts like this, when we meet them in the course of our subject? Herod, reduced to quit Jerusalem, takes refuge at Rome. He has no thoughts of demanding the sovereignty for himself, but for another. It was the grossest injustice to give it to a stranger whilst there were princes of the royal family in being. It was contrary to the laws, and even contrary to the usual practice of the Romans. But it had been decreed from all eternity, that Herod should be king of the Jews. Heaven and earth should sooner pass away, than that decree of God not be fulfilled. Antony was at Rome, and in possession of sovereign power, when Herod arrived there. How many events were necessary to the conducting of things to this point! But is there any thing too hard for the Almighty?

ARTICLE II.

ABRIDGMENT OF THE HISTORY OF THE PARTHIANS FROM THE ESTABLISHMENT OF THAT EMPIRE TO THE DEFEAT OF CRASSUS, WHICH IS RELATED AT LARGE.

THE Parthian empire was one of the most powerful and most considerable that ever was in the East. Very weak in its beginnings, as is common, it extended itself by little and little over all Upper Asia, and made even the Romans tremble. Its duration is ge-

nerally allowed to be 474 years; of which 254 were before Jesus Christ, and 220 after him. Arsaces was the founder of that empire, from whom all his successors were called Arsacidae. Artaxerxes, by birth a Persian, having overcome and slain Artabanus, the last of those kings, transferred the empire of the Parthians to the Persians, in the fifth year of the emperor Alexander, the son of Mammæa. I shall only speak here of the affairs of the Parthians before Jesus Christ and shall treat them very briefly, except the defeat of Crassus, which I shall relate in all its extent.

I have observed elsewhere what gave Arsaces Ist occasion to make A. M. 3754. Parthia revolt, and to expel the Ant. J. C. 250 Macedonians, who had been in possession of it from the death of Alexander the Great; and in what manner he had caused himself to be elected king of the Parthians. Theodotus at the same time made Bactriana revolt, and took that province from Antiochus, surnamed Theos.

Some time after, Seleucus Callinicus,⁴ who succeeded Antiochus, A. M. 3768 Ant. J. C. 236 endeavoured in vain to subdue the Parthians. He fell into their hands himself, and was made prisoner: this happened in the reign of Tridates, called otherwise Arsaces II brother of the first.

Antiochus, surnamed the Great, was more successful than his predecessor.⁵ He marched into the East, A. M. 3792 Ant. J. C. 212 and repossessed himself of Media, which the Parthians had taken from him. He also entered Parthia, and obliged the king to retire into Hyrcania, from whence he returned soon after with an army of 100,000 foot and 20,000 horse.⁶ As the war was of a tedious duration, Antiochus made a treaty with Arsaces, by which he left him Parthia and Hyrcania, upon condition that he would assist him in reconquering the other revolted provinces. Antiochus marched afterwards against Euthydemus king of Bactria, with whom he was also obliged to come to an accommodation.

PRIAPATIUS, the son of Arsaces II. succeeded his father; and after having reigned fifteen years, left the crown at his death to PHRAATES I. his eldest son. A. M. 3798 Ant. J. C. 206

Phraates left it to MITHRIDATES, whom he preferred before his own issue, upon account of his extraordinary merit. In fact, he was one of the greatest kings the Parthians ever had. He carried his arms farther than Alexander the Great. It was he who made Demetrius Nicator prisoner. A. M. 3840 Ant. J. C. 164

PHRAATES II. succeeded Mithridates his father. Antiochus Sidetes, A. M. 3873 Ant. J. C. 131. king of Syria, marched against him at the head of a powerful army, under pretence of delivering his brother Demetrius, who had been kept long in captivity. After having defeated Phraates in three battles, he was himself overthrown and killed in the last, and his army entirely cut to pieces. Phraates in his turn, at the time he had formed the design of invading Syria, was attacked by the Scythians, and lost his life in a battle.

ARTABANUS his uncle reigned in his stead, and died soon after. A. M. 3875 Ant. J. C. 129.

His successor was MITHRIDATES II. of whom Justin says,⁷ that his great actions acquired him the surname of Great.

He declared war against the Armenians, and by a treaty of peace which he made with them, he obliged their king to send him his son Tigranes as a hostage. The latter was afterwards set upon the throne of Armenia by the Parthians themselves, and joined with Mithridates king of Pontus in the war against the Romans. A. M. 3909 Ant. J. C. 95.

¹ See Book xvii. ² Ibid. ³ See Book xviii. ⁴ The Abbé Longueur, in his Latin dissertation upon the Arsacidae, ascribes what is here said to Artabanus, whom he places between Arsaces II. and Priapatus. Justin says nothing of him.

⁵ Justin. l. xxxviii. c. 3.

A. M. 3912. Antiochus Eusebes took refuge with Mithridates, who re-established him in the possession of part of the kingdom of Syria two years after.

Ant. J. C. 92. It was the same Mithridates, as we shall see hereafter, who sent Orobasus to Sylla, to demand the amity and alliance of the Romans, and who caused him to be put to death on his return, for having given precedence to Sylla.

A. M. 3915. Demetrius Eucherus, who reigned at Damascus, besieging Philip his brother in the city of Beroa, was defeated and taken by the Parthian troops sent to the aid of Philip, and carried prisoner to Mithridates, who treated him with all possible honours. He died there of a disease.

Ant. J. C. 89. Mithridates II. died, after having reigned forty years, generally regretted by his subjects. The domestic troubles with which his death was followed, considerably weakened the Parthian empire and made his loss still more sensibly felt. Tigranes re-entered upon all the provinces which he had given up to the Parthians, and took several others from them. He passed the Euphrates, and made himself master of Syria and Phœnicia.

During these troubles, the Parthians, elected MNASKIRES, and after him, SINATROCCES, kings, of whom scarcely any thing more is known than their names.

A. M. 3935. PHRAATES, the son of the latter, was he who caused himself to be sur-named the God.

Ant. J. C. 69. He sent ambassadors to Lucullus, after the great victory which the Romans had obtained over Tigranes. He held at the same time secret intelligence with the latter. It was at that time Mithridates wrote to him the letter which Sallust has preserved.

A. M. 3938. Pompey having been appointed in the place of Lucullus, to terminate the war against Mithridates, engaged Phraates in the party of the Romans.

The latter joins Tigranes the younger against his father, and breaks with Pompey.

A. M. 3948. After Pompey's return to Rome, Phraates is killed by his own children. **Ant. J. C. 56.** MITHRIDATES his eldest son takes his place.

Tigranes king of Armenia dies almost at the same time. Artavases his son succeeds him.

Mithridates expelled his kingdom either by his own subjects, to whom he had rendered himself odious, or by the ambition of his brother Orodes, applies to Gabinus, who commanded in Syria, to re-establish him upon the throne; but

A. M. 3949. without effect. He takes up arms in his own defence. **Ant. J. C. 55.** Besieged in Babylon, and warmly pressed, he surrenders to Orodes, who, considering him only as an enemy, and not as a brother, causes him to be put to death; by which means Orodes becomes peaceable possessor of the throne.

But he found enough to employ him abroad, that he had no reason to expect. Crassus had lately been created consul at Rome, for the second time, with Pompey. On the partition of the provinces, Syria fell to Crassus, who was exceedingly rejoiced upon that account; because it favoured the design he had formed of carrying the war into Parthia. When he was in company, even with people whom he scarce knew, he could not moderate his transports. Among his friends, with whom he was under less restraint, he even burst out into rhodomontades unworthy of his age and character, and seemed to be no longer the same man. He did not confine his views to the government of Syria, nor to the conquest of some neighbouring provinces, nor even to

that of Parthia. He flattered himself with doing such things, as should make the great exploits of Lucullus against Tigranes, and those of Pompey against Mithridates, appear like child's play in comparison with his. He had already overrun, in imagination, Bactriana and the Indies, and penetrated as far as the remotest seas, and the extremities of the East. However, in the instructions and powers which were given him, war against Parthia was in no manner included, but all the world knew his design against it was his darling passion. Such a beginning forbodes no success.

His departure had besides something more inauspicious in it. One of the tribunes, named Ateius, threatened to oppose his going; and was joined by many people, who could not suffer him to set out, merely through wantonness to make war against people who had done the Romans no injury, and were their friends and allies. That tribune, in consequence of having in vain opposed the departure of Crassus, made haste to the gate of the city through which he was to pass, and set a chafingdish full of fire before him; and as soon as Crassus came to the place, he threw perfumes, and poured libations into the pan, uttering over them the most terrible imprecations, which could not be heard without making all present shudder with horror, and of which the misfortunes of Crassus have been regarded by many writers as the accomplishment.

Nothing could stop him. Superior to all opposition, he continued his march, arrived at Brundisium; and, though the sea was very tempestuous, embarked, and lost many of his ships in his passage. When he arrived at Galatia, he had an interview with king Dejotarus, who, though far advanced in years, was at that time employed in building a new city. Upon which Crassus rallied him to this effect: "King of the Galatians, you begin full late to build a city at the twelfth hour of the day."—"And you, my lord," replied Dejotarus, "are not over early in setting out to make war against the Parthians." For Crassus was at that time upwards of sixty years old, and his countenance made him look still older than he was.

He had been informed that there were considerable treasures in the temple of Jerusalem, which Pompey had not ventured to touch. He believed it worth his while to go a little out of his way to make himself master of them. He therefore marched thither with his army. Besides the other riches, which amounted to very considerable sums, in the temple there was a beam of gold, enclosed and concealed in another of wood made hollow for that purpose: this was known only to Eleazar, the priest, who kept the treasures of the sanctuary. This beam of gold weighed 300 minæ, each of which weighed two pounds and a half. Eleazar, who was apprized of the motive of Crassus's march to Jerusalem, in order to save the other riches, which were almost all of them deposited in the temple by private persons, discovered the golden beam to Crassus, and suffered him to take it away, after having made him take an oath not to meddle with the rest. Was he so ignorant as to imagine any thing sacred in the eyes of avarice? Crassus took the beam of gold; and, notwithstanding plundered the rest of the treasures, which amounted to about 1,500,000*l.* sterling. He then continued his route.

Every thing succeeded at first as happily as he could have expected. He built a bridge over the Euphrates without any opposition, passed it with his army, and entered the Parthian territories. He invaded them without any other real motive for the war, than the insatiable desire of enriching himself by the plunder of a country which was supposed to be extremely opulent. The Romans under Sylla, and afterwards under Pompey, had made peace and several treaties with them. There had been no complaint of any infraction of these treaties, nor of any other enterprise that could give a just pretext for a war. So that the Parthians expected nothing less than such an invasion; and not being upon their guard, had

made no preparations for their defence. Crassus, in consequence, was master of the field, and overran without opposition the greatest part of Mesopotamia. He took also several cities without resistance; and had he known how to take advantage of the occasion, it had been easy for him to have penetrated as far as Seleucia and Ctesiphon, to have seized them, and made himself master of all Babylonia, as he had done of Mesopotamia. But instead of pursuing his point, in the beginning of autumn, after having left 7000 foot and 1000 horse, to secure the cities which had surrendered to him, he repassed the Euphrates, and put his troops into winter quarters in the cities of Syria, where his sole employment was to amass money, and to plunder temples.

He was joined there by his son, whom Cæsar sent to him out of Gaul, a young man who had already been honoured with several of the military crowns, which were given by generals to such as distinguished themselves by their valour. He brought with him 1000 chosen horse.

Of all the faults committed by Crassus in this expedition, which were all very considerable, the greatest undoubtedly, after that of having undertaken this war, was his hasty return into Syria. For he ought to have gone on without stopping, and to have seized Babylon and Seleucia, cities always at enmity with the Parthians, instead of giving his enemies time to make preparations by his retreat, which was the cause of his ruin.

Whilst he was re-assembling all his troops from their winter-quarters, ambassadors from the king of Parthia arrived, who opened their commission in few words. They told him that if that army was sent by the Romans against the Parthians, the war could not be terminated by any treaty of peace, and could only be brought to a conclusion by the final ruin of the one or the other empire. That if, as they had been informed, it was only Crassus, who, contrary to the opinion of his country, and to satiate his private avarice, had taken arms against them, and entered one of their provinces, the king their master was well disposed to act with moderation in the affair, to take pity on the age of Crassus, and to suffer the Romans in his dominions, who were rather shut up than keeping possession of cities, to depart with their lives and rings safe. They spoke, no doubt, of the garrisons which Crassus had left in the conquered places. Crassus answered this discourse only with a rhodomontade. He told them, "They should have his answer in the city of Seleucia." Upon which the most ancient of the ambassadors, Vahises, made answer, laughing, and showing him the palm of his hand: "Crassus, you will sooner see hair grow in the palm of my hand, than you will see Seleucia." The ambassadors retired, and went to give their king notice that he must prepare for war.

As soon as the season would per-

A. M. 3951. mit, Crassus took the field. The Ant. J. C. 53. Parthians had time during the winter to assemble a very great army to make head against him. Orodes their king divided his troops and marched in person with one part of them to the frontiers of Armenia: he sent the other into Mesopotamia, under the command of Surena. That general, upon his arrival there, retook several of the places of which Crassus had made himself master the year before.

About the same time some Roman soldiers, who with exceeding difficulty had escaped out of the cities of Mesopotamia, where they had been in garrison, of which the Parthians had already retaken some, and were besieging the rest, came to Crassus, and related things to him highly capable of disquieting and alarming him. They told him, that they had seen with their own eyes the incredible numbers of the enemy, and that they had also been witnesses of their terrible valour in the bloody attacks of the cities they besieged. They added, that they were troops not to be escaped when they pursued, not overtaken when they fled; that their arrows, of an astonishing weight, and at the same time of an astonishing rapidity, were

always attended with mortal wounds against which it was impossible to guard.

This discourse infinitely abated the courage and boldness of the Roman soldiers; who had imagined that the Parthians differed in nothing from the Armenians and Cappadocians, whom Lucullus had so easily overthrown; and flattered themselves, that the whole difficulty of the war would consist in the length of the way, and the pursuit of the enemy, who would never dare to come to blows with them. They now saw, contrary to their expectation, that they were to undergo great battles and great dangers. This discouragement rose so high, that many of the principal officers, were of opinion that it was necessary for Crassus, before he advanced farther, to assemble a council, in order to deliberate again upon the whole enterprise. But Crassus listened to no other advice than that of those who pressed him to begin his march, and to make all possible expedition.

What encouraged him the most, and confirmed him in that resolution, was the arrival of Artabazus king of Armenia. He brought with him a body of 6000 horse, which were part of his guards; adding that, besides these, he had 10,000 cuirassiers, and 30,000 foot, at his service. But he advised him to take great care not to march his army into the plains of Mesopotamia, and told him, that he must enter the enemy's country by the way of Armenia; the reasons with which he enforced his advice, were, that Armenia, being a mountainous country, the Parthian cavalry, in which the greatest strength of their army consisted, would be rendered entirely useless to them; that if they took this route he should be in a condition to supply the army with all necessaries; instead of which, if they marched by the way of Mesopotamia, convoys would fail, and he would have a powerful army in his front on all the marches it would be necessary for him to take, before he could penetrate to the centre of the enemy's dominions; that in those plains, the horse would have all possible advantages against him; and, lastly, that he must cross several sandy deserts, where the troops might be in great distress for want of water and provisions. The advice was excellent, and the reasons unanswerable; but Crassus, blinded by Providence, who intended to punish the sacrilege he had committed in plundering the temple of Jerusalem, despised all that was said to him. He only desired Artabazus, who was returning into his dominions, to bring him his troops as soon as possible.

I have said, that Providence blinded Crassus, which is self-evident in a great measure. But a Pagan writer makes the same remark; this is Dion Cassius, a very judicious historian, and at the same time a military man. He says, that the Romans, under Crassus, "had no salutary view, and were either ignorant upon all occasions of what was necessary to be done, or in no condition to execute it; so that one would have thought, that, condemned and persecuted by some divinity, they could neither make use of their bodies nor minds." That Divinity was unknown to Dion. It was He whom the Jewish nation adored, and who avenged the injury done to his temple.

Crassus made haste, therefore, to set forward. He had seven legions of foot, near 4000 horse, and as many light-armed soldiers and archers, which amounted in all to more than 40,000 men; that is to say, one of the finest armies the Romans ever set on foot. When his troops were passing the bridge he had laid over the river Euphrates, near the city of Zeugma, a dreadful storm of thunder and lightning drove in the face of the soldiers, as if to prevent them from going on. At the same time a black cloud, out of which burst an impetuous whirlwind, attended with thunder-claps and lightning, fell upon the bridge and broke down a part of it. The troops were seized with fear and sadness. He endeavoured to re-animate them as well as he was able, promising them with an oath, that they should march back by the way of Armenia; and concluded his discourse with assuring them, that not one of them should return that way. Those last words, which were ambiguous, and had escaped him very imprudently, threw the whole army into the greatest trouble and dismay. Crassus well knew the bad effect they had produced; but out of a spirit of

obstinacy and haughtiness, he neglected to remedy it, by explaining the sense of those words, to re-assure the timorous.

He made his troops advance along the Euphrates. His scouts, whom he had sent out for intelligence, shortly returned, and reported, that there was not a single man to be seen in the country, but that they had found the marks of horses which seemed to have fled suddenly, as if they had been pursued.

Upon this advice, Crassus confirmed himself in his hopes; and his soldiers began to despise the Parthians, as men that would never have courage to stand a charge, and come to an engagement with them. Cassius advised him at least to approach some town, where they had a garrison, in order to rest the army a little, and have time to learn the true number of the enemies, their force, and what designs they had in view; or, if Crassus did not approve that counsel, to march along the Euphrates towards Seleucia; because, by always keeping upon the banks of that river, he would put it out of the power of the Parthian cavalry to surround him; and that with the fleet which might follow him, provisions might be always brought from Syria, and all other things of which the army might stand in need. This Cassius was Crassus's questor, and the same who afterwards killed Cæsar.

Crassus, after having considered this advice, was upon the point of complying with it, when a chief of the Arabians, named Ariamnes, came in unexpectedly, and had the address to make him approve a quite different plan. That Arab had formerly served under Pompey, and was known by many of the Roman soldiers, who looked upon him as a friend. Surena found him from this circumstance, admirably qualified to play the part he gave him. Accordingly, when he was conducted to Crassus, he informed him, that the Parthians would not look the Roman army in the face; that its name alone had already spread a universal terror among their troops; and that there wanted no more for the obtaining a complete victory, than to march directly up to them, and give them battle. He offered to be their guide himself, and to carry them the shortest way. Crassus, blinded by his flattery, and deceived by a man who knew how to give a specious turn to what he proposed, fell into the snare, notwithstanding the pressing entreaties of Cassius, and some others, who suspected that impostor's design.

Crassus would hearken to nobody. The traitor Ariamnes, after having persuaded him to draw off from the banks of the Euphrates, conducted him across the plain by a way at first level and easy, but which at length became difficult, from the deep sands in which the army found itself engaged, in the midst of a vast country all bare and parched, where the eye could discover neither end nor boundary where the troops might hope to find rest and refreshment. If thirst and fatigue of the way, discouraged the Romans, the prospect of the country alone threw them into a despair still more terrible: for they could perceive neither near them, nor at a distance, the least tree, plant, or brook; not so much as a hill, nor a single blade of grass; nothing was to be seen all round but heaps of burning sand.

This gave just reason to suspect some treachery, of which the arrival of some couriers from Artabasu ought to have fully convinced them. That prince informed Crassus, that king Ordes had invaded his dominions with a great army; that the war he had to maintain, prevented him from sending the aid he had promised; but that he advised him to approach Armenia, in order that they might unite their forces against the common enemy: that, if he would not follow that advice, he cautioned him at least to avoid, in his marches and encampments, the open plains, and such places as were commodious for the horse, and to keep always close to the mountains. Crassus, instead of giving ear to these wise counsels, inveighed against those that gave them; and without vouchsafing to write an answer to Artabasu, he only told his couriers, I have not time at present to consider the affairs of Armenia; I shall go thither soon, and shall then punish Artabasu for his treachery.

Crassus was so infatuated with his Arab, and so blinded by his artful suggestion, that he had continued

to follow him without the least distrust, notwithstanding all the advice that was given him, till he had brought him into the sandy desert we have mentioned. The traitor then made his escape, and went to give Surena an account of what he had done.

After a march of some days in a desert and enemy's country, where it was difficult to have any intelligence, the scouts came in full speed to inform Crassus, that a very numerous army of the Parthians was advancing with great order and boldness to attack him immediately. That news threw the whole camp into great trouble and consternation. Crassus was more affected with it than the rest. He made all possible haste to draw up his army in battle. At first, following the advice of Cassius, he extended his infantry as far as he could, that it might take up the more ground, and make it difficult for the enemy to surround him; and he posted all his cavalry upon the wings. But afterwards he changed his opinion, and drawing up his foot in close order, he made them form a large hollow square, facing on all sides, of which each flank had twelve cohorts in front. Every cohort had a company of horse near it, in order that, each part being equally sustained by the cavalry, the whole body might charge with greater security and boldness. He gave one of the wings to Cassius, the other to his son, the younger Crassus, and posted himself in the centre.

They advanced in this order to the banks of a brook which had not much water, but was however highly grateful to the soldiers, from the exceeding drought and excessive heat.

Most of the officers were of opinion, that it was proper to encamp in this place, to give the troops time to recover from the extraordinary fatigues they had undergone in a long and painful march, and to rest there during the night; that in the mean time, all possible endeavours should be used to get intelligence of the enemy, and that when their number and disposition were known, they should attack them the next day. But Crassus, suffering himself to be carried away by the ardour of his son, and of the cavalry under his command, who pressed him to lead them against the enemy, gave orders that all who had occasion, should take their refreshment under arms in their ranks; and scarce allowing them time for that purpose, he commanded them to march, and led them on, not slowly, and halting sometimes, but with rapidity, and as fast as they could move, till they came in view of the enemy. Contrary to their expectation, they did not appear either so numerous or so terrible as they had been represented, which was a stratagem of Surena's. He had concealed the greatest part of his battalions behind the advanced troops, and to prevent their being perceived by the brightness of their arms, he had given them orders to cover themselves with their vests or with skins.

When they approached and were ready to charge, the Parthian general had no sooner given the signal of battle than the whole field resounded with dreadful cries, and the most horrid noise. For the Parthians did not excite their troops to battle with horns or trumpets, but made use of a great number of hollow instruments, covered with leather, and having bells of brass round them, which they struck violently against each other; and the noise made by these instruments was harsh and terrible, and seemed like the roaring of wild beasts, joined with claps of thunder. Those Barbarians had well observed, that of all the senses none disorders the soul more than the hearing; that it strikes upon, and affects it the most immediately, and is the most sudden in making it in a manner confused and distracted.

The trouble and dismay into which this noise had thrown the Romans, were quite different when the Parthians, throwing off on a sudden the covering of their arms, appeared all on fire, from the exceeding brightness of their helmets and cuirasses, which were of burnished steel, and glittered like sun-beams, and to which the furniture and armour of their horses added not a little. At their head appeared Surena,

• The Roman cohort was a body of infantry consisting of 5 or 600 men; and differed very little from what is now called a battalion.

handsome, well made, of an advantageous stature, and of a much greater reputation for valour than the effeminacy of his mien seemed to promise. For he was painted after the fashion of the Medes, and, like them, wore his hair curled and dressed with art; whereas the other Parthians still persevered in wearing theirs after the manner of the Scythians, much neglected, and such as nature gave them, in order to appear more terrible.

At first the Barbarians were for charging the Romans with their pikes, and endeavoured to penetrate and break the front ranks: but having observed the depth of the hollow square so well closed and even, in which the troops stood firm and supported each other successfully, they fell back and retired in a seeming confusion, as if their order of battle were broken. But the Romans were much astonished to see on a sudden their whole army surrounded on all sides. Crassus immediately gave orders for his archers and light-armed foot to charge them; but they could not execute those orders long; for they were compelled by a shower of arrows to retire, and cover themselves behind their heavy-armed foot.

Their disorder and dismay now began, when they experienced the rapidity and force of those arrows, against which no armour was proof, and which penetrated alike whatever they hit. The Parthians dividing, applied themselves on all sides to shooting at a distance, without its being possible for them to miss, even though they had endeavoured it, so close were the Romans embattled. They did dreadful execution, and made deep wounds, because as they drew their bows to the utmost, the strings discharged their arrows, which were of an extraordinary weight, with an impetuosity and force that nothing could resist.

The Romans, attacked in this manner on all sides by the enemy, knew not in what manner to act. If they continued firm in their ranks, they were wounded mortally, and if they quitted them to charge the enemy, they could do them no hurt, and suffered no less than before. The Parthians fled before them, and kept a continual discharge as they retired; for of all nations in the world they were the most expert in that exercise after the Scythians: an operation in reality very wisely conceived; since by flying they saved their lives, and by fighting, avoided the infantry of flight.

As long as the Romans had hopes that the Barbarians, after having exhausted all their arrows, would either give over the fight, or to come to blows with them hand to hand, they supported their distress with valour and resolution; but when they perceived that in the rear of the enemy there were camels laden with arrows, whither those who had exhausted their quivers wheeled about to replenish them, Crassus, losing almost all courage, sent orders to his son to endeavour, whatever it cost him, to join the enemy, before he was entirely surrounded by them; for they were principally intent against him, and were wheeling about to take him in the rear.

Young Crassus, therefore, at the head of 1300 horse, 500 archers, and eight cohorts armed with round bucklers,^a wheeled about against those who endeavoured to surround him. The latter, whether they were afraid to stand the charge of a body of troops that came on with so good an aspect, or whether they designed to draw off young Crassus as far as they could from his father, immediately faced about and fled. Young Crassus upon that, crying out as loud as he could, "They don't stand us," pushed on full speed after them. The foot, animated by the example of the horse, piqued themselves upon not staying behind, and followed them at their heels, carried on by their engerness, and the joy which the hopes of victory gave them. They firmly believed they had conquered, and had nothing to do but to pursue, till being at a great distance from their main body, they discovered the stratagem; for those who had seemed to fly, faced about, and being joined by many other troops, came on to charge the Romans.

Young Crassus thereupon made his troops halt, in hopes that the enemy, upon seeing their small number,

would not fail to attack them, and come to close fight. But those Barbarians contented themselves with opposing him in front with their heavy-armed horse, and sent out detachments of their light-horse, that wheeling about, and surrounding them on all sides without joining them, poured in a perpetual flight of arrows upon them. At the same time, by stirring up the heaps of sand, they raised so thick a dust, that the Romans could neither see nor speak to one another; and being pent up in a narrow space, and keeping close order, they were a mark for every arrow shot at them, and died by a slow but cruel death. For finding their entrails pierced, and not being able to support the pain they suffered, they rolled themselves upon the sands with the arrows in their bodies, and expired in that manner in exquisite torments; or endeavouring to tear out by force the bearded points of the arrows, which had penetrated through their veins and nerves, they only made their wounds the larger, and increased their pain.

Most of them died in this manner; and those who were still alive were no longer in any condition to act. For when young Crassus exhorted them to charge the heavy-armed horse, they showed him their hands nailed to their bucklers, and their feet pierced through and through and rivited to the ground; so that it was equally impossible for them either to defend themselves or fly. Putting himself therefore at the head of his horse, he made a vigorous charge upon that heavy-armed body covered with iron, and threw himself boldly amongst the squadrons, but with great disadvantage, as well in attacking as defending. For his troops with weak and short javelins struck against armour either of excellent steel, or very hard leather; whereas the Barbarians charged the Gauls, who were either naked or lightly armed, with good and strong spears. These Gauls were troops in whom young Crassus placed the greatest confidence, and with whom he did most wonderful exploits. For those troops took hold of the spears of the Parthians, and closing with them, seized them by the neck, and threw them off their horses upon the ground, where they lay without power to stir, from the exceeding weight of their arms. Several of the Gauls quitting their horses, crept under those of the enemy, and thrust their swords into their bellies. The horses, wild with the pain, plunged and reared, and throwing off their riders, trampled them under foot as well as the enemy, and fell dead upon them both.

But what gave the Gauls most trouble, was the heat and thirst; for they were not accustomed to support them. They also lost the greater part of their horses, which, running precipitately upon that heavy-armed body, killed themselves upon their spears. They were obliged therefore to retire to their infantry, and to carry off young Crassus, who had received several dangerous wounds.

Upon their way they saw, at a small distance, a rising bank of sand, to which they retired. They fastened their horses in the centre, and made an enclosure with their bucklers, by way of entrenchment, in hopes that it would assist them considerably in defending themselves against the Barbarians; but it happened quite otherwise. For in a level spot, the front covered the rear, and gave it some relaxation; whereas upon this hill, the inequality of the ground showing them over each other's heads, and those in the rear most, they were all exposed to the enemy's shot. So that, unable to avoid the arrows which the Barbarians showered continually upon them, they were all equally struck by them, and deplored their unhappy destiny, in perishing thus miserably, without being able to make use of their arms, or to give the enemy proofs of their valour.

Young Crassus had two Greeks with him, who had settled in that country in the city of Carræ. Those two young men, touched with compassion to see him in so bad a condition, pressed him to make off with them, and to retire into the city of Ischne, which had espoused the party of the Romans, and was at no great distance. But he replied, "that no fear of any death, however cruel, could induce him to abandon so many brave men, who died through love for him." A noble sentiment in a young nobleman! He ordered them

^a These formed 4 or 5000 men

to make off as fast as they could, and embracing them, dismissed them the service. For himself, not being able to make use of his hand, which was shot through with an arrow, he commanded one of his domestics to thrust his sword through him, and presented his side to him. The principal officers killed themselves, and many of those that remained were slain, fighting with exceeding valour. The Parthians made only about 500 prisoners; and after having cut off young Crassus's head, marched immediately against his father.

The latter, after having ordered his son to charge the Parthians, and received advice that they were put to the rout, and were pursued vigorously, had resumed some courage, and the more, because those who opposed him, seemed to abate considerably of their ardour; for the greatest part of them were gone with the rest against young Crassus. Wherefore, drawing his army together, he retired to a small hill in his rear, in hopes that his son would speedily return from the pursuit.

Of a great number of officers, sent successively by his son, to inform him of the danger he was in, the greatest part had fallen into the hands of the Barbarians, who had put them to the sword. Only the last who had escaped with great difficulty, got to his presence, and declared to him that his son was lost if he did not send him directly a powerful reinforcement. Upon this news, Crassus was struck with such a diversity of afflicting thoughts, and his reason thereby so much disturbed, that he was no longer capable of seeing or hearing any thing. However, the desire of saving his son and the army, determined him to go to his aid, and he ordered the troops to march.

At that very instant the Parthians, who were returning from the defeat of young Crassus, arrived with great cries and songs of victory, which from afar apprized the wretched father of his misfortune. The Barbarians, carrying the head of young Crassus upon the end of a spear, approached the Romans, and insulting them with the most scornful bravadoes, asked them of what family that young Roman was, and who were his relations? "For," said they, "it is impossible that a young man of such extraordinary valour and bravery should be the son of so base and cowardly a father as Crassus."

This sight exceedingly dispirited the Romans, and instead of exciting the height of anger, and the desire of revenge in them, as might have been expected, froze them with terror and dismay. Crassus, however, showed more constancy and courage on his disgrace than he had before done; and running through the ranks, he cried out, "Romans, this mournful spectacle concerns me alone. The fortune and glory of Rome are still invulnerable and invincible, whilst you continue firm and intrepid. If you have any compassion for a father who has now lost a son whose valour you admired, let it appear in your rage and resentment against the Barbarians. Deprive them of their insolent joy, punish their cruelty, and do not suffer yourselves to be cast down by my misfortune. There is a necessity for experiencing some loss, when we aspire at great achievements. Lucullus did not defeat Tigranes, nor Scipio Antiochus, without its costing them some blood. It is after the greatest defeats that Rome has acquired the greatest victories. It is not by the favour of fortune she has attained to so high a degree of power, but by her patience and fortitude in supporting herself with vigour against adversity."

Crassus endeavoured by remonstrances of this kind to reanimate his troops; but when he had given them orders to raise the cry of battle, he perceived the general discouragement of his army even in that cry itself, which was faint, unequal and timorous; whereas, that of the enemy was bold, full, and strenuous.

The charge being given, the light-horse of the Parthians dispersed themselves upon the wings of the Romans, and taking them in flank, overwhelmed them with their arrows, whilst the heavy cavalry attacked them in front, and obliged them to close up in one compact body; except those who, to avoid the arrows, the wounds of which occasioned a long and painful death, had the courage to throw themselves upon the horse, like men in despair. Though they did not do them much hurt, their audacity was attended with this

advantage; it occasioned their dying immediately, by the large and deep wounds they received. For the Barbarians thrust their lances through their bodies with such force and vigour, that they often pierced two at once.

After having fought in that manner the remainder of the day, when night came on the Barbarians retired; saying, they would grant Crassus only that night to lament for his son, unless he should find it more expedient to consult his own safety, and prefer going voluntarily to their king Arsaces, to being dragged before him. They then encamped in the presence of the Roman army, in the firm expectation that the next day they should meet with little or no difficulty in completing its defeat.

This was a terrible night for the Romans. They had no thoughts either of interring their dead, or of dressing their wounded, of whom the greatest part died in the most horrible torments. Every man was solely intent upon his own particular distress. For they all saw plainly that they could not escape, whether they waited for day in camp, or ventured during the night to throw themselves into that immense plain of which they saw no end. Besides which, in the latter choice, their wounded gave them great trouble. For to carry them off would be very difficult, and extremely retard their flight; and if they were left behind, it was not to be doubted but they would discover the departure of the army by their cries and lamentations.

Though they were perfectly sensible that Crassus alone was the cause of all their misfortunes, they however were unanimous in desiring to see his face, and to hear his voice. But he lying upon the ground, in an obscure corner, with his head covered in his cloak, was to the vulgar, says Plutarch, a great example of the instability of fortune; to wise and considerate persons, a still greater instance of the pernicious effects of temerity and ambition, which had blinded him to such a degree, that he could not bear to be less at Rome than the first and the greatest of so many millions of men, and thought himself low and mean, because there were two above him, Cæsar and Pompey.

Octavius, one of his lieutenants, and Cassius approached him, and endeavoured to make him rise, and to console and encourage him: but seeing him entirely depressed with the weight of his affliction, and deaf to all consolation and remonstrance, they assembled the principal officers, and held a council of war directly; and it being their unanimous opinion, that it was necessary to retire immediately, they decamped without sound of trumpet. This was done at first with great silence. But soon after, the sick and wounded, who could not follow, perceiving themselves abandoned, filled the camp with tumult and confusion, cries, shrieks, and horrible lamentations; so that the troops who marched foremost were seized with trouble and terror, imagining the enemy were coming on to attack them. By frequently turning back, and drawing up again in order of battle, or burying themselves in setting the wounded, who followed them, upon the beasts of burden, and in dismounting such as were less sick, they lost considerable time. There were only 300 horse, under the command of Ignatius, who did not stop, and arrived about midnight at the city of Carræ. Ignatius called to the sentinels upon the walls, and when they answered, bade them go to Coponius, who commanded in the place, and tell him that Crassus had fought a great battle with the Parthians; and without saying any more, or letting them know who he was, he pushed on with all possible expedition to the bridge which Crassus had laid over the Euphrates, and saved his troops by that means. But he was very much blamed for having abandoned his general.

However, the message he had sent to Coponius by those guards, was of great service to Crassus. For that governor, wisely conjecturing from the manner in which the unknown person had given him that intelligence, that it implied some disaster, gave orders immediately for the garrison to stand to their arms. And when he was informed of the way Crassus had taken, he marched out to meet him, and conducted

him and his army into the city. The Parthians, though well informed of his flight, would not pursue him in the dark. But early the next morning, they entered the camp and put all the wounded who had been left there, to the number of 4000, to the sword; and their cavalry being dispersed over the plain after those who fled, took great numbers of them, whom they found straggling on all sides.

One of Crassus's lieutenants, named Vargunteius, having separated in the night from the main body of the army with four cohorts, missed his way, and was found the next morning upon a small eminence by the Barbarians, who attacked him. He defended himself with great valour, but was at length overpowered by multitudes, and all his soldiers killed, except twenty, who with sword in hand fell on the enemy in despair, in order to open themselves a passage through them. The Barbarians were so much astonished at their bravery, that out of admiration of it they opened and gave them a passage. They arrived safe at Carræ.

At the same time Surenâ received false advice, that Crassus had escaped with his best forces, and that those who had retired to Carræ were only a body of troops collected from all quarters, that were not worth the trouble of pursuing. Surenâ, believing the reward of his victory lost, but still uncertain whether it was or was not, desired to be better informed, in order that he might resolve, either to besiege Carræ, if Crassus was there, or to pursue him if he had quitted it. He therefore despatched one of his interpreters, who spoke both languages perfectly well, with orders to approach the walls of Carræ, and in the Roman language to desire to speak with Crassus himself, or Cassius, and to say that Surenâ demanded a conference with them.

The interpreter having executed his orders, Crassus accepted the proposal with joy. Soon after, some Arabian soldiers came from the Barbarians, who knew Crassus and Cassius by sight, from having seen them in the camp before the battle. Those soldiers approached the place, and seeing Cassius upon the walls, they told him, that Surenâ was inclined to treat with them and permit them to retire, upon condition that they would continue in amity with the king his master, and abandon Mesopotamia to him: that this proposal was more advantageous for both parties, than to proceed to the last extremities.

Cassius acceded to this offer, and demanded that the time and place for an interview between Surenâ and Crassus should immediately be fixed. The Arabians assured him that they would go and do their utmost to that effect, and withdrew.

Surenâ, overjoyed with keeping his prey in a place from whence it could not escape, marched thither the next day with his Parthians, who talked at first with extreme haughtiness, and declared that if the Romans expected any favourable terms from them, they must previously deliver up Crassus and Cassius bound hand and foot into their hands. The Romans, enraged at such flagrant deceit, told Crassus that it was necessary to renounce all remote and vain hopes of aid from the Armenians, and fly that very night, without losing a moment's time. It was highly important that not one of the inhabitants of Carræ should know of this design, till the instant of its execution. But Andromachus, one of the citizens, was informed of it first and by Crassus himself, who confided it to him, and chose him for his guide, relying very injudiciously upon his fidelity.

The Parthians consequently were not long before they were fully apprized of the whole plan by means of that traitor. But as it was not their custom to engage in the night, the impostor, to prevent Crassus from getting so much ground as might make it impossible for the Parthians to come up with him, led the Romans sometimes by one way, sometimes by another, and at length brought them into deep marshy grounds and places intersected with great ditches, where it was very difficult to march, and necessary to make a great many turnings and windings to extricate themselves out of that labyrinth.

There were some who, suspecting that it was with no good design that Andromachus made them go backwards and forwards in that manner, refused at

last to follow him, and Cassius himself returned towards Carræ. By hasty marches, he escaped into Syria with 500 horse. Most of the rest, who had trusty guides, gained the pass of the mountains, called the *Sinnachian* mountains, and were in a place of safety before the break of day. The latter might be about 5000 men, under the command of Octavius.

As for Crassus, the day overtook him, while he was still embarrassed, by the contrivance of the perfidious Andromachus, in those marshy and difficult places. He had with him four cohorts of foot armed with round bucklers, a few horse, and five lictors who carried the fasces before him.

He at length came into the main road, after abundance of trouble and difficulty, when the enemy were almost upon him, and he had no more than twelve stadia to march in order to join the troops under Octavius. All he could do was to gain as soon as possible another summit of those mountains, less impracticable to the horse, and in consequence not so secure. This was under that of the *Sinnachian* mountains, to which it was joined by a long chain of mountains that filled up all the space between them. Octavius therefore saw plainly the danger that threatened Crassus, and descended first himself from those eminences with a small number of soldiers to his aid. But he was soon followed by all the rest, who, reproaching themselves for their cowardice, flew to his assistance. Upon their arrival they charged the Barbarians so roughly, that they obliged them to abandon the hill. After that they placed Crassus in the midst of them, and forming a kind of rampart for him with their bucklers, they

1 [This is the ancient Harran in Mesopotamia from which Abraham departed, on his way to the land of Canaan. It was a city renowned as being the seat of the Zabians, who worshipped the host of heaven. It still retains the name of Harran, though now an inconsiderable city. It lies 40 miles north of Racca, or Nicephorium, on the Euphrates. The place where the battle was fought lay 20 geographical miles south of Charræ. The brook here mentioned, is a small streamlet which runs into the Balissus, or Belis, as it is now called, which runs south-east to the Euphrates, and joins it at Racca, or Nicephorium. This part of Mesopotamia was called Anthemusia by the Macedonians, who transferred this name from a district in Macedon; and was so called from the superabundance of roses which it produced. It was afterwards named Carthene, from a race of Arab princes who ruled it. Edessa, now called Hoba, was the capital of Osrhene, and was so called from the just of that name in Macedonia, and lay 20 geographical miles north-west of Charræ, and contains at present a population of 40,000 souls. "Two hours' walk from Charræ," says the Turkish geographer, Hadji Khalifah, "are to be seen on a hill, called the hill of Abraham, the remains of a Zabian temple."

Charræ lay 55 geographical miles south-east of Zeugma, in direct distance, where Crassus laid crossed the Euphrates. Here two roads separate, one to the right through the naked level plain that lies south of Charræ, leading to the Euphrates at Nicephorium, and the other to the left and north-east towards the Tigris and Nisibis. The appellation of Mesopotamia, or the country between the rivers, was applied by the Greeks in a restricted sense to the territory that lay north-west of the Babylonian plain, or the wall of Media, that ran across it from the Euphrates at Macepartha north-east to the Tigris; for the term in its true meaning should include both Babylonia and Chaldaea, as far as Korna, where the rivers meet. The name of Mesopotamia is just a translation of Aram Nabarajim, or Aram of the rivers, to distinguish it from Syria, the Hebrew name of which is Aram. It seems also to be the translation of the Hebrew Shinar, probably derived from *Shene*, two; and *Nuhar*, river; by a usual change of the aspirate, signifying Biduvalius, internumus, Mesopotamia, the country between the two rivers. See the Hebrew Lexicon of D. Levi, p. 11, 12. Now, as the plain of Shinar, or Sennar, in the Greek, included the plain of Babel, it included more than what the Greeks denominated Mesopotamia. It is erroneous to suppose that the modern Diarbeker corresponds to the ancient Mesopotamia. It only corresponds to the Great Oval valley that lies between the ranges of mount Masius and Niphates, comprehending the source and basin of the Upper Tigris, and which formed the southern part of Armenia, though this district be now included in Mesopotamia. Diarbeker is an Arabic appellation, signifying the district of Beker, the Euphrates of an Arab tribe that anciently settled here. Mesopotamia is by the Arabian geographers divided into three Divars, or districts: Diyar Beker, the northern part; Diyar Rabbia, the southern part; Diyar Malar, the interior part; from three Arab tribes so called, who came from Arabiâ and settled in this country. When Mesopotamia was divided between the Romans and Persians, Borsessa became the capital of Roman Mesopotamia, and Nisibis did of the Persian division.

declared fiercely that not an arrow of the enemy should approach their general's body till they were all dead around him fighting in his defence.

Surena, seeing that the Parthians, already repulsed, went on with less vigour to the attack, and that if the night came on, and the Romans should gain the mountains, it would be impossible for him to take them, had again recourse to stratagem to amuse Crassus. He gave secret orders, that some prisoners should be set at liberty, after having posted a number of his soldiers around them, who, seeming in discourse together, said, as the general report of the army, that the king was much averse to continuing war with the Romans; that, on the contrary, his design was to cultivate their amity, and to give them proofs of his favourable inclinations, by treating Crassus with great humanity. And that their deeds might agree with their words, as soon as the prisoners were released, the Barbarians retired from the fight; and Surena, advancing peacefully with his principal officers towards the hill, with his bow unstrung, and arms extended, invited Crassus to come down and treat of an accommodation. He said, with a loud voice, that contrary to the king his master's will, and through the necessity of a just defence, he had made them experience the force and power of the Parthian arms; but that at present he was disposed to treat them with mildness and favour, by granting them peace, and giving them liberty to retire with entire security on his part. We have observed, on more than one occasion, that the peculiar characteristic of these Barbarians was to promote the success of their designs by fraud and treachery, and to make no scruple of breaking through their engagements upon such occasions.

The troops of Crassus lent a willing ear to this discourse of Surena's, and expressed exceeding joy at it; but Crassus, who had experienced nothing but deceit and perfidy from the Barbarians, and to whom so sudden a change was very suspicious, did not easily give into it, and deliberated with his friends. The soldiers began to call out to him, and to urge him to accept the interview. From thence they proceeded to outrage and reproaches; and went so far as to accuse him of cowardice; charging him with exposing them to be slaughtered by enemies with whom he had not so much as the courage to speak, when they appeared unarmed before him.

Crassus at first had recourse to entreaties, and remonstrated to them, that by maintaining their ground for the rest of the day, upon the eminences and difficult places where they then were, they might easily escape when night came on; he even showed them the way, and exhorted them not to frustrate such hopes of their approaching safety. But seeing they grew outrageous, that they were ready to mutiny, and, by striking their swords upon their shields, even menaced him; apprehending that commotion, he began to descend, and, turning about, he said only these few words: "Octavius, and you, Petronius, with all the officers and captains here present, you see the necessity I am under of taking a step I would willingly avoid, and are witnesses of the indignities and violence I suffer. But I beg you, when you have retired in safety, that you will tell all the world, for the honour of Rome our common mother, that Crassus perished, deceived by the enemy, and not abandoned by his citizens." Octavius and Petronius could not resolve to let him go alone, but went down the hill with him, when Crassus dismissed his victors, who would have followed him.

The first persons the Barbarians sent to him were two Greeks, who, dismounting from their horses, saluted him with profound respect, and told him in the Greek tongue, that he had only to send some of his attendants, and Surena would satisfy them, that himself, and those with him, came without arms, and with all the fidelity and good intentions possible. Crassus replied, that had he set the least value upon his life, he should not have come to put himself into their hands; and sent two brothers, named Roscius, to know only upon what foot they should treat, and in what number.

Surena caused those two brothers to be seized and kept prisoners; and advancing on horseback, follow-

ed by the principal officers of his army, as soon as he perceived Crassus, "What do I see?" said he "What! the general of the Romans on foot, and ourselves on horseback! Let a horse be brought for him immediately." He imagined that Crassus appeared in that manner before him out of respect. Crassus replied, "that there was no reason to be surprised that they came to an interview, each after the custom of his own country."—"Very good," returned Surena; "from henceforth let there be a treaty of peace between king Orodes and the Romans: but we must go to prepare and sign the articles of it upon the banks of the Euphrates. For you Romans," added he, "do not always remember your conventions." At the same time he held out his hand to him. Crassus would have sent for a horse; but Surena told him there was no occasion for it, and that the king made him a present of that.

A horse was immediately presented to him, which had a golden bit; and the king's officers taking him round the middle set him upon it, surrounded him, and began to strike the horse to make him go forwards faster. Octavius was the first, who, offended at such behaviour, took the horse by the bridle. Petronius seconded him, and afterwards all the rest of his attendants, who came round him, and endeavoured to stop the horse, and to make those retire by force who pressed close on Crassus. At first they pushed against each other with great tumult and disorder, and afterwards came to blows. Octavius, drawing his sword, killed a groom of one of those Barbarians. At the same time another of them gave Octavius a great stroke with his sword behind, which laid him dead upon the spot. Petronius, who had no shield, received a stroke upon his cuirass, and leaped from his horse without being wounded. Crassus at the same moment was killed by a Parthian. Of those who were present, some were killed fighting around Crassus, and others had retired in good time to the hill.

The Parthians soon followed them thither, and told them, that Crassus had suffered the punishment due to his treachery; but as for them, that Surena let them know they had only to come down with confidence, and gave them his word that they should suffer no ill treatment. Upon this promise some went down and put themselves into the hands of the enemy; others took the advantage of the night, and dispersed on all sides. But of the latter very few escaped; all the rest were pursued the next day by the Arabians, who came up with them, and put them to the sword.

The loss of this battle was the most terrible blow the Romans had received since the battle of Cannæ. They had 20,000 men killed in it, and 10,000 taken prisoners. The rest made their escape by different ways into Armenia, Cilicia, and Syria; and out of these ruins an other army was afterwards formed in Syria, of which Cassius took upon him the command, and with it prevented that country from falling into the hands of the victor.

This defeat must, in one sense, have been more affecting to them than that of the battle of Cannæ, because they had reason to expect it. When Hannibal was victorious at Cannæ, Rome was in a state of humiliation. She had already lost many battles, and had no thought but of defending herself, and repulsing the enemy from her territory. At this time Rome was triumphant, respected and dreaded by all nations: she was mistress of the most potent kingdoms of Europe, Asia, and Africa; lately victorious over one of the most formidable enemies she ever had; yet in the most exalted height of her greatness, she saw her glory suddenly fall to the ground, in an attack upon a people, formed out of the assemblage of the eastern nations, whose valour she despised, and whom she reckoned already amongst her conquests. So complete a victory showed those haughty conquerors of the world a rival in a remote people, capable of making head against, and disputing the empire of the universe with them; and not only of setting bounds to their ambitious projects, but of making them tremble for their own safety. It showed that the Romans

* Amongst the Romans the consul always marched on foot, at the head of the infantry.

might be overthrown in a pitched battle, and fighting with all their forces; that that power, which till then, like the inundation of a mighty sea, had overflowed all the country in its way, might at length receive bounds, and be restrained for the future within them.

The check received by Crassus from the Parthians was a blot on the Roman name, which the victories gained over them some time after by Ventidius were not capable of effacing. The standards of the vanquished legions were always shown by them as sights. The prisoners taken in that fatal day were kept there in captivity, and the Romans, citizens or allies, contracted ignominious marriages to the shame of Rome, as Horace emphatically describes it, and grew old in tranquillity, upon the lands, and under the standards, of Barbarians. It was not till thirty years after, in the reign of Augustus, that the king of the Parthians, without being compelled to it by arms, consented to restore their standards and prisoners to the Romans, which was looked upon by Augustus and the whole empire as a most glorious triumph; so much were the Romans humbled by the remembrance of that defeat, and so much did they believe it incumbent on them to efface it, if possible, to the last trace. For themselves, they never could forget it. Cæsar was upon the point of setting out against the Parthians, to avenge the affront which Rome had received from them, when he was killed. Antony formed the same design, which turned to his disgrace. The Romans, from that time, always regarded the war with the Parthians as the most important of their wars. It was the object of the application of the most warlike emperors, Trajan, Septimus, Severus, &c. The surname of Parthicus was the title of which they were fondest, and which most sensibly flattered their ambition. If the Romans sometimes passed the Euphrates to extend their conquest beyond it, the Parthians in their turn did the same, to carry their arms and devastations into Syria, and even into Palestine. In a word, the Romans could never subject the Parthians to their yoke; and that nation was like a wall of brass, which with impregnable force resisted the most violent attacks of their power.

When the battle of Carræ was fought, Orodes was in Armenia, where he had lately concluded a peace with Artabasus. The latter, upon the return of the expresses he had sent to Crassus, perceiving by the false measures he had taken, that the Romans were infallibly lost, entered into an accommodation with Orodes; and by giving one of his daughters to Pacorus, son of the Parthian king, he cemented by that alliance the treaty he had lately made. Whilst they were celebrating the nuptials, the head and hand of Crassus were brought to them, which Surena had caused to be cut off, and sent to the king as a proof of his victory. Their joy was exceedingly augmented by that sight; and it is said that orders were given to pour molten gold into the mouth of that head, in mockery of the insatiable thirst which Crassus always had for that metal.

Surena did not long enjoy the pleasure of his victory. His master, jealous of his glory, and of the credit it gave him, caused him to be put to death soon after. There are princes, near whom too shining qualities are dangerous; who take umbrage at the virtues they are forced to admire, and cannot bear to be served by superior talents, capable of eclipsing their own. Orodes was of this character. He perceived, as Tacitus observes of Tiberius, that with all his power he could not sufficiently repay the service his general had lately done him. Now where a benefit is above all return, ingratitude and hatred take the place of acknowledgment and affection.

² Destitit per hæc fortunam summa Cæsar, imparemque tanto merito rebar. Nam beneficia eò usque læta sunt, dum videtur exsolvi posse; ubi multum antevenero, propterea odium redditur.—*Tacit. Annal. l. 4. c. 18.*

Surena was a general of extraordinary merit. At thirty years of age he possessed consummate ability and surpassed all the men of his time in valour. He was, besides that, perfectly well made, and of the most advantageous stature. For riches, credit, and authority, he had also more than any man; and was undoubtedly, the greatest subject the king of Parthia had. His birth gave him the privilege of putting the crown upon the king's head at his coronation, and that right had appertained to his family from the establishment of the empire. When he travelled, he had always 1000 camels to carry his baggage, 200 chariots for his wives and concubines, and, for his guard, 1000 horse completely armed, besides a great number of light-armed troops and domestics, which in all did not amount to less than 10,000 men.

The Parthians expecting, after the defeat of the Roman army, to find Syria without defence, marched to conquer it. But Cassius, who had formed an army out of the ruins of the other, received them with so much vigour, that they were obliged to repossess the Euphrates shamefully, without effecting any thing.

The next year to the consuls, M. Calpurnius Bibulus, and M. Tullius Cicero, were assigned the provinces of Syria and Cilicia. Cicero repaired immediately to the latter, which had been allotted him; but Bibulus amusing himself at Rome, Cassius continued to command in Syria. And that was much to the advantage of the Romans; for the affairs of that country required a man of a quite different capacity from Bibulus. Pacorus, son of Orodes king of the Parthians, had passed the Euphrates, in the beginning of the spring, at the head of a numerous army, and had entered Syria. He was too young to command alone, and was therefore accompanied by Orsaces, an old general, who regulated every thing. He marched directly to Antioch, which he besieged. Cassius had shut himself up in that place with all his troops. Cicero, who had received advice of his condition in his province, by the means of Antiochus, king of Comagene, assembled all his forces, and marched to the eastern frontier of his province, which bordered upon Armenia, to oppose an invasion on that side, should the Armenians attempt it, and at the same time to be at hand to support Cassius in case of need. He sent another body of troops towards the mountain Amanus, with the same view. That detachment fell in with a large body of the Parthian cavalry, which had entered Cilicia, and entirely defeated it, so that not a single man escaped.

The news of this success, and that of Cicero's approach to Antioch, extremely encouraged Cassius and his troops to make a good defence, and so much abated the ardour of the Parthians, that, despairing to carry the place, they raised the siege, and went to form that of Antignia, which was not far from thence. But they were so little skilled in attacking towns, that they miscarried again before this, and were compelled to retire. We are not to be surprised at this, as the Parthians made their principal force consist in cavalry, and applied themselves most to engagements in the field, which suited their genius best. Cassius, who was apprised of the route they would take, laid an ambuscade for them, which they did not fail to fall into. He defeated them entirely, and killed a great number of them, amongst whom was their general Orsaces. The remains of their army repossessed the Euphrates.

When Cicero saw the Parthians removed, and Antioch out of danger, he turned his arms against the inhabitants of mount Amanus, who, being situated between Syria and Cilicia, were independent of, and at war with, both those provinces. They made continual incursions into them, and gave them great trouble. Cicero entirely subjected those mountaineers, and took and demolished all their castles and forts. He afterwards marched against another barbarous nation, a kind of savages, who called themselves free

³ Cic. ad. Famil. l. ii. Epist. 10, 17. li. ii. xii. 19. rv. 1—4. Ad. Attic. l. v. 18, 20, 21. vi. 1, 8. vii. 2.

Cilicians,¹ and pretended to have never been subjected to the empire of any of the kings who had been masters of the countries round about. He took all their cities, and made such dispositions in the country as very much pleased all their neighbours, whom they used perpetually to harass.

It is Cicero himself who acquaints us with these circumstances in several of his letters. There are two among the rest, which may be looked upon as perfect models of the manner in which a general or commander ought to give a prince, or his ministry, an account of a military expedition; with such simplicity, perspicuity, and precision, in which the proper character of writings and relations of this kind consists, are they expressed. The first is addressed to the senate and people of Rome, and to the principal magistrates; it is the second of his fifteenth book of his familiar epistles; the other is written particularly to Cato. This last is a masterpiece, wherein Cicero, who passionately desired the honour of a triumph for his military expeditions, employs all the art and address of eloquence to engage that grave senator in his favour. Plutarch tells us² that after his return to Rome, the senate offered him a triumph, and that he refused it upon account of the civil war then ready to break out between Cæsar and Pompey; not believing that it became him to celebrate a solemnity which breathed nothing but joy, at a time when the state was upon the point of falling into the greatest calamities. His refusal to triumph in the midst of the apprehensions and disorders of a bloody civil war, evinces in Cicero a great love for the public good and his country, and does him much more honour than a triumph itself could have done.

During the civil war between Pompey and Cæsar, and those that followed, the Parthians declaring sometimes for one, and sometimes for the other party, made several irruptions in Syria and Palestine. But those are events which particularly relate to the Roman or Jewish histories, and therefore do not enter into my plan.

I shall conclude this abridgment of that of the Parthians, with the deaths of Pacorus and Orodes his father. Ventidius, who commanded the Roman armies, under the authority of Antony the triumvir, did not a little contribute to the re-establishing the honour of the nation. He was a soldier of fortune, who from the lowest condition of life,³ had raised himself by his merit to the highest dignities of the republic. In the war against the allies of Rome, who attempted to extort the freedom of the city by force, he was taken when an infant, with his mother, in Asculum, the capital of the Picenians, by Strabo, the father of Pompey the Great, and led in triumph before that general. Supported by the influence of C. Cæsar, under whom he had served in Gaul, and who had raised him through all the degrees of the service, he became prætor and consul. He was the only person till the time of Trajan that triumphed for his exploits against the Parthians, and the only one who obtained that honour, after having been led in a triumph himself.

I have said that Ventidius contributed very much to make the Romans amends for the affront they had received at the battle of Carræ. He had begun to revenge the defeat of Crassus and his army, by two successive victories gained over those terrible enemies. A third, still greater than the former, completed the work, and was obtained in this manner:

That general,⁴ apprehending the

A. M. 3965. Parthians, whose preparations were Ant. J. C. 39. far advanced, would get the start of him, and pass the Euphrates before he had time to draw all his troops together out of their different quarters, had recourse to this stratagem. There was a petty eastern prince in his camp, under the name of an ally, whom he knew to be entirely in the interest of the Parthians, and that he held secret intelligence with them, and gave them advice of all

the designs of the Romans which he could discover. He resolved to make this man's treachery the means of drawing the Parthians into a snare he had laid for them.

With that view he contracted a more than ordinary intimacy with this traitor. He conversed frequently with him upon the operations of the campaign. Affecting at length to open himself to him with great confidence, he observed that he was much afraid, from advices he had received, that the Parthians designed to pass the Euphrates not at Zeugma, as usual, but a great way lower. For, said he, if they pass at Zeugma, the country on this side is so mountainous, that the cavalry, in which the whole force of their army consists, can do us no great hurt. But if they pass below, there are nothing but plains, where they will have all manner of advantages against us, and it will be impossible for us to make head against them. As soon as he had imparted this secret to him, the spy did not fail, as Ventidius had rightly foreseen, to communicate it to the Parthians, with whom it had all the effect he could desire. Pacorus, instead of going to Zeugma, immediately took the other route, lost abundance of time in consequence of the great compass he was obliged to take, and in the preparations necessary for passing the river there. Ventidius got forty days by this means, which he employed in making Silon join him from Judæa, with the legions which were quartered on the other side of mount Taurus, and found himself in a condition to give the Parthians a good reception when they entered Syria.

As they saw that they had not been attacked either in passing the river, or afterwards, they attributed that inactivity to terror and cowardice, and marched directly to charge the enemy in their camp, though assisted very advantageously upon an eminence, not doubting but they should soon make themselves masters of it, and that without much resistance. They were mistaken. The Romans quitted their camp, fell on them with impetuosity, and pushed them with the utmost vigour upon the declivity: and as they had the advantage of the ground, and their light-armed troops from the top of the hill poured showers of darts upon the Parthians, they soon put them into disorder, notwithstanding the vigorous resistance they made at first. The slaughter was very great. Pacorus was killed in the battle, and his death was followed immediately with the flight of his whole army. The vanquished made haste to regain the bridge, in order to return into their own country; but the Romans prevented them, and cut the greatest part of them in pieces. Some few escaping by flight, retired to Antiochus king of Comagena. History observes, that this celebrated battle, which so well revenged the defeat of Crassus, was fought exactly on the same day with the battle of Carræ fourteen years before.

Orodes was so struck with the loss of this battle,⁵ and the death of his son, that he was almost out of his senses. For several days, he neither opened his mouth nor took any nourishment. When the excess of his grief was a little abated, and would permit him to speak, nothing was heard from him but the name of Pacorus. He imagined that he saw him, and called to him; he seemed to discourse with him as if he were living, to speak to him, and hear him speak. At other times he remembered that he was dead, and shed a torrent of tears.

Never was grief more just. This was the most fatal blow for the Parthian monarchy it had ever received; nor was the loss of the prince less than that of the army itself. For he was the most excellent character the house of the Arsacidæ had ever produced, for justice, clemency, valour, and all the qualities which constitute the truly great prince. He had made himself so much beloved in Syria, during the little time he resided there, that never did the people express more

⁵ Orodes, repente filii morte et exercitus clade aud'it, ex dolore in furorem vertitur. Multis diebus non aliquid quenquam, non cibum sumere, non vocem mittere, ita ut etiam motus factus videretur. Post multos deinde dies, ubi dolor vocem laxaverit, nihil aliud quam Pacorum vocabat. Pacorus illi videri, Pacorus audiri videbatur; cum illo loqui, cum illo consistere. Interdum quasi amicum debilitat dolebat.—Justin.

affection for any of their native sovereigns, than for the person of this foreign prince.

When Orodes had a little recovered the dejection into which the death of his dear son Pacorus had thrown him, he found himself extremely embarrassed about the choice of his successor out of his other children. He had thirty by different women; each of whom solicited him in favour of her own, and made use of all the ascendancy she had over a mind impaired by age and affliction. At last he determined, however, to follow the order of birth, and nominated

PHRAATES, the eldest, and also most vicious of them all. He had scarce taken possession of the throne, when he caused all his brothers, whom his father had by the daughter of Antiochus Eusebes, king of Syria, to be murdered, and that only because their mother was of a better family than his, and they had more merit than himself. The father, who was still alive, not being able to avoid professing extreme displeasure upon that occasion, that unnatural son ordered him also to be put to death. He treated the rest of his brothers in the same manner, and did not spare his own son, from the apprehension that the people would set him upon the throne in his stead. It was this prince, so cruel towards all his own family, that treated Hyrcanus, king of the Jews, with peculiar favour and clemency.

ARTICLE III.

ABRIDGMENT OF THE HISTORY OF THE KINGS OF CAPPADOCIA, FROM THE FOUNDATION OF THAT KINGDOM TO THE TIME WHEN IT BECAME A PROVINCE OF THE ROMAN EMPIRE.

I have spoken in several parts of this history of the kings of Cappadocia, according as I had occasion, but without mentioning either their beginning or succession. I shall here unite in one point of view all that relates to that kingdom.

Cappadocia is a great country of Asia Minor. The Persians, under whose dominion it was at first, had divided it into two parts, and established two satrapies or governments in it. The Macedonians, into whose possession it fell, suffered those two governments to be changed into kingdoms. The one extended towards mount Taurus, and was properly called Cappadocia, or Cappadocia Major; the other towards Pontus, and was called Cappadocia Pontica, or Cappadocia Minor: they were at length united into one kingdom.

Strabo says, that Ariarathes was the first king of Cappadocia, but does not mention at what time he began to reign. It is probable that it

A. M. 3644. was about the time that Philip, father
Ant. J. C. 360. of Alexander the Great, began to reign in Macedonia, and Ochus in Persia. Upon this supposition the kingdom of Cappadocia continued three hundred threescore and sixteen years, before it was reduced into a province of the Roman empire under Tiberius.

It was governed at first by a long succession of kings named Ariarathes; then by kings called Ariobarzanes, who did not exceed the third generation; and at length by the last, Archelaus. According to Diodorus Siculus, there had been many kings of Cappadocia before Ariarathes; but as his history is almost entirely unknown, I shall make no mention of it in this place.

A. M. 3644. **ARIARATHES I.** He reigned jointly
Ant. J. C. 360. with his brother Holophernes, for whom he had a particular affection.

Having joined the Persians in the expedition against Egypt, he acquired great glory, and returned home laden with honours by king Ochus.

A. M. 3668. **ARIARATHES II.** son of the former,
Ant. J. C. 336. had lived at peace in his dominions, during the wars of Alexander the Great, who out of impatience to come to blows with Darius, was unwilling to be delayed by the conquest of Cappadocia, and had contented himself with some instances of submission.

After that prince's death, Cappadocia in the partition made of the provinces of his empire by his generals, fell to Eumenes. Perdiccas, to put him into possession of it, conducted him thither at the head of a powerful army. Ariarathes on his side prepared for a vigorous defence. He had 30,000 foot and a numerous cavalry. They came to a battle. Ariarathes was defeated and taken prisoner. Perdiccas caused him, with his principal officers, to be crucified and put Eumenes into possession of his dominions.

ARIARATHES III. After the death of his father, he escaped into Armenia.

As soon as he was apprized of the death of Perdiccas and Eumenes,
A. M. 3685
and the employment which other
Ant. J. C. 315
was gave Antiochus and Seleucus, he entered Cappadocia with troops lent him by Ardotes king of Armenia. He defeated Amyntas, general of the Macedonians, drove him out of the country, and reascended the throne of his ancestors.

ARIANNES, his eldest son, succeeded him. He entered into an alliance
A. M. 3720.
with Antiochus Theos, king of Syria,
Ant. J. C. 284.
and married his eldest son to Stratonice, the daughter of the same Antiochus. He had so great an affection for this son, that he made him his colleague in the kingdom.

ARIARATHES IV. having reigned alone after the death of his father, left his dominions, when he died, to his son of the same name with himself, who was at that time very young.

ARIARATHES V. He married Antiochia, daughter of Antiochus the
A. M. 3814.
Great, an artful princess, who find-
Ant. J. C. 190.
ing herself barren, had recourse to imposture. She deceived her husband, and made him believe that she had two sons, one of whom was called Ariarathes, and the other Holophernes. Her barrenness ceasing some time after, she had two daughters, and then one son, who was named Mithridates. She confessed the fraud to her husband, and sent the elder of the supposititious children to be brought up at Rome, with a small train, and the other into Ionia. The legitimate son took the name of Ariarathes, and was educated after the manner of the Greeks.

Ariarathes V. supplied his father-in-law, Antiochus king of Syria, with troops, in the war which he undertook against the Romans. Antiochus having been defeated, Ariarathes sent ambassadors to Rome, to ask pardon of the senate, for having been obliged to declare against the Romans in favour of his father-in-law. This was granted him, but not till after he had been condemned to pay, by way of expiation of his fault, 200 talents, that is to say, 200,000 crowns. The senate afterwards abated him half that sum, at the request of Eumenes king of Pergamus, who had lately married his daughter.

Ariarathes afterwards entered into an alliance with his son-in-law Eumenes, against Pharnaces king of Pontus. The Romans, who had rendered themselves arbiters of the kings of the East, sent ambassadors to negotiate a treaty between those three princes; but Pharnaces rejected their mediation. However, two years after, he was obliged to treat with Eumenes and Ariarathes upon conditions sufficiently hard.

The latter had a son of his own name, who loved him in the most tender manner, which occasioned his being surnamed Philopator; for whom he had no less affection. He desired to give him proofs of it by resigning the kingdom to him, and placing him upon the throne during his life. The son, who had the utmost affection and respect for a father who so well deserved both, could not resolve to accept an offer so advantageous in the vulgar opinion of men, but one which aimed a mortal wound at so good a heart as his; and represented to his father, that he was not one of those who could consent to reign during the life of him to whom he owed his being. Such examples of moderation, generosity, disinterestedness, and sincere

* Strab. l. xii. p. 633, 634.

* He is so called by Polybius, and Orophenes by Diodorus Siculus.

* Liv. l. xxxvii. n. 50. l. xxxviii. n. 37 and 39.

affection for a father, are the most extraordinary, and the more to be admired, as in the times of which we are now relating the history, inordinate ambition respected nothing, and boldly violated the most sacred ties of nature and religion.

ARIARATHES VII. surnamed Philopator, reigned after his father's Ant. J. C. 162. Death, and was an excellent prince.

As soon as he ascended the throne, he sent an embassy to Rome, to renew the alliance his father had contracted with the Romans, which he found no difficulty to obtain. He applied himself very closely to the study of philosophy, from whence Cappadocia, which, till then, had been unknown to the Greeks, became the residence of many learned men.

Demetrius, king of Syria, had a sister, whom Ariarathes refused to espouse, lest that alliance should give offence to the Romans. The refusal extremely prejudiced Demetrius against the king of Cappadocia. He soon found an occasion to be revenged, by supplying Holophernes with troops, who pretended to be the brother of Ariarathes,¹ expelled him from the throne, and after that violence reigned tyrannically. He put many to death, confiscated the estates of the greatest noblemen, and even plundered a temple of Jupiter, which had been revered by the people from time immemorial, and had never suffered such a violation before. Apprehending a revolution, which his cruelty gave him reason to expect, he deposited 400 talents² with the inhabitants of Priene, a city of Ionia. Ariarathes had taken refuge at Rome, to implore aid of the Romans. The usurper sent his deputies thither also. The senate, according to the usual motives of their policy, decreed that the kingdom should be divided between the two brothers.

Ariarathes found a more ready and Ant. J. C. 159. son of Attalus, king of Pergamus, who signalled the beginning of his reign by re-establishing this unfortunate prince upon the throne of his ancestors. Ariarathes, to revenge himself on the usurper, wished to compel the inhabitants of Priene to deliver into his hands the 400 talents Holophernes had left with them. They opposed that demand, with pleading the inviolable faith of deposits, which would not admit their giving up that sum to any one whomsoever, during the life of the person who had confided it to their keeping. Ariarathes had no regard to so just a representation, and laid waste their lands without mercy; notwithstanding which, so considerable a loss did not induce them to violate the fidelity they thought themselves obliged to observe in regard to him, who had confided that deposit with them.

Holophernes had retired to Antioch,⁴ where he joined in a conspiracy with the inhabitants of that city against Demetrius his benefactor, whose place he had conceived hopes of supplying. The conspiracy was discovered, and Holophernes imprisoned. Demetrius would have put him to death directly, if he had not judged it more advisable to reserve him, in order to make use of him afterwards in the pretensions he had upon Cappadocia, and the design he had formed of dethroning and destroying Ariarathes; but he was prevented by the plot contrived against him by the three kings of Egypt, Pergamus, and Cappadocia, who set Alexander Bala upon the throne in his stead.

Ariarathes aided the Romans Ant. J. C. 129. against Aristonicus,⁵ who had possessed himself of the kingdom of Pergamus, and perished in that war.

He left six children, whom he had by Laodice. The Romans, in gratitude for the father's services, added Lycæonia and Cilicia to their dominions. Laodice, who was regent during the minority of those six princes, apprehending the loss of her authority when they should be of age to reign, poisoned five

of them the same year their father died. She would have treated the sixth in the same manner, if the vigilance of relations had not removed him from the fury of that unnatural mother. The people set him upon the throne, after having destroyed that cruel murderess of her children.

ARIARATHES VII. He married another Laodice,⁶ sister of Mithridates Ant. J. C. 91 Eupator, and had two-sons by her, Ant. J. C. 91

ARIARATHES VIII. and ARIARATHES IX. His brother-in-law caused him to be murdered by Gordius, one of his subjects. Laodice afterwards married Nicomedes king of Bithynia, who immediately took possession of Cappadocia. Mithridates sent an army thither, drove out the garrisons of Nicomedes, and reared the kingdom to his nephew, the son of the same Ariarathes, whom he had caused to be assassinated.

ARIARATHES VIII. had scarce ascended the throne, when Mithridates pressed him to recall Gordius from banishment, with design to rid himself of the son by the same assassin who had killed the father. That young prince shuddered at the proposal, and raised an army to oppose the violence of his uncle. Mithridates being unwilling to decide his measures by the hazard of a battle, chose rather to draw Ariarathes to a conference, in which he assassinated him, with a dagger concealed for that purpose, in the view of the two armies. He set his own son of only eight years of age in his place, caused him to be called Ariarathes, and gave him Gordius for his governor.⁷ The Cappadocians, not being able to bear the oppression of the lieutenants of Mithridates, rose in arms, called in Ariarathes, the late king's brother, from Asia, and placed him upon the throne.

ARIARATHES IX. Soon after his return, Mithridates attacked, overthrew, and expelled him the kingdom. That young prince's grief brought a disease on him, of which he died soon after. Mithridates had re-established his son upon the throne.

Nicomedes, king of Bithynia, apprehending that Mithridates, being in possession of Cappadocia, might fall upon his dominions, set up an infant of eight years of age, to whom he also gave the name of Ariarathes, and sent deputies to the Romans to demand the kingdom of his father in his name. Queen Laodice, his wife, went expressly to Rome to support the imposture, and to testify that she had three sons by ARIARATHES VII., of whom this, which she produced, was the last. Mithridates, on his side, ventured to have assurances made by Gordius, that this son, whom he had placed upon the throne, was the son of that Ariarathes who had been killed in the war against Aristonicus. What times were these! what a series is here of frauds and impostures! The Roman people saw through them; and in order not to support them on either side, decreed that Mithridates should renounce Cappadocia, which for the future should enjoy its liberty, and govern itself as it thought proper. But the Cappadocians sent to Rome to declare that liberty was insupportable to them, and to demand a king. We may justly be astonished at the taste of a people, who could prefer slavery to liberty. But there are nations to which the monarchical is better adapted than the republican government; and there are few who are wise enough to make a moderate use of perfect and entire liberty. The Cappadocians elected, or rather received from the Romans, Ariobarzanes for their king, whose family was extinct at the third generation.

ARIOBARZANES I. This new prince did not enjoy his dignity in peace.⁸ Ant. J. C. 89. Mithraas and Bagoas, generals of Ant. J. C. 89. Tigranes, drove him out of Cappadocia, and established there Ariarathes, son of Mithridates. The Romans caused Ariobarzanes to be reinstated. He was expelled some time after by an army sent by Mithridates into Cappadocia, in favour of his son. Sylla, having obtained great advantages over Mithridates, compelled him to abandon Cappa-

dodia. Some time after, at the instigation of that prince, Tigranes invaded that kingdom, and carried off 300,000 men, to whom he gave lands in Armenia, and placed a considerable number of them in the city of Tigranocerta. Ariobarzanes, who had escaped to Rome before the invasion, was not restored till Pompey had put an end to the war with Mithridates.

A. M. 3938. considerably enlarged the dominions Ant. J. C. 66. of Ariobarzanes, when he replaced him on the throne of Cappadocia.

His son succeeded to all that great inheritance, but did not keep it long. He was killed some time before Cicero went to command in Cilicia. The prince who reigned at that time was Ariobarzanes III. grandson of Ariobarzanes I.

A. M. 3953. Ariobarzanes I. Cicero, upon Ant. J. C. 51. quitting Rome, had received orders to favour and protect Ariobarzanes with all possible care, as a prince whose welfare was dear to the senate and people: a glorious testimonial, which had never before been granted to any king. Cicero punctually executed the order of the senate. When he arrived in Cilicia, Ariobarzanes was menaced with being killed, as his father had been. A conspiracy was on foot against him, in favour of his brother Ariarathes. The latter declared to Cicero, that he had no part in that plot; that indeed he had been earnestly solicited to accept the kingdom, but that he had always been infinitely averse to such thoughts, during the life of his brother; who, it seems, had no issue. Cicero employed the authority of his office, and all the influence his high reputation gave him, to dispel the storm with which the king was threatened. His endeavours were successful; he saved the king's life and crown by his resolution, and a generous disinterestedness, which rendered him inaccessible to all the attempts that were made to corrupt his integrity, and to seduce him. The greatest danger came from the high-priest of Comana. There were two principal cities of that name, the one in Cappadocia and the other in the kingdom of Pontus.¹ They were consecrated to Bellona, and observed almost the same ceremonies in the worship of that goddess. The one was formed upon the model of the other; that of Pontus upon that of Cappadocia. It is of the latter we speak in this place. The temple of that goddess was endowed with great estates, and served by a vast number of persons, under the authority of a pontiff, a man of great influence, and so considerable, that the king alone was his superior: he was generally of the blood royal. His dignity was for life. Strabo says, that in his time there were above 6000 persons consecrated to the service of the temple of Comana. It was that which made the high-priest so powerful; and in the time of which we speak,² might have occasioned a very dangerous war, and involved Ariobarzanes in great difficulties, had he thought proper to defend himself by force of arms, as it was believed he would; for he had troops, both horse and foot, ready to take the field, with great funds to pay and subsist them. But Cicero, by his prudence, prevailed upon him to retire out of the kingdom, and to leave Ariobarzanes in the peaceable possession of it.

During the civil war between Cæsar and Pompey, Ariobarzanes marched with some troops to the latter, who were present at the battle of Pharsalia. This, no doubt, was the reason that Cæsar laid Ariobarzanes under contribution. It is certain that he exacted very considerable sums of money from him;³ for that prince

represented to him, that it would be impossible for him to pay them, if Pharnaces continued to plunder Cappadocia. Cæsar was then, in Egypt, from whence he set out to reduce Pharnaces to reason. He passed through Cappadocia, and made such regulations there, as imply that Ariobarzanes and his brother kept up no very good understanding with each other, and entirely subjected the latter to the authority of the former. After Cæsar had conquered Pharnaces,⁴ he gave part of Cilicia and Armenia to Ariobarzanes.

This mild treatment gave the murderers of Cæsar reason to believe that A. M. 3962. the king of Cappadocia, would not fa- Ant. J. C. 42. vour their party.⁵ He did not openly declare against them; but he refused to enter into their alliance. This conduct gave them a just distrust of him, so that Cassius thought it incumbent upon him not to spare him. He attacked him, and having taken him prisoner, put him to death.

ARIARATHES X. By the death of Ariobarzanes the kingdom of Cappadocia fell to his brother Ariarathes. The possession of it was disputed with him by Sisinna the eldest son of Glaphyra, wife of Archelaus, high-priest of Bellona, at Comana, in Cappadocia. This Archelaus was the grandson of Archelaus, a Cappadocian by nation, and general of an army in Greece for Mithridates against Sylla. He abandoned the party of Mithridates in the second war, as we shall relate in the twenty-third book, and joined the Romans.⁶ He left one son, named also Archelaus, who married Berenice, queen of Egypt, and was killed six months after in a battle. He had obtained a very honourable dignity from Pompey, which was the high-priesthood of Comana in Cappadocia. His son Archelaus possessed it after him. He married Glaphyra, a lady of extraordinary beauty, and had two sons by her, Sisinna and Archelaus.

The first disputed the kingdom of A. M. 3963. Cappadocia with Ariarathes who pos- Ant. J. C. 41. sessed it.⁷ Mark Antony was the judge of this difference, and determined it in favour of Sisinna. What became of him is not known; history only tells us, that A. M. 3968. Ariarathes re-ascended the throne. Ant. J. C. 36. Five or six years after Mark Antony expelled him, and established Archelaus,⁸ the second son of Glaphyra, in his stead.

ARCHELAUS.⁹ That prince became very powerful. He expressed A. M. 3973. his gratitude to Mark Antony by join- Ant. J. C. 31. ing him with good troops at the battle of Actium. He was so fortunate, notwithstanding that conduct, as to escape the resentment of Augustus. He was suffered to keep possession of Cappadocia, and was almost the only one treated with so much favour.

He assisted Tiberius to re-establish Tigranes in Armenia,¹⁰ and ob- A. M. 3984. tained of Augustus, Armenia Minor, Ant. J. C. 20. and a great part of Cilicia. Tiberius rendered him great services with Augustus, especially when his subjects brought accusations against him before that prince. He pleaded his cause himself, and was the occasion of his gaining it. Archelaus fixed his residence in the island of Eleusis near the coast of Cilicia, and having married Pythodorus, the widow of Polemon king of Pontus, he considerably augmented his power. For as the sons of Polemon were infants at that time, he had undoubtedly the administration of their kingdom jointly with their mother.

His reign was very long and happy;¹¹ but his latter years were unfor- A. M. 3988. tunate, and his misfortunes were the Ant. J. C. 16. consequence of Tiberius's revenge. That prince, who saw with pain, that Caius and Lu-

cius, the sons of Agrippa, grandsons of Augustus, and his sons by adoption, were raised by degrees above him; to avoid giving umbrage to the two young Cæsars, and to spare himself the mortification of being witness to their aggrandizement, demanded and obtained permission to retire to Rhodes, under pretext that he had need of repose for the re-establishment of his health. His retreat was considered as a real banishment, and people began to neglect him as a person in disgrace, and did not believe it safe to appear his friends. During his stay at Rhodes, king Archelaus, who was not at a great distance from thence, residing generally at Eleusis,³ paid him no honours, forgetting the great obligations he had to him. It was not, says Tacitus, out of pride or haughtiness, but by the advice of Augustus's principal friends, who believed the amity of Tiberius dangerous at that time. On the contrary, when

A. M. 4002. young Caius Cæsar, appointed governor of the East, was sent into Armenia by Augustus, to appease the troubles of that country, Archelaus, who looked upon him as the future successor to the empire, paid him all kind of honours, and distinguished himself by the zeal with which he paid his court to him. Politicians are often mistaken in their conjectures, for want of a clear insight into futurity. It would have been more consistent with prudence and wisdom in Archelaus to have observed such a conduct as would have been agreeable to each of the princes, who might both arrive at the empire. Something of this nature is observed of Pomponius Atticus,⁴ who during all the divisions, with which the republic was torn at different times, always knew how to render himself agreeable to the heads of both parties.

Tiberius never forgot the injurious preference that had been given to his rival, which was the more offensive to him, as it argued an ungrate-

A. M. 4020. full disposition in Archelaus. He Ant. J. C. 16. made him highly sensible of this when he became master. Archelaus was cited to Rome as having endeavoured to excite troubles in the province. Livia wrote to him, and without dissembling the emperor's anger, gave him hopes of pardon, provided he came in person to demand it. This was a snare laid for drawing him out of his kingdom. The king of Cappadocia either did not perceive it, or dared not to act as if he did. He set out for Rome, was very ill received by Tiberius, and saw himself shortly after proceeded against as a criminal. Dion assures us, that Archelaus, depressed with age, was generally believed to have lost his reason; but that in reality he was perfectly in his senses, and counterfeited the madman, because he saw no other means of saving his life. The senate passed no sentence against him; but age, the gout, and, more than those, the indignity of the treatment he was made to suffer, soon occasioned his death. He reigned two-and-fifty years. After his death, Cappadocia was reduced into a province of the Roman empire.

This kingdom was very powerful. The revenues of Cappadocia were so considerable when Archelaus

died, that Tiberius thought himself able, from his new acquisition, to abate the half of a tax he had caused to be levied. He even gave that province some relief, and would not exact from it all the duties it had paid the last king.

The kings of Cappadocia generally resided at Mazaca,⁵ a city situate at the foot of the mountain Ar-

• Strab. l. xii. p. 537, 538.

• [This city was afterwards called Cæsarea Mazaca, in honour of Tiberius Cæsar, and is now called Kaisariyah by the Turks. It was also sometimes called Ad Arzum, to distinguish it from other cities of the same name. This city continued to increase in wealth and splendour after its annexation to the empire. It struck a number of medals, consecrated temples to the emperors, and celebrated public games in honour of Septimius Severus and his sons. It was adorned with an amphitheatre and many temples, and when pillaged by Schabour, son of Ardeshir Babegan, the Persian king, in the reign of Valerian, it contained a population of 400,000 souls. Its dimensions were contracted by Justinian, who rebuilt the walls. It was raised to the dignity of an apostolic See, and gave birth to the celebrated Basil, who was buried near the town. The city lies in the south side of a plain, fertile and of great extent, and at the foot of a stupendous mountain called Argæus. Two branches of this mountain advance a short distance into the plain, forming a small recess, in the centre of which stands Cæsarea, surrounded on three sides by mountains. The area of the modern city is inconsiderable, and the houses, though built of stone and mortar, are mean in their appearance. It is still the emporium of an extensive trade, and the resort of merchants to it from all parts of Asia Minor and Syria, for the purpose of buying cotton, here cultivated in great quantities, and either sold as a raw material, or as manufactured into cloth. Kinnier states the population at 25,000; of which 1500 are Armenians, 300 Greeks, and 150 Jews.]

Very considerable ruins are visible here, as the area of the ancient city was much larger than that now occupied by the modern city. The sides of the hills south of the town are strewn with mouldering rubbish in vast piles, and to the north and east other ruins are plainly discernible. The ruins on the south side are about a quarter of a mile distant from the suburbs, and are called Eski Shehr, or the old city. No vestiges of inscriptions, no columns, or sculptured marbles, are however to be seen, though many of the ruins are of great antiquity, and the arches of the old gateways are semicircular, and not in the pointed, or Saracenic fashion.

Mount Argæus is undoubtedly the highest mountain in Asia Minor, and, I believe, equal in elevation to mount Blanc, it being distinctly visible at the horizontal distance of 150 miles, say 180. It rises, like mount Elwund, from the plain of Hamadan, but with far greater elevation; and as Kinnier observed on the 24th of October, when the whole of the country round was parched with drought, it was enveloped in the snows of perpetual winter, half way from its summit. The natives say that the Romans had a castle on its summit, where Tiberius Cæsar used to sit; but they confessed, that, although many had made the attempt, no one, within their knowledge, had ever passed its frozen steep.

That it was esteemed very lofty by the ancients, is plain from the notion that obtained credit among them, that from its summit both the Euxine and Mediterranean seas could be distinctly seen: and, consequently, they must have deemed it higher than mount Taurus, which lay betwixt it and the latter.

The range of the Arzi Dagh is totally unconnected with any other, but rises in six peaks, like the steps of a ladder, the most lofty of which bore north-east by east from Karahissar, where Kinnier had an excellent view of the range. The peak of Argæus, as far as he could judge from observation, lies ten miles south of Cæsarea. It is very surprising that Colonel Leake, who saw its lofty peaks rising considerably above the horizon, at the north-west extremity of the plain of Iconium, 150 miles distant, should have estimated its elevation at only six thousand feet, and yet he believes it to be the highest mountain in Asia Minor. No mountain, of such a diminutive height, can possibly be seen at such a elevation, and rising so high above the verge of the distant horizon. The utmost elevation of mount Taurus is conjectured by the same traveller at only 6500 feet. The fact is otherwise; and it is quite plain, that if a mountain be visible at such a distance, and be covered with snow half way down, in the latitude of 36 degrees, in the drought of autumn, that it must equal, if not exceed, mount Blanc in elevation.

Ptolemy, in his Table of Cappadocia, lib. v. p. 121, 122, places the southern boundary of mount Argæus 10 miles north of Cæsarea, perfectly opposite to fact; and extends the range from 39 degrees 40 minutes north latitude to 40 degrees 30 minutes north latitude. There are eighty villages dependent on Cæsarea.

Mr. Bruce, in his Journey from Cæsarea to Oœcart, mentions a river which he crossed on a stone bridge, not very far from the city, and observed many morasses occasioned by the inundations of the river. This river is undoubtedly that mentioned in the text, as running west from the elevated plain of Cæsarea to the Halys. Perhaps these very morasses may have been caused by the inundation of the river from the stoppage of its mouth by Ariarathe. The range

Annal. l. ii. c. 42.*

gen, and which was governed by the laws of Charondas.¹ This city was built upon the river Melas, which empties itself into the river Euphrates. A king of Cappadocia, whom Strabo calls simply Ariarathes, without mentioning the time when he lived, having filled up the mouths of this river, it overflowed all the neighbouring country; after which he caused small islands to be made in it, after the manner of the Cyclades, where he passed part of his life in puerile diversions. The river broke the dams of its mouths, and the waters returned into their channel. The Euphrates having received them, overflowed, and did incredible damage in Cappadocia. The Galatians, who inhabited Phrygia, suffered also great losses by that inundation, for which they insisted upon being made amends. They demanded 300 talents of the king of Cappadocia, and made the Romans their judges.

Cappadocia abounded with horses, asses, and mules.² It was from thence the horses were brought

¹ This Charondas was a celebrated legislator of Græcia Major, of whom mention has been made.

² Boch. Phaleg. l. iii. c. II. Scol. Persii.

of Argæus, as represented in Kinnier's map, lies between the Karasu on the north, and the Enga-Su on the south, both of which unite about 30 British miles west of Cæsarea, thus forming a peninsula. As the river is frequently subjected to inundations, also, from the melting of the snows of mount Argæus, it is very probable that this additional circumstance contributed to increase the calamity. Cæsarea lies in 35 degrees 42 minutes east longitude of Greenwich, and in 36 degrees 41 minutes north latitude.]

so particularly allotted for the use of the emperors that the consuls themselves were forbidden to have any of them. It furnished also a great number of slaves and false witnesses.³ The Cappadocians were reported to accustom themselves to the bearing of torments from their infancy, and to put one another to the rack and other methods of torture, in order to inure themselves against the pains their false witness might one day expose them to suffer. This people exceeded the Greek nation in perjury, though the latter had carried that vice to a great height,⁴ if we may believe Cicero, who ascribes to them the having made this manner of speaking common amongst them; "Lend me your evidence, and I will pay you with mine."⁵

Cappadocia, generally speaking, was far from being a country of great geniuses and learned men. It has produced, however, some very celebrated authors. Strabo and Pausanias are of that number. It was believed especially, that the Cappadocians were very unfit for the professions of orators; and it became a proverb, that a rhetorician of that country was as hard to be found as a white raven or a flying tortoise.⁶ S. Basil and S. Gregory Nazianzen are exceptions to that rule.

THE HISTORY OF SYRACUSE.

BOOK XXII.

This twenty-second book contains the conclusion of the history of Syracuse. It may be divided into three parts. The first includes the long reign of Hiero II. The second, the short reign of his grandson, Hieronymus, the troubles of Syracuse occasioned by it, with the siege and taking of that city by Marcellus. The third is a concise abridgment of the history of Syracuse, with some reflections on the government and character of the Syracusans, and on Archimedes.

ARTICLE I.

SECTION I.—HIERO THE SECOND CHOSEN CAPTAIN-GENERAL BY THE SYRACUSANS, AND SOON AFTER APPOINTED KING. HE MAKES AN ALLIANCE WITH THE ROMANS IN THE BEGINNING OF THE FIRST PUNIC WAR.

A. M. 3700. Hiero II. was descended from the family of Gelon, who had formerly reigned in Syracuse.¹ As his mother was a slave, his father, Hierocles, according to the barbarous custom of those times, caused him to be exposed soon after his birth: believing that the infant dishonoured the nobility of his race. If Justin's fabulous account may be believed, the bees nourished him several days with their honey. The oracle declaring, that so singular an event was a certain presage of his future greatness, Hierocles caused him to be brought back to his house, and took all possible care of his education.

The child derived from this education all the benefit that could be expected. He distinguished himself early above all those of his years, by his address in military exercises, and his courage in battle. He acquired the esteem of Pyrrhus, and received several rewards from his hands. He was of a beautiful aspect, tall stature, and robust complexion. In his conversation he was affable and polite, in business just, and moderate in command: so that he wanted nothing but the title of king, as he already possessed all the qualities that adorn that rank.

Discord having arisen between the citizens of Syracuse and their troops, Ant. J. C. 277. the latter, who were in the neighbourhood, raised Artemidorus and Hiero to the supreme command, which comprehended all authority, civil and military. The latter was at that time very young, but displayed a prudence and maturity that gave promise of a great king. Honoured with this command, by the help of some friends he entered the city; and having found means to bring over the adverse party, who were intent upon nothing but raising disorders, he behaved with so much mildness and greatness of mind, that the Syracusans, though highly dissatisfied with the liberty assumed by the soldiers, of choosing their officers, were, however, unanimous in conferring upon him the title and power of captain-general.

From his first measures it was easy to judge that the new magistrate aspired at something more than that

office. In fact, observing that the troops no sooner quitted the city, than Syracuse was involved in new troubles by seditious spirits and lovers of innovation, he perceived how important it was, in the absence of himself and the army, to have somebody upon whom he might rely for keeping the citizens within the bounds of their duty. Leptines seemed very fit for that purpose, as being a man of integrity, and one who had great influence with the people. Hiero attached him to himself for ever, by espousing his daughter, and by the same alliance secured the public tranquillity, during the time he should be obliged to remove from Syracuse, and march at the head of the armies.

Another much bolder, though far less just, stroke of policy, established his security and repose. He had every thing to fear from the foreign soldiers, turbulent, malignant men, void of respect for their commanders, and of affection for a state of which they made no part, solely actuated by the desire of lucre, and always ready for a revolt; who having been bold enough to assume a right in the election of magistrates, which did not belong to them, were capable, upon the least discontent, of attempting any thing against himself. He easily comprehended, that he should never have the mastery over them, as they were too well united amongst themselves; that, if he undertook to punish the most criminal, their chastisement would not fail to provoke the rest; and that the only means to put an end to the troubles they occasioned, was utterly to exterminate this factious body of troops, whose licentiousness and rebellious disposition were only fit to corrupt others, and incline them to pernicious excesses. Deceived by a false zeal and blind love for the public good, and sensibly affected also with the prospect of the dangers to which he was perpetually exposed, he thought it incumbent on him, for the safety of his country and security of his person, to proceed to this cruel and sad extremity, very contrary to his natural character, but which seemed necessary to him in the present conjuncture. He therefore took the field under the pretext of marching against the Mamertines.⁴ When he came within view of the enemy, he divided his army into two parts: on the one side he posted such of the soldiers as were Syracusans; on the other, the mercenaries. He put himself at the head of the first, as if he intended an attack; and left the others exposed to the Mamertines, who cut them in pieces; after which he returned quietly to the city with the Syracusan troops.

The army being thus purged of all who might excite disorders and sedition, he raised a sufficient number of new troops, and afterwards discharged the duties of his function in peace. The Mamertines, elate with their success, advancing into the country, he marched against them with the Syracusan troops, whom he had armed and disciplined well, and gave them battle in the plain of Myla. A great part of the enemies were left upon the field, and their generals made prisoners. At his return he was declared king

⁴ They were originally troops from Campania, whom Agathocles had taken into his pay, and who afterwards seized Messina, having first put the principal inhabitants to the sword.

A. M. 3733. by all the citizens of Syracuse, and afterwards by all the allies. This Ant J. C. 271. happened seven years after his being raised to the supreme authority.

It would be difficult to justify the manner in which he gained that eminence. Whether he put the foreign soldiers in motion himself, which seems probable enough, or only lent himself to their zeal, it was a criminal infidelity to his country and the public authority, to which his example gave a mortal wound. It is true, the irregularity of his entrance upon office was somewhat ananied by the consent which the people and allies afterwards gave to it. But can we suppose, that in such a conjuncture their consent was perfectly free? As to his being elected king, there was nothing of compulsion in that: if his secret ambition had any part in it, that fault was well atoned for by his wise and disinterested conduct through the long duration of his reign and life.

The loss of the battle we have spoken of entirely disconcerted the affairs of the Mamertines. Some of them had recourse to the Carthaginians, to whom they surrendered their citadel; others resolved to abandon the city to the Romans, and sent to desire their aid. Hence arose the first Punic war, as I have explained more at large elsewhere.¹

Appius Claudius the consul put to sea, in order to aid the Mamertines.² Not being able to pass the strait of Messina, of which the Carthaginians had possessed themselves, he made a feint of abandoning that enterprise, and of returning towards Rome with all the troops he had on board his fleet. Upon this news the enemy, who blocked up Messina on the side next the sea, having retired, as if there had been nothing farther to apprehend, Appius tacked about, and passed the strait without danger.

The Mamertines,³ partly through menaces and partly through surprise, having driven out of the citadel the officer who commanded in it for the Carthaginians, called in Appius, and opened the gates of their city to him. The Carthaginians soon after formed the siege of it, and made a treaty of alliance with Hiero, who joined his troops to theirs. The Roman consul thought fit to venture a battle, and attack the Syracusans first. The fight was warm. Hiero showed all possible courage, but could not resist the valour of the Romans, and was obliged to give way, and retire to Syracuse. Claudius, having obtained a like victory over the Carthaginians, saw himself master of the field, advanced to the walls of Syracuse, and even designed to have besieged it.

When the news of Appius's good A. M. 3739. success arrived at Rome, it occasioned great joy.⁴ Ant J. C. 265. In order to make the most of it, it was thought proper to use new efforts. The two consuls lately elected, Manius Octacilius and Manius Valerius, were ordered into Sicily. Upon their arrival, several of the Carthaginian and Syracusan cities surrendered at discretion.

The consternation of Sicily, joined to the number and force of the Roman legions, made Hiero conceive what was likely to be the event of this new war. That prince was sensible, that he might rely upon a more faithful and constant amity on the side of the Romans. He knew that the Carthaginians had not renounced the design they had anciently formed, of possessing themselves of all Sicily; and if they made themselves masters of Messina, he rightly judged his power would be very insecure in the neighbourhood of such dangerous and formidable enemies. He saw no other expedient for the preservation of his kingdom, than to leave the Carthaginians engaged with the Romans; well assured that the war would be long and obstinate between these two republics, whose strength was equal; and that as long as they should be contending, he should have no reason to apprehend being distressed either by the one or the other. He, therefore, sent ambassadors to the consuls to treat of peace and alliance. They were far from refusing those offers. They

were too much afraid, that the Carthaginians, being masters at sea, might cut off all passage for provisions; which fear was the better founded, as the troops who had first passed the strait had suffered extremely by famine. An alliance with Hiero secured the legions in that respect, and was immediately concluded. The conditions were, that the king should restore to the Romans, without ransom, all the prisoners he had taken from them, and pay them a hundred talents in money.⁵

From thenceforth Hiero, constantly attached to the Romans, to whom he sent supplies when occasion required, reigned peaceably at Syracuse, as a king who had no view nor ambition but the esteem and love of his people. No prince was ever more successful in that point, nor longer enjoyed the fruits of his wisdom and prudence. For more than fifty years that he lived after being elected king, whilst all things were in flames around him, occasioned by the cruel wars which the two most potent states of the world made against each other, he was so prudent and nappy as to be no more than a spectator of them, and only to hear the noise of those arms which shook all the neighbouring regions, whilst himself and his people retained a profound peace.

The Romans perceived,⁶ on more than one occasion, during the first Punic war, and especially at the siege of Agrigentum, with which it was in a manner opened, the importance of their alliance with Hiero, who abundantly supplied them with provisions, at times when the Roman army without his aid would have been exposed to excessive famine.

The interval between the end of the first Punic war and the commencement of the second, which was about five-and-twenty years, was a time of peace and tranquillity to Hiero, in which the actions of that prince are little spoken of.

Polybius⁷ only informs us, that the Carthaginians, in the unhappy war A. M. 3763. they were obliged to support against Ant J. C. 241. the strangers, or mercenaries, which was called the African war, finding themselves extremely pressed, had recourse to their allies, and especially to king Hiero, who granted them all they asked of him. That prince perceived, that to support himself in Sicily, it was necessary that the Carthaginians should overcome in this war; lest the strangers, who had already obtained many advantages over the Carthaginians, in case of entire success, should find no farther obstacles to their projects, and should form designs of bringing their victorious arms into Sicily. Perhaps, also, as he was an excellent politician, he thought it incumbent on him to be upon his guard against the too great power of the Romans, who would become absolute masters, if the Carthaginians should be entirely ruined in the war against the revolvers.

Hiero's sole application during this long interval of peace, was to make his subjects happy, and to redress the evils which the unjust government of Agathocles, who preceded him some years, and the intestine divisions which ensued, had occasioned; an employment worthy of a king. There was a levity and inconstancy in the character of the Syracusans, which often inclined them to excessive and violent resolutions; but at bottom they were humane and equitable, and no enemies to a just and reasonable obedience. The proof of which is, that when they were governed with wisdom and moderation, as by Timoleon, they respected the authority of the laws and magistrates and obeyed them with joy.

Hiero was no sooner entered upon office, and had the supreme authority confided to him, than he showed his detestation for the wretched policy of the tyrants; who, considering the citizens as their enemies had no other thoughts than to weaken and intimidate them, and reposed their whole confidence in the foreign soldiers, by whom they were perpetually surrounded. He began by putting arms into the hands of the citizens, formed them with care in the exercises of war, and employed them in preference to all others

SECTION II.—HIERO'S PACIFIC REIGN. HE PARTICULARLY FAVOURS AGRICULTURE. HE APPLIES THE ABILITIES OF ARCHIMEDES HIS RELATION TO THE SERVICE OF THE PUBLIC, AND CAUSES HIM TO MAKE AN INFINITE NUMBER OF MACHINES FOR THE DEFENCE OF A BESIEGED PLACE. HE DIES VERY OLD, AND MUCH REGRETTED BY THE PEOPLE.

WHEN Hiero attained the sovereign authority, his great aim was to convince his subjects less by his words than his actions, that he was infinitely remote from any design to the prejudice of their fortunes or liberty. He was not intent upon being feared, but upon being loved. He looked upon himself less as their master, than as their protector and father. Before his reign, the state had been divided by two factions, that of the citizens and that of the soldiers; whose differences, supported on both sides with great animosity, had occasioned infinite misfortunes. He used his utmost endeavours to extinguish all remains of this division, and to eradicate from their minds all seeds of discord and misunderstanding. He seems to have succeeded wonderfully in that respect, as during a reign of more than fifty years, no sedition or revolt disturbed the tranquillity of Syracuse.

What contributed most, without doubt, to this happy calm, was the particular care taken by Hiero to keep his subjects employed; to banish luxury and idleness, the parent of all vices, and the usual source of all seditions, from his dominions; to support and improve the natural fertility of his country; and to reflect honour upon agriculture, which he considered as the certain means to render his people happy, and to diffuse abundance throughout his kingdom. The cultivation of lands, indeed, besides employing an infinite number of hands, which would otherwise remain idle and unprofitable, draws into a country, by the exportation of grain, the riches of the neighbouring nations, and turns their current into the houses of the people, by a commerce which is renewed every year, and which is the deserved fruit of their labour and industry. This is, and we cannot repeat it too often, what ought to be the peculiar attention of a wise government, as one of the most essential parts of wise and salutary policy, though unhappily too much neglected.

Hiero applied himself entirely to this end. He did not think it unworthy of the sovereignty to study and make himself thoroughly master of all the rules of agriculture. He even gave himself the trouble to compose books upon that subject, of which we ought much to regret the loss.¹ But he considered that object of his inquiries in a manner still more worthy of a king. The principal riches of the state, and the most certain fund of the prince's revenue, consisted in corn. He therefore believed it of the highest consequence, and what demanded his utmost care and application, to establish good order in that traffic, to render the condition of the husbandmen, of whom the greatest part of the people were composed, safe and happy; to ascertain the prince's dues, whose principal revenue rose from them; to obviate such disorders as might get ground to the prejudice of his institutions; and to prevent the unjust vexations which might possibly be attempted to be introduced in the sequel. To answer all these purposes, Hiero made regulations so wise, reasonable, equitable, and at the same time conformable to the people's and prince's interests, that they became in a manner the fundamental laws of the country, and were always observed as sacred and inviolable, not only in his reign, but in all succeeding times. When the Romans had subjected the city and dominions of Syracuse, they imposed no new tributes, and decreed that all things should be disposed according to the laws of Hiero;² in order that the Syracusans, in changing their masters, might have the consolation not to change their laws, and see themselves in some

measure still governed by a prince whose very name was always dear to them, and rendered those laws exceedingly venerable.

I have observed, that in Sicily the prince's principal revenue consisted in corn, the tenth being paid him. It was therefore his interest that the country should be well cultivated, that estimates should be made of the value of the lands; and that they should produce abundantly, as his revenue augmented in proportion to their fertility. The collectors of this tenth for the prince, which was paid in kind, and not in money, were called *Decumani*, that is to say, farmers of the tenths. Hiero, in the regulations he made upon this head, did not neglect his own interests, which is the mark of a wise prince, and good economist. He knew very well, there was reason to apprehend, that the country people, who frequently consider the most legal and moderate imposts as intolerable burdens, might be tempted to defraud the prince of his dues. To spare them this temptation, he took such just and exact precautions, that whether the corn were in the ear, on the floor to be thrashed, laid up in barns, or laden for carriage, it was not possible for the husbandman to secrete any part of it, or to defraud the collector of a single grain, without exposing himself to a severe penalty. Cicero acquaints us with these circumstances at much length. But he adds also, that Hiero had taken the same precautions against the avidity of the collectors, to whom it was equally impossible to extort any thing from the husbandmen beyond the tenth. Hiero seems to have been very much against the husbandman's being drawn from his home upon any pretext whatsoever. In fact, says Cicero, inveighing against Verres, who gave them great trouble by frequent and painful journeys, it is very hard and afflicting to the poor husbandmen, to be brought from their country to the city, from the plough to the bar, and from the care of tilling their lands to that of prosecuting lawsuits. *Miserum atque iniquum, ex agro homines trahi in forum, ab aratro ad subsellia, ab usu rerum rusticarum ad insolitam liem atque iudicium.*³ And besides, can they flatter themselves, let their cause be ever so just, that they shall carry it to the prejudice of the collectors? *Judices ut orator decumanum persequatur?*

Can there be any thing more to a king's praise than what we have now said? Hiero might undertake wars, for he did not want valour, gain battles, make conquests, and extend the bounds of his dominions, and upon these accounts might pass for a hero in the opinion of the generality of men. But with how many taxes must he have loaded his people? How many husbandmen must he have torn from their lands? How much blood would the gaining of those victories have cost him! and of what emolument would they have been to the state? Hiero, who knew wherein true glory consists, placed his in governing his people with wisdom, and in making them happy. Instead of conquering new countries by the force of arms, he endeavoured to multiply his own in a manner by the cultivation of the lands, by rendering them more fertile than they were, and in actually multiplying his people, wherein the real force and true riches of a state consist; and which can never fail to happen when the people of a country reap a reasonable advantage from their labour.

It was in the second Punic war that Hiero gave distinguished proof of his attachment to the Romans.⁴ As soon as he received advice of Hannibal's arrival in Italy, he went with his fleet well equipped to meet Tiberius Sempronius, who was arrived at Messina, to offer that consul his services, and to assure him that, advanced in age as he was, he would show the same zeal for the Roman people as he had formerly done in his youth in the first war

against the Carthaginians. He took upon him to supply the consul's legions, and the troops of the allies, with corn and clothes at his own expense. Upon the news received the same instant, of the advantage gained by the Roman over the Carthaginian fleet, the consul thanked the king for his advantageous offers, and made no use of them at that time.

Hiero's inviolable fidelity towards the Romans,¹ which is very remarkable in his character, appeared still more conspicuously after their defeat near the lake of Thrasymentus. They had already lost three battles against Hannibal, each more unfortunate and more bloody than the other. Hiero, in that mournful conjuncture, sent a fleet laden with provisions to the port of Ostia. The Syracusan ambassadors, when introduced to the senate, told them, "That Hiero their master had been as sensibly afflicted with their last disgrace, as if he had suffered it in his own person. That though he well knew, that the grandeur of the Roman people was almost more worthy of admiration in times of adversity, than after the most signal success; he had sent them all the aid that could be expected from a good and faithful ally, and earnestly desired the senate would not refuse to accept it. That they had particularly brought a Victory of gold, that weighed three hundred pounds, which the king hoped they would vouchsafe to receive as a favourable augury, and a pledge of the vows which he had made for their prosperity. That they had also imported three hundred thousand bushels of wheat, and two hundred thousand of barley; and that if the Roman people desired a greater quantity, Hiero would cause as much as they pleased to be transported to whatever places they should appoint. That he knew the Roman people employed none in their armies but citizens and allies; but that he had seen light-armed strangers in their camp. That he had therefore sent them a thousand archers and slingers, who might be opposed successfully to the Balears and Moors of Hannibal's army."—They added to this aid a very salutary piece of advice, which was, that the prætor, who should be sent to command in Sicily, might despatch a fleet to Africa, in order to find the Carthaginians such employment in their own country, as might put it out of their power by that diversion to send any succours to Hannibal.

The senate answered the king's ambassadors in very obliging and honourable terms, "That Hiero acted like a very generous prince, and a most faithful ally: that from the time he had contracted an alliance with the Romans, his attachment for them had been constant and unalterable; in fine, that in all times and places he had powerfully and magnificently succoured them: that the people had a due sense of such generosity: that some cities of Italy had already presented the Roman people with gold, who, after having expressed their gratitude, had not thought fit to accept it: that the Victory was too favourable an augury not to be received: that they would place her in the Capitol, that is to say, in the temple of the most high Jupiter, in order that she might establish there her fixed and lasting abode." All the corn and barley on board the ships, with the archers and slingers, were sent to the consuls.

Valerius Maximus² makes an observation here, upon the noble and prudent liberality of Hiero; first, in the generous design he forms, of presenting the Romans with three hundred and twenty pounds weight of gold; then, in the industrious precaution he uses, to prevent them from refusing to accept it. He does not offer them that gold in specie; he knew the exceeding delicacy of the Roman people too well for that; but under the form of a Victory, which they dared not refuse, upon account of the good omen it seemed to bring along with it.

It is extraordinary to see a prince, whose dominions were situate as Syracuse was in regard to Carthage, from which it had every thing to fear, at a time when Rome seemed near her ruin, continue unalterably faithful, and declare openly for her interests, notwithstanding all the dangers to which so daring a conduct exposed him. A more prudent politician, to speak the usual language, would perhaps have waited the event of a new action, and not have been so hasty to declare himself without necessity, and at his extreme peril. Such examples are the more estimable for being rare and almost unparalleled.

I do not know, however, whether, even in good policy, Hiero ought not to have acted as he did. It would have been the greatest of all misfortunes for Syracuse, had the Carthaginians entirely ruined, or even weakened the Romans too much. That city would have immediately felt all the weight of Carthage; as it was situated over-against it, and lay highly convenient for strengthening its commerce, securing to it the empire of the sea, and establishing it firmly in Sicily, by the possession of the whole island. It would therefore have been imprudent to suffer such allies to be ruined by the Carthaginians, who would not have been the better friends to the Syracusans for having renounced the Romans by force. It was therefore a decisive stroke, to fly immediately to the aid of the Romans; and as Syracuse would necessarily fall after Rome, it was absolutely requisite to hazard every thing, either to save Rome, or fall with her.

If the facts, which history has preserved of so long and happy a reign, are few, they do not give us the less idea of this prince, and ought to make us exceedingly regret the want of more particular information concerning his actions.

The sum of a hundred talents (a hundred thousand crowns,) which he sent to the Rhodians,³ and the presents he made them after the great earthquake, which laid waste their island, and threw down their Colossus, are illustrious instances of his liberality and munificence. The modesty with which his presents were attended infinitely enhances the value of them. He caused two statues to be erected in the public square at Rhodes, representing the people of Syracuse placing a crown upon the head of the Rhodians; as if, says Polybius, Hiero, after having made that people such magnificent presents, far from assuming any vanity from his munificence, believed himself their debtor upon that very account. And, indeed, the liberality and beneficence of a prince to strangers is rewarded with interest, in the pleasure they give to himself, and the glory he acquires by them.

There is a pastoral of Theocritus (*Idyll.* 16.) which bears the name of the king we speak of, wherein the poet seems tacitly to reproach that prince with paying very ill for the verses made in honour of him. But the mean manner in which he claims, as it were, a reward for the verses he meditates, leaves room to conclude, that the imputation of avarice falls with more justice upon the poet than upon the prince, distinguished and esteemed, as we have seen, for his liberality.

It is to Hiero's just taste, and singular attention to every thing that concerned the public good, that Syracuse was indebted for those amazing machines of war, of which we shall soon see it make so great a use, when besieged by the Romans.⁴ Though that prince seemed to devote his cares entirely to the tranquillity and domestic affairs of the kingdom, he did not neglect those of war; convinced, that the surest means to preserve the peace of his dominions, was to hold himself always in readiness to make war upon unjust neighbours, who should attempt to disturb it. He knew how to profit by the advantage he possessed of having in his dominions the most learned geometric as the world had ever produced: it is plain I mean Archimedes. He was illustrious, not only by his great ability in geometry, but by his birth, as he was Hiero's relation. Sensible alone to the pleasures of the mind, and highly averse to the hurry and tumult of business and government, he devoted himself solely to the

study of a science, whose sublime speculations on truths purely intellectual and spiritual, and entirely distinct from matter, have such attraction for the learned of the first rank, as scarce leaves them at liberty to apply themselves to any other objects.

Hiero had, however, sufficient influence over Archimedes, to engage him to descend from those lofty speculations to the practice of those mechanics which depend on the hand, but are disposed and directed by the head. He pressed him continually, not to employ his art always in soaring after immaterial and intellectual objects, but to bring it down to sensible and corporeal things, and to render his reasonings in some measure more evident and familiar to the generality of mankind, by joining them experimentally with things of use.

Archimedes frequently conversed with the king, who always heard him with great attention and extreme pleasure. One day, when he was explaining to him the wonderful effects of the powers of motion, he proceeded to demonstrate, "That with a certain given power any weight whatsoever might be moved." And applauding himself afterwards on the force of his demonstration, he ventured to boast, that if there were another world besides this we inhabit, by going to that he could remove this at pleasure. The king, surprised and delighted, desired him to put his proposition in execution, by removing some great weight with a small force.

Archimedes preparing to satisfy the just and rational curiosity of his kinsman and friend, chose out one of the galleys in the port, caused it to be drawn on shore with great labour, and by abundance of men. He then ordered its usual lading to be put on board, and besides that as many men as it could hold. Afterwards, placing himself at some distance, and sitting at his ease, without trouble, or exerting his strength in the least, by only moving with his hand the end of a machine, which he had provided with numerous cords and pulleys, he drew the galley to him upon the land, with as much ease, and as steadily, as if it had swam upon the water.

The king, upon the sight of so prodigious an effect of the powers of motion, was entirely astonished; and judging from that experiment of the efficacy of the art, he earnestly solicited Archimedes to make several sorts of machines and battering engines for sieges and attacks, as well for the defence as assault of places.

It has been sometimes asked, whether the sublime knowledge of which we speak, be necessary to a king; and if the study of arts and sciences ought to form part of the education of a young prince? What we read here demonstrates their utility. If king Hiero had wanted taste and curiosity, and employed himself solely in his pleasures, Archimedes had remained inactive in his closet, and all his extraordinary science been of no advantage to his country. What treasures of useful knowledge lie buried in obscurity, and in a manner hid under the earth, because princes set no value upon learned men, and consider them as persons useless to the state. But when, in their youth, they have imbibed some small tincture of arts and sciences, (for the study of princes ought to extend no farther in that point,) they esteem such as distinguish themselves by their learning, sometimes converse with them, and hold them in honour; and by so glorious a protection make way for valuable discoveries, of which the state soon reaps the advantage. Syracuse had this obligation to Hiero; which, without doubt, was the effect of his excellent education; for he had been bred with uncommon care and attention.

What has been said hitherto of Archimedes, and what we shall presently add, with respect to those admirable machines of war which were used during the siege of Syracuse, shows how wrong it is to despise those sublime and speculative sciences, whose only objects are simple and abstract ideas. It is true, that all mere geometrical or algebraical speculations do not relate to useful things. But it is also as true, that most of those, which have not that relation, conduct or refer to those that have. They may appear unprofitable, as long as they do not deviate, if I may so say, from this intellectual world; but the mixed mathematics, which descend to matter, and consider the motions of

the stars, the perfect knowledge of navigation, the art of drawing remote objects near by the assistance of telescopes, the increase of the powers of motion, the nice exactitude of the balance, and other similar objects, become more easy of access, and in a manner familiarize themselves with the vulgar. The labour of Archimedes was long obscure, and perhaps contemned, because he confined himself to simple and barren speculations. Ought we therefore to conclude that it was useless and unprofitable? It was from that very source of knowledge, buried till then in obscurity, that shot forth those brilliant lights and wonderful discoveries, which display from their birth a sensible and manifest utility, and inspired the Romans with astonishment and despair when they besieged Syracuse.

Hiero was great and magnificent in all things, in building palaces, arsenals, and temples. He caused an infinite number of ships of all burdens to be built for the exportation of corn; a traffic in which almost the whole wealth of the island consisted. We are told of a galley built by his order, under the direction of Archimedes, which was reckoned one of the most famous structures of antiquity.¹ It was a whole year in building. Hiero passed whole days amongst the workmen, to animate them by his presence.

This ship had twenty benches of oars. The enormous pile was fastened together on all sides with huge nails of copper, which weighed each ten pounds and upwards.

The inside had in it three galleries or corridors, the lowest of which led to the hold by a flight of stairs, the second to apartments, and the first to soldiers' lodgings.

On the right and left side of the middle gallery, there were apartments to the number of thirty; in each of which were four beds for men. The apartment for the officers and seamen had fifteen beds, and three great rooms for eating; the last of which, that was at the stern, served for a kitchen. All the floors of these apartments were inlaid with small stones of different colours, representing stories taken from the *Illiad* of Homer. The ceilings, windows and all the other parts, were finished with wonderful art, and embellished with all kinds of ornaments.

In the uppermost gallery there was a gymnasium, or place of exercise, and walks proportionate to the magnitude of the ship. In them were gardens and plants of all kinds, disposed in wonderful order. Pipes, some of hardened clay, and others of lead, conveyed water all round to refresh them. There were also arbours of ivy and vines, that had their roots in great vessels filled with earth. These vessels were watered in the same manner as the gardens. The arbours served to shade the walks.

After these came the apartment of Venus, with three beds. This was floored with agates and other precious stones, the finest that could be found in the island. The walls and roof were of cypress wood. The windows were adorned with ivory, paintings, and small statues. In another apartment was a library at the top of which, on the outside, was fixed a sundial.

There was also an apartment with three beds for a bath, in which were three great brazen coppers, and a bathing-vessel, made of a single stone of various colours. This vessel contained two hundred and fifty quarts. At the ship's head was a great reservoir of water, which held a hundred thousand quarts.

All round the ship, on the outside, were Atlases of six cubits, or nine feet, in height, which supported the sides of the ship; these Atlases were at equal distances from each other. The ship was adorned on all sides with paintings, and had eight towers proportioned to its size; two at the head, two at the stern, and four in the middle, of equal dimensions. Upon these towers were parapets, from which stones might be discharged upon the ships of an enemy that should approach too near. Each tower was guarded by four young men completely armed, and two archers. The inside of them was filled with stones and arrows.

Upon the side of the vessel, well strengthened with planks, was a kind of rampart, on which was an engine to discharge stones, made by Archimedes: it threw a stone of three hundred weight, and an arrow of twelve cubits (eighteen feet) the distance of a stadium, or a hundred and twenty-five paces from it.

The ship had three masts, at each of which were two machines to discharge stones. There also were the hooks and masses of lead to throw upon such as approached. The whole ship was surrounded with a rampart of iron to keep off those who should attempt to board it. All around were iron grapplings (*corvi*;) which being thrown by machines, grappled the vessels of the enemy, and drew them close to the ship, from whence it was easy to destroy them. On each of the sides were sixty young men completely armed, and as many about the masts, and at the machines for throwing stones.

Though the hold of this ship was extremely deep, one man sufficed for clearing it of all water, with a machine made in the nature of a screw, invented by Archimedes. An Athenian poet of that name made an epigram upon this superb vessel, for which he was well paid. Hiero sent him a thousand medimni of corn as a reward, and caused them to be carried to the port of Piræus. The medimnus, according to Father Montfaucon, is a measure that contains six bushels. This epigram is come down to us. The value of verse was known at that time in Syracuse.

Hiero having found that there was no port in Sicily capable of containing this vessel, except some where it could not lie at anchor without danger, resolved to make a present of it to king Ptolemy,¹ and sent it to Alexandria. There was at that time a great dearth of corn throughout all Egypt.

Several other transports of less burden attended this great ship. Three hundred thousand quarters of corn were put on board them, with ten thousand great earthen jars of salted fish, twenty thousand quintals (or two millions of pounds) of salt meat, twenty thousand bundles of different cloths, without including the provisions for the ships' crews and officers.

To avoid too much prolixity, I have retrenched some part of the description which Athenæus has left us of this great ship. I could have wished, that, to have given us a better idea of it, he had mentioned the exact dimensions of it. Had he added a word upon the benches of oars, it would have cleared up and determined a question, which, without it, must for ever remain doubtful and obscure.

Hiero's fidelity was put to a very severe trial, after the bloody defeat of the Romans in the battle of Cannæ, which was followed by an almost universal defection of their allies.

But even the laying waste of his dominions by the Carthaginian troops, which their fleet had landed in Sicily, was not capable of shaking his resolution. He was only afflicted to see that the contagion had spread even to his own family.² He had a son named Gelon, who married Nereis the daughter of Pyrrhus, by whom he had several children, and amongst others Hieronymus, of whom we shall soon speak. Gelon, despising his father's great age, and setting no value on the alliance of the Romans after their last disgrace at Cannæ, had declared openly for the Carthaginians. He had already armed the multitude, and solicited the allies of Syracuse to join him; and would perhaps have occasioned great trouble in Sicily, if a sudden and unexpected death had not intervened. It happened so opportunely, that his father was suspected of having promoted it. He did not survive his son long and died at the age of fourscore and ten years, infinitely regretted by his people, after having reigned fifty-four years.

ARTICLE II.

SECTION I.—HIERONYMUS, GRANDSON OF HIERO SUCCEEDS HIM, AND CAUSES HIM TO BE REGRETTER BY HIS VICES AND CRUELTY. HE IS KILLED IN A CONSPIRACY. BARBAROUS MURDER OF THE PRINCESSES. HIPPOCRATES AND EPICYDES POSSESS THEMSELVES OF THE GOVERNMENT OF SYRACUSE, AND DECLARE FOR THE CARTHAGINIANS AS HIERONYMUS HAD DONE.

THE death of Hiero occasioned great revolutions in Sicily. The kingdom was fallen into the hands of Hieronymus his grandson, a young⁴ prince incapable of making a wise use of his independence, and far from possessing strength to resist the seducing allurements of sovereign power. Hiero's apprehensions, that the flourishing condition in which he left his kingdom would soon change under an infant king, suggested to him the thought and desire of restoring their liberty to the Syracusans. But his two daughters opposed that design with all their influence; from the hope that the young prince would have only the title of king, and that they should have all the authority, in conjunction with their husbands, Andranodorus and Zoippus, who were to hold the first rank amongst his guardians.⁵ It was not easy for an old man of ninety to hold out against the caresses and arts of those two women, who besieged him day and night, to preserve the freedom of his mind in the midst of their pressing and assiduous insinuations, and to sacrifice with courage the interests of his family to those of the public.

To prevent as far as possible the evils he foresaw, he appointed him fifteen guardians, who were to form his council; and earnestly desired them, at his death, never to depart from the alliance with the Romans, to which he had inviolably adhered for fifty years, and to teach the young prince to tread in his steps, and to follow the principles in which he had been educated till then.

The king dying after these arrangements, the guardians whom he had appointed for his grandson, immediately summoned the assembly, presented the young prince to the people, and caused the will to be read. A small number of people, expressly placed to applaud it, clapped their hands, and raised acclamations of joy. All the rest, in a consternation equal to that of a family who have lately lost a good father, kept a mournful silence, which sufficiently expressed their grief for their recent loss, and their apprehension of what was to come. His funeral was afterwards solemnized, and more honoured by the sorrow and tears of his subjects, than the care and regard of his relations for his memory.⁶

Andranodorus's first care was to remove all the other guardians, by telling them roundly, the prince was of age to govern for himself.

He was at that time near fifteen years old. So that Andranodorus, being the first to renounce the guardianship held by him in common with many colleagues, united in his own person all their power. The wisest arrangements made by princes at their deaths, are often little regarded, and seldom executed afterwards.

The best and most moderate prince in the world,⁷ succeeding a king so well beloved by his subjects, as Hiero had been, would have found it very difficult to console them for the loss they had sustained. But Hieronymus, as if he strove by his vices to make him still more regretted, no sooner ascended the throne, than he made the people sensible how much all things

⁶ Funus fit regium, magis amore civium et caritate, quam curâ suorum celebre. Liv.

⁷ Vix quidem ulli bono moderatoque regi facilis erat favor apud Syracusanos succedenti tantæ caritati Hieronis. Verum enimvero Hieronymus, velut suis vitis desiderabilem efficere vellet avum, primo statim conspectu, omnia quàm disparia essent, læstendit. Liv.

were altered. While neither Hiero, nor Gelon his son, had ever distinguished themselves from the other citizens by their habits, or any outward ornaments, Hieronymus was presently seen in a purple robe, with a diadem on his head, and surrounded by a troop of armed guards. Sometimes he affected to imitate Dionysius, the Tyrant, in coming out of his palace in a chariot drawn by four white horses. All the rest of his conduct was suitable to his equipage: a visible contempt for all the world; haughtiness and disdain in hearing; an affectation of saying disobliging things; so difficult of access, that not only strangers, but even his guardians, could scarce approach him; a refinement of taste in discovering new methods of excess; a cruelty so enormous as to extinguish all sense of humanity in him: this odious disposition of the young king terrified the people to such a degree, that even some of his guardians, to escape his cruelty, either put themselves to death, or condemned themselves to voluntary banishment.

Only three men, Andranodorus and Zoippus, both Hiero's sons-in-law, and Thraso, had a great freedom of access to the young king. He paid little more notice to them than to others; but as the two first openly declared for the Carthaginians, and the latter for the Romans, that difference of sentiments, and very warm disputes, which were frequently the consequence of it, drew upon them that prince's attention.

About this time a conspiracy against the life of Hieronymus happened to be discovered. One of the principal conspirators, named Theodotus, was accused. Being put to the torture, he confessed the crime as far as it regarded himself; but all the violence of the most cruel torments could not make him betray his accomplices. At length, as if no longer able to support the pains inflicted on him, he accused the king's best friends, though innocent, amongst whom he named Thraso, as the ringleader of the whole enterprise; adding, that they should never have engaged in it, if a man of his credit had not been at their head. The zeal he had always expressed for the Roman interests rendered the evidence probable, and he was accordingly put to death. Not one of the accomplices, during their companion's being tortured, either fled or concealed himself, so much they relied upon the fidelity of Theodotus, and such was his fortitude to keep the secret inviolable.

The death of Thraso, who was the sole support of the alliance with the Romans, left the field open to the partizans of Carthage. Hieronymus despatched ambassadors to Hannibal, who sent back a young Carthaginian officer, of illustrious birth, named also Hannibal, with Hippocrates and Epicydes, natives of Carthage, but descended from the Syracusans by their father. After the treaty with Hieronymus was concluded, the young officer returned to his general; the two others continued with the king by Hannibal's permission. The conditions of the treaty were, that after having driven the Romans out of Sicily, of which they fully assured themselves, the river Himera, which also divides the island, should be the boundary of their respective dominions. Hieronymus, puffed up by the praises of his flatterers, even demanded, some time after, that all Sicily should be given up to him, leaving the Carthaginians Italy for their part. The proposal appeared idle and rash; but Hannibal gave very little attention to it, having no other view at that time than of drawing off the young king from the party of the Romans.

Upon the first rumour of this treaty, Appius, prætor of Sicily, sent ambassadors to Hieronymus to renew the alliance made by his grandfather with the Romans. That proud prince received them with great contempt; asking them, with an air of raillery and insult, what had passed at the battle of Cannæ; that Hannibal's ambassadors had related incredible things respecting it; that he was happy in an opportunity of knowing the truth from their mouths, that he might thence determine upon the choice of his

allies. The Romans made answer, that they would return to him, when he had learned to treat ambassadors seriously, and with respect; and, after having cautioned rather than desired him not to change sides too rashly, they withdrew.

At length his cruelty, and the other vices to which he blindly abandoned himself, drew upon him an unfortunate end. Those who had formed the conspiracy mentioned before, pursued their scheme; and having found a favourable opportunity for the execution of their enterprise, killed him in the city of the Leontines, on a journey he made from Syracuse into the country.

We here evidently see the difference between a king and a tyrant; and that it is not in guards or arms that the security of a prince consists, but in the affection of his subjects. Hiero, from being convinced, that those who have the laws in their hands for the government of the people, ought always to govern themselves by the laws, behaved in such a manner, that it might be said the law, and not Hiero, reigned. He believed himself rich and powerful for no other end than to do good and to render others happy. He had no occasion to take precautions for the security of his life: he had always the surest guard about him, the love of his people: and Syracuse was afraid of nothing so much as of losing him. Hence he was lamented at his death as the common father of his country. Not only their mouths but hearts were long after filled with his name, and incessantly blessed his memory. Hieronymus, on the contrary, who had no other rule of conduct than violence, who regarded all other men as born solely for himself, and valued himself upon governing them not as subjects but slaves, led the most wretched life in the world, if to pass his days in continual apprehension and terror, can be called living. As he trusted nobody, nobody placed any confidence in him. Those who were nearest his person were the most exposed to his suspicions and cruelty, and thought they had no other security for their own lives, than by putting an end to his. Thus ended a reign of short duration, but abounding with disorders, injustice, and oppression.

Appius,² who foresaw the consequence of his death, gave the senate advice of all that had passed, and took the necessary precautions to preserve that part of Sicily which belonged to the Romans. They, on their side, perceiving the war in Sicily was likely to become important, sent Marcellus A. M. 3790. thither, who had been appointed consul with Fabius, in the beginning of Ant. J. C. 214. the fifth year of the second Punic war, and had distinguished himself gloriously by his successes against Hannibal.

When Hieronymus was killed, the soldiers, less out of affection for him, than a certain natural respect for their kings, had thoughts at first of avenging his death upon the conspirators. But the grateful name of liberty by which they were flattered, and the hope that was given them of the division of the tyrant's treasures amongst them, and of additional pay, with the recital of his horrid crimes and shameful excesses, all together appeased their first heat, and changed their disposition in such a manner, that they left, without interment, the body of that prince for whom they had just before expressed so warm a regret.

As soon as the death of Hieronymus was known at Syracuse, Andranodorus seized the Isle, which was part of the city, with the citadel, and such other places as were most proper for his defence in it, putting good garrisons into them. Theodotus and Sosis, heads of the conspiracy, having left their accomplices with the army, to keep the soldiers quiet, arrived soon after at the city. They made themselves masters of the quarter Achradina, where, by showing the tyrant's bloody robe, with his diadem, to the people, and exhorting them to take arms for the defence of their liberty, they soon saw themselves at the head of a numerous body.

The whole city was in confusion. The next day at sun-rise, all the people, armed and unarmed, ran

¹ Hunc tam superbum apparatus habitumque convenientes æquebantur contemptus omnium hominum, superbi aures, contumeliosa dicta, rari aditus, non alienis modò sed tutoribus etiam; libidines novæ inhumana crudelitas. Liv.

to the quarter Achradina, where the senate was held, which had neither assembled nor been consulted upon any affair since Hiero's death. Polyæmus, one of the senators, spoke to the people with great freedom and moderation. He represented, "that having experienced the indignities and miseries of slavery, they were more sensibly affected with them; but that as to the evils occasioned by civil discord, they had rather heard them spoken of by their fathers, than been acquainted with them themselves: that he commended their readiness in taking arms, and should praise them still more, if they did not proceed to use them, till the last extremity: that at present it was his advice to send deputies to Andranodorus, and to let him know he must submit to the senate, open the gates of the Isle, and withdraw his garrisons: that if he persisted in his usurpation, it would be necessary to treat him with more rigour than Hieronymus had experienced."

This deputation at first made some impression upon him; whether it were, that he still retained a respect for the senate, and was moved with the unanimous concurrence of the citizens; or whether the best fortified part of the Isle having been taken from him by treachery and surrendered to the Syracusans, that loss gave him just apprehensions. But his wife Demarata, Hiero's daughter, a haughty and ambitious princess, having taken him aside, put him in mind of the famous saying of Dionysius the Tyrant, "that it was never proper to quit the saddle" (i. e. the tyranny), "till pulled off the horse by the heels; that a great fortune might be renounced in a moment, but that it would cost abundance of time and pains to attain it; that it was therefore necessary to endeavour to gain time; and whilst he amused the senate by ambiguous answers, to treat privately with the soldiers at Leontium, whom it would be easy to bring over to his interest by the attraction of the king's treasures in his possession."

Andranodorus did not entirely reject this counsel, nor think proper to follow it without reserve. He chose a mean between both. He promised to submit to the senate in expectation of a more favourable opportunity; and the next day having thrown open the gates of the Isle, repaired to the quarter Achradina; and there, after having excused his delay and resistance, from the fear he had entertained of being involved in the tyrant's punishment, as his uncle, he declared that he was come to put his person and interest into the hands of the senate. Then turning towards the tyrant's murderers, and addressing himself to Theodotus and Sosis, "you have done," said he, "a memorable action. But, believe me, your glory is only begun, and has not yet attained its highest pitch. If you do not take care to establish peace and union among the citizens, the state is in great danger of expiring, and of being destroyed at the very moment she begins to taste the blessings of liberty." After this discourse, he laid the keys of the Isle and of the king's treasures at their feet. The whole city was highly rejoiced on this occasion, and the temples were thronged during the rest of the day with infinite numbers of people, who went thither to return thanks to the gods for so happy a change of affairs.

The next day the senate being assembled according to the ancient custom, magistrates were appointed, amongst whom Andranodorus was elected one of the first, with Theodotus and Sosis, and some others of the conspirators who were absent.

On the other side, Hippocrates and Epicydes, whom Hieronymus had sent at the head of two thousand men, to endeavour to excite troubles in the cities which continued to adhere to the Romans, seeing themselves, upon the news of the tyrant's death, abandoned by the soldiers under their command, returned to Syracuse, where they demanded to be escorted in safety to Hannibal, having no longer any business in

Sicily, after the death of him to whom they had been sent by that general. The Syracusans were not sorry to part with those two strangers, who were of a turbulent, factious disposition, and well experienced in military affairs. There is in most affairs a decisive moment, which never returns after having been once let slip. The negligence in assigning the time for their departure, gave them an opportunity of insinuating themselves into the favour of the soldiers, who esteemed them upon account of their abilities, and of setting them against the senate, and the better inclined part of the citizens.

Andranodorus, whose wife's ambition would never let him rest, and who till then, had covered his designs with smooth dissimulation, believing it a proper time for disclosing them, conspired with Themistus, Gelon's son-in-law, to seize the sovereignty. He communicated his views to a comedian named Ariston, from whom he kept nothing secret. That profession was not at all dishonourable among the Greeks, and was exercised by persons of no ignoble condition. Ariston believing it his duty, as it really was, to sacrifice his friend to his country, discovered the conspiracy. Andranodorus and Themistus were immediately killed, by order of the other magistrates, as they entered the senate. The people rose, and threatened to revenge their deaths; but were deterred from it by the sight of the dead bodies of the two conspirators, which were thrown out of the senate-house. They were then informed of their pernicious designs; to which all the misfortunes of Sicily were ascribed, rather than to the wickedness of Hieronymus, who being only a youth, had acted entirely by their counsels. They insinuated that his guardians and tutors had reigned in his name; that they ought to have been cut off before Hieronymus, or at least with him: that impunity had carried them on to commit new crimes, and induced them to aspire to the tyranny: that not being able to succeed in their design by force, they had employed dissimulation and perfidy: that neither favours and honours had been capable of overcoming the wicked disposition of Andranodorus; nor the electing him one of the supreme magistrates amongst the deliverers of their country, him, who was the declared enemy of liberty: that as to the rest, they had been inspired with their ambition of reigning by the princesses of the blood-royal whom they had married, the one Hiero's, the other Gelon's, daughter.

At those words, the whole assembly cried out, that not one of them ought to be suffered to live, and that it was necessary to extirpate entirely the race of the tyrants, without suffering any vestige to remain. Such is the nature of the multitude.² It either abjectly abandons itself to slavery, or domineers with insolence. But with regard to liberty, which holds the mean betwixt those extremes, it neither knows how to be without it, or to use it; and finds but too many flatterers always ready to enter into its passions, inflame its rage, and hurry it on to excessive violences, and the most inhuman cruelties, to which it is but too much inclined of itself; as was the case at this time. At the request of the magistrates, which was almost sooner accepted than proposed, they decreed that the royal family should be entirely destroyed.

Demarata, the daughter of Hiero, and Harmonia, Gelon's daughter, the first married to Andranodorus, and the other to Themistus, were killed first. From thence they went to the house of Heraclea, wife of Zoippus; who having been sent on an embassy to Ptolemy, king of Egypt, remained there in voluntary banishment, to avoid being witness of the miseries of his country. Having been apprized that they were coming to her, that unfortunate princess had taken refuge with her two daughters in the most retired part of her house, near her household gods. There, when the assassins arrived, with her hair loose and dishevel

¹ Sed evocatum eum ab legatis Demarata uxor, filis Hieronis, inflata adhuc regis animis ac muliebri spiritu, admonet sæpe usurpatæ Dionysii tyranni vocis: quæ, pedibus tractum, non insidentem equo, relinquere tyrannidem, dixit debere. Liv.

² Hæc natura multitudinis est: aut servit humiliter, aut superbe dominatur: libertatem, quæ media est, nec spernere modicè, nec habere sciunt. Et non ferè desunt irarum indulgentes ministri, qui avidos atque intemperantes plebeiorum animos ad sanguinem et cædes irritant. Liv.

ed, her face bathed in tears, and in a condition most proper to excite compassion, she conjured them, in a faltering voice, interrupted with sighs, in the name of Hiero her father and Gelon her brother, "Not to involve an innocent princess in the guilt and misfortunes of Hieronymus. She represented to them, that her husband's banishment had been to her the sole fruit of that reign: that not having had any share in the fortunes and criminal designs of her sister Demarata, she ought to have none in her punishment. Besides, what was there to fear, either from her, in the forlorn condition and almost widowhood to which she was reduced, or from her daughters, unhappy orphans, without credit or support? That if the royal family were become so odious to Syracuse, that it could not bear the sight of them, they might be banished to Alexandria, the wife to her husband, the daughters to their father." When she saw them inflexible to her remonstrances, forgetting what concerned herself, she implored them at least to save the lives of the princesses her daughters, both of an age which inspires the most inveterate and furious of enemies with compassion; but her discourse made no impression upon the minds of those barbarians. Having torn her in a manner from the arms of her household gods, they stabbed her in the sight of her two daughters, and soon after murdered them also, already stained and covered with the blood of their mother. What was still more deplorable in their destiny was, that immediately after their death, an order from the people came for sparing their lives.

From compassion, the people in a moment proceeded to rage and fury against those who had been so hasty in the execution, and had not left them time for reflection or repentance. They demanded that magistrates should be nominated in the room of Andronodorus and Theonistus. They were a long time in suspense upon this choice. At length, somebody in the crowd of the people happening to name Epicydes, another immediately mentioned Hippocrates. Those two persons were demanded with so much ardour by the multitude, which consisted of citizens and soldiers, that the senate could not prevent their being created.

The new magistrates did not immediately discover the design they had, of reinstating Syracuse in the interests of Hannibal. But they had seen with pain the measures which had been taken before they were in office. For, immediately after the re-establishment of liberty, ambassadors had been sent to Appius, to propose renewing the alliance which had been broken by Hieronymus. He had referred them to Marcellus, who was lately arrived in Sicily, with an authority superior to his own. Marcellus, in his turn, sent deputies to the magistrates of Syracuse, to treat of peace.

Upon arriving there, they found the state of affairs much altered. Hippocrates and Epicydes, at first by secret practices, and afterwards by open complaints, had inspired every body with great aversion for the Romans; giving out, that designs were formed for putting Syracuse into their hands. The behaviour of Appius, who had approached the entrance of the port with his fleet, to encourage the party in the Roman interest, strengthened those suspicions and accusations so much, that the people ran tumultuously to prevent the Romans from landing, in case they should have that design.

In this trouble and confusion it was thought proper to summon the assembly of the people. In this meeting the opinions differed very much; and the heat of the debate giving reason to fear some sedition, Apollonides, one of the principal senators, made a discourse very suitable to the present situation of affairs. He intimated "that never city was nearer its destruction or preservation than Syracuse actually was at that time; that if they all with unanimous consent should join either the Romans or Carthaginians, their condition would be happy: that if they were divided, the war would neither be more warm nor more dangerous between the Romans and Carthaginians, than between the Syracusans themselves against each other, as both parties must necessarily have, within the circumference of their own walls, their own troops, armies, and generals: that it was therefore absolutely

requisite to make agreement and union amongst themselves their sole care and application; and that to know which of the alliances was to be preferred was not now the most important question: nevertheless, with respect to the choice of allies, the authority of Hiero, in his opinion, ought to prevail over that of Hieronymus; and that the amity of the Romans happily experienced for fifty years together, seemed preferable to that of the Carthaginians, upon which they could not much rely for the present, and with which they had had little reason to be satisfied formerly." He added a last motive of no mean force, which was, "that in declaring against the Romans, they would have a war immediately upon their hands, which the Carthaginians were not able to carry on against them immediately."

The less passionate this discourse appeared, the more effect it had. It induced them to desire the opinion of the several bodies of the state; and the principal officers of the troops, as well natives as foreigners, were requested to confer together. The affair was long discussed with great warmth. At length, as it appeared that there was no present means for supporting the war against the Romans, a peace with them was resolved, and ambassadors sent to conclude it.

Some days after this resolution had been taken, the Leontines sent to demand aid of Syracuse, for the defence of their frontiers. This deputation seemed to come very seasonably for ridding the city of a turbulent, unruly multitude, and removing their leaders who were no less dangerous. Four thousand men were ordered to march under the command of Hippocrates, of whom they were glad to be rid, and who was not sorry himself for this opportunity which they gave him to embroil affairs. For he no sooner arrived upon the frontier of the Roman province, than he plundered it, and cut in pieces a body of troops sent by Appius to its defence. Marcellus complained to the Syracusans, of this act of hostility, and demanded that this stranger should be banished from Sicily with his brother Epicydes; who, having repaired about the same time to Leontium, had endeavoured to embroil the inhabitants with the people of Syracuse, by exhorting them to resume their liberty as well as the Syracusans. The city of the Leontines was dependent on Syracuse, but pretended at this time to throw of the yoke, and to act independently of the Syracusans, as an entirely free city. When therefore the Syracusans sent to complain of the hostilities committed against the Romans, and to demand the expulsion of the two Carthaginian brothers, who were the authors of them, the Leontines replied, that they had not empowered the Syracusans to make peace for them with the Romans.

The deputies of Syracuse related to Marcellus this answer from the Leontines, who were no longer at the disposal of their city, and left him at liberty to declare war against them, without any infraction of the treaty made with them. He marched immediately to Leontium, and made himself master of it at the first attack. Hippocrates and Epicydes fled. All the deserters found in the place, to the number of two thousand, were put to the sword; but as soon as the city was taken, all the Leontines and other soldiers were spared, and even every thing taken from them was restored, except what was lost in the first tumult of a city carried by storm.

Eight thousand troops, sent by the magistrates of Syracuse to the aid of Marcellus, met a man on their march, who gave them an account of what had passed at the taking of Leontium; exaggerating with artful malice the cruelty of the Romans, who, he falsely affirmed, had put all the inhabitants to the sword, as well as the troops sent thither by the Syracusans.

This artful falsehood, which they took no steps to ascertain, inspired them with compassion for their companions. They expressed their indignation by their murmurs. Hippocrates and Epicydes, who were before well known to these troops, appeared at the very instant of this trouble and tumult, and put themselves under their protection, not having any other resource. They were received with joy and acclamations. The report soon reached the rear of the army

where the commanders Dinomenes and Sosias were. When they were informed of the cause of the tumult, they advanced hastily, blamed the soldiers for having received Hippocrates and Epicydes, the enemies of their country, and gave orders for their being seized and bound. The soldiers opposed this with great menaces; and the two generals sent expresses to Syracuse, to inform the senate of what had passed.

In the mean time, the army continued its march towards Megara, and upon the way met a courier prepared by Hippocrates, who was charged with a letter which seemed to be written by the magistrates of Syracuse to Marcellus. They praised him for the slaughter he had made at Leontium, and exhorted him to treat all the mercenary soldiers in the same manner, in order that Syracuse might at length be restored to its liberty. The reading of this forged letter enraged the mercenaries, of whom this body of troops was almost entirely composed. They were for falling upon the few Syracusans amongst them, but were prevented from that violence by Hippocrates and Epicydes; not from motives of pity or humanity, but that they might not entirely lose their hopes of re-entering Syracuse. They sent a man thither, whom they had gained by bribes, who related the storming of Leontium, conformably to the first account. Those reports were favourably received by the multitude, who cried out, that the gates should be shut against the Romans. Hippocrates and Epicydes arrived about the same time before the city, which they entered, partly by force, and partly by the intelligence which they had within it. They killed the magistrates, and took possession of the city. The next day the slaves were made free, the prisoners set at liberty, and Hippocrates and Epicydes elected into the highest offices, in a tumultuous assembly. Syracuse, in this manner, after a short glimpse of liberty, sunk again into its former slavery.

SECTION II.—THE CONSUL MARCELLUS BESIEGES SYRACUSE. THE CONSIDERABLE LOSSES OF MEN AND SHIPS OCCASIONED BY THE DREADFUL MACHINES OF ARCHIMEDES, OBLIGE MARCELLUS TO CHANGE THE SIEGE INTO A BLOCKADE. HE TAKES THE CITY AT LENGTH BY MEANS OF HIS INTELLIGENCE WITHIN IT. DEATH OF ARCHIMEDES, KILLED BY A SOLDIER WHO DID NOT KNOW HIM.

AFFAIRS being in this state,¹ Marcellus thought proper to quit the country of the Leontines, and advance towards Syracuse. When he was near it, he sent deputies to let the inhabitants know, that he came to restore liberty to the Syracusans, and not with intent to make war upon them. They were not permitted to enter the city. Hippocrates and Epicydes went out to meet them; and having heard their proposals, replied haughtily, that if the Romans intended to besiege their city, they should soon be made sensible of the difference between attacking Syracuse and attacking Leontium. Marcellus, therefore, determined to besiege the place by sea and land;² by land, on the side of the Hexapylum; and by sea, on that of the Achradina, the walls of which were washed by the waves.

He gave Appius the command of the land forces, and reserved that of the fleet to himself. It consisted of sixty galleys of five benches of oars, which were full of soldiers armed with bows, slings, and darts, to scour the walls. There were a great number of other vessels, laden with all sorts of machines used in attacking places.

The Romans carrying on their attacks at two different places, Syracuse was in great consternation, and apprehensive that nothing could oppose so terrible a power, and such mighty efforts. And it had indeed been impossible to have resisted them, without the assistance of one single man, whose wonderful industry was every thing to the Syracusans: this was Archimedes. He had taken care to supply the walls with all things necessary to a good defence. As soon

as his machines began to play on the land side, they discharged upon the infantry all sorts of darts, and stones of enormous weight, which flew with so much noise, force, and rapidity, that nothing could withstand their shock. They beat down and dashed to pieces all before them, and occasioned a terrible disorder in the ranks of the besiegers.

Marcellus succeeded no better on the side of the sea. Archimedes had disposed his machines in such a manner, as to throw darts to any distance. Though the enemy lay far from the city, he reached them with his larger and more forcible baliste and catapultæ. When they overshot their mark, he had smaller, proportioned to the distance; which put the Romans into such confusion, as made them incapable of attempting any thing.

This was not the greatest danger. Archimedes had placed lofty and strong machines behind the walls, which suddenly letting fall vast beams, with an immense weight at the end of them, upon the ships, sunk them to the bottom. Besides this, he caused an iron grapple to be let out by a chain; and having caught hold of the head of a ship with his hook, by means of a weight let down within the walls, it was lifted up and set upon its stern, and held so for some time; then by letting go the chain, either by a wheel or a pulley, it was let fall again, with its whole weight, either on its head or side, and often entirely sunk. At other times the machines dragging the ship towards the shore by cordage and hooks, after having made it whirl about a great while, dashed it to pieces against the points of the rocks, which projected under the walls, and thereby destroyed all within it. Gallies, frequently seized and suspended in the air, were whirled about with rapidity, exhibiting a dreadful sight to the spectators, after which they were let fall into the sea, and sunk to the bottom with their crews.

Marcellus had prepared, at great expense, machines called *sambucæ*, from their resemblance to a musical instrument of that name. He appointed eight galleys of five benches for that purpose, from which the oars were removed, from half on the right, and from the other half on the left side. These were joined together two and two, on the sides without oars. This machine consisted of a ladder of the breadth of four feet, which when erect was of equal height with the walls. It was laid at length upon the sides of the two galleys joined together, and extended considerably beyond their beaks; and upon the masts of these vessels were affixed cords and pulleys. When it was to work, the cords were made fast to the extremity of the machine, and men upon the stern drew it up by the help of the pulleys, others at the head assisted in raising it with levers. The galleys afterwards being brought forward to the foot of the walls, the machines were applied to them. The bridge of the *sambucæ* was then let down (no doubt after the manner of a draw-bridge,) upon which the besiegers passed to the walls of the place besieged.

This machine had not the expected effect. Whilst it was at a considerable distance from the walls, Archimedes discharged a vast stone upon it that weighed ten quintals;³ then a second, and immediately after a third; all of which striking against it with dreadful force and noise, beat down and broke its supports, and gave the galleys upon which it stood such a shock, that they parted from each other.

Marcellus, almost discouraged, and at a loss what to do, retired as fast as possible with his galleys, and sent orders to his land forces to do the same. He called also a council of war, in which it was resolved the next day, before sunrise, to endeavour to approach the walls. They were in hopes, by this means, to shelter themselves from the machines, which, for want of distance proportioned to their force, would be rendered ineffectual.

But Archimedes had provided against all contingencies. He had prepared machines long before, as we have already observed, that carried to all distan-

¹ Liv. l. xxiv. n. 33, 34. Plut. in Marcel. p. 305—307. Polyb. l. vii. p. 515—518.

² The description of Syracuse may be seen in vol. I.

³ The quintal, which the Greeks called *τάλαντον*, was of several kinds. The least weighed a hundred and twenty five pounds; the largest more than twelve hundred.

ees a proportionate quantity of darts and ends of beams, which, being very short, required less time for preparing them, and in consequence were frequently discharged. He had besides made small chasms or loop-holes in the walls at little distances, where he had placed scorpions,¹ which, not carrying far, wounded those who approached, without being perceived but by their effect.

When the Romans had gained the foot of the walls, and thought themselves very well covered, they found themselves exposed either to an infinity of darts, or overwhelmed with stones, which fell directly upon their heads, there being no part of the wall which did not continually pour that mortal hail upon them. This obliged them to retire. But they were no sooner removed to some distance, than a new discharge of darts overtook them in their retreat; so that they lost great numbers of men, and almost all their galleys were disabled or beaten to pieces, without being able to revenge their loss in the least upon their enemies. For Archimedes had placed most of his machines in security behind the walls; so that the Romans, says Plutarch, repulsed by an infinity of wounds without seeing the place or hand from which they came, seemed to fight in reality against the gods.

Marcellus, though at a loss what to do, and not knowing how to oppose the machines of Archimedes, could not, however, forbear jesting upon them. "Shall we persist," said he to the workmen and engineers, "in making war with this Briareus of a geometriician, who treats my galleys and sambucas so rudely? He infinitely exceeds the fabled giants, with their hundred hands, in his perpetual and surprising discharges upon us." Marcellus had reason for complaining of Archimedes alone. For the Syracusans were really no more than members of the engines and machines of that great geometriician, who was himself the soul of all their powers and operations. All other arms were unemployed; for the city at that time made use of none, either defensive or offensive, but those of Archimedes.

Marcellus at length perceiving the Romans so much intimidated, that if they saw upon the walls only a small cord, or the least piece of wood, they would immediately fly, crying out, that Archimedes was going to discharge some dreadful machine upon them, renounced his hopes of being able to make a breach in the place, gave over his attacks, and turned the siege into a blockade. The Romans conceived that they had no other resource than to reduce the great number of people in the city by famine, in cutting off all provisions that might be brought to them either by sea or land. During the eight months in which they besieged the city, there were no kind of stratagems which they did not invent, nor any actions of valour left untried, except indeed the assault, which they never dared to attempt more. So much force, upon some occasions, have a single man and a single science, when rightly applied. Deprive Syracuse of only one old man, the great strength of the Roman arms must inevitably take the city; his sole presence checks and disconcerts all their designs.

We here see, which I cannot repeat too often, how much interest princes have in protecting arts, favouring the learned, encouraging academies of science by honourable distinctions and actual rewards, which never ruin or impoverish a state. I say nothing in this place of the birth and nobility of Archimedes; he was not indebted to them for the happiness of his genius and profound knowledge; I consider him only as a learned man, and an excellent geometriician. What a loss would Syracuse have sustained, if, to have saved a small expense and pension, such a man had been abandoned to inaction and obscurity! Hiéro was careful not to act in this manner. He knew all the value of our geometriician; and it is no vulgar merit in a prince to understand that of other men. He paid it due honour; he made it useful; and did not stay till occasion or necessity obliged him to do so: it would then have been too late. By a wise fore-

sight, the true character of a great prince and a great minister, in the very arms of peace he provided all that was necessary for supporting a siege, and making war with success; though at that time there was no appearance of any thing to be apprehended from the Romans, with whom Syracuse was allied in the strictest friendship. Hence were seen to rise in an instant, as out of the earth, an incredible number of machines, of every kind and size, the very sight of which was sufficient to strike armies with terror and confusion.

There are amongst these machines, of some of which we can scarce conceive the effects, and the reality of which we might be tempted to call in question, if it were allowable to doubt the evidence of writers, such for instance as Polybius, an almost contemporary author, who treated on facts entirely recent, and such as were known to all the world. But how can we refuse to give credit to the uniform consent of Greek and Roman historians, whether friends or enemies, in regard to circumstances of which whole armies were witnesses, and experienced the effects, and which had so great an influence in the events of the war? What passed in the siege of Syracuse shows how far the ancients had carried their genius and art in besieging and supporting sieges. Our artillery, which so perfectly imitates thunder, has not more effect than the engines of Archimedes, if indeed they have so much.

A burning-glass is spoken of, by means of which Archimedes is said to have burnt part of the Roman fleet. That must have been an extraordinary invention; but as no ancient author mentions it, it is no doubt a modern tradition without any foundation. Burning glasses were known to antiquity, but not of that kind, which indeed seem impracticable.

After Marcellus had resolved to confine himself to the blockade of A. M. 3791. Syracuse,² he left Appius before the Ant. J. C. 213. place with two-thirds of the army, advanced with the other into the island, and brought over some cities to the Roman interest.

At the same time Himilcon, general of the Carthaginians, arrived in Sicily with a great army, in hopes of re-conquering it, and expelling the Romans.

Hippocrates left Syracuse with 10,000 foot and 500 horse to join him, and carry on the war in concert against Marcellus. Epiicydes remained in the city, to command there during the blockade.

The fleets of the two states appeared at the same time on the coast of Sicily; but that of the Carthaginians, seeing itself weaker than the other, was afraid to venture a battle, and soon sailed back for Carthage.

Marcellus had continued eight months before Syracuse with Appius, according to Polybius, when the year of his consulship expired. Livy places the expedition of Marcellus in Sicily, and his victory over Hippocrates, in this year, which must have been the second year of the siege. And indeed Livy has given us no account of this second year, because he had ascribed to the first what had passed in the second. For it is highly improbable, that nothing memorable happened in it.

This is the conjecture of Mr. Crevier, professor of rhetoric in the college of Beauvais, who has published a new edition of Livy, with remarks, and with which I am convinced the public will be well-pleased. The first volume of the said work contains a long preface, which is well worth reading.

Marcellus, therefore, employed a great part of the second year of the siege, in several expeditions in Sicily. On his return from Agrigentum, upon which he had made an ineffectual attempt, he came up with the army of Hippocrates, which he defeated, and killed above 8000 men. This advantage kept those in their duty, who had entertained thoughts of going over to the Carthaginians. After the gaining of this victory, he returned against Syracuse; and having sent off Appius for Rome, who went thither to demand the consulship, he put Q. Crispinus into his place.

¹ The scorpions were machines in the nature of cross-bows, with which the ancients used to discharge darts and stones.

² *In pace, ut sapiens, optavit idonea bello.* Horat.

And wise in peace prepared the arms of war.

³ Liv. l. xxiv. n. 35, 36.

A. M. 3792. In the beginning of the third campaign, Marcellus, almost absolutely despairing of being able to take Syracuse, either by force, because Archimedes continually opposed him with invincible obstacles, or by famine, as the Carthaginian fleet, which was returned more numerous than before, easily threw in convoys, deliberated whether he should continue before Syracuse to push the siege, or turn his endeavours against Agrigentum. But, before he came to a final determination, he thought it proper to try whether he could not make himself master of Syracuse by some secret intelligence. There were many Syracusans in his camp, who had taken refuge there in the beginning of the troubles. A slave of one of these secretly carried on an intrigue, in which four, core of the principal persons of the city engaged, who came in companies to consult with him in his camp, concealed in barks under the nets of fishermen. The conspiracy was on the point of taking effect, when a person named Attalus, through resentment for not having been admitted into it, discovered the whole to Epicydes, who put all the conspirators to death.

This enterprise having thus miscarried, Marcellus found himself in new difficulties. Nothing employed his thoughts but the grief and shame of raising a siege, after having consumed so much time, and sustained the loss of so many men and ships in it. An accident supplied him with a resource, and gave new life to his hopes. Some Roman vessels had taken one Damippus, whom Epicydes had sent to negotiate with Philip, king of Macedon. The Syracusans expressed a great desire to ransom this man, and Marcellus was not averse to it. A place near the port Trogilius was agreed on for the conference concerning the ransom of the prisoner. As the deputies went thither several times, it came into a Roman soldier's thought to consider the wall with attention. After having counted the stones, and examined with his eye the measure of each of them, upon a calculation of the height of the wall he found it to be much lower than it was believed, and concluded that with ladders of a moderate size it might be easily scaled. Without loss of time he related the whole to Marcellus. The general is not always the only wise man in an army; a private soldier may sometimes furnish him with important hints. Marcellus did not neglect this advice, and assured himself of its reality with his own eyes. Having caused ladders to be prepared, he took the opportunity of a festival, that the Syracusans celebrated for three days in honour of Diana, during which the inhabitants gave themselves up entirely to rejoicing and good cheer. At the time of night when he conceived that the Syracusans, after their debauch, would begin to grow drowsy and fall asleep, he made a thousand chosen troops, in profound silence, advance with their ladders to the wall. When the first had got to the top without noise or tumult, others followed, encouraged by the boldness and success of their leaders. These thousand soldiers, taking advantage of the enemy's stillness, who were either drunk or asleep, soon scaled the wall. Having thrown down the gate of the Hexapylum, they took possession of the quarter of the city called Epipolæ.

It was then no longer time to deceive, but terrify the enemy. The Syracusans, awakened by the noise, began to rouse, and to prepare for action. Marcellus made all his trumpets sound together, which so frightened and alarmed them, that all the inhabitants fled, believing every quarter of the city in the possession of the enemy. The strongest and best part, however, called Achradina, was not yet taken, because separated by its walls from the rest of the city.

Marcellus at day-break entered the new city by the quarter called Tyche. Epicydes having hastily drawn up some troops, which he had in the Isle, which was adjoining to Achradina, marched against Marcellus: but finding him stronger and better attended

than he expected, after a slight skirmish he shut himself up in Achradina.

All the captains and officers with Marcellus congratulated him upon this extraordinary success. As to himself, when he had considered from an eminence the loftiness, beauty, and extent of that city, he is said to have shed tears, and to have deplored the unhappy condition it was upon the point of experiencing. He called to mind the two powerful Athenian fleets which had formerly been sunk before this city, and the two numerous armies cut in pieces, with the illustrious generals who commanded them: the many wars sustained with so much valour against the Carthaginians: the many famous tyrants and potent kings, Hiero particularly, whose memory was still recent, who had signalized himself by so many royal virtues, and still more, by the important services he had rendered the Roman people, whose interests had always been as dear to him as his own. Moved by that reflection, he believed it incumbent upon him, before he attacked Achradina, to send to the besieged to exhort them to surrender voluntarily, and prevent the ruin of their city. His remonstrances and exhortations had no effect.

To prevent being harassed in his rear, he then attacked a fort called Euryelus, which lay at the bottom of the new town, and commanded the whole country on the land side. After having carried it, and placed therein a strong garrison, he turned all his efforts against Achradina.

During these transactions, Hippocrates and Himilcon arrived. The first, with the Sicilians, having placed and fortified his camp near the great harbour, and given the signal to those who were in possession of Achradina, attacked the old camp of the Romans, in which Crispinus commanded: Epicydes, at the same time, made a sally upon the posts of Marcellus. Neither of these enterprises was successful. Hippocrates was vigorously repulsed by Crispinus, who pursued him as far as his intrenchments, and Marcellus obliged Epicydes to shut himself up in Achradina.

As it was then autumn, there happened a plague, which killed great numbers in the city, and still more in the Roman and Carthaginian camps. The distemper was not excessive at first, and proceeded only from the heat of the season, and the unwholesomeness of the soil: but afterwards the communication with the infected, and even the care taken of them, dispersed the contagion; from whence it happened, that some, neglected and absolutely abandoned, died of the violence of the malady, and others received help which became fatal to those who brought it. Death, and the sight of such as were buried, continually presented a mournful object to the eyes of the living. Nothing was heard night and day but groans and lamentations. At length the being accustomed to the evil had hardened their hearts to such a degree, and so far extinguished all sense of compassion in them, that they not only ceased to grieve for the dead, but left them without interment. Nothing was to be seen every where but dead bodies, exposed to the view of those who expected the same fate. The Carthaginians suffered much more from it than the others. As they had no place to retire to, they almost all perished, with their generals Hippocrates and Himilcon. Marcellus, from the first breaking out of the disease, had brought his soldiers into the city, where the roofs and shade were of great relief to them; but, notwithstanding, he lost no inconsiderable number of men.

Bomilcar, in the mean time, who commanded the Carthaginian fleet, and had made a second voyage to Carthage to bring a new supply, returned with a hundred and thirty ships, and seven hundred transports. He was prevented by contrary winds from doubling the cape of Pachynus. Epicydes, who was afraid that if those winds continued, this fleet might be discouraged and return to Africa, left Achradina to the care of the generals of the mercenary troops, and went to Bomilcar, whom he persuaded to try the event of a naval battle, as soon as the weather would permit. Marcellus, seeing that the troops of the Sicilians increased every day, and that if he stayed, and suffered himself to be shut up in Syracuse, he should be very much pressed at the same time both by sea

• Liv. l. xxv. n. 23, 31. Plut. in Marcel. 308, 309.

• The new city or Neapolis, was Epipolæ, which in the latter times had been taken into the city and surrounded with walls.

and land, resolved, though not so strong in ships, to oppose the passage of the Carthaginian fleet. As soon as the high winds abated, Bomilcar stood out to sea, in order to double the cape; but when he saw the Roman ships advance towards him in good order, on a sudden, for what reason is not said, he took to flight, sent orders to the transports to regain Africa, and retired to Tarentum. Epicydes, who had been disappointed in such great hopes, and was apprehensive of returning into a city already half taken, made sail for Agrigentum, rather with the design of awaiting the event of the siege in that place, than of making any new attempt from thence.

When it was known in the camp of the Sicilians, that Epicydes had quitted Syracuse, and the Carthaginians Sicily, they sent deputies to Marcellus, after having sounded the dispositions of the besieged, to treat upon the conditions on which Syracuse should surrender. It was agreed with unanimity enough on both sides, that what had appertained to the kings, should appertain to the Romans; that the Sicilians should retain all the rest, with their laws and liberty. After these preliminaries they demanded a conference with those to whom Epicydes had intrusted the government in his absence. They told them, they had been sent by the army to Marcellus, and the inhabitants of Syracuse, in order that all the Sicilians, as well within as without the city, might have the same fate, and that no separate convention might be made. Having been permitted to enter the city, and to confer with their friends and relations, after having informed them of what they had already agreed with Marcellus, and giving them assurances that their lives would be safe, they persuaded them to begin by removing the three governors Epicydes had left in his place, which was immediately put in execution.

After which, having assembled the people, they represented, "that for whatever miseries they had suffered till then, or should suffer from thenceforth, they ought not to accuse fortune, as it depended upon themselves alone to put an end to them: that if the Romans had undertaken the siege of Syracuse, it was out of affection, not enmity, to the Syracusans: that it was not till after they had been apprized of the oppressions they suffered from Hippocrates and Epicydes, those ambitious agents of Hannibal, and afterwards of Hieronymus, that they had taken arms, and begun the siege of the city, not to ruin it, but to destroy its tyrants: that as Hippocrates was dead, Epicydes no longer in Syracuse, his lieutenants slain, and the Carthaginians dispossessed of Sicily, both by sea and land, what reason could the Romans now have for not inclining as much to preserve Syracuse, as if Hiero, the sole example of fidelity towards them, were still alive? That neither the city nor the inhabitants had any thing to fear but for themselves, if they let slip the occasion of renewing their amity with the Romans: that they never had so favourable an opportunity as the present, when they were just delivered from the violent government of their tyrants; and that the first use they ought to make of their liberty was to return to their duty."

This discourse was perfectly well received by every body. It was however judged proper to create new magistrates before the nomination of deputies; the latter of whom were chosen out of the former. The deputy who spoke in their name, and who was intrusted solely to use his utmost endeavours that Syracuse might not be destroyed, addressed himself to Marcellus to this effect: "It was not the people of Syracuse who first broke the alliance, and declared war against you, but Hieronymus, less criminal still towards Rome than towards his country; and afterwards, when peace was restored by his death, it was not any Syracusan that infringed it, but the tyrant's instruments, Hippocrates and Epicydes. They were the enemies who have made war against you, after having made us slaves, either by violence or fraud and perfidy; and it cannot be said that we have had any times of liberty, that have not also been times of peace with you. At present, as soon as we are become masters of ourselves by the death of those who held Sicily in subjection, we come that very instant to deliver up to you our arms, our persons, our walls,

and our city, determined not to refuse any conditions you shall think fit to impose. For the rest," continued he, addressing himself still to Marcellus, "your interest is as much concerned as ours. The gods have granted you the glory of having taken the finest and most illustrious city possessed by the Greeks. All we have ever achieved worthy of being recorded, either by sea or land, augments and adorns your triumph. Fame is not a sufficiently faithful chronicler to make known the greatness and strength of the city you have taken; posterity can only judge of them by its own eyes. It is necessary that we should show to all travellers, from whatever part of the universe they come, sometimes the trophies we have obtained from the Athenians and Carthaginians, and sometimes those you have acquired from us; and that Syracuse, thus placed for ever under the protection of Marcellus, may be a lasting and eternal monument of the valour and clemency of him who took and preserved it. It is unjust that the remembrance of Hieronymus should have more weight with you than that of Hiero. The latter was much longer your friend than the former your enemy. Permit me to say, you have experienced the good effects of the amity of Hiero; but the senseless enterprises of Hieronymus have fallen solely upon his own head."

The difficulty was not to obtain what they demanded from Marcellus, but to preserve tranquillity and union amongst those in the city. The deserters, convinced that they should be delivered up to the Romans, inspired the foreign soldiers with the same fear. Both the one and the other having therefore taken arms, whilst the deputies were still in the camp of Marcellus, they began by cutting the throats of the magistrates newly elected; and dispersing themselves on all sides, they put to the sword all they met, and plundered whatever fell in their way. That they might not be without leaders, they appointed six officers, three to command in Achradina, and three in the Isle. The tumult being at length appeased, the foreign troops were informed from all hands, that it was concluded with the Romans, that their cause should be entirely distinct from that of the deserters. At the same instant, the deputies who had been sent to Marcellus arrived, who fully undeceived them.

Amongst those who commanded in the Isle, there was a Spaniard named Mericus: means were found to corrupt him. He gave up the gate near the fountain Arethusa to soldiers, sent by Marcellus in the night to take possession of it. At day-break the next morning, Marcellus made a false attack on Achradina, to draw all the forces of the citadel, and the Isle adjoining to it, to that side, and to enable some vessels he had prepared to throw troops into the Isle, which would be unguarded. Every thing succeeded according to his plan. The soldiers, whom those vessels had landed in the Isle, finding almost all the posts abandoned, and the gates, by which the garrison of the citadel had marched out against Marcellus, still open, they took possession of them after a slight encounter. Marcellus having received advice that he was master of the Isle, and of part of Achradina, and that Mericus, with the body under his command, had joined his troops, ordered a retreat to be sounded, that the treasures of the kings might not be plundered. They did not rise so high in their amount as was imagined.

The deserters having escaped, a passage being expressly left open for them, the Syracusans opened all the gates of Achradina to Marcellus, and sent deputies to him, with instructions to demand nothing farther from him than the preservation of the lives of themselves and their children. Marcellus having assembled his council, and some Syracusans who were in his camp, gave his answer to the deputies in their presence: "That Hiero, for fifty years, had not done the Roman people more good, than those who had been masters of Syracuse some years past had intended to do them harm: but that their ill-will had fallen upon their own heads, and they had punished themselves for their violation of treaties in a more severe manner than the Romans could have desired: that he had besieged Syracuse during three years, not that the Roman people might reduce it into slavery, but

to prevent the chiefs of the revolvers from continuing to hold it under oppression: that he had undergone many fatigues and dangers in so long a siege; but that he thought he had made himself ample amends by the glory of having taken that city, and the satisfaction of having saved it from the entire ruin it seemed to deserve." After having placed a body of troops to secure the treasury, and safeguards in the houses of the Syracusans who had withdrawn into his camp, he abandoned the city to be plundered. It is reported, that the riches that were pillaged in Syracuse at this time exceeded all that could have been expected at the taking of Carthage itself.

An unhappy accident interrupted the joy of Marcellus, and gave him a very sensible affliction. Archimedes, at a time when all things were in this confusion at Syracuse, shut up in his closet like a man of another world, who has no regard for what is passing in this, was intent upon the study of some geometrical figure, and not only his eyes, but the whole faculties of his soul, were so engaged in this contemplation, that he had neither heard the tumult of the Romans, universally busy in plundering, nor the report of the city's being taken. A soldier on a sudden comes in upon him, and bids him follow him to Marcellus. Archimedes desired him to stay a moment, till he had solved his problem and finished the demonstration of it. The soldier, who neither cared for his problem nor demonstration, enraged at his delay, drew his sword and killed him. Marcellus was exceedingly afflicted when he heard the news of his death. Not being able to restore him to life, of which he would have been very glad, he applied himself to honour his memory to the utmost of his power. He made a diligent search after all his relations, treated them with great distinction, and granted them peculiar privileges. As for Archimedes, he caused his funeral to be celebrated in the most solemn manner, and erected to him a monument amongst the great persons who had distinguished themselves most at Syracuse.

ARTICLE III.

SECTION. I.—TOMB OF ARCHIMEDES DISCOVERED BY CICERO.

ARCHIMEDES, by his will, had desired his relations and friends to put no other epitaph on his tomb, after his death, than a cylinder circumscribed by a sphere, that is to say, a globe or spherical figure; and to set down at the bottom the proportion which those two solids, the containing and the contained, have to each other. He might have filled up the bases of the columns of his tomb with relieves, whereon the whole history of the siege of Syracuse might have been carved, and himself appeared like another Jupiter thundering upon the Romans. But he set an infinitely higher value upon a discovery, a geometrical demonstration, than upon all the so-much-celebrated machines which he had invented.

Hence he chose rather to do himself honour in the eyes of posterity, by the discovery he had made of the relation of a sphere to a cylinder of the same base and height; which is as two to three.

The Syracusans, who had been in former times so fond of the sciences, did not long retain the esteem and gratitude they owed a man who had done so much honour to their city. Less than a hundred and forty years after, Archimedes was so perfectly forgotten by his citizens, notwithstanding the great services he had done them, that they denied his having been buried at Syracuse. It is Cicero who informs us of this circumstance.

At the time he was questor in Sicily, his curiosity induced him to make a search after the tomb of Archimedes; a curiosity worthy a man of Cicero's genius, and which merits the imitation of all who travel. The Syracusans assured him that this search would be to no purpose, and that there was no such monument amongst them. Cicero pitied their ignorance, which only served to increase his desire of making that discovery. At length, after several fruitless attempts, he

perceived without the gate of that city, *viz.* Argiræum, amongst a great number of tombs, in that place a pillar almost entirely covered with thorns and brambles, through which he could discern the figure of a sphere and cylinder. Those who have any taste for antiquities may easily conceive the joy of Cicero upon this occasion. He cried out "that he had found what he had looked for." The place was immediately ordered to be cleared, and a passage opened to the column, on which they saw the inscription still legible, though part of the lines were obliterated by time. So that, says Cicero,¹ in concluding this account, the greatest city of Greece, and the most flourishing of old in the study of the sciences, would not have known the treasure it possessed, if a man, born in a country which it considered almost as barbarous, a man of Arpinum, had not discovered for it the tomb of its citizen, so highly distinguished by the force and penetration of his mind.

We are obliged to Cicero for having left us this curious and elegant account: but we cannot easily pardon him for the contemptuous manner in which he speaks at first of Archimedes. It is in the beginning, where, intending to compare the unhappy life of Dionysius the Tyrant with the felicity of one passed in sober virtue, and abounding with wisdom, he says, "I will not compare the lives of a Plato or an Archytas, persons of consummate learning and wisdom, with that of Dionysius, the most horrid, the most miserable, and the most detestable, that can be imagined. I shall have recourse to a man of his own city, A LITTLE OBSCURE PERSON, who lived many years after him. I shall produce him from his dust, and bring him upon the stage with his rule and compasses in his hand." I say nothing of the birth of Archimedes, his greatness was of a different class. But ought the greatest geometrical man of antiquity, whose sublime discoveries have in all ages been the admiration of the learned, be treated by Cicero as a little and obscure person, as if he had been only a common artificer employed in making machines? unless it be, perhaps, that the Romans, with whom a taste for geometry and such speculative sciences never gained much ground esteemed nothing great but what related to government and policy.

Orabunt causas melius, colique meatus
Describent radio, et surgentia sidera dicent:
Tu regere imperio populos, Romane, memento.
Virg. Æn. vi.

Let others better mould the running mass
Of metals, and inform the breathing brass,
And soften into flesh a marble face;
Plead better at the bar, describe the skies,
And when the stars descend and when they rise,
But Rome, 'tis thine alone with awful sway,
To rule mankind, and make the world obey;
Disposing peace and war thy own majestic way.
Dryden.

This is the Abbe Fraguier's reflection in the short dissertation he has left us upon this passage of Cicero.²

SECTION II.—SUMMARY OF THE HISTORY OF SYRACUSE.

THE island of Sicily, with the greatest part of Italy extending between the two seas, composed what was called Magna Græcia, in opposition to Greece, properly so called, which had peopled all these countries by its colonies.

Syracuse was the most considerable city of Sicily, and one of the most powerful of all Greece. It was founded by Archias the Corinthian, in the third year of the seventeenth Olympiad. A. M. 3295.

¹ *Et cetera*, adopting an expression of Archimedes.
² Ita nobilissima Græciæ civitas, quondam verò etiam doctissima, sui civis unius acutissimi monumentum ignorasset, nisi ab homine Arpinate didicisset.

³ Non ergo jam cum hujus vitæ quæ tæritus, miserius, de temetibus excogitare nihil possum, Platonis aut Archytæ vitam comparabo, doctorum hominum et planè sapientum. Ex eadem urbe humilem homuncionem a pulvere et radio excitabo, qui multis annis post fuit, Archimedes.

⁴ He means the dust used by geometricians.
⁵ *Memoirs of the Academy of Inscriptions, vol. ii.*

¹ Cic. *Tusc. Quest. l. v. n. 64, 66.*

The first two ages of its history are very obscure, and therefore I pass over them in silence. It does not begin to be known till after the reign of Gelon, and furnishes in the sequel many great events, for the space of more than two hundred years. During all that time it exhibits a perpetual alternative of slavery under the tyrants, and liberty under a popular government; till Syracuse is at length subjected to the Romans, and makes part of their empire.

I have treated all these events, except the last, in the order of time. But as they are cut into different sections, and dispersed into different books, I have thought proper to unite them here in one point of view, that their series and connection might be the more evident, from their being shown together and in general, and the places pointed out, where they are treated with due extent.

GELON. The Carthaginians, in A. M. 3520. concert with Xerxes, having attacked the Greeks who inhabited Sicily, whilst that prince was employed in making an irruption into Greece; Gelon, who had made himself master of Syracuse, obtained a celebrated victory over the Carthaginians, the very day of the battle of Thermopylae. Amilcar, their general, was killed in this battle. Historians speak differently of his death, which has occasioned my falling into a contradiction. For on one side, I suppose, with Diodorus Siculus, that he was killed by the Sicilians in the battle; and on the other I say, after Herodotus, that to avoid the shame of surviving his defeat, he threw himself into the pile, in which he had sacrificed many human victims.

Gelon upon returning from his A. M. 3525. victory, repaired to the assembly without arms or guards, to give the people an account of his conduct. He was chosen king unanimously. He reigned five or six years, solely employed in the truly royal care of making his people happy. See vol. i.

HIERO I. Hiero, the eldest of Gelon's brothers, succeeded him. The beginning of his reign was worthy of great praise. Simonides and Pindar vied with each other in celebrating him. The latter part of it did not answer the former. He reigned eleven years. See vol. i.

THRASYBULUS. Thrasybulus his A. M. 3543. brother succeeded him. He rendered himself odious to all his subjects by his vices and cruelty. They expelled him the throne and city, after a reign of one year. See vol. i.

Times of Liberty.

After his expulsion, Syracuse and A. M. 3544. all Sicily enjoyed their liberty for the space of almost sixty years.

An annual festival was instituted to celebrate the day upon which their liberty was re-established.

Syracuse attacked by the Athenians.

During this interval, the Athenians, animated by the warm exhortations of Alcibiades, turned their arms against Syracuse: this was in the sixth year of the Peloponnesian war. How fatal the event of this war was to the Athenians, may be seen in vol. i.

DIONYSIUS the elder. The reign A. M. 3598. of this prince is famous for its length of thirty-eight years; and still more for the extraordinary events with which it was attended. See vol. i.

DIONYSIUS the younger. Dionysius, son of the elder Dionysius, succeeded him. He contracts a particular intimacy with Plato, and has frequent conversations with him; who had come to his court at the request of Dion, the near relation of Dionysius. He did not long profit from the wise precepts of that philosopher, and soon abandoned himself to all the vices and excesses which attend tyranny.

Besieged by Dion, he escapes from the citadel, and retires into Italy.

A. M. 3644.

Dion's excellent qualities. He is assassinated in his own house by Callippus.

A. M. 3646

Thirteen months after the death of Dion, Hipparinus, brother of Dionysius the younger, expels Callippus, and establishes himself in Syracuse.

A. M. 3647.

During the two years of his reign, Sicily is agitated by great commotions.

A. M. 3649.

Dionysius the younger, taking advantage of those troubles, re-ascends the throne ten years after having quitted it.

A. M. 3654.

At last, reduced by Timoleon, he retires to Corinth. See vol. i.

A. M. 3657.

Times of Liberty.

Timoleon restores liberty to Syracuse. He passes the rest of his life there in a glorious retirement, beloved and honoured by all the citizens and strangers. See vol. i.

A. M. 3658

This interval of liberty was of no long duration.

AGATHOCLES. Agathocles, in a short time, makes himself tyrant of Syracuse. See vol. i.

A. M. 3685.

He commits unparalleled cruelties.

He forms one of the boldest designs related in history; carries the war into Africa; makes himself master of the strongest places, and ravages the whole country.

After various events, he perishes miserably. He reigned about twenty-eight years.

Times of Liberty.

Syracuse revived again for some time, and tasted with joy the sweets of liberty.

A. M. 3713.

But she suffered much from the Carthaginians, who disturbed her tranquillity by continual wars.

She called in Pyrrhus to her aid.

The rapid success of his arms at first gave them great hopes, which soon vanished. Pyrrhus by a sudden retreat plunged the Syracusans into new misfortunes. See vol. i.

A. M. 3726.

HIERO II. They were not happy and in tranquillity till the reign of Hiero II. which was very long, and almost always pacific.

HIERONYMUS. He scarce reigned one year. His death was followed with great troubles, and the taking of Syracuse by Marcellus.

After that period what passed in Sicily to its total reduction is little remarkable. There were still some remains of war fomented in it by the partisans of tyranny, and the Carthaginians who supported them, but those wars were unproductive of any event of consequence, and Rome was soon absolute mistress of all Sicily. Half the island had been a Roman province ever since the treaty which put an end to the first Punic war. By that treaty, Sicily was divided into two parts; the one continued in the possession of the Romans; and the other under the government of Hiero; which last part, after the surrender of Syracuse, fell also into their hands.

SECTION III.—REFLECTIONS UPON THE GOVERNMENT AND CHARACTER OF THE SYRACUSANS.

By the taking of Syracuse, all Sicily became a province of the Roman empire; but it was not treated as the Spaniards and Carthaginians were afterwards, upon whom a certain tribute was imposed as the reward of the victors, and punishment of the vanquished, *Quasi victoriae premium, ac pœna belli*. Sicily, in submitting to the Roman people, retained all her ancient rights and customs, and obeyed them upon the same conditions she had obeyed her kings. And she

¹ Siciliæ civitates sic in amicitiam recepinus, ut eodem jure essent, quæ fuissent; eadem conditione populo R. pœnerent quæ suis antea parvisset. Cic.

certainly well deserved that privilege and distinction. She was the first¹ of all the foreign nations that had entered into alliance and amity with the Romans; the first conquest their arms had the glory to make out of Italy; and the first country that had given them the grateful experience of commanding a foreign people. The greatest part of the Sicilian cities had expressed an unexampled attachment, fidelity, and affection, for the Romans. The island was afterwards a kind of step for their troops to pass over into Africa; and Rome would not so easily have reduced the formidable power of the Carthaginians, if Sicily had not served it as a magazine, abounding with provisions, and a secure retreat for their fleets. Hence, after the taking and ruin of Carthage, Scipio Africanus thought himself bound to adorn the cities of Sicily with a great number of excellent paintings and curious statues; in order that a people who were so highly gratified with the success of the Roman arms, might be sensible of its effects, and retain illustrious monuments of their victories amongst them.

Sicily would have been happy in being governed by the Romans, if they had always given her such magistrates as Cicero, as well acquainted as he with the obligations of his function, and like him intent upon the due discharge of it. It is highly pleasing to hear him explain himself upon the subject; which he does in his defence of Sicily against Verres.

After having invoked the gods as witnesses of the sincerity of the sentiments he is going to express, he says: "In all² the employments with which the Roman people have honoured me to this day, I have ever thought myself obliged, by the most sacred ties of religion, worthily to discharge the duties of them. When I was made quaestor, I looked upon that dignity, not as a gift conferred upon me, but as a deposit confided to my vigilance and fidelity. When I was afterwards sent to act in that office in Sicily, I thought all eyes were turned upon me, and that my person and administration were in a manner exhibited as a spectacle to the view of all the world: and in this thought, I not only denied myself all pleasures of an extraordinary kind, but even those which are authorized by nature and necessity. I am now intended for *Ædile*. I call the gods to witness, that how honourable soever this dignity seems to me, I have too just a sense of its weight, not to have more solicitude and disquiet, than joy and pleasure, from it; so much do I desire to make it appear, that it was not bestowed on me by chance, or the necessity of being filled up, but conferred deservedly by the choice and discernment of my country."

All the Roman governors were far from being of this character: and Sicily, above all other provinces, experienced, as Cicero some lines after reproaches

Verres,³ that they were almost all of them like so many tyrants, who believed themselves attended by the fasces and axes, and invested with the authority of the Roman empire, only to exercise in their province an open robbery of the public with impunity, and to break through all the barriers of justice and shame in such a manner, that no man's estate, life, house, nor even honour, were safe from their violence.

Syracuse, from all we have seen of it, must have appeared like a theatre, on which many different and surprising scenes have been exhibited; or rather like a sea, sometimes calm and untroubled, but oftener violently agitated by winds and storms, always ready to overwhelm it entirely. We have seen in no other republic such sudden, frequent, violent, and various revolutions; sometimes enslaved by the most cruel tyrants, at others under the government of the wisest kings; sometimes abandoned to the capricious will of a populace, without either curb or restriction; sometimes perfectly docile and submissive to the authority of law, and the empire of reason it passed alternately from the most insupportable slavery to the most grateful liberty, from a kind of convulsive and frantic emotions, to a wise, peaceable, and regular conduct. The reader will easily call to mind, on the one side, Dionysius the father and son, Agathocles and Hieronymus, whose cruelties made them the objects of the public hatred and detestation; on the other, Gelon, Dion, Timoleon, the two Hieros, ancient and modern, universally beloved and revered by the people.

To what are such opposite extremes, and vicissitudes so contrary, to be attributed? Undoubtedly, the levity and inconstancy of the Syracusans, which was their distinguishing characteristic, had a great share in them; but what, I am convinced, conducted the most to them, was the very form of their government, compounded of an aristocracy and a democracy; that is to say, divided between the senate or elders, and the people. As there was no counterpoise in Syracuse to balance those two bodies, when authority inclined either to the one side or the other, the government presently changed either into a violent and cruel tyranny or an unbridled liberty, without order or regulation. The sudden confusion, at such times, of all orders of the state, made the way to sovereign power easy to the most ambitious of the citizens: to attract the affection of their country, and soften the yoke of their fellow-citizens, some exercised that power with lenity, wisdom, equity and affability; and others, by nature, less virtuously inclined, carried it to the last excess of the most absolute and cruel despotism, under pretext of supporting themselves against the attempts of their citizens, who, jealous of their liberty, thought every means for the recovery of it legitimate and laudable.

There were, besides, other reasons that rendered the government of Syracuse difficult, and thereby made way for the frequent changes it underwent. That city did not forget the signal victories it had obtained against the formidable power of Africa, and that it had carried its victories and the terror of its arms, even to the walls of Carthage; and that not once only, as afterwards against the Athenians, but during several ages. The high idea its fleets and numerous troops suggested of its maritime power, at the time of the irruption of the Persians into Greece, occasioned its pretending to equal Athens in that respect, or at least to divide the empire of the sea with that state.

Besides which, riches, the natural effect of commerce, had rendered the Syracusans proud, haughty, and imperious, and at the same time had plunged them into a sloth and luxury that inspired them with a disgust for all fatigue and application. They generally abandoned themselves blindly to their orators, who

¹ Omnium nationum exterarum princeps Sicilia se ad amicitiam fidemque populi R. applicuit: prima omnium, id quod ornamentum imperii est, provincia est, appellata: prima docuit majores nostros, quam præclarum esset, exteris gentibus imperare—Itaque inujuriis nostris in Africam ex hac provincia gradus imperii factus est. Neque enim tam facile opes Carthaginis tantæ concidissent, nisi illud, et rei frumentariæ subsidium, et receptaculum classicis nostris pateret. Quare P. Africanus, Carthagine deletâ, Siculorum urbes signis monumentisque pulcherrimis exornavit; ut, quos victoriâ populi R. lætari arbitrabatur, apud eos monumenta victoriæ plurima collocaret. *Cic. Verr.* 3. n. 2, 3.

² O dii immortales—Ita mihi meam voluntatem spemque reliquæ vitæ vestra populique R. existimatio comprobet, ut ego quis adhuc mihi magistratus populus R. mandavit, sic eos accepi, ut me omnium officiorum obstringi religione arbitrarer. Ita quaestor sum factus, ut mihi honorem illum non tam datum quam creditum ac commissum putarem. Sic obtinui quaesturam in provinciâ, ut omnium oculos in me unum conjectores arbitrarer: ut me quaesturamque meam quasi in aliquo orbis terrarum theatro versari existimarem; ut omnia semper, quæ jucunda videntur esse, non modo his extraordinariis cupiditatibus, sed etiam ipsi nature ac necessitati denegarem. Nunc sum designatus ædilis—Ita mihi deo omnes propitios esse velim, ut tamen si mihi jucundissimus est honor populi, tamen nequamquam tantum capio voluptatis, quantum sollicitudinis et laboris ut hæc ipse ædilis, non quia necesse fuit alicui candidato data, sed quia sic oportuerit recte collocata, et judicio populi, digno in loco posita esse videatur. *Cic. Verr.* 7. n. 35—37.

³ Nunquam tibi venit in mentem, non tibi idcirco fasces et securæ, et tantum imperii vim, tantanque ornamentum omnium dignitatem datam; ut earum rerum vi et auctoritate omnia repugula juris, pudoris, et officii perfringeres; ut omnium bona prædâ tuam duceres; nullius res tota, nullius domus clausa, nullius vita septa, nullius pudicitia munita, contra tuam cupiditatem et audaciam posset esse. *Cic. Verr.* n. 39.

had acquired an absolute ascendant over them. In order to obey, it was necessary either to flatter or reproach them.

They had naturally a fund of equity, humanity, and good-nature; and yet, when influenced by the seditious discourses of the orators, they would proceed to excessive violence and cruelties, of which they immediately after repented.

When they were left to themselves, their liberty, which at that time knew no bounds, soon degenerated into caprice, fury, violence, and I might say, even frenzy. On the contrary, when they were subjected to the yoke, they became base, timorous, submissive, and grovelling, like slaves. But as this condition was constrained, and directly contrary to the character and disposition of the Greek nation, born and nurtured in liberty, the sense of which was not wholly extinguished in them, but merely lulled asleep, they waked from time to time from their lethargy, broke their chains, and made use of them, if I may be admitted to use the expression, to beat down and destroy the unjust masters who had opposed them.

With the slightest attention to the whole series of

the history of the Syracusans, it may easily be perceived (as Galba afterwards said of the Romans,) that they were equally incapable of bearing either entire liberty or entire servitude. So that the ability and policy of those who governed them, consisted in keeping the people to a wise medium between those two extremes, by seeming to leave them an entire freedom in their resolutions, and reserving only to themselves the care of explaining the utility, and facilitating the execution of good measures. And in this the magistrates and kings we have spoken of were wonderfully successful, under whose government the Syracusans always enjoyed peace and tranquillity, were obedient to their princes, and perfectly submissive to the laws. And this induces me to conclude, that the revolutions of Syracuse were less the effect of the people's levity, than the fault of those that governed them, who had not the art of managing their passions, and engaging their affection, which is properly the science of kings, and of all who command others.

¹ Imperaturus es hominibus, qui nectotam servitutem pati possunt, nec totam libertatem. *Tacit. Hist. l. i. c. 16.*

THE HISTORY OF PONTUS.

BOOK XXIII.

SECTION I.—MITHRIDATES, AT TWELVE YEARS OF AGE, ASCENDS THE THRONE OF PONTUS. HE SEIZES CAPPADOCIA AND BITHYNIA, HAVING FIRST EXPELLED THEIR KINGS. THE ROMANS RE-ESTABLISH THEM. HE CAUSES ALL THE ROMANS AND ITALIANS IN ASIA MINOR TO BE PUT TO THE SWORD IN ONE DAY. FIRST WAR OF THE ROMANS WITH MITHRIDATES, WHO HAD MADE HIMSELF MASTER OF ASIA MINOR AND GREECE, AND HAD TAKEN ATHENS. SYLLA IS CHARGED WITH THIS WAR. HE BESIEGES AND RETAKES ATHENS. HE GAINS THREE GREAT BATTLES AGAINST THE GENERALS OF MITHRIDATES. HE GRANTS THAT PRINCE PEACE IN THE FOURTH YEAR OF THE WAR. LIBRARY OF ATHENS, IN WHICH WERE THE WORKS OF ARISTOTLE. SYLLA CAUSES IT TO BE CARRIED TO ROME.

MITHRIDATES, king of Pontus, whose history I am now beginning to relate, and who rendered himself so famous by the war he supported, during almost thirty years, against the Romans, was surnamed Eupator. He was descended from a house which had given a long succession of kings to the kingdom of Pontus. The first, according to some historians, was Artabazus, one of the seven princes that slew the Magi, and set the crown of Persia upon the head of Darius Hystaspes, who rewarded him with the kingdom of Pontus. But, besides that we do not find the name of Artabazus amongst those seven Persians, many reasons induce us to believe, that the prince of whom we speak was the son of Darius, the same who is called Artabazanes, who was competitor with Xerxes for the throne of Persia, and was made king of Pontus either by his father or his brother, to console him for the preference given to Xerxes. His posterity enjoyed that kingdom during seventeen generations. Mithridates Eupator, of whom we are treating in his place, was the sixteenth from him.

He was but twelve years of age
A. M. 3880. when he began to reign. His father,
Ant. J. C. 124. before his death, had appointed him his successor, and had given him his mother for guardian, who was to govern jointly with him. He began his reign by putting his mother and brother to death;¹ and the sequel corresponded but too well with such a beginning. Nothing is said of the first years of his reign,² except that one of the Roman generals, whom he had corrupted with money having surrendered, and put him into possession of Phrygia, it was soon after taken from him by the Romans, which gave birth to his enmity against them.

Ariarathes, king of Cappadocia,
A. M. 3913. being dead, Mithridates caused the
Ant. J. C. 91. two sons he had left behind him to be put to death, though their mother Laodice was his own sister, and placed one of his own sons, at that time very young, upon the throne, giving him the name of Ariarathes, and appointing Gordius his guardian and regent. Nicomedes, king of Bithynia, who was apprehensive that this increase of power would put Mithridates into a condition to

possess himself also of his dominions in time, thought proper to set up a certain young man (who seemed very fit for acting such a part) as a third son of Ariarathes. He engaged Laodice, whom he had espoused after the death of her first husband, to acknowledge him as such, and sent her to Rome, to assist and support by her presence the claim of this pretended son, whom she carried thither along with her. The cause being brought before the senate, both parties were condemned; and a decree passed, by which the Cappadocians were declared free. But they said they could not be without a king. The senate permitted them to choose whom they thought fit. They elected Ariobarzanes, a nobleman of their nation. Sylla, upon his quitting the office of pretor, was charged with the commission of establishing him upon the throne. That was the pretext assigned for this expedition; but the real motive of it was, to check the enterprises of Mithridates, whose power daily augmenting, gave umbrage to the Romans. Sylla executed his commission the following year; and after having defeated a great number of Cappadocians, and a much greater of Armenians, who came to their aid, he expelled Gordius, with the pretended Ariarathes, and set Ariobarzanes in his place.

Whilst Sylla was encamped upon the banks of the Euphrates, a Parthian, named Orobasus, arrived at his camp, deputed from king Arsaces,³ to demand the alliance and amity of the Romans. Sylla, when he received him at his audience, caused three seats to be placed in his tent, one for Ariobarzanes, who was present, another for Orobasus, and that in the midst for himself. The Parthian king afterwards, offended at his deputy for having acquiesced in this instance of Roman pride, caused him to be put to death. This is the first time the Parthians had any intercourse with the Romans.

Mithridates did not dare at that time to oppose the establishment of Ariobarzanes; but dissembling the mortification that conduct of the Romans gave him, he resolved to take an opportunity of being revenged upon them. In the mean while he engaged in cultivating powerful alliances for the augmentation of his strength; and began with Tigranes, king of Armenia, a very powerful prince. Armenia⁴ had at first appertained to the Persians; it came under the Macedonians afterwards; and upon the death of Alexander made part of the kingdom of Syria. Under Antiochus the Great, two of his generals, Artaxius and Zadiadres, with that prince's permission, established themselves in this province, of which it is probable they were before governors. After the defeat of Antiochus, they adhered to the Romans, who acknowledged them as kings. They had divided Armenia into two parts. Tigranes, of whom we now speak, was descended from Artaxius. He possessed himself of all Armenia, subjected several neighbouring countries by his arms, and thereby formed a very powerful kingdom. Mithridates gave him his daughter Cleopatra in marriage, and engaged him to enter so far into his projects against the Romans

¹ Memnon in excerptis Photii, c. xxxii.
² Apian in Mithrid. 177, 178.

³ This was Mithridates II.
⁴ Strab. l. xi. p. 531, 532.

that the agreed Mithridates should have the cities and countries they should conquer for his share, and Tigranes the people, with all the effects capable of being carried away.

The first enterprise and act of host-
A. M. 3915. tility was committed by Tigranes,
Ant. J. C. 89. who deprived Ariobarzanes of Cappadocia, of which the Romans had put him into possession, and re-established Ariarathes, the son of Mithridates, in it. Nicomedes, king of Bithynia, happening to die about this time, his eldest son, called also Nicomedes, ought naturally to have succeeded him, and was accordingly proclaimed king. But Mithridates set up his younger brother Sostrates against him, who deprived him of the throne by force of arms. The two dethroned kings went to Rome to implore aid of the senate, who decreed their re-establishment, and sent Manius Aquilius and M. Altinus to put that decree in execution.

They were both reinstated. The Romans advised them to make irruptions into the lands of Mithridates, promising them their support; but neither the one nor the other dared to attack so powerful a prince so near home. At length, however, Nicomedes, urged both by the ambassadors, to whom he had promised great sums for his re-establishment, and by his creditors, Roman citizens settled in Asia, who had lent him very considerable sums for the same purpose, could no longer resist their solicitations. He made incursions upon the lands of Mithridates, ravaged all the flat country as far as the city Amastris, and returned home laden with booty, which he applied in discharging part of his debts.

Mithridates was not ignorant by whose advice Nicomedes had committed this irruption. He might easily have repulsed him, as he had a great number of good troops on foot; but he did not take the field. He was glad to throw the blame on the side of the Romans, and to have a just cause for declaring war against them. He began by making remonstrances to their generals and ambassadors. Pelopidas was at the head of this embassy. He complained of the various contraventions of the Romans to the treaty of alliance subsisting between them and Mithridates, and in particular of the protection granted by them to Nicomedes, his declared enemy. The ambassadors of the latter replied, and made complaints on their side against Mithridates. The Romans, who were unwilling to declare themselves openly at present, gave the man answer in loose and general terms; that the Roman people had no intention that Mithridates and Nicomedes should injure each other.

Mithridates, who was not satisfied with this answer, made his troops march immediately into Cappadocia, expelled Ariobarzanes again, and set his son Ariarathes upon the throne, as he had done before. At the same time, he sent his ambassador to the Roman generals to make his apology, and to renew his complaints against them. Pelopidas declared to them, that his master was contented the Roman people should be umpire in the affair; and added, that he had already sent his ambassadors to Rome. He exhorted them not to undertake any thing, till they had received the senate's orders, nor engage rashly in a war that might be attended with fatal consequences. For the rest, he gave them to understand, that Mithridates, in case justice were refused him, was in a condition to procure it for himself. The Romans highly offended at so haughty a declaration, made answer, that Mithridates was immediately to draw his troops from Cappadocia, and not to continue to disturb Nicomedes or Ariobarzanes. They ordered Pelopidas to quit the camp that moment, and not return, unless his master obeyed. The other ambassadors were no better received at Rome.

The rupture was then inevitable, and the Roman generals did not wait till the orders of the senate and people arrived; which was what Mithridates wished. The design he had long formed of declaring war against the Romans, had occasioned his having made many alliances, and engaged many nations in his interest. Amongst his troops were reckoned twenty-two nations, or as many different languages, all which Mithridates himself spoke with facility. His army

consisted of 250,000 foot and 40,000 horse, without including 130 armed chariots and a fleet of 400 ships.

Before he proceeded to action, he thought it necessary to prepare his troops for it, and made them a long discourse to animate them against the Romans. He represented to them, "That the matter now in hand was not to examine whether war or peace were to be preferred; that the Romans, by attacking the first, had left them no room for deliberation: that their business was to fight and conquer: that he assured himself of success, if the troops persisted to act with the same valour they had already shown upon so many occasions, and very lately against the same enemies, whom they had put to flight and cut to pieces in Bithynia and Cappadocia: that there could not be a more favourable opportunity than the present, when the Marsi infested and ravaged the very heart of Italy; when Rome was torn in pieces by civil wars, and an innumerable army of the Cinabri from Germany overran all Italy: that the time was come for humbling those proud republicans, who were hostile to the royal dignity, and had sworn to pull down all the thrones of the universe. Then as to what remained, the war his soldiers were now entering upon was highly different from that they had sustained with so much valour in the horrid deserts and frozen regions of Scythia: that he should lead them into the most fruitful and temperate country of the world, abounding with rich and opulent cities, which seemed to offer themselves an easy prey: that Asia, abandoned to be devoured by the insatiable avarice of the proconsuls, the inexorable cruelty of tax-gatherers, and the flagrant injustice of corrupt judges, held the name of Roman in abhorrence, and impatiently expected them as her deliverers: that they followed him, not so much to a war, as to assured victory and certain spoils." The army answered this discourse with universal shouts of joy, and reiterated protestations of service and fidelity.

The Romans had formed three armies out of their troops in the several parts of Asia Minor. The first was commanded by L. Cassius, who had the government of the province of Pergamus; the second, by Manius Aquilius; the third, by Q. Oppius, proconsul, in his province of Pamphylia. Each of them had forty thousand men, including the cavalry. Besides these troops, Nicomedes had fifty thousand foot and six thousand horse. They began the war, as I have already observed, without waiting for orders from Rome, and carried it on with so much negligence and so little judgment, that they were all three defeated on different occasions, and their armies ruined. Aquilius and Oppius themselves were taken prisoners, and treated with all kinds of insults. Mithridates, considering Aquilius as the principal author of the war, treated him with the highest indignities. He made him pass in review before the troops, and presented him as a sight to the people, mounted on an ass, obliging him to cry out with a loud voice, that he was Manius Aquilius. At other times he obliged him to walk on foot with his hands fastened by a chain to a horse, that drew him along. At last he caused molten lead to be poured down his throat, and put him to death with the most exquisite torments. The people of Mitylene had treacherously delivered him

¹ Justin. l. xxxviii. c. 3-7.

² I have abridged this discourse extremely, which Justin repeats at length, as it stood in Trejus Pompeius, of whom he is only the epitomiser. The discourse is a specimen of that excellent historian's style, and ought to make us very much regret the loss of his writings.

³ "Nunc se diversam belli conditionem ingredi. Nam neque celo Asiae esse temperatius aliud, nec solo fertilis, nec urbiu multitudinē amoenius; magnanque temporis partem, non ut militiam sed ut festum diem, acturos, bello dubium facili magis an uberi—tamenque se avida expectat Asia, ut etiam vocibus vocet; adeo illud odium Romanorum incussit rapacitas proconsulum, et publicanorum calumnie litium." Justin.—*Scilicet, mutuum* in this passage properly signifies the forcible sale of goods of those who for default of the payment of taxes and duties had their estates and effects seized on and sold by the publicans. *Calumnie litium* are the unjust quirks and canery, which served as pretexts for depriving the rich of their estates, either upon account of taxes, or under some other colour.

up to Mithridates at a time when he was sick, and had retired to their city for the recovery of his health.

Mithridates, who was desirous of gaining the people's hearts by his reputation for clemency, sent home all the Greeks he had taken prisoners, and supplied them with provisions for their journey. That instance of his goodness and lenity opened the gates of all the cities to him. The people came out to meet him every where with acclamations of joy. They gave him excessive praises, called him the preserver, the father of the people, the deliverer of Asia, and applied to him all the other names by which Bacchus was denominated, to which he had a just title, for he passed for the prince of his time, who could drink most without being disordered; a quality he valued himself upon, and thought much to his honour.

The fruits of these his first victories were, the conquest of all Bithynia, from which Nicomedes was driven; of Phrygia and Mysia, lately made Roman provinces; of Lycia, Pamphylia, Paphlagonia, and several other countries.

Having found at Stratonice a young maid of exquisite beauty, named Monima, he took her along with him in his train.

A. M. 3916. Mithridates, considering that the Romans, and all the Italians in general, who were at that time in Asia

Minor upon different affairs, carried on secret intrigues much to the prejudice of his interests, sent private orders from Ephesus, where he then was, to the governors of the provinces, and magistrates of the cities of Asia Minor, to massacre them all upon a day fixed.⁴ The women, children, and domestics, were included in this proscription. To these orders was annexed a prohibition to give interment to those who should be killed. Their estates and effects were to be confiscated for the use of the king and the murderers. A severe fine was laid upon such as should conceal the living, or bury the dead; and a reward appointed for whoever discovered those who were hid. Liberty was given to the slaves who killed their masters; and debtors forgiven half their debts, for killing their creditors. The repetition only of this dreadful order is enough to make one shudder with horror. What then must have been the desolation in all those provinces when it was put in execution! Fourscore thousand Romans or Italians were butchered in consequence of it. Some make the slain amount to almost twice that number.

Being informed that there was a great treasure at Cos,⁵ he sent people thither to seize it. Cleopatra, queen of Egypt, had deposited it there, when she undertook the war in Phœnicia against her son Lathyrus. Besides this treasure, they found eight hundred talents (eight hundred thousand crowns,) which the Jews in Asia Minor had deposited there when they saw the war ready to break out.

All those who had found means to escape this general slaughter in Asia, had taken refuge in Rhodes,⁶ which received them with joy, and afforded them a secure retreat. Mithridates laid siege to that city ineffectually, which he was soon obliged to raise, after having been in danger of being taken himself in a sea-fight, wherein he lost many of his ships.

When he had made himself master of Asia Minor,⁷ Mithridates sent Archelaus, one of his generals, with an army of a hundred and twenty thousand men into Greece. That general took Athens, and chose it for his residence, giving all orders from thence in regard to the war on that side. During his stay there, he engaged most of the cities and states of Greece in the interests of his master. He reduced Delos by force,

which had revolted from the Athenians, and reinstated them in the possession of it. He sent them the sacred treasure, kept in that island by Aristion, to whom he gave two thousand men as a guard for the money. Aristion was an Athenian philosopher of the sect of Epicurus. He employed the 2000 men under his command to secure to himself the supreme authority at Athens, where he exercised a most cruel tyranny, putting many of the citizens to death, and sending many to Mithridates, upon pretence that they were of the Roman faction.

Such was the state of affairs when Sylla was charged with the war against Mithridates. He set out immediately for Greece, with five legions, and some cohorts and cavalry. Mithridates was at that time at Pergamus, where he distributed riches, governments, and other rewards, to his friends.

Upon Sylla's arrival, all the cities opened their gates to him, except Athens, which, subjected to the tyrant Aristion's yoke, was obliged unwillingly to oppose him. The Roman general, having entered Attica, divided his troops into two bodies, the one of which he sent to besiege Aristion in the city of Athens, and with the other he marched in person to the port Piræus, which was a kind of second city, where Archelaus had shut himself up, relying upon the strength of the place, the walls being almost sixty feet high, and entirely of hewn stone. The work was indeed very strong, and had been raised by the order of Pericles in the Peloponnesian war, when, the hopes of victory depending solely upon this port, he had fortified it to the utmost of his power.

The height of the walls did not amaze Sylla. He employed all sorts of engines in battering them, and made continual assaults. If he would have waited a little, he might have taken the higher city without striking a blow, which was reduced by famine to the last extremity. But being in haste to return to Rome, and apprehending the changes that might happen there in his absence, he spared neither danger, attacks nor expense, in order to hasten the conclusion of that war. Without enumerating the rest of the warlike stores and equipage, twenty thousand mules were perpetually employed in working the machines only. Wood happened to fall short, from the great consumption made of it in the machines, which were often either broken and spoiled by the vast weight they carried, or burnt by the enemy, he did not spare the sacred groves. He cut down the beautiful avenues of the Academy and Lycæum, which were the finest walks in the suburbs, and planted with the finest trees; and caused the high walls that joined the port to the city to be demolished, in order to make use of the ruins in erecting his works, and carrying on his approaches.

As he had occasion for abundance of money in this war, and endeavoured to attach the soldiers to his interests and to animate them by great rewards, he had recourse to the inviolable treasures of the temples, and caused the finest and most precious gifts, consecrated at Epidaurus and Olympia, to be brought from thence. He wrote to the Amphictyons assembled at Delphi, "that they would act wisely in sending him the treasures of the god, because they would be more secure in his hands; and that if he should be obliged to make use of them, he would return the value after the war." At the same time he sent one of his friends, named Caphis, a native of Phocis, to Delphi, to receive all those treasures by weight.

When Caphis arrived at Delphi, he was afraid, through reverence for the god, to meddle with the consecrated gifts, and bewailed with tears, in the presence of the Amphictyons, the necessity imposed upon him. Upon which, some person there having said, that he heard the sound of Apollo's lyre from the inside of the sanctuary, Caphis, whether he really believed it, or was willing to take advantage of that occasion to strike Sylla with a religious awe, wrote him an account of what had happened. Sylla, deriding his simplicity, replied, "that he was surprised he should not comprehend, that singing was a sign of joy, and by no means of anger and resentment; and, therefore he had nothing to do but to take the trea-

saures boldly, and be assured that the god saw him do so with pleasure, and gave them to him himself."

Plutarch, on this occasion, notices the difference between the ancient Roman generals, and those of the times we now speak of. The former, whom merit alone had raised to office, and who had no other views from their employments but the public good, knew how to make the soldiers respect and obey them, without descending to use low and unworthy methods for that purpose. They commanded troops that were steady, disciplined, and well inured to execute the orders of their generals without reply or delay. Truly kings, says Plutarch, in the grandeur and nobility of their sentiments, but simple and modest private persons in their train and equipage, they put the state to no other expense in the discharge of their offices than what was reasonable and necessary, conceiving it more shameful in a captain to flatter his soldiers, than to fear his enemies. Things were much changed in the times we now speak of. The Roman generals, abandoned to insatiable ambition and luxury, were obliged to make themselves slaves to their soldiers, and to buy their services by gifts proportioned to their avidity, and often by the toleration and impunity of the greatest crimes.

Sylla, in consequence, was perpetually in extreme want of money to satisfy his troops, and then more than ever for carrying on the siege in which he had engaged, the success of which seemed to him of the highest importance, both with respect to his honour and even his safety. He was desirous of depriving Mithridates of the only city he had left in Greece, and which, by preventing the Romans from passing into Asia, would destroy all hopes of conquering that prince, and oblige Sylla to return shamefully into Italy, where he would have found more terrible enemies in Marius and his faction. He was besides sensibly galled by the keen railery which Aristion vented every day against him and his wife Metella.

It is not easy to say whether the attack or defence were conducted with most vigour; for both sides behaved with incredible courage and resolution. The sallies were frequent, and attended with almost battles in form, in which the slaughter was great, and be loss generally not very unequal. The besieged would not have been in a condition to have made so vigorous a defence, if they had not received several considerable reinforcements by sea.

What did them most damage was the secret treachery of two Athenian slaves who were in the Piræus. Those slaves, whether out of affection to the Roman interest, or desirous of providing for their own safety in case the place was taken, wrote upon leaden balls all that was going forward within, and threw them from slings to the Romans. So that how prudent soever the measures were which Archelaus took, who defended the Piræus, whilst Aristion commanded in the city, none of them succeeded. He resolved to make a general sally; the traitors slung a leaden ball with this intelligence upon it: "To-morrow, at such an hour, the foot will attack your works, and the horse your camp." Sylla laid ambushes, and repulsed the besieged with loss. A convoy of provisions was in the night to have been thrown in the city, which was in want of every thing. Upon advice of the same kind the convoy was intercepted.

Notwithstanding all these disappointments, the Athenians defended themselves like lions. They found means either to burn most of the machines erected against the wall, or by undermining them to throw them down and break them to pieces.

The Romans, on their side, behaved with no less vigour. By the help of mines also they made a way to the bottom of the walls, under which they hollowed the ground; and, having propped the foundation with beams of wood, they afterwards set fire to the props with a great quantity of pitch, sulphur, and tow. When those beams were burnt, part of the wall fell down with a horrible noise, and a large breach was opened, through which the Romans advanced to the assault. The battle continued a great while with

equal ardour on both sides, but the Romans were at length obliged to retire. The next day they renewed the attack. The besieged had built a new wall during the night in the form of a crescent, in the place of the other, which had fallen, and the Romans found it impossible to force it.

Sylla, discouraged by so obstinate a defence, resolved to attack the Piræus no longer and confined himself to reduce the place by famine. The city, on the other side, was at the last extremity. A bushel of barley had been sold in it for a thousand drachmas (about five-and-twenty pounds sterling.) The inhabitants did not only eat the grass and roots which they found about the citadel, but the flesh of horses, and the leather of their shoes, which they boiled soft. In the midst of the public misery, the tyrant passed his days and nights in revelling. The senators and priests went to throw themselves at his feet, conjuring him to have pity on the city, and to obtain a capitulation from Sylla: he dispersed them with a shower of arrows, and in that manner drove them from his presence.

He did not demand a cessation of arms, nor send deputies to Sylla, till reduced to the last extremity. As those deputies made no proposals, and asked nothing of him to the purpose, but ran on in praising and extolling Theseus, Eumolpus, and the exploits of the Athenians against the Medes, Sylla was tired with their discourse, and interrupted them, by saying, "Gentlemen orators, you may go back again, and keep your rhetorical flourishes for yourselves. For my part, I was not sent to Athens to be informed of your ancient prowess, but to chastise your modern revolt."

During this audience, some spies, having entered the city, overheard by chance some old men talking in the Ceranicus, and blaming the tyrant exceedingly for not guarding a certain part of the wall, that was the only place by which the enemy might easily take the city by escalade. At their return into the camp they related what they had heard to Sylla. The parley had been to no purpose. Sylla did not neglect the intelligence given him. The next night he went in person to take a view of the place, and finding the wall actually accessible, he ordered ladders to be raised against it, began the attack there and, having made himself master of the wall after a weak resistance, entered the city. He would not suffer it to be set on fire, but abandoned it to be plundered by the soldiers, who in several houses found human flesh, which had been dressed to be eaten. A dreadful slaughter ensued. The next day all the slaves were sold by auction, and liberty was granted to the citizens who had escaped the swords of the soldiers, who were very few in number. He besieged the citadel the same day, where Aristion, and those who had taken refuge there, were soon so much reduced by famine, that they were forced to surrender themselves. The tyrant, his guards, and all who had been in any office under him, were put to death.

Some few days after, Sylla made himself master of the Piræus, and burnt all its fortifications, especially the arsenal, which had been built by Philo, the celebrated architect, and was a wonderful fabric. Archelaus, by the help of his fleet, had retired to Munychia another port of Attica.

This year, upon which we are now entering, was fatal to the arms of A. M. 3918 Mithridates.³ Taxiles, one of his Ant. J. C. 85 generals, arrived in Greece from Thrace and Macedonia, with an army of a hundred thousand foot and ten thousand horse, with fourscore and ten chariots armed with scythes. Archelaus, that general's brother, was at that time in the port of Munychia, and would neither remove from the sea, nor come to a battle with the Romans; but he endeavoured to protract the war, and cut off their provisions. This was very prudent conduct, for Sylla began to be in want of them; so that famine obliged him to quit Attica, and to enter the fruitful plains of Boeotia, where Hortensius joined him. Their troops being united,

³ Αὐτοὶ τοὶ τῆς ψυχῆς βασιλικοὶ, καὶ τῆς δικαιοσύνης ἐπὶ τῆς ἐκείνης.

⁴ A public square at Athens.

⁵ Plut. in Sylla, p. 461—466. Appian. p. 196—203.

they took possession of a fertile eminence in the midst of the plains of Elätea, at the foot of which ran a rivulet. When they had formed their camp, the enemies could discover at one view their small number, which amounted to only fifteen thousand foot and fifteen hundred horse. This induced Archelaus's generals to press him in the warmest manner to proceed to action. They did not obtain his consent without great difficulty. They immediately began to move, and covered the whole plain with horses, chariots, and innumerable troops; for when the two brothers were joined, their army was very formidable. The noise and cries of so many nations, and so many thousands of men preparing for battle, the pomp and magnificence of their array, were truly terrible. The brightness of their arms, magnificently adorned with gold and silver, and the lively colours of the Median and Scythian coats of arms, mingled with the glitter of brass and steel, darted forth as it were flashes of lightning, which, whilst it dazzled the sight, filled the soul with terror.

The Romans, seized with dread, kept close within their intrenchments. Sylla not being able by his discourse and remonstrances to remove their fear, and not being willing to force them to fight in their present state of discouragement, was obliged to lie still, and suffer, though with great impatience, the bravadoes and insulting derision of the barbarians. They conceived so great a contempt for him in consequence, that they neglected to observe any discipline. Few of them kept within their intrenchments; the rest, for the sake of plunder, dispersed in great troops, and straggled to a considerable distance, even several days' journey, from the camp. They plundered and ruined some cities in the neighbourhood.

Sylla was in the utmost despair when he saw the cities of the allies destroyed before his eyes, for want of power to make his army fight. He at last thought of a stratagem, which was to give the troops no repose, and to keep them incessantly at work in turning the Cephissus, a little river which was near the camp, and in digging deep and large trenches, under pretence of their better security, but in fact, that by being tired of such great fatigues, they might prefer the hazard of a battle to the continuance of their labour. His stratagem was successful. After having worked without intermission three days, as Sylla, according to custom, was taking a view of their progress, they cried out to him with one voice, to lead them against the enemy. Sylla suffered himself to be exceedingly entreated, and did not comply for some time; but when he saw their ardour increase from his opposition, he made them stand to their arms, and marched against the enemy.

The battle was fought near Cheronea. The enemy had possessed themselves, with a great body of troops, of a very advantageous post, called Thurium: it was the ridge of a steep mountain, which extended itself upon the left flank of the Romans, and was well calculated to check their motions. Two men of Cheronea came to Sylla, and promised him to drive the enemy from this post, if he would give them a small number of chosen troops, which he did. In the mean time he drew up his army in battle, divided his horse between the two wings, taking the right himself, and giving the left to Murena. Galba and Hortensius formed a second line. Hortensius, on the left, supported Murena, whilst Galba on the right did the same for Sylla. The barbarians had already begun to extend their horse and light-armed foot in a large compass, with design to surround the second line, and charge it in the rear.

At that instant the two men of Cheronea, having gained the top of Thurium with their small troop, without being perceived by the enemy, showed themselves on a sudden. The barbarians, surprised and terrified, immediately took to flight. Pressing against each other upon the declivity of the mountain, they ran precipitately down before the enemy, who charged and closely pursued them down the hill sword in hand, so that about three thousand men were killed upon the mountain. Of those who escaped, some fell into the hands of Murena, who had just before formed in order of battle. Having marched against them, he intercepted and made a great slaughter of them: the

rest, who endeavoured to regain their camp, fell in upon the main body of their troops with so much precipitation, that they threw the whole army into terror and confusion, and made their generals lose much time in restoring order, which was one of the principal causes of their defeat.

Sylla, taking advantage of this disorder, marched against them with so much vigour, and charged over the space between the two armies with such rapidity, that he prevented the effect of their chariots armed with scythes. The force of these chariots depended upon the length of their course, which gave impetuosity and violence to their motion; instead of which, a short space, that did not leave room for their career, rendered them useless and ineffectual. This the barbarians experienced at this time. The first chariots came on so slowly, and with so little effect, that the Romans, easily pushing them back, with great noise and loud laughter called for more, as was customary at Rome in the chariot-races of the Circus.

After those chariots were removed, the two main bodies came to blows. The barbarians presented their long pikes, and kept close order with their bucklers joined, so that they could not be broken; and the Romans threw down their javelins, and with sword in hand thrust aside the enemy's pikes, in order to join and charge them with great fury. What increased their animosity, was the sight of fifteen thousand slaves, whom the king's generals had spirited from them by the promise of their liberty, and posted them amongst the heavy-armed foot. Those slaves had so much resolution and bravery, that they sustained the shock of the Roman foot without giving way. Their battalions were so deep and so well closed that the Romans could neither break nor move them, till the light-armed foot of the second line had put them into disorder by the discharge of their arrows, and a shower of stones from their slings, which forced them to give ground.

Archelaus having made his right wing advance to surround the left of the Romans, Hortensius led on the troops under his command to take him in flank; which Archelaus seeing, he ordered two thousand horse quickly to wheel about. Hortensius, upon the point of being overpowered by that great body of horse, retired by degrees towards the mountains, perceiving himself too far from the main body, and upon the point of being surrounded by the enemy. Sylla, with great part of his right wing, which had not yet been engaged, marched to his relief. From the dust raised by those troops, Archelaus judged what was going forward, and leaving Hortensius, he turned about towards the place Sylla had quitted, in hopes he should find no difficulty in defeating the right wing, which would now be without its general.

Taxiles, at the same time, led on his foot, armed with brazen shields, against Murena: whilst each side raised great shouts, which made the neighbouring hills resound. Sylla halted at the noise, not knowing well to which side he should first hasten. At length he thought it most expedient to return to his former post and support his right wing. He, therefore, sent Hortensius to assist Murena with four cohorts, and taking the fifth with him, he flew to his right wing, which he found engaged in battle with Archelaus, neither side having the advantage. But, as soon as he appeared, that wing taking new courage from the presence of their general, opened their way through the troops of Archelaus, put them to flight, and pursued them vigorously for a considerable time.

After this great success, without losing a moment, he marched to the aid of Murena. Finding him also victorious, and that he had defeated Taxiles, he joined him in the pursuit of the vanquished. A great number of the barbarians were killed on the plain and a much greater cut to pieces, in endeavouring to gain their camp; so that, of so many thousand men, only ten thousand escaped, who fled to the city of Chalci. Sylla wrote in his memoirs, that only fourteen of his men were missing, and that two of them returned the same evening.

To celebrate so great a victory, A. M. 3919 he gave music games at Thebes, and caused judges to come from the neighbouring Grecian cities to distribute the prizes; for he had an implacable aversion for the Thebans. He even deprived them of half their territory, which he consecrated to Apollo Pythius and Jupiter Olympius; and decreed, that the money he had taken out of the temples of those gods should be repaid out of their revenues.

These games were no sooner over, than he received advice, that L. Valerius Flaccus, of the adverse party, (for at this time the divisions between Marius and Sylla were at the highest,) had been elected consul, and had already crossed the Ionian sea with an army, in appearance against Mithridates, but in reality against himself. For this reason he began without delay his march to Thessaly, as with design to meet him. But being arrived at the city of Melite, news came to him from all sides, that all the places he had left in his rear were plundered by another of the king's armies, stronger and more numerous than the first. For Dorylaeus had arrived at Chalchis with a great fleet, on board of which were fourscore thousand men, the best equipped, the most warlike and disciplined, of all Mithridates's troops, and had thrown himself into Boeotia, and possessed himself of the whole country, in order to bring Sylla to battle. Archelaus would have dissuaded him from that design, by giving him an exact account of the battle he had so lately lost; but his counsel and remonstrances had no effect. He soon discovered that the advice that had been given him was highly reasonable and judicious.

He chose the plain of Orchomenus for the field of battle. Sylla caused ditches to be dug on each side of the plain, to deprive the enemy of the advantage of an open country, in which their cavalry could act, and to remove them towards the marshes. The barbarians fell furiously on the workmen, dispersed them, and put to flight the troops that supported them. Sylla seeing his army flying in this manner, quitted his horse immediately, and, seizing one of his ensigns, he pushed forward towards the enemy through those that fled, crying to them, "For me, Romans, I think it glorious to die here. But for you, when you shall be asked where you abandoned your general, remember to say it was at Orchomenus." They could not endure those reproaches, and returned to the charge with such fury, that they made Archelaus's troops turn their backs. The barbarians came on again in better order than before, and were again repulsed with greater loss.

The next day, at sunrise, Sylla led back his troops towards the enemy's camp, to continue his trenches; and falling upon those who were detached to skirmish and drive away the workmen, he charged them so rudely that he put them to flight. These runaways threw the troops who had continued in the camp into such terror, that they were afraid to stay to defend it. Sylla entered it pell-mell with those who fled, and made himself master of it. The marshes, in a moment, were dyed with blood, and the lake filled with dead bodies. The enemies, in different attacks, lost the greatest part of their troops. Archelaus continued a great while hid in the marshes, and escaped at last to Chalchis.

The news of all these defeats threw Mithridates into great consternation. However, as that prince was by nature fruitful in resources, he did not lose courage, and applied himself to repair his losses by making new levies. But from the fear that his ill success might give birth to some revolt or conspiracy against his person, as had already happened, he took the bloody precaution of putting all he suspected to death, without sparing even his best friends.

He was not more successful in Asia^a himself, than his generals had been in Greece. Fimbria, who commanded a Roman army there, beat the remainder of his best troops. He pursued the vanquished as far as the gates of Pergamus, where Mithridates resided,

and obliged him to quit that place himself, and retire to Pitane, a maritime place in the Troad. Fimbria pursued him thither, and invested him by land. But, as he had no fleet to do the same by sea, he sent to Lucullus, who was cruising in the neighbouring seas with the Roman fleet, and represented to him that he might acquire immortal glory by seizing the person of Mithridates who could not escape him, and by putting an end to so important a war. Fimbria and Lucullus were of two different factions. The latter would not be concerned in the affairs of the other; so that Mithridates escaped by sea to Mitylene, and exorted himself out of the hands of the Romans. This fault cost them very dear, and is not unusual in states where misunderstandings subsist between the ministers and generals of the army, which make them neglect the public good, lest they should contribute to the glory of their rivals.

Lucullus afterwards twice defeated Mithridates's fleet, and gained two great victories over him. This happy success was the more surprising, as it was not expected that Lucullus would distinguish himself by military exploits. He had passed his youth in the studies of the bar; and during his being questor in Asia, the province had always enjoyed peace. But so happy a genius as his did not want to be taught by experience, which is not to be acquired by lessons, and is generally the growth of many years. He supplied that defect in some measure, by employing the whole time of his journeys, by land and sea, partly in asking questions of persons experienced in the art of war, and partly in instructing himself by the reading of history. So that he arrived in Asia a complete general, though he had left Rome with only a moderate knowledge in the art of war.^b Let our young warriors consider this with due attention, and observe in what manner great men are formed.

Whilst Sylla was very successful in Greece, the faction that opposed him, and at that time engrossed all power at Rome, had declared him an enemy of the commonwealth. Cinna and Carbo treated the most worthy and most considerable persons with every kind of cruelty and injustice. Most of these, to avoid this insupportable tyranny, had chosen to retire to Sylla's camp, as to a port of safety; so that in a small time Sylla had a little senate about him. His wife Metella, having escaped with great difficulty with her children, brought him an account that his enemies had burnt his house and ravaged his lands, and begged him to depart immediately to the relief of those who remained in Rome, and were upon the point of being made victims of the same fury.

Sylla was in the greatest perplexity. On the one side, the miserable condition to which his country was reduced, inclined him to march directly to its relief; on the other, he could not resolve to leave imperfect so great and important an affair as the war with Mithridates. Whilst he was under this cruel embarrassment, a merchant came to him to treat with him in secret from the general Archelaus, and to make him some proposals of an accommodation. He was so exceedingly rejoiced when this man had explained his commission, that he made all possible haste to have a conference with that general.

They had an interview upon the sea-coast, near the little city of Delium. Archelaus, who was not ignorant how important it was to Sylla to have it in his power to repass into Italy, proposed to him the uniting his interests with those of Mithridates; and added, that his master would supply him with money, troops, and ships, to maintain a war against the faction of Cinna and Marius.

^a Ad Mithridaticum bellum missus a senatu, non modò opinionem vicit omnium quæ de virtute ejus erat, sed etiam gloriam suæ imperatoris. Idque est fuit mirabilis, quòd ab eo laus imperatoria non expectabatur, quæ adolecentiam in forensi operâ, quæretur diuturnum tempus, Murena sed in Pontogente, in Asiæ pace consumperat. Sed incredibilia quædam ingenii magnitudo non desideravit inductem unâ disciplinam. Itaque cum totum iter et navigationem consumpisset, partim in percontando à peritis, partim in rebus gestis legendis; in Asiâ factus imperator venit, cum cunctis Romæ profectus rei militaris rudis. Vol. II.—40

Sylla, without seeming offended at first with such proposals, exhorted him on his side to withdraw himself from the slavery in which he lived, under an imperious and cruel prince. He added, that he might take upon him the title of king in his government; and offered to have him declared the ally and friend of the Roman people, if he would deliver up to him Mithridates's fleet under his command. Archelaus rejected such a proposal with indignation, and even expressed to the Roman general, how much he thought himself affronted by the supposition of his being capable of such treachery. Upon which Sylla, assuming the air of grandeur and dignity so natural to the Romans, said to him: "If, being only a slave, and at best but an officer of a barbarian king, you look upon it as base to quit the service of your master, how dared you propose the abandoning the interests of the republic to such a Roman as myself? Do you imagine our condition, and the state of affairs between us, to be equal? Have you forgotten my victories? Do you not remember, that you are the same Archelaus whom I have defeated in two battles, and forced in the last to hide himself in the marshes of Orcho-menus?"

Archelaus confounded by so haughty an answer, sustained himself no longer in the sequel of the negotiation. Sylla got the ascendant entirely, and dictating the law as victor, proposed the following conditions: "That Mithridates should renounce Asia and Paphlagonia; that he should restore Bithynia to Nicomedes, and Cappadocia to Ariobarzanes; that he should pay the Romans two thousand talents (about three hundred thousand pounds sterling) for the expenses of the war, and deliver up to them seventy armed galleys, with their whole equipment; and that Sylla, on his side, should secure to Mithridates the rest of his dominions, and cause him to be declared the friend and ally of the Roman people." Archelaus seemed to approve these conditions, and despatched a courier immediately to communicate them to Mithridates. Sylla set out for the Hellespont, carrying Archelaus with him, whom he treated with great honours.

He received Mithridates's ambassadors at Larissa, who came to declare to him that their master accepted and ratified all the other articles, but that he desired he would not deprive him of Paphlagonia; and that as to the seventy galleys, he could by no means comply with that article. Sylla, offended at this refusal, answered them in an angry tone: "What say you? would Mithridates keep possession of Paphlagonia, and does he refuse me the galleys I demanded? I expected to have seen him return me thanks upon his knees, if I should have only left the hand with which he butchered a hundred thousand Romans. He will change his note when I go over to Asia, though at present, in the midst of his court at Pergamus, he meditates plans for a war he never saw." Such was the lofty style of Sylla, who gave Mithridates to understand, at the same time, that he would not talk such language had he been present at the past battles.

The ambassadors, terrified with this answer, made no reply. Archelaus endeavoured to soften Sylla, and promised him that he would induce Mithridates to consent to all the articles. He set out for that purpose, and Sylla, after having laid waste the country, returned into Macedonia.

Archelaus, upon his return, joined A. M. 3920. him at the city of Philippi, and informed him that Mithridates would accept the proposed conditions; but that he exceedingly desired to have a conference with him. What made him earnest for this interview was his fear of Fimbria, who having killed Flaccus, of whom mention has been made before, and put himself at the head of that consul's army, was advancing by great marches against Mithridates; and this it was which determined that prince to make peace with Sylla. They had an interview at Dardania, a city of the Troad. Mithridates had with him 200 galleys, 20,000 foot, 6000 horse, and a great number of chariots armed with scythes; and Sylla had only four cohorts and 200 horse in his company. When Mith-

ridates advanced to meet him, and offered him his hand, Sylla asked him whether he accepted the proposed conditions? As the king kept silence, Sylla continued, "Do you not know, Mithridates, that it is for suppliants to speak, and for the victorious to hear and be silent?" Upon this Mithridates began a long apology, endeavouring to ascribe the cause of the war, partly to the gods, and partly to the Romans. Sylla interrupted him, and after having made a long detail of the violence and inhumanities he had committed, he demanded of him a second time, whether he would ratify the conditions which Archelaus had laid before him? Mithridates, surprised at the haughtiness and pride of the Roman general, having answered in the affirmative, Sylla then received his embraces, and afterwards presenting the kings Ariobarzanes and Nicomedes to him, he reconciled them to each other. Mithridates, after the delivery of the seventy galleys, entirely equipped, and 500 archers, re-embarked.

Sylla saw plainly, that this treaty of peace was highly disagreeable to his troops. They could not bear that a prince, who of all kings was the most mortal enemy to Rome, and who in one day had caused 100,000 Roman citizens, dispersed in Asia, to be put to the sword, should be treated with so much favour, and even honour, and declared the friend and ally of the Romans, whilst almost still reeking with their blood. Sylla, to justify his conduct, gave them to understand, that if he had rejected his proposals of peace, Mithridates, on his refusal, would not have failed to treat with Fimbria; and that if those two enemies had joined their forces, they would have obliged him either to abandon his conquests, or hazard a battle against troops superior in number, under the command of two great captains, who in one day might have deprived him of the fruit of all his victories.

Thus ended the first war with Mithridates, which had lasted four years, and in which Sylla had destroyed more than 160,000 of the enemy; recovered Greece, Macedonia, Ionia, Asia, and many other provinces, of which Mithridates had possessed himself, and having deprived him of a great part of his fleet, compelled him to confine himself within the bounds of his hereditary dominions. But what has been most admired in Sylla is, that during three years, whilst the factions of Marius and Cinna had enslaved Italy, he did not dissemble his intending to turn his arms against them; and yet did not discontinue the war he had begun, convinced that it was necessary to conquer the foreign enemy, before he reduced and punished those at home. He has been also highly praised for his constancy in not hearkening to any proposals from Mithridates, who offered him considerable aid against his enemies, till that prince had accepted the conditions of peace he prescribed him.

Some days after, Sylla began his march against Fimbria, who was encamped under the walls of Thyatira, in Lydia; and, having marked out a camp near his, he began his entrenchments. Fimbria's soldiers coming out unarmed, ran to salute and embrace those of Sylla, and assisted them with great pleasure in forming their lines. Fimbria, seeing this change in his troops, and fearing Sylla as an irreconcilable enemy, from whom he could expect no mercy, after having attempted in vain to get him assassinated, killed himself.

Sylla condemned Asia in general to pay 20,000 talents, and, besides that fine rifled individuals exceedingly, by abandoning their houses to the insolence and rapaciousness of his troops, whom he quartered upon them, and who lived at discretion as in conquered cities. For he gave orders, that every host should pay each soldier quartered on him four drachmas a day, and entertain at table himself, and as many

† Vix quidquam in Syllæ operibus clarius duxerim, quam quodd, cum per triennium Cinnae Marianæque partes Italiam considerent, neque illarumque esse bellum his dissimulavit, nec quod erat in manibus omisit: existimavitque ante frangendum hostem, quam ulciscendum civem: repulsoque externo metu, ubi quod aliquem esset vicissem, superaret quod erat domesticum. *Vell. Pat. l. i. c. 24.*

• About 3,000,000. sterling. • About two shillings.

of his friends as he should think fit to invite; that each captain should have fifty drachmas; and, besides that, a robe to wear in the house, and another when he went abroad.

After having thus punished Asia, he set out from Ephesus with all his ships, and arrived the third day at the Piræus. Having been initiated in the great mysteries, he took for his own use the library of Apellicon, in which were the works of Aristotle. That philosopher, at his death, had left his writings to Theophrastus, one of his most illustrious disciples. The latter had transferred them to Neleus of Scepsis, a city in the neighbourhood of Pergamus in Asia; after whose death those works fell into the hands of his heirs, ignorant persons, who kept them shut up in a chest. When the kings of Pergamus began to collect industriously all sorts of books for their library, as the city of Scepsis was dependent upon them, those heirs, apprehending these works would be taken from them, thought proper to hide them in a vault under ground, where they remained almost a hundred and thirty years; till the heirs of Neleus's family, who after several generations were fallen into extreme poverty, brought them out to sell to Apellicon, a rich Athenian, who sought every where after the most curious books for his library. As they were very much damaged by the length of time, and the damp place where they had laid, Apellicon had copies immediately taken of them, in which there were many chasms; because the originals were either rotted in many places, or worm-eaten and obliterated. These blanks, words, and letters, were filled up as well as they could be by conjecture, and that in some places with sufficient want of judgment. From hence arose the many difficulties in those works which have ever since exercised the learned world. Apellicon being dead some short time before Sylla's arrival at Athens, he seized upon his library, and with these works of Aristotle, which he found in it, enriched his own at Rome. A famous grammarian of those times, named Tyrannion, who lived then at Rome, having a great desire for these works of Aristotle, obtained permission from Sylla's librarian to take a copy of them. That copy was communicated to Andronicus the Rhodian, who afterwards imparted it to the public, and to him the world is obliged for the works of that great philosopher.

SECTION II.—SECOND WAR AGAINST MITHRIDATES, UNDER MURENA, OF ONLY THREE YEARS' DURATION. MITHRIDATES PREPARES TO RENEW THE WAR. HE CONCLUDES A TREATY WITH SERTORIUS. THIRD WAR WITH MITHRIDATES. LUCULLUS THE CONSUL SENT AGAINST HIM. HE OBLIGES HIM TO RAISE THE SIEGE OF CYZICUM, AND DEFEATS HIS TROOPS. HE GAINS A COMPLETE VICTORY OVER HIM, AND REDUCES HIM TO FLY INTO PONTUS. TRAGICAL END OF THE SISTERS AND WIVES OF MITHRIDATES. HE ENDEAVOURS TO RETIRE TO TIGRANES, HIS SON-IN-LAW. LUCULLUS REGULATES THE AFFAIRS OF ASIA.

SYLLA, on setting out for Rome, A. M. 3921. had left the government of Asia to Ant. J. C. 83. Murena, with the two legions that had served under Fimbrina, to keep the province in obedience. This Murena is the father of him for whom Cicero made the fine oration which bears his name. His son at this time made his first campaign under him.

After Sylla's departure, Mithridates being returned into Pontus, turned his arms against the people of Chalcis and the Bosphorus, who had revolted against him. They first demanded his son Mithridates for their king, and having obtained him, immediately returned to their duty. The king imagining this conduct was the result of his son's intrigues, took umbrage at it; and having caused him to come to him, he ordered him to be bound with chains of gold, and soon after put him to death. That son had done him

great services in the war against Fimbrina. We see here a new instance of the jealousy which the excessive love of power is apt to excite, and to what a height the prince, who abandons himself to it, is capable of carrying his suspicions against his own blood; always ready to proceed to the most fatal extremities, and to sacrifice whatever is dearest to him to the slightest distrust. As for the inhabitants of the Bosphorus, he prepared a great fleet and a numerous army, which gave reason to believe his designs were against the Romans. And, in fact, he had not restored all Cappadocia to Ariobarzanes, but reserved part of it in his own hands; and he began to suspect Archelaus, as having engaged him in a peace equally shameful and disadvantageous.

When Archelaus perceived it, well knowing the master he had to deal with, he took refuge with Murena, and solicited him warmly to turn his arms against Mithridates. Murena, who passionately desired to obtain the honour of a triumph, suffered himself to be easily persuaded. He made an irruption into Cappadocia, and made himself master of Comana, the most powerful city of that kingdom. Mithridates sent ambassadors to him, to complain of his violating the treaty the Romans had made with him. Murena replied, that he knew of no treaty made with their master. There was in reality nothing reduced to writing on Sylla's part, the whole having passed by verbal agreement. In consequence, he continued to ravage his country, and took up his winter-quarters in it. Mithridates sent ambassadors to Rome, to make his complaints to Sylla and the senate.

There came a commissioner from Rome, but without a decree of the senate, who publicly ordered Murena not to molest the king of Pontus. A. M. 3922. Ant. J. C. 82.

But, as they conferred together in private, this was looked upon as a mere collusion; and indeed Murena persisted in ravaging his country. Mithridates therefore took the field, and having passed the river Halys, gave Murena battle, defeated him, and obliged him to retire into Phrygia with very great loss.

Sylla, who had been appointed dictator, not being able to suffer any longer that Mithridates, contrary to the treaty he had granted him, should be molested, sent Gabinus to Murena to order him in earnest to desist from making war with that prince, and to reconcile him with Ariobarzanes. He obeyed. Mithridates having put one of his sons, only four years old, into the hands of Ariobarzanes, as a hostage, under that pretext retained the cities in which he had garrisons, promising no doubt to restore them in time. He then gave a great feast, in which he promised prizes for such as should excel the rest in drinking, eating, singing, and rallying: fit objects of emulation! Gabinus was the only one who did not think proper to enter these lists. Thus ended the second war with Mithridates, which lasted only three years. Murena, at his return to Rome, received the honour of a triumph, to which he had no great claim.

Mithridates at length restored Cappadocia to Ariobarzanes, being A. M. 3926. Ant. J. C. 78. compelled so to do by Sylla, who died the same year. But he contrived a stratagem to deprive him entirely of it. Tigranes had lately built a great city in Armenia, which, from his own name, he called Tigranocerta. Mithridates persuaded his son-in-law to conquer Cappadocia, and to transport the inhabitants into the new city and the other parts of his dominions, that were not well peopled. He did so, and took away three hundred thousand souls. From thenceforth, wherever he carried his victorious arms, he acted in the same manner for the better peopling of his own dominions.

The extraordinary reputation of Sertorius, who was giving the Romans terrible employment in Spain, made Mithridates conceive the thought of sending an embassy to him, in order

to engage him to join forces against the common enemy. The flatterers, who compared him to Pyrrhus, and Sertorius to Hannibal, insinuated, that the Romans, attacked at the same time on different sides, would never be able to oppose two such formidable powers, when the most able and experienced of generals should act in concert with the greatest of kings. He therefore sent ambassadors to Spain, with letters and instructions for treating with Sertorius; to whom they offered, in his name, a fleet and money to carry on the war, upon condition that he would suffer that prince to recover the provinces of Asia, which the necessity of his affairs had reduced him to abandon by the treaty he had made with Sylla.

As soon as those ambassadors arrived in Spain, and had opened their commission to Sertorius, he assembled his council, which he called the senate. They were unanimously of an opinion, that he should accept that prince's offers with joy; and the rather, because so immediate and effective an aid, as the offered fleet and money, would cost him only a vain consent to an enterprise which it did not in any manner depend upon him to prevent. But Sertorius, with a truly Roman greatness of soul, protested, that he would never consent to any treaty injurious to the glory or interests of his country; and that he would not even desire a victory over his own enemies, that was not acquired by just and honourable methods. And, having made Mithridates's ambassadors come into the assembly, he declared to them, that he would suffer his master to keep Bithynia and Cappadocia, which were accustomed to be governed by kings, and to which the Romans could have no just pretensions; but he would never consent that he should set his foot in Asia Minor, which appertained to the republic, and which he had renounced by a solemn treaty.

When this answer was related to Mithridates, it struck him with amazement; and he is affirmed to have said to his friends, "What orders may we not expect from Sertorius, when he shall sit in the senate in the midst of Rome; who, even now, confined upon the coast of the Atlantic ocean, dictates bounds to our dominions, and declares war against us, if we undertake any thing against Asia?" A treaty was however concluded, and sworn between them, to this effect; That Mithridates should have Bithynia and Cappadocia; that Sertorius should send him troops for that purpose, and one of his captains to command them; and that Mithridates, on his side, should pay Sertorius three thousand talents down, and give him forty galleys.

The captain sent by Sertorius into Asia, was one of those banished senators of Rome, who had taken refuge with him, named Marcus Marius, to whom Mithridates paid great honours. For, when Marius entered the cities, preceded by the fasces and axes, Mithridates followed him, well satisfied with the second place, and with only making the figure of a powerful, but inferior, ally in this proconsul's company. Such was at that time the Roman greatness, that the name alone of that potent republic obscured the splendour and power of the greatest kings. Mithridates, however, found his interest in this conduct. Marius, as if he had been authorized by the Roman people and senate, discharged most of the cities from paying the exorbitant taxes which Sylla had imposed on them; expressly declaring that it was from Sertorius they received that favour, and to him they were indebted for it. So moderate and politic a conduct opened the gates of the cities to him without the help of arms, and the name alone of Sertorius made more conquests than all the forces of Mithridates.

Nicomedes, king of Bithynia, A. M. 3929. died this year, and made the Roman people his heirs. Ant. J. C. 75. His country became thereby, as I have observed elsewhere, a province of the Roman empire. Mithridates immediately formed a resolution to renew the war against them upon this occasion, and employed the greatest part of the year in making the necessary preparations for carrying it on with vigour. He be-

lieved, that, after the death of Sylla, and during the troubles with which the republic was agitated, the conjuncture was favourable for re-entering upon the conquests he had given up.

Instructed by his misfortunes and experience, he banished from his army all armour adorned with gold and jewels, which he began to consider as the allurements of the victor, and not as the strength of those who wore them. He caused swords to be forged after the Roman fashion with solid and weighty bucklers; he collected horses, rather well made and trained than magnificently adorned; assembled a hundred and twenty thousand foot, armed and disciplined like the Roman infantry, and sixteen thousand horse well equipped for service, besides a hundred chariots armed with long scythes, and drawn by four horses. He also fitted out a considerable number of galleys, which glittered no longer, as before, with gilt flags, but were filled with all sorts of arms, offensive and defensive; and provided immense sums of money for the pay and subsistence of the troops.

Mithridates had begun by seizing Paphlagonia and Bithynia. The province of Asia, which found itself exhausted by the exactions of the Roman tax-gatherers and usurers, to deliver themselves from their oppression, declared a second time for him. Such was the cause of the third Mithridatic war, which subsisted almost twelve years.

The two consuls, Lucullus and Cotta, were sent against him, each of A. M. 3930. Ant. J. C. 74. Lucullus had Asia, Cilicia, and Cappadocia, for his province; the other, Bithynia and Propontis.

Whilst Lucullus was employed in repressing the rapaciousness and violence of the tax-gatherers and usurers, and in reconciling the people of the countries through which he passed, by giving them good hopes for the time to come; Cotta, who was already arrived, thought he had a favourable opportunity, in the absence of his colleague, to signalize himself by some great exploit. He therefore prepared to give Mithridates battle. The more he was told that Lucullus was approaching, that he was already in Phrygia, and would soon arrive, the greater haste he made to fight, believing himself already assured of a triumph, and desirous of preventing his colleague from having any share in it. But he was bidden by sea and land. In the naval battle he lost sixty of his ships, with their whole complements; and in that by land he had four thousand of his best troops killed, and was obliged to shut himself up in the city of Chalcedon, with no hope of any other relief than what his colleague should think fit to give him. All the officers of his army, enraged at Cotta's rash and presumptuous conduct, endeavoured to persuade Lucullus to enter Pontus, which Mithridates had left without troops, and where he might assure himself of finding the people inclined to revolt. He answered generously, that he would always esteem it more glorious to preserve a Roman citizen than to possess himself of the whole dominions of an enemy; and without resentment against his colleague, he marched to assist him with all the success he could have hoped. This was the first action by which he distinguished himself, and which ought to do him more honour than all his most splendid victories.

Mithridates, encouraged by the double advantage he had gained, A. M. 3931. Ant. J. C. 73. undertook the siege of Cyzicum, a city of the Propontis, which strenuously supported the Roman party in this war. In making himself master of this place, he would have opened himself a passage from Bithynia into Asia Minor, which would have been very advantageous to him by giving him an opportunity of carrying the war thither with all possible ease and security. It was for this reason he desired to take it. In order to succeed, he invested it by land with three hundred thousand men, divided into ten camps; and by sea with four hundred ships. Lucullus soon followed him thither; and began by seizing a post upon an eminence which

¹ About four hundred and fifty thousand pounds.
² Appian. de Bello Mithrid. p. 175.

³ Plut. in Lucul. p. 436.
⁴ Plut. in Lucul. p. 497-499. Appian. p. 219-221.

was of the highest importance to him, because it facilitated his receiving convoys, and gave him the means of cutting off the enemy's provisions. He had only thirty thousand foot, and two thousand five hundred horse. The superiority of the enemy in number, far from dismaying, encouraged him; for he was convinced, that so innumerable a multitude would soon be in want of provisions. Hence, in haranguing his troops, he promised them in a few days a victory that would not cost them a single drop of blood. It was in this that he placed his glory; for the lives of the soldiers were dear to him.

The siege was long, and carried on with extreme vigour. Mithridates battered the place on all sides with innumerable machines. The defence was no less vigorous. The besieged did prodigies of valour, and employed all means that the most industrious capacity could invent, to repulse the enemy's attacks, either by burning their machines, or rendering them useless by a thousand different obstacles which they opposed to them. What inspired them with so much courage was their exceeding confidence in Lucullus, who had let them know, that if they continued to defend themselves with the same valour, they might assure themselves that the place would not be taken.

Lucullus was indeed so well posted, that, without coming to a general action, which he always carefully avoided, he made Mithridates's army suffer extremely, by intercepting his convoys, charging his foraging parties with advantage, and beating the detachments he sent out from time to time. In a word, he knew so well how to improve all occasions that offered, he weakened the army of the besiegers so much, and used such address in cutting off their provisions, having shut up all avenues by which they might be supplied, that he reduced them to extreme famine. The soldiers could find no other food but the herbage, and some went so far as to support themselves upon human flesh. Mithridates, who passed

A. M. 3932. Ant. J. C. 72. times, in despair that a general who could not yet have had much experience, should so often have deceived him by false marches and feigned movements, and had defeated him without drawing his sword, was at length obliged to raise the siege shamefully, after having spent almost two years before the place. He fled by sea, and his lieutenants retired with his army by land to Nicomedia. Lucullus pursued them; and, having come up with them near the Granicus, he killed twenty thousand of them upon the spot, and took an infinite number of prisoners. It is said, that in this war there perished almost three hundred thousand men, either soldiers and servants, or other followers of the army.

After this new success, Lucullus returned to Cyzicum, entered the city, and after having enjoyed for some days the pleasure of having preserved it, and the honours which he derived from that success, he made a rapid march along the coasts of the Hellespont, to collect ships and form a fleet.

Mithridates, after having raised the siege of Cyzicum repaired to Nicomedia, from whence he passed by sea into Pontus. He left part of his fleet, and ten thousand of his best troops, in the Hellespont, under three of his most able generals. Lucullus, with the Roman fleet, beat them twice, the first time at Tenedos, and the other at Lemnos, when the enemy thought of nothing less than making sail for Italy, and of alarming and plundering the coasts of Rome itself. He killed almost all their men in these two engagements; and in the last took their three generals,

one of whom was M. Marius, the Roman senator whom Sertorius had sent from Spain to the aid of Mithridates. Lucullus ordered him to be put to death, because it was not consistent with the Roman dignity that a senator of Rome should be led in triumph. One of the two others poisoned himself, and the third was reserved for the triumph. After having cleared the coasts by these two victories, Lucullus turned his arms towards the continent; reduced Bithynia first, then Paphlagonia; marched afterwards into Pontus, and carried the war into the heart of Mithridates's dominions.

He suffered at first so greatly from a want of provisions in this expedition, that he was obliged to make 30,000 Galatians follow the army, each with a quantity of wheat upon his shoulders. But upon his advancing into the country, and subjecting the cities and provinces, he found such abundance of all things that an ox sold for only one drachma, and a slave for no more than four.

Mithridates had suffered almost as much by a tempest, in his passage on the Euxine sea, as in the campaign wherein he had been treated so roughly. He lost in it almost all the remainder of his fleet and the troops he had brought thither for the defence of his ancient dominions. When Lucullus arrived, he was making new levies with the utmost expedition, to defend himself against that invasion, which he had clearly foreseen.

Lucullus, upon arriving in Pontus, without loss of time besieged Amisus and Eupatoria, two of the principal cities in the country, very near each other.

The latter, which had been very lately built, was called Eupatoria, from the surname of Eupator, given to Mithridates; this place was his usual residence, and he had designed to make it the capital of his dominions. Not content with these two sieges at once, Lucullus sent a detachment of his army to form that of Themiscyra, upon the river Thermodon, which place was not less considerable than the two others.

The officers of Lucullus's army complained, that their general amused himself too long in sieges which were not worth his trouble, and that in the mean time he gave Mithridates opportunity to augment his army and gather strength. To which he answered in his justification: "That is directly what I want; I act designedly thus, that our enemy may take new courage, and assemble so numerous an army as may embolden him to wait for us in the field and fly no longer before us. Do you not observe, that he has behind him immense wildernesses, and infinite deserts, in which it will be impossible for us either to pursue or come up with him? Armenia is but a few days' march from these deserts. There Tigranes keeps his court, that king of kings, whose power is so great that he subdues the Parthians, transports whole cities of Greeks into the heart of Media, has made himself master of Syria and Palestine, exterminated the kings descended from Seleucus, and carried their wives and daughters into captivity. This powerful prince is the ally and son-in-law of Mithridates. Do you think, when he has him in his palace as a suppliant, that he will abandon him, and not make war against us? Hence in hastening to drive away Mithridates, we shall be in great danger of drawing Tigranes upon our hands, who has long sought pre-texts for declaring against us, and who can never find one more specious, legitimate, and honourable, than that of assisting his father-in-law, and a king reduced to the last extremity. Why, therefore, should we serve Mithridates against ourselves; or show him to whom he should have recourse for the means of supporting the war with us, by pushing him, against his will, and at a time perhaps when he looks upon such a step as unworthy his valour and greatness, into the arms and protection of Tigranes? Is it not infinitely better, by giving him time to take courage and strengthen himself with his own forces, to have only upon our hands the troops of Colchis, the Tibarenians, and Cappadocians, whom we have so often defeated, than to expose ourselves to have the additional force of the Armenians and Medes to contend with?"

1 Cum totius impetus belli ad Cyzicorum mœnia committitur, tamque urbem sibi Mithridates Asiae januum fore putavisset, quâ effractâ et revulsa tota patet provincia; perfecta ab Lucullo hæc sunt omnia, ut urbe fidelissimorum sociorum defenderetur, ut omnes copie regis diurnitate obsidionis consumerentur. *Cic. in Orat. pro Mur.* n. 31.

2 Ab eodem imperatore classem magnam et ornatam, quæ ductibus Sertorianis ad Italiam studio inflammato raperetur, superatam esse atque depressam. *Cic. pro lege Manil.* n. 21.

Quid? illam pugnam navalem ad Tenedum, cum tanto concursu, acerrimis ductibus, hostium classis Italianæ spe atque animis inflata peteret, medicos certamine et parva eliminatio commissam arbitrarî? *Cic. pro Murana.* n. 33.

Whilst the Romans attacked the A. M. 3933. three places we have mentioned, Ant. J. C. 71. Mithridates, who had already formed a new army, took the field very early in the spring. Lucullus left the command of the sieges of Amisus and Eupatoria to Murenus, the son of him whom we have spoken of before, whom Cicero represents in a very favourable light: "He went into Asia, a province abounding with riches and pleasures, where he left behind him no traces either of avarice or luxury. He behaved in such a manner in this important war, that he did many great actions without the general, the general none without him." Lucullus marched against Mithridates, who lay encamped in the plains of Cabire. The latter had the advantage in two actions, but was entirely defeated in the third, and obliged to fly, without either servant or equery to attend him, or a single horse of his stable. It was not till after some time, that one of his eunuchs, seeing him on foot in the midst of the flying crowd, got off his horse and gave it him. The Romans were so near him, that they almost had him in their hands; and it was owing entirely to themselves that they did not take him. The avarice alone of the soldiers lost them a prey, which they had pursued so long, through so many toils, dangers, and battles, and deprived Lucullus of the sole reward of all his victories. Mithridates, says Cicero, artfully imitated the manner in which Medea, in the same kingdom of Pontus, formerly escaped the pursuit of her father. That princess is said to have cut in pieces the body of Abyrtyus, her brother, and to have scattered his limbs in the places through which her father pursued her; in order that his care in taking up those dispersed members, and the grief so sad and a spectacle would give him, might stop the rapidity of his pursuit. Mithridates, in like manner, as he fled, left upon the way a great quantity of gold, silver, and precious effects, which had either descended to him from his ancestors or had been amassed by himself in preceding wars; and whilst the soldiers employed themselves in gathering those treasures, the king escaped their hands. So that the father of Medea was stopped in his pursuit by sorrow, but the Romans by joy.

After this defeat of the enemy, Lucullus took the city of Cabire, with several other places and castles, in which he found great riches. He found also the prison full of Greeks and princes nearly related to the king, who were confined in them. As those unhappy persons had long given themselves over for dead, the liberty they received from Lucullus, seemed less a deliverance than a new life to them. In one of those castles, a sister of the king's, named Nyssa, was also taken, which was to her a great instance of good fortune. For the other sisters of that prince, with his wives, who had been sent farther from the danger, and who believed themselves in safety and repose, all died miserably, Mithridates on his flight having sent them orders to die by Bacchidas the eunuch.

Among the other sisters of the king were Roxana and Satira, both unmarried, and about forty years of age, with two of his wives, Berenice and Monima, both of Ionia. All Greece spoke much of the latter, whom they admired more for her prudence than her beauty, though exquisite. The king having fallen desperately in love with her, had forgotten nothing that might incline her to favour his passion: he sent her at once 15,000 pieces of gold. She was always

averse to him, and refused his presents, till he gave her the quality of wife and queen, and sent her the royal tiara, or diadem, an essential ceremony in the marriage of the kings of those nations. Nor did she then comply without extreme regret, and in compliance with the wishes of her family, who were dazzled with the splendour of a crown and the power of Mithridates, who was at that time victorious, and at the height of his glory. From the time of her marriage to the instant of which we are now speaking that unfortunate princess had passed her life in continual sadness and affliction, lamenting her fatal beauty, which instead of a husband had given her a master, and instead of procuring her an honourable abode and the endearments of conjugal society, had confined her in a close prison, under a guard of barbarians; where, far removed from the delightful regions of Greece, she had only enjoyed a dream of the happiness with which she had been flattered, and had really lost that solid and essential good she possessed in her own beloved country.

When Bacchidas arrived, and had signified to the princesses the order of Mithridates, which favoured them no farther than to leave them at liberty to choose the kind of death they should think most gentle and immediate, Monima, taking the diadem from her head, tied it round her neck, and hung herself up by it. But that wreath not being strong enough, and breaking, she cried out, "ah, fatal trifle, you might at least do me this mournful office!" Then, throwing it away with indignation, she presented her throat to Bacchidas.

As for Berenice, she took a cup of poison; and as she was going to drink it, her mother, who was present, desired to share it with her. They accordingly drank both together. The half of that poison sufficed to carry off the mother, worn out and feeble with age; but was not enough to surmount the strength and youth of Berenice. That princess struggled long with death in the most violent agonies, till Bacchidas, tired with waiting the effects of the poison ordered her to be strangled.

Of the two sisters, Roxana is said to have swallowed poison, venting a thousand reproaches and imprecations against Mithridates. Satira on the contrary was pleased with her brother, and thanked him, for that, being in so great danger for his own person, he had not forgotten them, and had taken care to supply them with the means of dying free, and of withdrawing from the indignities their enemies might else have made them suffer.

Their deaths extremely afflicted Lucullus, who was of a gentle and humane disposition. He continued his march in pursuit of Mithridates; but having received advice that he was four days' journey before him, and had taken the road to Armenia, to retire to his son-in-law Tigranes, he returned directly; and, after having subjected some of the nations, and taken some cities in the neighbourhood, he sent Appius Clodius to Tigranes, to demand Mithridates of him; and in the mean time returned against Amisus, which place was not yet taken. Callimachus, who commanded in it, and was the most able

A. M. 3934. he could hold out no longer, he set Ant. J. C. 70. fire to the city, and escaped in a ship that waited for him. Lucullus did his utmost to extinguish the flames, but in vain; and to increase his concern, saw himself obliged to abandon the city to be plundered by the soldiers, from whom the place had as much to fear as from the flames themselves. His troops were insatiable for booty, and he not capable of restraining them. A shower of rain, which then happened to fall, preserved a great number of buildings; and Lucullus, before his departure, caused those which had been burnt to be rebuilt. This city was an ancient colony of the Athenians. Such of the Athenians, during Aristion's being master of Athens, as desired to fly from his tyranny, had retired thither, and enjoyed there the same rights and privileges with the natives.

Lucullus, when he left Amisus, directed his march towards the cities of Asia, whom the avarice and

² *Ex suo regno sic Mithridates profugit, ut ex eodem Pontu Medea illa quondam profugisse dicitur: quam prædicant, in fugâ, fratris sui membra in suis locis, quæ se parca persequeretur, dissimulavit, ut eorum collectio dispensa, marisque patrius, celeritatem persequendi retardaret. Sic Mithridates fugiens maximam vim auri acque argenti, pulcherrimarumque rerum omnium, quas et a majritibus acceperat, et ipse bello superiore ex totâ Asiâ direptas in suum regnum congresserat in Pontu, omnem reliquit. Hæc domi nostri colligunt omnia diligentiùs, rex ipse et manibus effugit. Ita filium in persequendi studio moror, nos lætitiâ retardavit. Cic. de leg. Manis. n. 22.*

eruelly of the usurers and tax-gatherers held under the most dreadful oppression; inasmuch that those poor people were obliged to sell their children of both sexes, and even set up at auction the paintings and statues consecrated to the gods. And, when these would not suffice to pay the duties, taxes, and interest of their arrears, they were given up without mercy to their creditors, and often exposed to such barbarous tortures, that slavery, in comparison with their miseries, seemed a kind of redress and tranquillity to them.

These immense debts of the province arose from the fine of twenty thousand talents which Sylla had imposed on it. They had already paid the sum twice over: but those insatiable usurers by heaping interest upon interest, had run it up to 120,000 talents; so that they still owed triple the sums they had already paid.

Tacitus⁵ had reason to say, that usury was one of the most ancient evils of the Roman commonwealth, and the most frequent cause of sedition; but at the time we now speak of, it was carried to an excess not easy to be credited.

The interest of money amongst the Romans was paid every month, and was one per cent; hence it was called *usura centesima* or *unciarium fenus*; because in reckoning the twelve months, twelve per cent. was paid: *uncia* is the twelfth part of a whole.

The law of the twelve tables⁶ prohibited the raising interest to above twelve per cent. This law was revived by the two tribunes of the people, in the 396th year of Rome.

Ten years after,⁷ interest was reduced to half that sum, in the 406th year of Rome; *semunciarium fenus*.

At length, in the 411th year of Rome,⁸ all interest was prohibited by a decree: *Ne fœnerari liceret*.

All these decrees were ineffectual. Avarice was always too strong for the laws,⁹ and whatever regulations were made to suppress it, either in the time of the republic or under the emperors, it always found means to elude them. Nor has it paid more regard to the laws of the church, which has never entered into any composition on this point, and severely condemns all usury, even the most moderate; because, God having forbidden any, she never believed she had a right to permit it in the least. It is remarkable, that usury has always occasioned the ruin of the states where it has been tolerated; and it was this disorder which contributed very much to subvert the constitution of the Roman commonwealth, and gave birth to the greatest calamities in all the provinces of that empire.

Lucullus, at this time, exerted himself in procuring for the provinces of Asia¹⁰ some relaxation; which he could only effect by putting a stop to the injustice and cruelty of the usurers and tax-gatherers. The latter, finding themselves deprived by Lucullus of the immense gain they made, raised a great outcry, as if they had been excessively injured; and by the force of money animated many orators against him; particularly confiding in having most of those who

governed the republic in their debt, which gave them a very extensive and almost unbounded influence. But Lucullus despised their clamours with a constancy the more admirable from its being very uncommon.

SECTION III.—LUCULLUS CAUSES WAR TO BE DECLARED WITH TIGRANES, AND MARCHES AGAINST HIM. VANITY AND RIDICULOUS SELF-SUFFICIENCY OF THAT PRINCE. HE LOSES A GREAT BATTLE. LUCULLUS TAKES TIGRANOCERTA, THE CAPITAL OF ARMENIA. HE GAINS A SECOND VICTORY OVER THE JOINT FORCES OF TIGRANES AND MITHRIDATES. MUTINY AND REVOLT IN THE ARMY OF LUCULLUS.

TIGRANES, to whom Lucullus had sent an ambassador, though of no great power in the beginning of his reign, had enlarged it so much by a series of successes, of which there are few examples that he was commonly surnamed king of kings. After having overthrown and almost ruined the family of the kings, successors of the great Seleucus; after having very often humbled the pride of the Parthians, transported whole cities of Greeks into Media, conquered all Syria and Palestine, and given laws to the Arabians called Scenites; he reigned with an authority respected by all the princes of Asia. The people paid him honours after the manner of the East, even to adoration. His pride was inflamed and supported by the immense riches he possessed, by the excessive and continual praises of his flatterers, and by a prosperity that had never known any interruption.

Appius Claudius was introduced to an audience of this prince, who appeared with all the splendour he could display, in order to give the ambassador a higher idea of the royal dignity; who, on his side, uniting the haughtiness of his natural disposition with that which particularly characterized his republic, perfectly supported the dignity of a Roman ambassador.

After having explained, in few words, the subjects of complaint, which the Romans had against Mithridates, and that prince's breach of faith in breaking the peace, without so much as attempting to give any reason or colour for it, he told Tigranes that he came to demand his being delivered up to him, as due by every sort of title to Lucullus's triumph; that he did not believe, as a friend to the Romans, which he had been till then, that he would make any difficulty in giving up Mithridates; and that, in case of his refusal, he was instructed to declare war against him.

That prince, who had never been contradicted, and who knew no other law nor rule than his own will and pleasure, was extremely offended at this Roman freedom. But he was much more so with Lucullus's letter, when it was delivered to him. The title of king only, which it gave him, did not satisfy him. He had assumed that of king of kings, of which he was very fond, and had carried his pride in that respect so far, as to cause himself to be served by crowned heads. He never appeared in public without having four kings attending him; two on foot on each side of his horse, when he went abroad; at table, in his chamber; in short, every where, he had always some of them to do the lowest offices for him; but especially when he gave audience to ambassadors. For, at that time, to give strangers a greater idea of his glory and power, he made them all stand in two ranks, on each side of his throne, where they appeared in the habit and posture of common slaves. A pride so full of absurdity offends all the world. One more refined shocks less, though much the same at bottom.

It is not surprising that a prince of this character should bear with impatience the manner in which Claudius spoke to him. It was the first free and sincere speech he had heard during the five-and-twenty years he had governed his subjects, or rather tyrannized over them with excessive insolence. He answered, that Mithridates was the father of Cleopatra, his wife; that the union between them was of too strict a nature

⁹ [The Asia here mentioned is not to be confounded with Asia Minor, or the peninsula so called, taken at large, (a space equal in amplitude to more than 200,000 British square miles,) but with the Propontian Asia, or the Pergæan Kingdom, and such additions as had been made to it in the partition of the Syrian dominions consequent on the defeat of Antiochus, and which was left as a legacy to the Romans by the last of the Attalian line. This portion comprehended Mysia, Lydia, Caria, Ionia, Phrygia, or the south-west part of the Asiatic peninsula. It was this Asia which had revolted from the Roman yoke and embraced the cause of Mithridates, and whose inhabitants (at least those of the principal cities) had, at his request, murdered above 150,000 Roman citizens.]

¹⁰ *Plut. in Lucul. p. 504—512. Memn. c. xlviii.—viii. Appian in Mithrid. p. 228—232.*

to admit his delivering him up for the triumph of Lucullus; and that if the Romans were unjust enough to make war against him, he knew how to defend himself, and to make them repent it. To express his resentment, he directed his answer only to Lucullus, without adding the usual title of Imperator, or any other commonly given to the Roman generals.

Lucullus, when Clodius reported the result of his commission, and that war had been declared against Tigranes, returned with the utmost diligence into Pontus to begin it. The enterprise seemed rash, and the terrible power of the king astonished all those who relied less upon the valour of the troops and the conduct of the general, than upon a multitude of soldiers. After having made himself master of Sinope, he gave that place its liberty, as he did also to Amisus, and made them both free and independent cities. Cotta did not treat Heraclea, which he took after a long siege by treachery, in the same manner. He enriched himself out of its spoils, treated the inhabitants with excessive cruelty, and burnt almost the whole city. On his return to Rome, he was at first well received by the senate, and honoured with the surname of Ponticus, upon account of taking that place. But soon after, when the Heracleans had laid their complaints before the senate, and represented in a manner capable of moving the hardest hearts, the miseries Cotta's avarice and cruelty had made them suffer, the senate contented themselves with depriving him of the *latus clavus*, which was the robe worn by the senators; a punishment in no wise proportioned to the flagrant excess proved upon him.

Lucullus left Sornatus, one of his generals, in Pontus, with 6000 men, and marched with the rest, which amounted only to 12,000 foot and 3000 horse, through Cappadocia, to the Euphrates. He passed that river in the midst of winter, and afterwards the Tigris, and came before Tigranocerta, which was at some small distance, to attack Tigranes in his capital, where he had lately arrived from Syria. Nobody dared speak to that prince of Lucullus and his march, after his cruel treatment of the person who brought him the first news of it, whom he put to death in reward for so important a service. He listened to nothing but the discourses of flatterers, who told him Lucullus must be a great captain if he only dared wait for him at Ephesus, and did not betake himself to flight and abandon Asia, when he should see the many thousands of which his army was composed. So true it is, says Plutarch, that as all constitutions are not capable of bearing much wine, all minds are not strong enough to bear great prosperity without loss of reason and infatuation.

Tigranes at first had not designed so much as to see or speak to Mithridates, though his father-in-law, but treated him with the utmost contempt and arrogance, kept him at a distance, and placed a guard over him as a prisoner of state, in marshy, unwholesome places. But after Clodius's embassy, he had

ordered him to be brought to court
A. M. 3935. with all possible honours and marks
Ant. J. C. 69. of respect. In a private conversation
which they had together without witnesses, they cured themselves of their mutual suspicions, to the great misfortune of their friends, upon whom they cast all the blame.

In the number of those unfortunate persons was Metrodorus, of the city of Scerpsis, a man of extraordinary merit, who had so much influence with Mithridates, that he was called the king's father. That prince had sent him on an embassy to Tigranes, to desire aid against the Romans. When he had explained the occasion of his journey, Tigranes asked him; "And you, Metrodorus, what would you advise me to do, with respect to your master's demands?" Upon which Metrodorus replied, out of an excess of ill-timed sincerity, "As an ambassador, I advise you to do what Mithridates demands of you; but as your counsel, not to do it." This was a criminal prevarication, and a kind of treason. It cost him his life, when Mithridates had been apprized of it by Tigranes.

Lucullus was continually advancing against that prince, and was already in a manner at the gates of

his palace, without his either knowing or believing any thing of the matter, so much was he blinded by his presumption. Mithrobarzanes, one of his favourites, ventured to carry him that news. The reward he had for it was to be charged with a commission, to go immediately with some troops and bring Lucullus prisoner; as if the matter had been only to arrest one of the king's subjects. The favourite, with the greatest part of the troops given him, lost their lives in endeavouring to execute that dangerous commission.

This ill success opened the eyes of Tigranes and made him recover from his infatuation. Mithridates had been sent back into Pontus with 10,000 horse to raise troops there, and to return and join Tigranes, in case Lucullus entered Armenia. For himself, he had chosen to continue at Tigranocerta, in order to give the necessary orders for raising troops throughout his whole dominions. After this check, he began to be afraid of Lucullus, quitted Tigranocerta, retired to mount Taurus, and gave orders to all his troops to repair thither to him.

Lucullus marched directly to Tigranocerta, took up his quarters around the place, and formed the siege of it. This city was full of all sorts of riches; the inhabitants of all orders and conditions having emulated each other in contributing to its embellishment and magnificence, in order to make their court to the king; for this reason Lucullus pressed the siege with the utmost vigour; believing that Tigranes would never suffer it to be taken, and that he would come on in a transport of fury to offer him battle, and oblige him to raise the siege. And he was not mistaken in his conjecture. Mithridates sent every day couriers to Tigranes, and wrote him letters, in the strongest terms, to advise him not to hazard a battle, and to make use of his cavalry alone in cutting off Lucullus's provisions. Taxiles himself was sent by him with the same instructions; who staying with him in his camp, earnestly entreated him, every day, not to attack the Roman armies, as they were excellently disciplined, veteran soldiers, and almost invincible.

At first he hearkened to this advice with patience enough. But when all his troops, consisting of a great number of different nations, were assembled, not only the king's feasts, but his councils, resounded with nothing but vain bravadoes, full of insolence, pride, and barbarian menaces. Taxiles was in danger of being killed, for having ventured to oppose the advice of those who were for a battle; and Mithridates himself was openly accused of opposing it, only out of envy, to deprive his son-in-law of the glory of so great a success.

In this conceit Tigranes determined to wait no longer, lest Mithridates should arrive, and share with him in the honour of the victory. He, therefore, marched with all his forces, telling his friends, that he was only sorry on one account, and that was, his having to engage with Lucullus alone, and not with all the Roman generals together. He measured his hopes of success by the number of his troops. He had twenty thousand archers, or slingers, fifty-five thousand horse, seventeen thousand of which were heavy-armed cavalry, a hundred and fifty thousand foot, divided into companies and battalions, besides pioneers to clear the roads, build bridges, clear and turn the course of rivers, with other labourers of the same description necessary in armies, to the number of thirty-five thousand, who being drawn up in battle-array behind the combatants, made the army appear still more numerous, and augmented its forces and confidence.

When he had passed mount Taurus, and all his troops appeared together in the plains, the sight alone of his army was sufficient to strike terror into the most daring enemy. Lucullus, always intrepid, divided his troops. He left Murena with six thousand foot before the place, and with all the rest of his infantry, consisting of twenty-four cohorts, which together did not amount to more than ten or twelve thousand men, all his horse, and about a thousand archers, or slingers, marched against Tigranes, and encamped in the plain, with a larger river in his front.

This handful of men made Tigranes laugh, and

supplied his flatterers with matter for pleasantry. Some openly jested upon them; others, by way of diversion, drew lots for their spoils; and of all Tigranes's generals, and all the kings in his army, there was not one who did not entreat him to intrust that affair to him alone, and content himself with being only a spectator of the action. Tigranes himself, to appear agreeable, and a delicate rallier, used an expression, which has been much admired; "If they come as ambassadors, they are a great many; but if as enemies, very few." Thus the first day passed in jesting and raillery.

The next morning, at sunrise, Lucullus made his army march out of their intrenchments. That of the barbarians was on the other side of the river towards the east, and the river ran in such a manner, that it turned off short to the left towards the west, where it was easily fordable. Lucullus, in order to lead his army to this ford, inclined also to the left, towards the lower part of the river, hastening his march. Tigranes, who saw him, believed he fled; and calling for Taxiles, told him, with a contemptuous laugh—"Do you see those invincible Roman legions? You see they can run away." Taxiles replied; "I heartily wish your majesty's good fortune may this day work a miracle in your favour; but the arms and motions of those legions do not indicate people running away."

Taxiles was still speaking, when he saw the eagle of the first legion move on a sudden to the right about, by the command of Lucullus, followed by all the cohorts, in order to pass the river. Tigranes, recovering then with difficulty, like one that had been long drunk, cried out two or three times, "How! are those people coming to us?" They came on so fast, that his numerous troops did not post themselves, nor draw up in battle without much disorder and confusion. Tigranes placed himself in the centre; gave the left wing to the king of the Adiabeniens, and the right to the king of the Medes. The greatest part of the heavy-armed horse covered the front of the right wing.

As Lucullus was preparing to pass the river, some of his general officers advised him not to engage upon that day, because it was one of those unfortunate days which the Romans called black-days. For it was the same upon which the army of Cæsar had been defeated in the battle with the Cimbrî. Lucullus made them this answer which afterwards became so famous: "And I, for my part, will make this a happy day for the Romans."

It was the sixth day of October (the day before the bones of October.)

After having made that reply, and exhorted them not to be discouraged, he passed the river, and marched foremost against the enemy. He was armed with a steel cuirass, made in the form of scales, which glittered surprisingly, under which was his coat of arms, bordered all round with fringe. He brandished his naked sword in his hand, to intimate to his troops, that it was necessary to close immediately with an enemy who were accustomed to fight only at a distance with their arrows; to deprive them, by the swiftness and impetuosity of the attack, of the space required for the use of them.

Perceiving that the heavy-armed cavalry, upon whom the enemy very much relied, were drawn up at the foot of a little hill, the summit of which was flat and level, and the declivity of not above five hundred paces, neither much broken, nor very difficult, he saw at first glance what use was to be made of it. He commanded his Thracian and Galatian horse to charge that body of the enemy's cavalry in flank, with orders only to turn aside their lances with their swords. For the principal, or rather whole force, of those heavy-armed horse, consisted in their lances, and when they had not room to use these, they could do nothing either against the enemy or for themselves; their arms being so heavy, stiff, and cumbersome, that they could not turn themselves, and were almost immovable.

Whilst his cavalry marched to execute his orders,

he took two cohorts of foot, and went to gain the eminence. The infantry followed courageously, excited by the example of their general, whom they saw marching foremost on foot, and ascending the hill. When he was at the top, he showed himself from the highest part of it, and seeing from thence the whole order of the enemy's battle, he cried out, "The victory is ours, fellow-soldiers, the victory is ours!" At the same time, with his two cohorts, he advanced against that heavy-armed cavalry, and ordered his men not to make use of their pikes, but close with the troopers sword in hand, and strike upon their legs and thighs, which were the only unarmed parts about them. But his soldiers had not so much trouble with them. That cavalry did not stay their coming on, but shamefully took to flight; and howling as they fled, fell with their heavy unwieldy horses upon the ranks of their foot, without joining battle at all, or so much as making a single thrust with their lances. The slaughter did not begin until they began to fly, or rather to endeavour to fly; for they could not do so, being prevented by their own battalions, whose ranks were so close and deep, that they could not break their way through them. Tigranes, that king so pompous and brave in words, had taken to flight from the beginning with a few followers; and seeing his son the companion of his fortune, he took off his diadem, weeping; and giving it him, exhorted him to save himself as well as he could by another route. That young prince was afraid to put the diadem upon his head, which would have been a dangerous ornament at such a time, and gave it into the hands of one of the most faithful of his servants who was taken a moment after, and carried to Lucullus.

It is said, that in this defeat more than a hundred thousand of the enemy's foot perished, and that very few of their horse escaped: on the side of the Romans only five were killed, and a hundred wounded. They had never engaged in a pitched battle so great a number of enemies with so few troops; for the victors did not amount to the twentieth part of the vanquished. The greatest and most able Roman generals, who had seen most wars and battles, gave Lucullus particular praises for having defeated two of the greatest and most powerful kings in the world, by two entirely different methods, delay and expedition. For by protraction and spinning out the war, he exhausted Mithridates when he was strongest and most formidable; and ruined Tigranes by making haste, and not giving him time to look about him. It has been remarked, that few captains have known how, like him, to make slowness active, and haste sure.

It was this latter conduct that prevented Mithridates from being present in the battle. He imagined that Lucullus would use the same precaution and protraction against Tigranes as he had done against himself; so that he marched but slowly and by small days' journeys to join Tigranes. But having met some Armenians upon the way, who fled with the utmost terror and consternation, he suspected what had happened; and afterwards meeting a much greater number of fugitives naked and wounded, was fully informed of the defeat, and went in search of Tigranes. He found him, at length, abandoned by all the world and in a very deplorable condition. Far from returning his ungenerous treatment, and insulting him in his misfortunes, as Tigranes had done to him, he quitted his horse, lamented their common disgrace, gave him the guard which attended, and the officers who served him, consoled, encouraged him, and revived his hopes; so that Mithridates, upon this occasion, showed himself not entirely void of humanity. Both together engaged in raising new troops on all sides.

In the mean time a furious sedition arose in Tigranocerta; the Greeks having mutinied against the barbarians, and being determined at all events to deliver the city to Lucullus. That sedition was at the highest when he arrived there. He took advantage of the occasion, ordered the assault to be given, took the city; and after having seized all the king's treasures, abandoned it to be plundered by the soldiers; who, besides other riches, found in it eight thousand talents of coined silver (about 1,200,000 pounds

* The Greek text says, *the army of Scipio*, which Monneur de Thou justly corrected in the margin of his *Plutarch*, *the army of Cæsar*.

sterling.) Besides this plunder, he gave each soldier eight hundred drachmas,¹ which, with all the booty they had taken, was not sufficient to satisfy their inordinate avidity.

As the city had been peopled by colonies which had been carried away by force from Cappadocia,² Cilicia, and other places, Lucullus permitted them all to return into their native countries. They received that permission with extreme joy, and quitted it in so great numbers, that from one of the greatest cities in the world, Tigranocerta became in an instant almost a desert.

If Lucullus had pursued Tigranes after his victory,³ without giving him time to raise new troops, he would either have taken or driven him out of the country, and the war would have been at an end. His having failed to do so was very ill taken both in the army and at Rome, and he was accused, not of negligence, but of having intended by such conduct to make himself necessary, and to retain the command longer in his own hands. This was one of the reasons that prejudiced the generality against him, and induced them to think of giving him a successor, as we shall see in the sequel.

After the great victory he had gained over Tigranes, several nations came to make their submissions to him. He received also an embassy from the king of the Parthians, who demanded the amity and alliance of the Romans. Lucullus received this proposal favourably, and sent also ambassadors to him, who, being arrived at the Parthian court, discovered that the king, uncertain which side to take, wavered between the Romans and Tigranes, and had secretly demanded Mesopotamia of the latter, as the price of the aid he offered him. Lucullus, informed of this secret intrigue, resolved to leave Mithridates and Tigranes, and to turn his arms against the king of the Parthians: flattered with the grateful thought, that nothing could be more glorious for him, than to have entirely reduced, in one expedition, the three most powerful princes under the sun. But the opposition this proposal met with from the troops, obliged him to renounce his enterprise against the Parthians, and to confine himself to the pursuit of Tigranes.

During this delay, Mithridates and Tigranes had been indefatigable in raising new troops. They had sent to implore aid of the neighbouring nations, and especially of the Parthians, who were the nearest, and at the same time in the best condition to assist them, in the present extremity. Mithridates wrote a letter to their king, which Sallust has preserved, and which is to be found amongst his fragments. I shall insert a part of it in this place.

LETTER OF MITHRIDATES TO ARSACES,⁴ KING OF THE PARTHIANS.

"All those who, in a state of prosperity, are invited to enter as confederates into a war, ought first to consider whether peace be at their own option;⁵ and next, whether what is demanded of them is consistent with justice, their interest, safety and glory. You might enjoy perpetual peace and tranquillity, were not the enemy always intent upon seizing occasions of war, and undeterred by any crimes. In reducing the Ro-

mans, you cannot but acquire the highest reputation. It may seem inconsistent in me, to propose to you either an alliance with Tigranes, or that you, powerful as you are, should join a prince in my unfortunate condition. But I dare assert, that those two motives your resentment against Tigranes upon account of his late war with you, and the disadvantageous situation of my affairs, if you judge rightly, far from opposing my demand, ought to support it. For as to Tigranes, as he knows he has given you just cause of complaint, he will accept, without difficulty, whatever conditions you shall think fit to impose upon him; and for me, I can say that fortune, by having deprived me of almost all I possessed, has enabled me to give others good counsel, and, which is much to be desired by persons in prosperity, I can, even from my own misfortunes, supply you with examples, and induce you to take better measures than I have done. For, do not deceive yourself; it is with all the nations, states, and kingdoms of the earth, that the Romans are at war; and two motives, as ancient as powerful, put their arms into their hands; the unbounded ambition of extending their conquests, and the insatiable thirst of riches.⁶ Mithridates afterwards enumerates at large the princes and kings whom they had reduced one after another, and often by means of one another. He repeats also his first successes against the Romans, and his late misfortunes. He goes on to this effect: "Examine now,⁷ I beg you whether, when we are finally ruined, you will be better able to resist the Romans, or can believe, that they will confine their conquests to my country? I know you are powerful in men, in arms, and in treasure; it is for that reason we desire to strengthen ourselves by your alliance; they, to grow rich by your spoils. For the rest, it is the intention of Tigranes to avoid drawing the war into his own country, that we shall go with all my troops, which are certainly well disciplined, to carry our arms far from home, and attack the enemy in person in their own country. We cannot therefore either conquer or be conquered, without your being in danger. Do you not know, that the Romans, when they found themselves stopped by the ocean in the west, turned their arms in this way? that to look back to their foundation and origin, whatever they have, they have from violence; home, wives, lands, and dominions? A vile herd of every kind of vagabonds, without country, without forefathers, they established themselves for the misfortune of the human race. Neither divine nor human laws restrain them from betraying and destroying their allies and friends, remote nations or neighbours, the weak or the powerful. They reckon as enemies all that are not their slaves; and especially whatever bears the name of king. For few nations affect a free and independent government the generality prefer just and equitable masters

* Nunc quæso, considera, nobis oppressis, utrum firmiorem te ad resistendum, an finem belli futurum putes? Sed equidem tibi magnas opes virorum, armorum, et auri esse: et ea re nobis ad societatem, ab illis ad prædâ pæteris. Ceterum consilium est Tigrani, regno integro, missi militibus belli prudentibus, præcui ab domo, parva laboro, per nostra corpora bellum conficere: quando neque vimus neque vincis sine periculo tuo possumus. An ignarus Romanis postquam ad occidentem pergentibus finem oceanus fecit, arma huc converterisse? Neque quicquam a principis nisi raptum habere: domum, conjuges, agros, imperium? Convenas, olim sine patriâ, sine parentibus, peste conditos oris terrarum: quibus non humana ulla neque divina obstant, quin socios, amicos, præcui juxtaque sites, inopes potentisque trahant, excidantque: omniaque non serva, et maxime regna, hostilia deuant. Namque pauci libertatem, pars magna justos dominos volunt. Nos suspecti sumus æmuli, et in tempore vindicæ affuturi. Tu verò, cui Seleucia maxima urbium, regnumque Persidis inclitis divitis est, quid ab illis, nisi dolum in præsens, et postea bellum expectas? Romani in omnes arma habent, æccidia in eis quibus spolia maxima sunt. Audendo et fallendo, et bella eis bellis serendi, magni facit. Per hunc morem extinguenda omnia, aut occidendi: quod difficile non est, si tu Mesopotamia nos Armeniam circumcedimus exercitum sine frumento, sine auxiliis. Fortuna autem nostris vitis adhuc incoloma. Teque illa fama sequitur, auxilio profectum magnis regibus latrones gentium oppressisse. Quod uti facias moneo, utique, ne malis perniciem nostrâ unum imperium prolatare, quam societate victor fieri.

³ Dion. Cass. l. xxxv. p. l.

⁴ Arsaces was a name common to all the kings of Parthia.

⁵ Omnes, qui secundis rebus suis ad belli societatem orantur, considerare debent, liceatne tum pacem agere: dein quod queritur, satine pium, tutum, gloriosum, an indecorum sit. Tibi perpetua pace frui liceret nisi hostes opportuni et aculeis essent. Egregria fama, si Romanos oppressis, futura est. Neque petere audaci societatem, et frustra mala mea cum tuis bonis misceri sperem. Atqui ea, que te morari posse videntur, ira in Tigranem recentis belli, et mese res parum prospera, si vera æstimare voles, maxime hortabuntur. Ille enim obnoxius, qualem tu vides societatem accipiet: mihi fortuna, multis rebus erepta, usum dedit bene cadendi, et quod furentibus opabili est, ego non validissimus præbeo exemplum, quo recte tua componas. Namque Romanis cum nationibus, populis, regibus cunctis, una et ea vetus causa bellandi est, cupido profunda imperii et divitiarum.

They suspect us, because we are rivals with them for dominion, and may in time take vengeance for their oppressions. But for you, who have Seleucia, the greatest of cities, and Persia, the richest and most powerful of kingdoms, what can you expect from them but deceit at present, and war hereafter? The Romans are at war with all nations; but especially with those from whom the richest spoils are to be expected. They are become great by heroic enterprise, by betraying, and by making one war bring forth another. By this means, they will either destroy all others, or be destroyed themselves. It will not be difficult to ruin them, if you, on the side of Mesopotamia, and we on that of Armenia, surround their army, which will be without provisions or auxiliaries. The prosperity of their arms has subsisted hitherto solely by our fault, who have not been so prudent as to appreciate the views of this common enemy, and to unite ourselves in confederacy against him. It will be for your immortal glory to have supported two great kings, and to have conquered and destroyed these robbers of the world. This is what I earnestly advise and exhort you to do; by warning you to choose rather to share with us, by a salutary alliance, in the conquest of the common enemy, than to suffer the Roman empire to extend itself still farther by our ruin."

It does not appear that this letter had the effect upon Phraates which Mithridates might have hoped from it. So that the two kings contented themselves with their own troops.

One of the means made use of by Tigranes to assemble a new army,¹ was to call Megadaes from Syria, who had governed it fourteen years in his name; to him he sent orders to join him with all the troops in that country. Syria² being thereby ungarrisoned, Antiochus Asiaticus, son of Antiochus Eusebes, to whom it of right appertained, as lawful heir of the house of Seleucus, took possession of some part of the country, and reigned there peaceably during four years.

The army³ of Tigranes and Mithridates was at last formed. It consisted of 70,000 chosen men, whom Mithridates had trained well in the

Roman discipline. It was about midsummer before it took the field. The two kings took particular care in all the movements they made, to choose an advantageous ground for their camp, and to fortify it well, to prevent Lucullus's attacking them in it; nor could all the stratagems he used, engage them to come to a battle. Their design was to reduce him gradually; to harass his troops on their marches, in order to weaken them; to intercept his convoys, and oblige him to quit the country for want of provisions. Lucullus not being able, by all the arts he could use, to bring them into the open field, employed a new plan, which succeeded. Tigranes had left at Artaxata, the capital of Armenia before the foundation of Tigranocerta, his wives and children; and there he had deposited almost all his treasures. Lucullus marched that way with all his troops, rightly foreseeing that Tigranes would not remain quiet, when he saw the danger to which his capital was exposed. That prince accordingly decamped immediately, followed Lucullus to disconcert his design; and, by four great marches, having got before him, posted himself behind the river Arsamin,⁴ which Lucullus was obliged to pass in his way to Artaxata, and resolved to dispute the passage with him. The Romans passed the river without being prevented by the presence or efforts of the enemy; a great battle ensued, in which the Romans again obtained a complete victory. There were three kings in the Armenian army, of whom Mithridates behaved the worst; for, not being able to look the Roman legions in the face, as soon as they charged, he was one of the first who fled; which threw the whole army into such a consternation, that it entirely lost all courage; and this was the principal cause of the loss of the battle.

Lucullus, after this victory,⁵ determined to contin-

ue his march to Artaxata, which was the certain means to put an end to the war. But as that city was still several days' journey from thence, towards the north, and winter was approaching with its train of snows and storms, the soldiers, already fatigued by a sufficiently rough campaign, refused to follow him into that country, where the cold was too severe for them. He was obliged to lead them into a warmer climate, by returning the way he came.

He therefore repassed mount Taurus, and entered Mesopotamia, where he took the city Nisibis, a place of considerable strength, and he put his troops into winter-quarters.

It was there that the spirit of mutiny began to show itself openly in the army of Lucullus. That general's severity, and the insolent liberty of the Roman soldiers, and still more the malignant practices of Clodius, had given occasion for this revolt. Clodius, so well known by the invectives of Cicero, his enemy, is hardly better treated by historians. They represent him as a man abandoned to all kind of vices, and infamous for his debaucheries, which he carried to such excess as to commit incest with his own sister, the wife of Lucullus; to these he added unbounded audacity, and uncommon cunning in the contrivance of seditions; in a word, he was one of those dangerous persons, born to disturb and ruin every thing by the unhappy union in himself of the most wicked inclinations, with the talents necessary for putting them in execution. He gave a proof of this upon the occasion of which we are now speaking. Discontented with Lucullus, he secretly spread reports against him, well calculated to render him odious. He affected to lament extremely the fatigues of the soldiers, and to enter into their interests. He told them every day, that they were very unfortunate, in being obliged to serve so long under a severe and avaricious general, in a remote climate, without lands or rewards, whilst their fellow-soldiers, whose conquests were very moderate in comparison with theirs, had enriched themselves under Pompey. Discourses of this kind, attended with obliging and affable behaviour, which he knew how to assume occasionally without the appearance of affectation, made such an impression upon the soldiers, that it was no longer in the power of Lucullus to govern them.

Mithridates, in the mean time, had re-entered Pontus with 4000 of his own troops, and 4000 given him by Tigranes. Several inhabitants of the country joined him again, as well out of hatred to the Romans, who had treated them with great rigour, as through the remains of affection for their king, reduced to the mournful condition in which they saw him, from the most splendid fortune and exalted greatness. For the misfortunes of princes naturally excite compassion, and there is generally a profound respect engraven in the hearts of the people for the name and person of kings. Mithridates encouraged and strengthened by these new aids, and the troops which several neighbouring states and princes sent him, resumed courage, and saw himself, more than ever, in a condition to make head against the Romans. So that not contented with being re-established in his dominions, which a moment before he did not so much as hope ever to see again, he had the boldness to attack the Roman troops, so often victorious; beat a body of them, commanded by Fabius; and, after having put them to the route, pressed Triarius and Sornatius, two other of Lucullus's lieutenants in that country, with great vigour.

Lucullus at length engaged his soldiers to quit their winter-quarters, and to go to their aid. But they arrived too late. Triarius had imprudently ventured a battle, in which Mithridates had defeated him, and killed 7000 of his men; amongst whom were reckoned 150 centurions and twenty-four tribunes,⁷ which made this one of the greatest losses

the Romans had sustained for a great while. The army would have been entirely defeated, but for a wound Mithridates had received, which exceedingly alarmed his troops, and gave the enemy time to escape. Lucullus, upon his arrival, found the dead bodies upon the field of battle, and did not give orders for their interment; which still more exasperated his soldiers against him. The spirit of revolt rose so high, that, without any regard for his character as general, they treated him no longer but with insolence and contempt; and though he went from tent to tent, and almost from man to man, to conjure them to march against Mithridates and Tigranes, he could never prevail upon them to quit the place where they were. They answered him brutally, that as he had no thoughts but of enriching himself alone out of the spoils of the enemy, he might march alone, and fight them, if he thought fit.

SECTION IV.—MITHRIDATES, TAKING ADVANTAGE OF THE DISCORD WHICH HAD ARISEN IN THE ROMAN ARMY, RECOVERS ALL HIS DOMINIONS. POMPEY IS CHOSEN TO SUCCEED LUCULLUS. HE OVERTHROWS MITHRIDATES IN SEVERAL BATTLES. THE LATTER FLIES IN VAIN TO TIGRANES, HIS SON-IN-LAW, FOR REFUGE, WHO IS ENGAGED IN A WAR WITH HIS OWN SON. POMPEY MARCHES INTO ARMENIA AGAINST TIGRANES, WHO COMES TO HIM AND SURRENDERS HIMSELF. WEARY OF PURSUING MITHRIDATES TO NO PURPOSE, HE RETURNS INTO SYRIA, MAKES HIMSELF MASTER OF THAT KINGDOM, AND PUTS AN END TO THE EMPIRE OF THE SELEUCIDÆ. HE MARCHES BACK TO PONTUS. PHARNACES MAKES THE ARMY REVOLT AGAINST HIS FATHER MITHRIDATES, WHO KILLS HIMSELF. THAT PRINCE'S CHARACTER. POMPEY'S EXPEDITIONS INTO ARABIA AND JUDEA, WHERE HE TAKES JERUSALEM. AFTER HAVING REDUCED ALL THE CITIES OF PONTUS, HE RETURNS TO ROME, AND RECEIVES THE HONOUR OF A TRIUMPH.

MANIUS ACILIUS GLABRIUS and C. Piso had been elected consuls at Rome. The first had Bithynia and Pontus for his province, where Lucullus commanded. The senate, at the same time, disbanded Fimbria's legions, which were part of his army. All this news augmented the disobedience and insolence of the troops towards Lucullus.

It is true, his rough, austere, and frequently haughty disposition, gave some room for such usage. He cannot be denied the glory of having been one of the greatest captains of his age; and of having had almost all the qualities that form a complete general. But one was wanting which diminished the merit of all the rest; I mean the art of gaining the affections, and making himself beloved by the soldiers. He was difficult of access; rough in commanding; carried exactitude, in point of duty, to an excess that made it odious; was inexorable in punishing offences; and did not know how to conciliate good-will by praises and rewards opportunely bestowed, or by an air of kindness and affability, and insinuating manners, still more efficacious than either gifts or praises. And what proves that the sedition of the troops was in a great measure his own fault, was their being very docile and obedient under Pompey.

In consequence of the letters which Lucullus had written to the senate, in which he acquainted them, that Mithridates was entirely defeated, and utterly incapable of retrieving himself, commissioners had been nominated to regulate the affairs of Pontus, as of a kingdom totally reduced. They were much surprised to find, upon their arrival, that, far from being master of Pontus, he was not so much as master of his army, and that his own soldiers treated him with the utmost contempt.

The arrival of the consul Acilius Glabrio still added to their licentiousness. He informed them, that

Lucullus had been accused at Rome of protracting the war for the sake of continuing his command; that the senate had disbanded part of his troops, and forbade them paying him any farther obedience. So that he soon found himself almost entirely abandoned by the soldiers. Mithridates taking advantage of this disorder, had time to recover his whole kingdom, and to make great ravages in Cappadocia.

Whilst the affairs of the army were in this condition, great noise A. M. 3938 was made at Rome against Lucul- Ant. J. C. 66 lus.—Pompey had just put an end to the war with the pirates, for which an extraordinary power had been granted to him.² Upon this occasion one of the tribunes of the people, named Manilius proposed a decree to this effect: "That Pompey taking upon him the command of all the troops and provinces which were under Lucullus, and adding to them Bithynia, where Acilius commanded should be charged with the conduct of the war against the kings Mithridates and Tigranes, retaining under him all the naval forces, and continuing to command at sea with the same conditions and prerogatives as had been granted him in the war against the pirates; that is to say, that he should have absolute power on all the coasts of the Mediterranean, to thirty leagues' distance from the sea."³ This was, in effect, subjecting the whole Roman empire to one man. For all the provinces which had not been granted him by the first decree, Phrygia, Lycæonia, Galatia, Cappadocia, Cilicia, the higher Colchis, and Armenia, were conferred upon him by this second, which included also all the armies and forces, with which Lucullus had defeated the two kings, Mithridates and Tigranes.

Consideration for Lucullus, who was deprived of the glory of his great exploits, and in the place of whom a general was appointed to succeed more to the honours of his triumph than the command of his armies, was not, however, what gave the nobility and senate most concern: they were well convinced that great wrong was done him, and that his services were not treated with the gratitude they deserved; but what gave them most pain, and what they could not support, was that high degree of power to which Pompey was raised, which they considered as a tyranny already formed. For this reason they exhorted each other in private, and mutually encouraged one another to oppose this decree, and not abandon their expiring liberty.

Cæsar and Cicero, who were very powerful at Rome, supported Manilius, or rather Pompey, with all their credit. It was upon this occasion that the latter pronounced that fine oration before the people, entitled, For the law of Manilius. After having demonstrated, in the first two parts of his discourse, the necessity and importance of the war in question, he proves in the third, that Pompey is the only person capable of terminating it successfully. For this purpose, he enumerates at length the qualities necessary to form a general of an army, and shows that Pompey possesses them all in a supreme degree. He insists principally upon his probity, humanity, innocence of manners, integrity, disinterestedness, love of the public good "Virtues, by so much the more necessary," says he "as the Roman name is become infamous and hateful amongst foreign nations, and our allies, in consequence of the debauches, avarice, and unheard-of oppressions of the generals and magistrates we send amongst them. Instead of which, the prudent, moderate, and irreproachable conduct of Pompey will

² In ipso illo malo gravissimâque belli offensivâ, L. Lucullus qui tamen aliquâ ex parte ita incommodis mederi foras potuisset, vestro jussu coactus, quod imperii diuturnitati modum statuendum, veteri exemplo, putavitis, partem militum, qui jam stipendiis confecti erant, dimisit, partem Glabrio tradidit. *Cic. pro leg. Manil.* n. 96.

make him be regarded, not as sent from Rome, but descended from heaven, for the happiness of the nations. People begin to believe, that all which is related of the noble disinterestedness of those ancient Romans is real and true; and that it was not without reason, that under such magistrates, nations chose rather to obey the Roman people than to command others."

Pompey was at that time the idol of the people; wherefore the fear of displeasing the multitude kept those grave senators silent, who had at first appeared so well inclined, and so full of courage. The decree was authorised by the suffrages of all the tribes; and Pompey, though absent, declared absolute master of almost all Syria had usurped by arms, and by making a cruel war upon his country.

We must not imagine, says a very judicious historian,¹ that either Caesar or Cicero, who took so much pains to have this law passed, acted from views of the public good. Caesar, full of ambition and great projects, endeavoured to make his court to the people, whose authority he knew was at that time much greater than the senate's; he thereby opened himself a way to the same power, and familiarized the Romans to extraordinary and unlimited commissions: in heaping upon the head of Pompey so many favours and glaring distinctions, he flattered himself that he should at length render him odious to the people, who would soon take offence at him. So that in lifting him up, he had no other design than to prepare a precipice for him. Cicero also had in view only his own greatness. His weak side was a desire of bearing sway in the commonwealth; not indeed by guilt and violence, but by the method of persuasion. Besides his wish to support himself by the influence of Pompey, he was very well pleased with showing the nobility and people, who formed two parties, and, in a manner, two republics in the state, that he was capable of making the balance incline to the side he espoused. It was always his policy to conciliate equally both parties, in declaring sometimes for the one, and sometimes for the other.

Pompey,² who had lately terminated the war with the pirates, was still Ant. J. C. 66. in Cilicia, when he received letters to inform him of all the people had decreed in his favour. When his friends, who were present, congratulated him, and expressed their joy, it is said, that he knit his brows, struck his thigh, and cried out, as if oppressed by, and sorry for, that new command: "Gods! what endless labours am I devoted to? Should I not have been more happy as a man unknown and inglorious? Shall I never cease to make war, nor ever have my arms off my back? Shall I never escape the envy that persecutes me, nor live at peace in the country with my wife and children?"

This is usually enough the language of the ambitious, even of those who are most inordinately actuated by that passion. But, however successful they may be in imposing upon themselves, it seldom happens that they deceive others; and the public is far from mistaking them. The friends of Pompey, and even those who were most intimate with him, could not endure his dissimulation at this time. For there was not one of them who did not know, that his natural ambition and passion for command, still more inflamed by his quarrel with Lucullus, made him feel a more refined and sensible satisfaction in the new charge conferred upon him; and his actions soon took off the mask, and discovered his real sentiments.

The first step which he took upon arriving in the provinces of his government, was to forbid any obedience whatsoever to the orders of Lucullus. In his march he altered every thing which his predecessor had decreed. He exonerated some from the penalties Lucullus had laid upon them; deprived others of the rewards he had given them: in short, his sole view in every thing was to let the partisans of Lucullus see that they adhered to a man who had neither authority nor power. Strabo's uncle,³ by the mother's side, highly discontented with Mithridates for having put

to death several of his relations, to avenge himself for that cruelty, had gone over to Lucullus, and had given up fifteen places in Cappadocia to him. Lucullus loaded him with honours, and promised to reward him as such considerable services deserved. Pompey, far from having any regard for such just and reasonable engagements, which his predecessor had entered into solely from a view to the public good, affected a universal opposition to them, and looked upon all those as his enemies who had contracted any friendship with Lucullus.

It is not uncommon for a successor to endeavour to lessen the value of his predecessor's actions, in order to arrogate all the honour to himself; but certainly none ever carried that conduct to such monstrous excess as Pompey did at this time. His great qualities and innumerable conquests are exceedingly extolled; but so base and odious a jealousy ought to sully, or rather totally eclipse, the glory of them. Such was the manner in which Pompey thought fit to begin.

Lucullus made bitter complaints of this conduct. Their common friends, in order to a reconciliation, concerted an interview between them. It passed at first with all possible politeness, and with reciprocal marks of esteem and amity. But these were only compliments, and a language that extended no farther than the lips, which costs the great nothing. The heart soon explained itself. The conversation growing warm by degrees, they proceeded to invectives; Pompey reproaching Lucullus with his avarice, and Lucullus Pompey with his ambition, in which they spoke the truth of each other. They parted more incensed, and greater enemies than before.

Lucullus set out for Rome, whither he carried a great quantity of books, which he had collected in his conquests. Of these he formed a library, which was open to all the learned and curious, whom it drew about him in great numbers. They were received at his house with all possible politeness and generosity. The honour of a triumph was granted to Lucullus, but not without being long contested.

It was he who first brought cherries to Rome,⁴ which, till then, had been unknown in Europe. They were thus called from Cernus, a city in Cappadocia.

Pompey began by engaging Phraates, king of the Parthians, in the Roman interest. He has been spoken of already, and is the same who was surnamed the god. He concluded an offensive and defensive alliance with him. He offered peace also to Mithridates; but that prince, believing himself sure of the smity and aid of Phraates, would not so much as hear it mentioned. When he was informed that Pompey had anticipated him, he sent to treat with him. But Pompey having demanded, by way of preliminary, that he should lay down his arms, and give up all deserters, those proposals were very near occasioning a mutiny in Mithridates's army. As there were abundance of deserters in it, they could not suffer any thing to be said upon delivering them up to Pompey; nor would the rest of the army consent to see themselves weakened by the loss of their comrades. To appease them, Mithridates was obliged to tell them that he had sent his ambassadors only to inspect the condition of the Roman army; and to swear that he would not make peace with the Romans, either on those or on any other conditions.

Pompey, having distributed his fleet in different stations, to guard the whole sea between Phœnicia and the Bosphorus, marched by land against Mithridates, who had still 30,000 foot and 2000 or 3000 horse; but did not dare, however, to come to a battle. That prince was encamped upon a mountain, in a very strong position, where he could not be forced; but he abandoned it on Pompey's approach, for want of water. Pompey immediately took possession of it; and conjecturing, from the nature of the plants and other signs, that there must be an abundance of springs within it, he ordered wells to be dug, and in an instant the camp had water in abundance. Pompey could not sufficiently wonder how Mithridates, for want of attention and curiosity, had been so long ignorant of so important and necessary a resource.

³ Strab. l. xii. p. 557, 558.

⁴ Plin. l. xv. c. 25.

Soon after he followed him, encamped near him, and shut him up within strong ramparts, which he carried quite round his camp. They were almost eight leagues in circumference,¹ and were fortified with strong towers, at proper distances from each other. Mithridates, either through fear or negligence, suffered him to finish his works. Pompey's plan was to starve him out. And in fact he reduced him to such a want of provisions, that his troops were obliged to subsist upon the carriage-beasts in their camp. The horses alone were spared. After having sustained this kind of siege for almost fifty days, Mithridates escaped by night undiscovered, with all the best troops of his army, having first ordered all the useless and sick persons to be killed.

Pompey immediately pursued him; came up with him near the Euphrates; encamped near him; and apprehending, that, in order to escape, he would make haste to pass the river, he quitted his intrenchments, and advanced against him by night, in order of battle. His design was merely to surround the enemy, to prevent their flying, and to attack them at day-break the next morning. But all his old officers made such entreaties and remonstrances to him, that they induced him to fight without waiting till day; for the night was not very dark, the moon giving light enough for distinguishing objects, and knowing one another. Pompey could not withstand the ardour of his troops, and led them on against the enemy. The barbarians were afraid to stand the attack, and fled immediately in the utmost consternation. The Romans made a great slaughter of them, killed above 10,000 men, and took their whole camp.

Mithridates, with 800 horse, in the beginning of the battle opened himself a way, sword in hand, through the Roman army, and went off. But those 800 horse soon quitted their ranks and dispersed, and left him with only three followers, of which number was Hysicratia, one of his wives, a woman of masculine courage and warlike boldness; which occasioned her being called Hysicrates,² by changing the termination of her name from the feminine to the masculine. She was mounted that day on horseback, and wore the habit of a Persian. She continued to attend the king, without giving way to the fatigues of his long journeys, or being weary of serving him, though she took care of his horse herself, till they arrived at a fortress where the king's treasures and most precious effects lay. There, after having distributed the most magnificent of his robes to such as were assembled about him, he made a present to each of his friends of a mortal poison, that none of them might fall alive into the hands of their enemies, but by their own consent.

That unhappy fugitive³ saw no other hopes for him, than from his son-in-law Tigranes. He sent ambassadors to demand permission to take refuge in his dominions, and aid for the re-establishment of his entirely ruined affairs. Tigranes was at that time at war with his son. He caused those ambassadors to be seized and thrown into prison, and set a price upon his father-in-law's head, promising one hundred talents⁴ to whosoever should seize or kill him; under pretence that it was Mithridates who had made his son take up arms against him; but in reality to make his court to the Romans, as we shall soon see.

Pompey, after the victory he had gained, marched into Armenia Major against Tigranes. He found him at war with his son, who bore the same name with himself. We have already mentioned that the king of Armenia had espoused Cleopatra, the daughter of Mithridates. He had three sons by her, two of whom he had put to death without reason. The third, to escape the cruelty of so unnatural a father, had fled to Phraates, king of Parthia, whose daughter he had married. His father-in-law carried him back to Armenia at the head of an army, where they besieged Artaxata. But finding the place very strong, and

provided with every thing necessary for a good defence, Phraates left him part of the army to carry on the siege, and returned with the rest into his own dominions. Tigranes, the father, soon after fell upon the son with all his troops, beat his army, and drove them out of the country. That young prince, after this misfortune, had designed to withdraw to his grandfather Mithridates. But on the way he was informed of his defeat; and having lost all hope of obtaining aid from him, he resolved to throw himself into the arms of the Romans. Accordingly, he entered their camp, and went to Pompey to implore his protection. Pompey gave him a very good reception, and was glad of his coming; for, as he was about to carry the war into Armenia, he had occasion for such a guide as he. He therefore caused that prince to conduct him directly to Artaxata.

Tigranes, terrified at this news, and sensible that he was not in a condition to oppose so powerful an army, resolved to have recourse to the generosity and clemency of the Roman general. He put into his hands the ambassadors sent to him by Mithridates, and followed them directly himself. Without taking any precaution, he entered the Roman camp, and went to submit his person and crown to the discretion of Pompey and the Romans. He said,⁵ That of all the Romans, and of all mankind, Pompey was the only person in whose faith he could confide; that, in whatsoever manner he should decide his fate, he should be satisfied; that he was not ashamed to be conquered by a man whom none could conquer; and that it was no dishonour to submit to him, whom fortune had made superior to all others.

When he arrived on horseback near the intrenchments of the camp, two of Pompey's lictors came out to meet him, and ordered him to dismount and enter on foot; telling him, that no stranger had ever been known to enter a Roman camp on horseback. Tigranes obeyed, ungirt his sword, and gave it to the lictors; and afterwards, when he approached Pompey, taking off his diadem, he would have laid it at his feet, and prostrated himself to the earth to embrace his knees. But Pompey ran to prevent him, and taking him by the hand, carried him into his tent, made him sit on the right, and his son, the young Tigranes, on the left side of him. After which he deferred hearing what he had to say to the next day and invited the father and son to sup with him that evening. The son refused to be there with his father and as he had not shown him the least mark of respect during the interview, and had treated him with the same indifference as if he had been a stranger, Pompey was very much offended at that behaviour. He did not, however, entirely neglect his interests, in determining upon the affair of Tigranes. After having condemned Tigranes to pay the Romans 6000 talents,⁶ for the charges of the war he had made against them without cause, and to relinquish to them all his conquests on the hither side of the Euphrates, he decreed, that he should reign in his ancient kingdom Armenia Major, and that his son should have Gordiana and Sophena, two provinces upon the borders of Armenia, during his father's life, and all the rest of his dominions after his death; reserving, however, to the father the treasures he had in Sophena, without which it would have been impossible for him to have paid the Romans the sum which Pompey required of him.

The father was well satisfied with these conditions, which still left him a crown. But the son, who had entertained chimerical hopes, could not relish a decree which deprived him of what had been promised him. He was even so much discontented with it, that he wanted to escape, in order to excite new troubles. Pompey, who suspected his design, order-

ed him to be always kept in view; and, upon his absolutely refusing to consent that his father should withdraw his treasures from Sophena, he caused him to be put into prison. Afterwards having discovered that he solicited the Armenian nobility to take up arms, and endeavoured to engage the Parthians to do the same, he put him amongst those whom he reserved for his triumph.

A short time after, Phraates, king of the Parthians, sent to Pompey, to claim that young prince as his son-in-law; and to represent to him, that he ought to make the Euphrates the boundary of his conquests. Pompey made answer, that the younger Tigranes was more related to his father than his father-in-law; and that as to his conquests, he should give them such bounds as reason and justice required; but without being prescribed them by any one.

When Tigranes had been suffered to possess himself of his treasures in Sophena, he paid the 6000 talents, and besides that, gave every private soldier in the Roman army fifty drachmas, 1000 to each centurion, and 10,000 to each tribune; and by that liberality obtained the title of friend and ally of the Roman people. This would have been pardonable, had he not added to it abject behaviour and submissions unworthy of a king.

Pompey gave all Cappadocia to Ariobarzanes, and added to it Sophena and Gordiana, which he had designed for young Tigranes.

After having regulated every thing in Armenia, Pompey marched northwards in pursuit of Mithridates. Upon the banks of the Cyrus² he found the Albanians and Iberians, two powerful nations, situate between the Caspian and Euxine seas, who endeavoured to stop him; but he beat them, and obliged the Albanians to demand peace. He granted it, and passed the winter in their country.

The next year he took the field very early against the Iberians. This was a very war-

A. M. 3939. like nation, and had never hitherto
An. J. C. 65. been conquered. It had always retained its liberty, during the time that the Medes, Persians, and Macedonians, had successively possessed the empire of Asia. Pompey found means to subdue this people, though not without very considerable difficulties, and obliged them to demand peace. The king of the Iberians sent him a bed, a table, and a throne, all of massy gold; desiring him to accept those presents as earnest of his amity. Pompey put them into the hands of the questors for the public treasury. He also subjected the people of Colchis, and made their king Olthaces prisoner, whom he afterwards led in triumph. From thence he returned into Albania, to chastise that nation for having taken up arms again, whilst he was engaged with the Iberians and the people of Colchis.

The army of the Albanians was commanded by Cosis, the brother of king Ordes. That prince, as soon as the two armies came to blows, singled out Pompey, and spurring furiously up to him, darted his javelin at him. But Pompey received him so vigorously with his spear, that it went through his body, and laid him dead at his horse's feet. The Albanians were overthrown, and a great slaughter was made of them. This victory obliged king Ordes to buy a second peace upon the same terms with that which he had made with the Romans the year before, at the price of great presents, and by giving one of his sons as a hostage for his observing it better than he had done the former.

Mithridates, in the mean time, had passed the winter at Dioscurias, in the north-east of the Euxine sea. Early in the spring he marched to the Cimmerian Bosphorus, through several nations of the Scythians, some of which suffered him to pass voluntarily, and others were obliged to it by force. The kingdom of the Cimmerian Bosphorus is the same which is now called Crim Tartary, and was at that time a province of Mithridates's empire. He had assigned it as an establishment to one of his sons, named Machares.

But that young prince had been so vigorously pressed by the Romans, whilst they besieged Sinope, and their fleet was in possession of the Euxine sea, which lay between that city and his kingdom, that he had been obliged to make a peace with them, and had invariably observed it till then. He well knew that his father was extremely displeased with such conduct, and therefore very much dreaded meeting him. In order to a reconciliation, he sent ambassadors to him upon his route, who represented to him that he had been reduced to act in that manner, contrary to his inclination, by the necessity of his affairs. But finding that his father was not influenced by his reasons, he endeavoured to escape by sea, and was taken by vessels sent expressly by Mithridates to cruise in his way. He chose rather to kill himself than fall into his father's hands.

Pompey, having terminated the war in the north and seeing it impossible to follow Mithridates into the remote country to which he had retired, led back his army to the south, and on his march subjected Darius king of the Medes, and Antiochus, king of Coenagena. He went on to Syria, and made himself master of the whole empire. Scaurus reduced Coele-syria and Damascus, and Gabinius all the rest of the country as far as the Tigris: these were two of his lieutenant-generals. Antiochus Asiaticus, son of Antiochus Eusebes, heir of the house of the Seleucide, who, by Lucullus's permission, had reigned four years in part of that country, of which he had taken possession when Tigranes abandoned it, came to solicit him to re-establish him upon the throne of his ancestors. But Pompey refused to give him audience, and deprived him of all his dominions, which he made a Roman province. Thus, whilst Tigranes was left in possession of Armenia, who had done the Romans great hurt during the course of a long war, Antiochus was dethroned, who had never committed the least hostility, and by no means deserved such treatment. The reason given for it was, that the Romans had conquered Syria from Tigranes; that it was not just that they should lose the fruit of their victory; that Antiochus was a prince who had neither the courage nor capacity necessary for the defence of the country; and that to put it into his hands would be to expose it to the perpetual ravages and incursions of the Jews and Arabians, which Pompey took care not to do. In consequence of this way of reasoning, Antiochus lost his crown, and was reduced to the necessity of passing his life as a private person.

In him ended the empire of the Seleucide, after a duration of almost
A. M. 3939.

250 years. During these expeditions of the Romans in Asia, great revolutions happened in Egypt. The Alexandrians, weary of their king Alexander, took up arms; and after having expelled him, called in Ptolemy Auletes to supply his place. That history will be treated at large in the ensuing article.

Pompey afterwards went to Damascus,⁴ where he regulated several affairs relating to Egypt and Judea. During his residence there, twelve crowned heads went thither to make their court to him, and were all in the city at the same time.

A fine contention⁵ between the love of a father and the duty of a son was seen at this time; a very extraordinary contest in those days, when the most horrid murders and parricides frequently opened the way to thrones. Ariobarzanes, king of Cappadocia, voluntarily resigned the crown in favour of his son, and put the diadem on his head in the presence of Pompey. The most sincere tears flowed in abundance from the eyes of the son, who was truly afflicted at a circumstance for which others would have highly rejoiced. It was the sole occasion in which he thought disobedience allowable; and he would have persisted in refusing the sceptre,⁶ if Pompey's orders had not interfered, and obliged him at length to submit to paternal authority. This is the second example Cap-

Vel. Max.

padocia has displayed of such a contest of generosity. We have spoken in its place of a similar contest between the two Ariaratheses.

As Mithridates was in possession of several strong places in Pontus and Cappadocia, Pompey judged it necessary to return thither in order to reduce them. He made himself master of almost all of them upon his arrival, and afterwards wintered at Aspis, a city of Pontus.

Stratonice, one of Mithridates's wives, surrendered a castle of the Bosphorus, which she had in her keeping, to Pompey, with the treasures concealed in it, demanding only for recompense, that if her son Xipharex should fall into his hands, he should be restored to her. Pompey accepted only such of those presents as would serve for the ornaments of temples. When Mithridates knew what Stratonice had done, to revenge her facility in surrendering that fortress, which he considered as a treason, he killed Xipharex in his mother's sight, who beheld that sad spectacle from the other side of the strait.

Cainu, or the New City, was the strongest place in Pontus, and therefore Mithridates kept the greatest part of his treasures, and whatever he had of greatest value, in that place, which he conceived impregnable. Pompey took it, and with it all that Mithridates had left in it. Amongst other things were found secret memoirs, written by himself, which gave a very good insight into his character. In one part he had noted down the persons he had poisoned, amongst whom were his own son Ariarathes and Alcaeus of Sardis; the latter, because he had carried the prize in the chariot-race against him. What fantastical records were these! Was he afraid that the public and posterity should not be informed of his monstrous crimes, and his motives for committing them?

His memoirs of physic were also found there, which Pompey caused to be translated into Latin by Læmus, a good grammarian, one of his freedmen; and they were afterwards made public in that language. For, amongst the other extraordinary qualities of Mithridates, he was very skilful in medicine. It was he who invented the excellent antidote which still bears his name, and from which physicians have experienced such effects, that they continue to use it successfully to this day.

Pompey, during his stay at Aspis, made such regulations in the affairs of the country, as the state of them would admit. As soon as the spring returned, he marched back into Syria for the same purpose. He did not think it advisable to pursue Mithridates in the kingdom of the Bosphorus, whither he was returned. To do that he must have marched round the Euxine Sea with an army, and passed through many countries, either inhabited by barbarous nations, or entirely desert; a very dangerous enterprise, in which he would have run great risk of perishing. So that all that Pompey could do was to post the Roman fleet in such a manner as to intercept any convoys that might be sent to Mithridates. He believed, by that means, he should be able to reduce him to the last extremity; and said, on setting out, that he left Mithridates more formidable enemies than the Romans, which were hunger and necessity.

What carried him with so much ardour into Syria was his excessive and vain-glorious ambition to push his conquests as far as the Red Sea. In Spain, and before that in Africa, he had carried the Roman arms as far as the western ocean on both sides of the straits of the Mediterranean. In the war against the Albanians, he had extended his conquests to the Caspian Sea, and believed there was nothing wanting to his glory, but to push them on as far as the Red Sea. Upon his arrival in Syria, he declared Antioch and Seleucia, upon the Orontes, free cities, and continued his march towards Damascus; from whence he designed to have gone on against the Arabians, and afterwards to have conquered all the countries to the Red Sea. But an accident happened which obliged

him to suspend all his projects, and to return into Pontus.

Some time before, an embassy had come to him from Mithridates, who demanded peace. He proposed, that he should be suffered to retain his hereditary dominions, as Tigranes had been, upon condition of paying a tribute to the Romans, and resigning all his other provinces. Pompey replied, that then he should also come in person, as Tigranes had done. Mithridates could not consent to such a meness, but proposed sending his children, and some of his principal friends. Pompey would not be satisfied with that. The negotiation broke off, and Mithridates applied himself to making preparations for war with as much vigour as ever. Pompey, who received advice of this activity, judged it necessary to be upon the spot, in order to have an eye to every thing. For that purpose, he went to pass some time at Amisus, the ancient capital of the country. There, through the just punishment of the gods, says Plutarch, his ambition made him commit faults which drew upon him the blame of all the world. He had publicly charged and reproached Lucullus, for having, while the war still raged, disposed of provinces, given rewards, decreed honours, and acted in all things as victors are not accustomed to act till a war is finally terminated; and now he fell into the same inconsistency himself. For he disposed of governments, and divided the dominions of Mithridates into provinces, as if the war had been at an end. But Mithridates still lived, and every thing was to be apprehended from a prince inexhaustible in resources, whom the greatest defeats could not disconcert, and whom losses themselves seemed to inspire with new courage, and to supply with new strength. And indeed at that very time, when he was believed to be irretrievably ruined, he was actually meditating a terrible invasion into the very heart of the Roman empire with the troops he had lately raised.

Pompey, in the distribution of rewards, gave Armenia Minor to Dejotarus, prince of Galatia, who had always continued firmly attached to the Roman interests during this war, to which he added the title of king. It was this Dejotarus who, by always persisting, through gratitude, in his adherence to Pompey, incurred the resentment of Cæsar, and had occasion for the eloquence of Cicero to defend him.

He made Archelus also high-priest of the Moon, who was the supreme goddess of the Comanians in Pontus, and gave him the sovereignty of the place, which contained at least 6000 persons, all devoted to the worship of that deity. I have already observed, that this Archelus was the son of him who commanded in chief the troops sent by Mithridates into Greece in his first war with the Romans, and who, being disgraced by that prince, had, with his son, taken refuge amongst them. They had always, from that time, continued their firm adherents, and had been of great use to them in the wars of Asia. The father being dead, the high-priesthood of Comana, and the sovereignty annexed to it, were given to the son, in recompense for the services of both.

During Pompey's stay in Pontus, Archelus, king of Arabia Petrea, took advantage of his absence to make incursions into Syria, which very much distressed the inhabitants. Pompey returned thither. Upon his way he came to the place where lay the dead bodies of the Romans killed in the defeat of Triarius. He caused them to be interred with great solemnity, which gained him the hearts of his soldiers. From thence he continued his march towards Syria, with the view of executing the projects he had formed for the war of Arabia: but news of importance interrupted those designs.

Though Mithridates had lost all hopes of peace, ever since Pompey had rejected the overtures he had caused to be made to him; and though he saw many of his subjects abandon his party; far from losing courage, he had formed the design of crossing Pannonia, and passing the Alps, to attack the Romans in Italy itself, as Hannibal had done before him: a project more bold than prudent, with which his inveterate hatred and blind despair had inspired him. A great number of the neighbouring Scythians had en

• Plin. l. xxv. c. 20.

• Joseph. Antiq. l. xiv. 5, 6. Plut. in Pomp. p. 639—641. Dion. Cass. l. xxxvii. p. 34—36. Appian. p. 246—251.

tered themselves in his service, and considerably augmented his army. He had sent deputies into Gaul to solicit the nations there to join him, when he should approach the Alps. As great passions are always credulous, and men easily flatter themselves in what they ardently desire, he was in hopes that the flame of the revolt among the slaves in Italy and Sicily, perhaps ill extinguished, might suddenly rekindle upon his presence: that the pirates would soon repossess themselves of the empire of the sea, and involve the Romans in new difficulties; and that the provinces, oppressed by the avarice and cruelty of the magistrates and generals, would be anxious to throw off the yoke by his aid, under which they had so long groaned. Such were the thoughts that he had revolved in his mind.

But as, in order to execute this project, it was necessary to march more than 500 leagues, and traverse the countries now called Little Tartary, Podolia, Moldavia, Wallachia, Transylvania, Hungary, Stiria, Carinthia, the Tirol, and Lombardy; and pass three great rivers, the Borysthenes, Danube, and Po; the bare idea of so tedious and dangerous a march threw his army into such terror, that, to prevent the execution of his design, they conspired against him, and chose Pharnaces, his son, king, who had been active in exciting the soldiers to this revolt. Mithridates then seeing himself abandoned by all the world, and that even his son would not suffer him to escape where he could, retired to his apartment, and, after having given poison to such of his wives, concubines, and daughters, as were with him at that time, he took the same himself; but when he perceived that it had not its effect upon him, he had recourse to his sword. The wound he gave himself not sufficing, he was obliged to desire a Gaulish soldier to put an end to his life. Dion says, he was killed by his own son.

Mithridates had reigned sixty years A. M. 3941. and lived seventy-two. His greatest Ant. J. C. 63. fear was of falling into the hands of the Romans, and of being led in triumph. To prevent that misfortune, he always carried poison about him, in order to escape that way, if other means should fail. The apprehension he was in, lest his son should deliver him up to Pompey, occasioned his taking the fatal resolution which he executed so suddenly. It is generally said, that the reason that the poison which he drank did not kill him was, his having taken antidotes so much, that his constitution was proof against it. But this is believed an error, and that it is impossible any remedy should be a universal antidote against all the different species of poison.

Pompey was at Jericho in Palestine, whither the differences between Hyrcanus and Aristobulus, of which we have spoken elsewhere, had carried him, when he received the first news of Mithridates's death. It was brought him by expresses despatched on purpose from Pontus with letters from his lieutenants. Those expresses arriving with their lances crowned with laurels, which was customary only when they brought advice of some victory, or news of great importance and advantage, the army was very eager and solicitous to know what it was. As they had only begun to form their camp, and had not erected the tribunal from which the general harangued the troops, without staying to raise one of turf, as was usual, because that would take up too much time, they made one of the packs of their carriage-horses, upon which Pompey mounted without ceremony. He acquainted them with the death of Mithridates and the manner of his killing himself; that his son Pharnaces submitted himself and his dominions to the Romans, and that thereby that tedious war, which had endured so long, was at length terminated. This was a subject of great joy to both the army and general.

Such was the end of Mithridates; a prince, says an historian, of whom it is difficult either to speak or be silent: full of activity in war, of distinguished

courage; sometimes very great through the favours of fortune, and always through his invincible resolution; truly a general in his prudence and counsel, and a soldier by his bold and hazardous exploits; a second Hannibal in his hatred of the Romans.

Cicero says of Mithridates, that after Alexander he was the greatest of kings; *Ille rex post Alexandrum maximus*.² It is certain that the Romans never had such a king in arms against them. Nor can we deny that he had his great qualities: a vast extent of mind, that embraced every subject; a superiority of genius, capable of the greatest undertakings; a constancy of soul, that the severest misfortunes could not depress; an industry and bravery, inexhaustible in resources, and which, after the greatest losses, brought him on a sudden again on the stage, more powerful and formidable than ever. I cannot, however, believe that he is to be considered as a consummate general; that idea does not seem to result from his actions. He obtained great advantages at first; but against generals without either merit or experience. When Sylla, Lucullus, and Pompey, opposed him, it does not appear he acquired any great honour, either by his address in posting himself to advantage, by his presence of mind in unexpected emergencies, or intrepidity in the heat of action. But, should we admit him to have all the qualities of a great captain, he cannot but be considered with horror, when we reflect upon the innumerable murders and parricides with which he polluted his reign, and that inhuman cruelty which regarded neither mother, wives, children, nor friends, and which sacrificed every thing to his insatiable ambition.

Pompey³ being arrived in Syria, A. M. 3941. went directly to Damascus, with de- Ant. J. C. 63. sign to set out from thence to be-
gin at length the war with Arabia.

When Artas, the king of that country, saw him upon the point of entering his dominions, he sent an embassy to make his submissions.

The troubles of Judea employed Pompey some time. He returned afterwards into Syria, from whence he set out for Pontus. Upon his arrival at Amisus, he found the body of Mithridates there, which Pharnaces his son had sent to him; no doubt to convince Pompey by his own eyes of the death of an enemy who had occasioned him so many difficulties and fatigues. He had added great presents, in order to conciliate his favour. Pompey accepted the presents; but as for the body of Mithridates, looking upon their enmity as extinguished by death, he did it all the honours due to the remains of a king, sent it to the city of Sinope, to be interred there with the kings of Pontus, his ancestors, who had long been buried in that place, and ordered the sums that were necessary for the solemnity of a royal funeral.

In this last journey he took possession of all the places in the hands of those to whom Mithridates had confided them. He found immense riches in some of them, especially at Telaurus, where part of Mithridates's most valuable effects and precious jewels were kept: his principal arsenal was also in the same place. Amongst these were 2000 cups of onyx, set and adorned with gold; with so prodigious a quantity of all kinds of plate, furniture, and military accoutrements for man and horse, that it cost the questor, or treasurer of the army, thirty entire days in taking the inventory of them.

Pompey granted Pharnaces the kingdom of Bosphorus, as a reward for his parricide, declared him the friend and ally of the Roman people, and marched into the province of Asia, in order to winter at Ephesus. Here he distributed rewards to his victorious army. He gave each of his soldiers fifteen hundred drachmas (about 37l. sterling,) and to the officers according to their several posts. The total sum to which his liberalities amounted, all raised out of the spoils of the enemy, was 16,000 talents; that is to say, about 2,400,000l.; besides which, he had 20,000

more (3,000,000,) to put into the treasury at Rome, upon the day of his entry.

His triumph continued two days, and was celebrated with extraordinary magnificence. Pompey caused 324 captives of the highest distinction to march before his chariot; amongst whom were Aris-

tobulus, king of Judea, with his son Antigonus; Olthaces, king of Colchis; Tigranes, the son of Tigranes, king of Armenia; the sister, five sons, and two daughters of Mithridates. In the place of that king's person, his throne, sceptre, and a colossal busto of gold of eight cubits, or twelve feet, in height, were carried in triumph.

THE HISTORY OF EGYPT.

BOOK XXIV.

SECTION I.—PTOLEMY AULETES HAVING BEEN PLACED UPON THE THRONE OF EGYPT IN THE ROOM OF ALEXANDER, IS DECLARED THE FRIEND AND ALLY OF THE ROMAN PEOPLE BY THE INFLUENCE OF CÆSAR AND POMPEY, WHICH HE HAD PURCHASED AT A VERY GREAT PRICE. IN CONSEQUENCE, HE LOADS HIS SUBJECTS WITH TAXES. HE IS EXPELLED THE THRONE. THE ALEXANDRIANS MAKE HIS DAUGHTER BERENICE QUEEN. HE GOES TO ROME, AND, BY MONEY, OBTAINS THE VOICES OF THE HEADS OF THE COMMONWEALTH FOR HIS RE-ESTABLISHMENT. HE IS OPOSED BY AN ORACLE OF THE SIBYL'S; NOTWITHSTANDING WHICH, GABINIUS SETS HIM UPON THE THRONE BY FORCE OF ARMS, WHERE HE REMAINS TILL HIS DEATH. THE FAMOUS CLEOPATRA, AND HER BROTHER, VERY YOUNG, SUCCEEDED HIM.

WE have seen in what manner A. M. 3939. Ptolemy Auletes ascended the throne Ant. J. C. 65. of Egypt. Alexander, his predecessor, upon his being expelled by his subjects, had withdrawn to Tyre, where he died some time after. As he left no issue, nor any other legitimate prince of the blood-royal, he had made the Roman people his heirs. The senate, for the reasons I have repeated elsewhere, did not judge it proper at that time to take possession of the dominions left them by Alexander's will; but to show that they did not renounce their right, they resolved to call in part of the inheritance, and sent deputies to Tyre, to demand a sum of money left there by that king at his death.

The pretensions of the Roman people were under no restrictions; and it would have been a very insecure establishment to possess a state to which they believed they had so just a claim, unless some means were found to make them renounce it. All the kings of Egypt had been friends and allies of Rome. For Ptolemy to get himself declared an ally by the Romans, was a certain means to his being authentically acknowledged king of Egypt by them. But by how much the more important that qualification was to him, so much the more difficult was it for him to obtain it. His predecessor's will was still fresh in the memory of every body; and as princes are seldom pardoned for defects which do not suit their condition,

though they are often spared for those that are much more hurtful, the surname of *Player* on the Flute, which he had drawn upon himself, had ranked him as low in the esteem of the Romans as in that of the Egyptians.

He did not, however, despair of success in his undertakings. All the methods which he took for the attainment of his end, were a long time ineffectual; and it is likely they would always have been so, if Cæsar had never been consul. That ambitious spirit, who believed all means and expedients just that conducted to his ends, being immensely in debt, and finding that king disposed to merit by money what he could not obtain by right, sold him the alliance of Rome at as dear a price as he was willing to buy it, and received for the purchase, as well for himself as for Pompey, whose credit was necessary to him for obtaining the people's consent, almost six thousand talents; that is to say, almost nine hundred thousand pounds. At this price he was declared the friend and ally of the Roman people.

Though that prince's yearly revenues were twice the amount of this sum, he could not immediately raise the money without exceedingly overtaxing his subjects. They were already highly discontented at his not claiming the isle of Cyprus as an ancient dependance of Egypt, and, in case of refusal, declaring war against the Romans. In this disposition the extraordinary imposts he was obliged to exact having finally exasperated them, they rose with so much violence, that he was forced to fly for the security of his life. He concealed his route so well, that the Egyptians either believed, or feigned to believe, that he had perished. They declared Berenice, the eldest of his three daughters, queen, though he had two sons, because they were both much younger than she.

Ptolemy, in the mean time, having landed at the isle of Rhodes, which was in his way to Rome, was informed that Cato, who after his death was called Cato of Utica, had also arrived there some time before. That prince, being glad of the opportunity to confer with him upon his own affairs, sent immediately to

• Sueton. in Jul. Cæs. c. liv. Dion. Cass. l. xxxix. p. 97. Strab. l. xvii. p. 796.

• Plut. in Cato. Utic. p. 776.

• See p. 268 of this volume.

let him know of his arrival, expecting that he would come directly to visit him. We may here see an instance of Roman grandeur, or rather haughtiness. Cato ordered him to be told, that, if he had any thing to say to him, he might come to him, if he thought fit. Accordingly he went. Cato did not vouchsafe so much as to rise when Ptolemy entered his chamber, and saluting him only as a common man, bade him sit down. The king, though in some confusion upon this reception, could not but inwardly wonder how so much haughtiness and state could unite in the same person with the simplicity and modesty that appeared in his dress and all his equipage. But he was still more surprised, when, upon entering upon business, Cato blamed him, in direct terms, for quitting the finest kingdom in the world, to expose himself to the pride and insatiable avarice of the Roman grandees, and to suffer a thousand indignities. He did not scruple to tell him, that, though he should sell all Egypt, he would not have sufficient to satisfy their avidity. He advised him, therefore, to return to Egypt, and reconcile himself with his subjects; adding, that he was ready to accompany him thither, and offering him his mediation and good offices for that purpose.

Ptolemy, upon this discourse, recovered as out of a dream, and having maturely considered what the wise Roman had told him, perceived the error he had committed in quitting his kingdom, and entertained thoughts of returning to it. But the friends he had with him being gained by Pompey to make him go to Rome, (one may easily guess with what views,) dissuaded him from following Cato's good advice. He had full time to repent it, when he found himself, in that proud city, reduced to solicit the magistrates upon his business from door to door, like a private person.

Cæsar, upon whom his principal hopes were founded, was not at Rome; he was at that time making war in Gaul. But Pompey, who was there, gave him an apartment in his house, and omitted nothing to serve him. Besides the money which he had received from that prince, in conjunction with Cæsar, Ptolemy had since cultivated his friendship by various services which he had rendered him during the war with Mithridates, and had maintained at his own charge 8000 horse for him in that of Judea. Having, therefore, made his complaint to the senate of the rebellion of his subjects, he demanded that they should oblige them to return to their obedience, as the Romans were engaged to do by the alliance granted him. Pompey's faction obtained for him a compliance with his request. The consul Lentulus, to whom Cilicia, separated from Egypt only by the coast of Syria, had fallen by lot, was charged with the re-establishment of Ptolemy upon the throne.

But before his consulship expired, A. M. 3947. the Egyptians having been informed Ant. J. C. 57. that their king was not dead, as they believed, and that he was gone to Rome, sent thither a solemn embassy, to justify their revolt before the senate. That embassy consisted of more than 100 persons, at the head of whom was a celebrated philosopher, named Dion, who had considerable friends at Rome. Ptolemy having received advice of this, found means to destroy most of those ambassadors, either by poison or the sword, and so much intimidated those whom he could neither corrupt nor kill, that they were afraid either to acquit themselves of their commission, or to demand justice for so many murders. But as all the world knew this cruelty, it made him as highly odious as he was before contemptible; and his immense profusion, in gaining the poorest and most self-interested senators, became so public, that nothing else was talked of throughout the city.

So notorious a contempt of the laws, and such an excess of audacity, excited the indignation of all the persons of integrity in the senate. M. Favonius, the Stoic philosopher, was the first in it who declared himself against Ptolemy. Upon his motion, it was re-

solved that Dion should be ordered to attend, in order to their knowing the truth from his own mouth. But the king's party, composed of that of Pompey and Lentulus, of such as he had corrupted with money, and of those who had lent him sums to corrupt others, acted so openly in his favour, that Dion did not dare to appear; and Ptolemy, having caused him also to be killed some short time after, though he who did the murder was accused in due form of law, the king was exculpated, upon maintaining that he had just cause for the action.

Whether that prince thought he had nothing farther to transact at Rome that demanded his presence, or apprehended receiving some affront, hated as he was, if he continued there any longer, he set out from thence some few days after, and retired to Ephesus, into the temple of the goddess, to wait there the decision of his destiny.

His affair, in fact, made more noise than ever at Rome. One of the tribunes of the people, named C. Cato, an active, enterprising young man, who did not want eloquence, declared himself, in frequent harangues, against Ptolemy and Lentulus, and was hearkened to by the people with singular pleasure and extraordinary applause.

In order to put a new engine in motion, he waited till the new consuls were elected: and as soon as A. M. 3948. Ant. J. C. 56. Lentulus had quitted that office, he produced to the people an oracle of the Sibyl's, which ran thus: "If a king of Egypt, having occasion for aid, applies to you, you shall not refuse him your amity; but, however, you shall not give him any troops; for if you do, you will suffer and hazard much."

The usual form was to communicate this kind of oracles first to the senate, in order to examine whether they were proper to be divulged. But Cato, apprehending that the king's faction might occasion the passing a resolution there to suppress this, which was so opposite to that prince, immediately presented the priests, with whom the sacred books were deposited, to the people, and obliged them by the authority which his office of tribune gave him, to lay what they had found in them before the public, without demanding the senate's opinion.

This was a thunder-stroke to Ptolemy and Lentulus. The words of the Sibyl were too express not to make all the impression upon the vulgar which their enemies desired. So that Lentulus, whose consulship was expired, not being willing to receive the affront to his face, of having the senate's decree revoked, by which he was appointed to reinstate Ptolemy, set out immediately for his province, in quality of proconsul.

He was not deceived. Some days after, one of the new consuls, named Marcellinus, the declared enemy of Pompey, having proposed the oracle to the senate, it was decreed, that regard should be had to it, and that it appeared dangerous for the commonwealth to re-establish the king of Egypt by force.

We must not believe there was any person in the senate so simple, or rather so stupid, as to have any faith in such an oracle. Nobody doubted but that it had been expressly contrived for the present conjuncture, and was the work of some secret political intrigue. But it had been published and approved in the assembly of the people, credulous and superstitious to excess, and the senate could pass no other judgment upon it.

This new incident obliged Ptolemy to change his measures. Seeing that Lentulus had too many enemies at Rome, he abandoned the decree by which he had been commissioned with his re-establishment, and demanded by Ammonius, his ambassador, whom he had left at Rome, that Pompey should be appointed to execute the same commission; because, it not being possible to execute it with open force, upon account of the oracle, he judged, with reason, that it was necessary to substitute, in the room of force, a person of great authority; and Pompey was at that time at the highest pitch of his glory, occasioned by his success in having destroyed Mithridates, the greatest and most powerful king Asia had seen since Alexander.

The affair was discussed in the senate, and debated

a Dion. Cass. l. xxxix. p. 97, 98. Plin. l. xxxiii. c. 10. Cic. ad Famil. l. i. ep. 1.—1. Id. in Piso. n. 48—50. Id. pro. Cæl. n. 23, 24.

with great vivacity by the different parties that rose up in it. The difference of opinions caused several sittings to be spent without any determination. Cicero never quitted the interest of Lentulus, his intimate friend, who, during his consulship, had infinitely contributed to his recall from banishment. But what means were there to render him any service, in the condition in which things stood? And what could that proconsul do against a great kingdom, without using force of arms, which was expressly forbidden by the oracle? In this manner, people of little wit and subtilty, that were not used to consider things in different lights, would have thought. The oracle only prohibited giving the king any troops for his re-establishment. Could not Lentulus have left him in some place near the frontiers, and still go with a good army to besiege Alexandria? After he had taken it, he might have returned, leaving a strong garrison in the place, and then sent the king thither, who would have found all things disposed for his reception without violence or troops. This was Cicero's advice; to confirm which, I shall repeat his own words, taken from a letter written by him at that time to Lentulus: "You are the best judge," says he, "as you are master of Cilicia and Cyprus, of what you can undertake and effect. If it seems practicable for you to take Alexandria, and possess yourself of the rest of Egypt, it is, without doubt, both for your own honour, and that of the commonwealth, that you should go thither with your fleet and army, leaving the king at Ptolemais, or in some other neighbouring place; in order that, after you have appeased the revolt, and left strong garrisons where necessary, that prince may safely return thither. In this manner you will restate him, according to the senate's first decree; and he will be restored without troops, which your zealots assure us is the direction of the Sibyl." Would one believe that a grave magistrate, in an affair so important as that at present in question, should be capable of an evasion, which appears so little consistent with the integrity and probity upon which Cicero valued himself? It was because he reckoned the pretended oracle of the Sibyl to be what indeed it was, that is to say, a mere contrivance and imposture.

Lentulus, stopped by the difficulties of that enterprise, which were great and real, was afraid to engage in it, and took the advice Cicero gave him in the conclusion of his letter, where he represented, "That all the world would judge of his conduct from the event;" that therefore he had only to take his measures so well, as to assure his success; and that otherwise, he would do better not to undertake it."

Gabinus, who commanded in Syria in the quality of proconsul, was less apprehensive and less cautious. Though every proconsul was prohibited by a positive law to quit his province or declare any war whatsoever, even upon the nearest borderer, without an express order of the senate, he had marched to the aid of Mithridates, prince of Parthia, who had been expelled by the king, his brother, from

A. M. 3949. Media, which kingdom had fallen to Ant. J. C. 55. He had already passed the Euphrates with his army for that purpose, when Ptolemy joined him with letters from Pompey, their common friend and patron, who had very lately been declared consul for the year ensuing. By those letters he conjured Gabinus to do his utmost in favour of the proposals that that prince should make him, with regard to his re-establishment in his kingdom. However dangerous that conduct might be, the authority of Pompey, and, still more, the hope of considerable gain, made Gabinus begin to waver. The pressing remonstrances of Antony, who sought occasion to signalize himself, and was besides inclin-

ed to please Ptolemy, whose entreaties flattered his ambition, fully determined him. This was the famous Mark Antony, who afterwards formed the second triumvirate with Octavius and Lepidus. Gabinus had engaged him to follow him into Syria, by giving him the command of his cavalry. The more dangerous the enterprise, the more Gabinus thought he had a right to make Ptolemy pay dear for it. The latter, who found no difficulty in agreeing to any terms, offered him for himself and the army 10,000 talents, or 1,500,000*l.* the greatest part to be advanced immediately in ready money, and the rest as soon as he should be reinstated. Gabinus accepted the offer without hesitation.

Egypt had continued under the government of queen Berenice. As soon as she ascended the throne, the Egyptians had sent to offer the crown, and Berenice, to Antiochus Asiaticus, in Syria, who, by his mother Seleus's side, was the nearest heir male. The ambassadors found him dead, and returned; they brought an account that his brother Seleucus, surnamed Cybiosactes, was still alive. The same offers were made to him, which he accepted. He was a prince of mean and sordid inclinations, and had no thoughts but of amassing money. His first care was to cause the body of Alexander the Great to be put into a coffin of glass, in order to seize that of massy gold, in which it had lain untouched till then. This action, and many others of a like nature, having rendered him equally odious to his queen and subjects, she caused him to be strangled soon after. He was the last prince of the race of the Seleucidae. She afterwards espoused Archelaus, high-priest of Comana, in Pontus, who called himself the son of the great Mithridates, though, in fact, he was only the son of that prince's chief general.

Gabinus, after having passed the Euphrates, and crossed Palestine, marched directly into Egypt. What was most to be feared in this war, was the way by which they must necessarily march to arrive at Pelusium; for they could not avoid passing plains covered with sands of such a depth as was terrible to think on, and so parched, that there was not a single drop of water the whole length of the fens of Serbonis. Antony, who was sent before with the horse not only seized the passes, but having taken Pelusium the key of Egypt on that side, with the whole garrison, he made the way secure for the rest of the army and gave his general great hopes of success in the expedition.

The enemy derived considerable advantage from the desire of glory which influenced Antony. For Ptolemy had no sooner entered Pelusium, than, urged by the violence of his hate and resentment, he would have put all the Egyptians in it to the sword. But Antony, who rightly judged that that act of cruelty would disgrace himself, opposed it, and prevented Ptolemy from executing his design. In all the battles and encounters which immediately followed one another, he not only gave proofs of his great valour, but distinguished himself by all the conduct of a great general.

As soon as Gabinus received advice of Antony's good success, he entered the heart of Egypt. It was in winter, when the waters of the Nile are very low, and consequently the properest time for the conquest of it. Archelaus, who was brave, able, and experienced, did all that could be done in his defence, and disputed his ground very well with the enemy. After he quitted the city in order to march against the Romans, when it was necessary to encamp and break ground for the intrenchments, the Egyptians, accustomed to live an idle and voluptuous life, raised an outcry, that Archelaus should employ the mercenaries in such work at the expense of the public. What could be expected from such troops in a battle? They were, in fact, soon put to the rout. Archelaus was killed, fighting valiantly. Antony, who had been his particular friend and guest, having found his body upon the field of battle, adorned it in a royal manner,

and solemnized his obsequies with great magnificence. By this action he left behind him a great name in Alexandria, and acquired amongst the Romans who served with him in this war the reputation of a man of singular valour and exceeding generosity.

Egypt was soon reduced, and obliged to receive Auletes, who took entire possession of his dominions. In order to strengthen him in it, Gabinus left him some Roman troops for the guard of his person. Those troops contracted at Alexandria the manners and customs of the country, and abandoned themselves to the luxury and effeminacy which reigned there more than in any other city. Auletes put his daughter Berenice to death, for having worn the crown during his exile; and afterwards got rid, in the same manner, of all the rich persons who had been of the adverse party. He had occasion for the confiscation of their estates, to make up the sum he had promised to Gabinus, to whose aid he was indebted for his re-establishment.

The Egyptians suffered all these violences without murmuring.¹ But, some days after, a Roman soldier having accidentally killed a cat, neither the fear of Gabinus nor the authority of Ptolemy could prevent the people from tearing him to pieces upon the spot, to avenge the insult done to the gods of the country; for cats were of that number.

Nothing farther is known with respect to the life of Ptolemy Auletes,² except that C. Rabirius Posthumus, who had either lent him, or caused to be lent him, the greatest part of the sums he had borrowed at Rome, having gone to him, in order to procure payment when he was entirely reinstated, that prince gave him to understand that he despaired of satisfying him, unless he would consent to take upon him the care of his revenues, by which means he might reimburse himself by little and little with his own hands. The unfortunate creditor having accepted that offer out of fear of losing his debt if he refused it, the king soon found a pretence for causing him to be imprisoned, though one of the oldest and dearest of Caesar's friends, and though Pompey was in some measure security for the debt, as the money was lent, and the obligations executed, in his presence, and by his procurement, in a country-house of his near Alba.

Rabirius thought himself too happy in being able to escape from prison and Egypt more miserable than he had gone thither. To complete his disgrace, he was prosecuted in form as soon as he returned to Rome, for having aided Ptolemy in corrupting the senate, by the sums he had lent him for that purpose; of having dishonoured his quality of Roman knight, by the employment he had accepted in Egypt; and lastly, of having shared in the money which Gabinus brought from thence, with whom, it was alleged, he had connived. Cicero's oration in his defence, which we still have, is an eternal monument of the ingratitude and perfidy of this unworthy king.

Ptolemy Auletes died in the peace-
A. M. 3953. able possession of the kingdom of
Ant. J. C. 51. Egypt, about four years after his re-establishment.³ He left two sons and two daughters. He bequeathed his crown to the eldest son and daughter, and ordered by his will that they should marry together, according to the custom of that house, and govern jointly. And because they were both very young (for the daughter, who was the eldest, was only seventeen years of age,) he left them under the guardianship of the Roman senate. This was the famous Cleopatra, whose history it remains for us to relate. We find the people appointed Pompey the young king's guardian, who some years after so basely ordered him to be put to death.⁴

SECTION II.—POTHINUS AND ACHILLAS, MINISTERS OF THE YOUNG KING, EXPEL CLEOPATRA. SHE RAISES TROOPS TO RE-ESTABLISH HERSELF. POMPEY, AFTER HAVING BEEN OVERTHROWN AT PHARSALIA, RETIRES INTO EGYPT. HE IS ASSASSINATED THERE. CÆSAR, WHO PURSUED HIM, AR-

RIVES AT ALEXANDRIA, WHERE HE IS INFORMED OF HIS DEATH, WHICH HE SEEMS TO LAMENT. HE ENDEAVOURS TO RECONCILE THE BROTHER AND SISTER, AND FOR THAT PURPOSE SENDS FOR CLEOPATRA, OF WHOM HE SOON BECOMES ENAMOURED. GREAT COMMOTIONS ARISE AT ALEXANDRIA, AND SEVERAL BATTLES ARE FOUGHT BETWEEN THE EGYPTIANS AND CÆSAR'S TROOPS, WHEREIN THE LATTER HAVE ALMOST ALWAYS THE ADVANTAGE. THE KING HAVING BEEN DROWNED IN FLYING AFTER A SEA-FIGHT, ALL EGYPT SUBMITS TO CÆSAR. HE SETS CLEOPATRA, WITH HER YOUNGER BROTHER, UPON THE THRONE, AND RETURNS TO ROME.

LITTLE is known of the beginning of the reign of Cleopatra and her brother.⁵ That prince was a minor, under the tuition of Pothinus the eunuch, and of Achilles the general of his army. Those two ministers, no doubt to engross to themselves the whole administration of the public affairs, had deprived Cleopatra, in the king's name, of the share in the sovereignty left her by the will of Auletes. Injured in this manner, she went into Syria and Palestine to raise troops in those countries, in order to assert her rights by force of arms.

It was exactly at this conjuncture of the quarrel between the brother and sister, that Pompey, after having lost the battle of Pharsalia, fled to Egypt; conceiving, that he should find there an open and secure asylum in his misfortunes. He had been the protector of Auletes, the father of the reigning king, and it was solely to Pompey's influence that he was indebted for his re-establishment. He was in hopes of finding the son grateful, and of being powerfully assisted by him. When he arrived, Ptolemy was upon the coast with his army, between Pelusium and mount Casius, and Cleopatra at no great distance, at the head of her troops also. Pompey, on approaching the coast, sent to Ptolemy to demand permission to land and enter his kingdom.

The two ministers, Pothinus and Achilles, consulted with Theodotus the rhetorician, the young king's preceptor, and with some others, what answer they should make: Pompey in the mean time waited the result of that council, and chose rather to expose himself to be the foot-ball of three unworthy persons who governed the prince, than to owe his safety to Caesar, who was his father-in-law, and the greatest of the Romans. This council differed in opinion; some were for receiving him, others for having him told to seek a retreat elsewhere. Theodotus approved neither of these methods; and displaying all his eloquence, undertook to demonstrate, that there was no other choice to be made, than that of ridding themselves of him. His reason was, because, if they received him, Caesar would never forgive the having assisted his enemy: if they sent him away without aid, and affairs should take a turn in his favour, he would not fail to revenge himself upon them for their refusal. That therefore there was no security for them, but in putting him to death; by which means they would gain Caesar's friendship, and prevent the other from ever doing them any hurt; for said he according to the proverb, "Dead men do not bite."

This advice prevailed, as being in their opinion the wisest and most safe. Achilles, Septimius, a Roman officer in the service of the king of Egypt, and some others, were charged with putting it into execution. They went to take Pompey on board a shallop, under the pretext that large vessels could not approach the shore without difficulty. The troops were drawn up on the sea-side, as with design to do honour to Pompey, with Ptolemy at their head. The perfidious Septimius tendered his hand to Pompey in the name of his master, and bade him come to a king, his friend, whom he ought to regard as his ward and son. Pompey then embraced his wife Cornelia, who was already in tears for his death; and, after having repeated these verses of Sophocles, "Every man who en-

ters the court of a tyrant becomes his slave, though free before," he went into the shallop. When they saw themselves near the shore, they stabbed him before the king's eyes, cut off his head and threw his body upon the strand, where it had no other funeral than what one of his freed-men gave it with the assistance of an old Roman, who was there by chance. They raised him a wretched funeral-pile, and for that purpose made use of some fragments of an old wreck, that had been driven ashore there.

Cornelia had seen Pompey massacred before her eyes. It is easier to imagine the condition of a woman in the height of grief from so tragical an object, than to describe it. Those who were in her galley, and in two other ships in company with it, made the coast resound with the cries they raised; and weighing anchor immediately, set sail before the wind, which blew fresh as soon as they got out to sea: this prevented the Egyptians, who were getting ready to chase them, from pursuing their design.

Cæsar made all possible haste to arrive in Egypt, whither he suspected Pompey had retired, and where he was in hopes of finding him still alive. That he might be there the sooner, he carried very few troops with him; only 800 horse and 3200 foot. He left the rest of his army in Greece and Asia Minor, under his lieutenant-generals, with orders to make all the advantages of his victory which it would admit, and to establish his authority in all those countries. As for his own person, confiding in his reputation, and the success of his arms at Pharsalia, and reckoning all places secure for him, he made no scruple to land at Alexandria with the few people he had. He was very high paying dear for his temerity.

Upon his arrival he was informed of Pompey's death, and found the city in great confusion. Theodotus believing he should do him an exceeding pleasure, presented him the head of that illustrious fugitive. He wept at seeing it, and turned away his eyes from a spectacle that gave him horror. He even caused it to be interred with all the usual solemnities. And the better to express his esteem for Pompey, and the respect he had for his memory, he received with great kindness, and loaded with favours, all who had adhered to him, and were then in Egypt; and wrote to his friends at Rome, that the highest and most grateful advantage of his victory was to find every day some new occasion to preserve the lives, and do services to some of those citizens, who had borne arms against him.

The commotions increased every day at Alexandria, and abundance of murders were committed there; the city having neither law nor government, because without a master. Cæsar, clearly perceiving that the small number of troops with him were far from being sufficient to awe an insolent and seditious populace, gave orders for the legions he had in Asia to march thither as soon as possible. It was not in his power to leave Egypt, because of the Etesian winds, which in that country blow continually during the dog-days, and prevent all vessels from quitting Alexandria; as those winds are then always full north. Not to lose time, he demanded the payment of the money due to him from Auletes, and took cognizance of the dispute between Ptolemy and his sister Cleopatra.

We have seen, that when Cæsar was consul for the first time, Auletes had gained him by the promise of 6000 talents, and by that means had procured himself to be established upon the throne, and declared the friend and ally of the Romans. The king had paid him only a part of that sum, and had given him a bond for the remainder.

Cæsar therefore demanded what was unpaid, which he wanted for the subsistence of his troops, and urged his claim with rigour. Pothinus, Ptolemy's first minister, employed various stratagems to make this rigour appear still greater than it really was. He plundered the temples of all the gold and silver which was found in them, and made the king and all the

great persons of the kingdom eat out of earthen or wooden vessels; insinuating underhand, that Cæsar had seized upon all the silver and gold plate, in order to render him odious to the populace by such reports, which were not destitute of probability in appearance, though entirely groundless.

But what finally incensed the Egyptians against Cæsar, and made them at last take arms, was the haughtiness with which he acted as judge between Ptolemy and Cleopatra, in causing them to be cited to appear before him for the decision of their dispute. We shall soon see upon what he founded his authority for proceeding in that manner. He therefore decreed in form, that they should disband their armies, should appear and plead their cause before him, and receive such sentence as he should pass between them. This order was looked upon in Egypt as a violation of the royal dignity, which, being independent, acknowledged no superior, and could be judged by no tribunal. Cæsar replied to these complaints, that he acted only in virtue of being appointed arbiter by the will of Auletes, who had put his children under the guardianship of the senate and people of Rome, the whole authority of which was then vested in his person, in quality of consul: that, as guardian, he had a right to arbitrate between them; and that all he pretended to was, as executor of the will, to establish peace between the brother and sister. This explanation having facilitated the affair, it was at length brought before Cæsar, and advocates were chosen to plead the cause.

But Cleopatra, who knew Cæsar's foible, believed that her presence would be more persuasive than any advocate she could employ with her judge. She caused him to be told, that she perceived that those whom she employed in her behalf betrayed her, and demanded his permission to appear in person. Plutarch says it was Cæsar himself who pressed her to come and plead her cause.

That princess took nobody with her, of all her friends, but Apollodorus the Sicilian; got into a little boat, and arrived at the bottom of the walls of the citadel of Alexandria, when it was quite dark night. Finding that there were no means of entering without being known, she thought of this stratagem. She laid herself at length in the midst of a bundle of clothes, Apollodorus wrapped it up in a cloth, tied up with a thong, and in that manner carried it through the gate of the citadel to Cæsar's apartment, who was far from being displeased with the stratagem. The first sight of so beautiful a person had all the effect upon him she had desired.

Cæsar sent the next day for Ptolemy, and pressed him to take her again, and be reconciled with her. Ptolemy saw plainly that his judge was become his adversary; and having learned that his sister was then in the palace, and even in Cæsar's own apartment, he quitted it in the utmost fury, and in the open street rent the diadem off his head, tore it to pieces, and threw it on the ground; crying out, with his face bathed in tears, that he was betrayed; and relating the circumstances to the multitude who assembled round him. In a moment the whole city was in an uproar. He put himself at the head of the populace, and led them on tumultuously to charge Cæsar with all the fury natural on such occasions.

The Roman soldiers, whom Cæsar had with him secured the person of Ptolemy. But as all the rest who knew nothing of what was passing, were dispersed in the several quarters of that great city, Cæsar would inevitably have been overpowered and torn to pieces by that furious populace, if he had not had the presence of mind to show himself to them from a part of the palace so high that he had nothing to fear upon it; from hence he assured them, that they would be fully satisfied with the judgment he should pass. Those promises appeased the Egyptians a little.

The next day he brought out Ptolemy and Cleopatra into an assembly of the people, summoned by his order. After having caused the will of the late king to be read, he decreed, as guardian and arbitrator, that Ptolemy and Cleopatra should reign jointly in Egypt, according to the intent of that will; and that Cæsar the younger son, and Arsinoë the young

* Cæsar confusus famâ rerum gestarum, infirmis auxiliis prædici non dubitaverat; atque omnem sibi locum tutum fore existimabat. Cæsar.

er daughter, should reign in Cyprus. He added the last article to appease the people; for it was an absolute gift that he made them, as the Romans were actually in possession of that island. But he feared the effects of the Alexandrian's fury; and it was to extricate himself out of his present danger that he made that concession.

Every one was satisfied and charmed with this decree, except Pothinus. A. M. 3957. Ant. J. C. 47. As it was he who had occasioned the breach between Cleopatra and her brother, and the expulsion of that princess from the throne, he had reason to apprehend that the consequences of this accommodation would prove fatal to him. To prevent the effect of Cæsar's decree, he inspired the people with new subjects of jealousy and discontent. He gave out, that it was only through fear and by force that Cæsar had granted this decree, which would not long subsist; and that his true design was to place Cleopatra alone upon the throne. This was what the Egyptians exceedingly feared, not being able to endure that a woman should govern them alone, and have the sole authority. When he saw that the people came into his views, he made Achilles advance at the head of the army from Pelusium, in order to drive Cæsar out of Alexandria. The approach of that army put all things into their former confusion. Achilles, who had 20,000 good troops, despised Cæsar's small number, and believed he should overpower him immediately. But Cæsar posted his men so well, in the streets and upon the avenues of the quarter in his possession, that he found no difficulty in supporting their attack.

When they saw they could not force him, they changed their measures, and marched towards the port, with design to make themselves masters of the fleet, to cut off his communication with the sea, and to prevent him, in consequence, from receiving succours and convoys on that side. But Cæsar again frustrated their design, by causing the Egyptian fleet to be set on fire, and by possessing himself of the tower of Pharos, which he garrisoned. By this means he preserved and secured his communication with the sea, without which he would have been ruined effectually. Some of the vessels on fire drove so near the quay, that the flames caught the neighbouring houses, from whence they spread throughout the whole quarter of Bruchion. It was at this time that the famous library was consumed, which had been the work of so many kings, and in which there were 400,000 volumes. What a loss was this to literature!

Cæsar, seeing so dangerous a war upon his hands, sent into all the neighbouring countries for aid. He wrote, amongst others, to Domitius Calvinus, whom he had left to command in Asia Minor, and signified to him his danger. That general immediately despatched two legions, the one by land, and the other by sea. That which went by sea arrived in time; the other that marched by land did not go thither at all. Before it had got there, the war was at an end. But Cæsar was best served by Mithridates the Pergamenean, whom he sent into Syria and Cilicia; for he brought him the troops which extricated him out of the danger, as we shall see in the sequel.

Whilst he awaited the aid he had sent for, in order that he might not fight an army so superior in number till he thought fit, he caused the quarter in his possession to be fortified. He surrounded it with walls, and flanked it with towers and other works. Those lines included the palace, a theatre very near it, which he made use of as a citadel, and the way that led to the port.

Ptolemy all this while was in Cæsar's hands; and Pothinus, his governor and first minister, who coincided with Achilles, gave him advice of all that passed, and encouraged him to push the siege with vigour. One of his letters was at last intercepted; and his treason being thereby discovered, Cæsar ordered him to be put to death.

Ganymedes another eunuch of the palace, who educated Arsinoë the youngest of the king's sisters, apprehending the same fate, because he had shared in that treason, carried off the young princess, and escaped into the camp of the Egyptians; who not

having had, till then, any of the royal family at their head, were overjoyed at her presence, and proclaimed her queen. But Ganymedes, who entertained thoughts of supplanting Achilles, caused that general to be accused of having given up the fleet to Cæsar that had been set on fire by the Romans, caused him to be put to death, and the command of the army to be transferred to himself. He took also upon him the administration of all other affairs; and undoubtedly did not want capacity for the office of a prime minister, probably only excepted, which is often reckoned little or no qualification: for he had all the necessary penetration and activity, and contrived a thousand artful stratagems to distress Cæsar during the continuance of this war.

For instance, he found means to spoil all the fresh water in his quarter, and was very near destroying him by that means. For there was no other fresh water in Alexandria, than that of the Nile. In every house were vaulted reservoirs, where it was kept. Every year, upon the great swell of the Nile, the water of that river came in by a canal, which had been cut for that purpose; and by a sluice, made with that design, was turned into the vaulted reservoirs, which were the cisterns of the city, where it grew clear by degrees. The masters of houses and their families drank of this water; but the poorer sort of people were forced to drink the running water, which was muddy and very unwholesome; for there were no springs in the city. Those caverns were made in such a manner, that they all had communication with each other. This provision of water made at one time served for the whole year. Every house had an opening like the mouth of a well, through which the water was taken up either in buckets or pichers. Ganymedes caused all the communications with the caverns in the quarters of Cæsar to be stopped up; and then found means to turn the sea-water into the latter, and thereby spoiled all his fresh water. As soon as they perceived that the water was spoiled, Cæsar's soldiers made such a noise, and raised such a tumult, that he would have been obliged to abandon his quarter, very much to his disadvantage, if he had not immediately thought of ordering wells to be sunk, where, at last, springs were found which supplied them with water enough to make amends for that which was spoiled.

After that, upon Cæsar's receiving advice that the legion which Calvinus had sent by sea was arrived upon the coast of Libya, which was not very distant, he advanced with his whole fleet to convoy it safely to Alexandria. Ganymedes was apprized of this, and immediately assembled all the Egyptian ships he could get, in order to attack him upon his return. A battle actually ensued between the two fleets. Cæsar had the advantage, and brought his legion without danger into the port of Alexandria; and had not the night come on, the ships of the enemy would not have escaped.

To repair that loss, Ganymedes drew together all the ships from the mouths of the Nile, and formed a new fleet, with which he entered the port of Alexandria. A second action was unavoidable. The Alexandrians climbed in throngs to the tops of the houses next the port, to be spectators of the fight, and awaited the success with fear and trembling; lifting up their hands to heaven to implore the assistance of the gods. The all of the Romans was at stake, as they had no resource left if they lost this battle. Cæsar was again victorious. The Rhodians, by their valour and skill in naval affairs, contributed exceedingly to this victory.

Cæsar, to make the best of it, endeavoured to seize the isle of Pharos, where he landed his troops after the battle, and to possess himself of the mole, called the Heptastadion, by which it was joined to the continent. But after having obtained several advantages he was repulsed with the loss of more than 800 men and was very near falling himself in his retreat. For the ship in which he had designed to get off, being

¹ There are to this day exactly the same kind of caves at Alexandria, which are filled once a year, as at that time. *Theracot's Travels.*

ready to sink on account of the great number of people who had entered it with him, he threw himself into the sea, and with great difficulty swam to the next ship. Whilst he was thus swimming he held one hand above the water, in which were papers of consequence, and swam with the other, so that they were not wetted.

The Alexandrians, seeing that ill success itself only served to give Caesar's troops new courage, entertained thoughts of making peace, or at least pretended such a disposition. They sent deputies to demand their king of him; assuring him, that his presence alone would put an end to all differences. Caesar, who well knew their subtle and deceitful character, was not at a loss to comprehend their professions; but as he hazarded nothing in giving them up their king's person, and, if they failed in their promises, the fault would be entirely on their side, he thought it incumbent on him to grant their demand. He exhorted the young prince to take advantage of this opportunity to inspire his subjects with sentiments of peace and equity; to redress the evils with which a war very imprudently undertaken had distressed his dominions; to approve himself worthy of the confidence he reposed in him, by giving him his liberty; and to show his gratitude for the services he had rendered his father. Ptolemy, early instructed by his masters in the art of dissimulation and deceit, begged of Caesar with tears in his eyes, not to deprive him of his presence, which was a much greater satisfaction to him, than to reign over others. The sequel soon explained how much sincerity there was in those tears and professions of amity. He was no sooner at the head of his troops, than he renewed hostilities with more vigour than ever. The Egyptians endeavoured, by means of their fleet, to cut off Caesar's provisions entirely. This occasioned a new fight at sea, near Canopus, in which Caesar was again victorious. When this battle was fought, Mithridates of Pergamus was upon the point of arriving with the army which he was bringing to the aid of Caesar.

He had been sent into Syria and Cilicia to assemble all the troops he could, and to march them to Egypt.² He acquitted himself of his commission with such diligence and prudence, that he had soon formed a considerable army. Antipater the Idumean contributed very much towards it. He had not only joined him with 3000 Jews, but engaged several neighbouring princes of Arabia and Coele-syria, and the free cities of Phœnicia and Syria also, to send him troops. Mithridates, with Antipater, who accompanied him in person, marched into Egypt; and upon arriving before Pelusium, they carried that place by storm. They were indebted principally to Antipater's bravery for the taking of this city; for he was the first that mounted the breach and got upon the wall, and thereby opened the way for those who followed him to carry the town.

On their route from thence to Alexandria, it was necessary to pass through the country of Onion,³ all the passes of which had been seized by the Jews who inhabited it. The army was there put to a stand, and their whole design was upon the point of miscarrying, if Antipater, by his influence, and that of Hyrcanus, from whom he brought them letters, had not engaged them to espouse Caesar's party. Upon the spreading of that news, the Jews of Memphis did the same, and Mithridates received from both all the provisions his army had occasion for. When they were near the Delta, Ptolemy detached a flying army to dispute the passage of the Nile with them. A battle was fought in consequence. Mithridates put himself at the head of part of his army, and gave the command of the other to Antipater. Mithridates's wing was soon broken, and obliged to give way; but Antipater, who had defeated the enemy on his side, came to his relief. The battle began afresh, and the enemy were

defeated. Mithridates and Antipater pursued them made a great slaughter, and regained the field of battle. They took even the enemy's camp, and obliged those who remained to repass the Nile, in order to escape.

Ptolemy then advanced with his whole army, in order to overpower the victors. Caesar also marched to support them; and as soon as he had joined them came directly to a decisive battle, in which he obtained a complete victory. Ptolemy, in endeavouring to escape in a boat, was drowned in the Nile. Alexandria and all Egypt submitted to the victor.

Caesar returned to Alexandria about the middle of our January; and not finding any further opposition to his orders, gave the crown of Egypt to Cleopatra, in conjunction with Ptolemy her other brother. This was in effect giving it to Cleopatra alone; for that young prince was only eleven years old. The passion which Caesar had conceived for that princess was properly the sole cause of his embarking in so dangerous a war. He had by her one son, called Cæsarion, whom Augustus caused to be put to death when he became master of Alexandria. His affection for Cleopatra kept him much longer in Egypt than his affairs required. For though every thing was settled in that kingdom by the end of January, he did not leave it till the end of April, according to Appian, who says he stayed there nine months. Now he had arrived there only about the end of July the year before.

Caesar passed whole nights in feasting with Cleopatra.⁴ Having embarked with her upon the Nile he carried her through the whole country with a numerous fleet, and would have penetrated into Ethiopia, if his army had not refused to follow him. He had resolved to bring her to Rome, and to marry her; and intended to have caused a law to pass in the assembly of the people, by which the citizens of Rome should be permitted to marry such and as many wives as they thought fit. Helvius Cinna, the tribune of the people, declared, after his death, that he had prepared a harangue, in order to propose that law to the people, not being able to refuse his assistance upon the earnest solicitation of Caesar.

He carried Arsinoë, whom he had taken in this war to Rome, and she walked in his triumph in chains of gold; but immediately after that solemnity he set her at liberty. He did not permit her, however, to return into Egypt, lest her presence should occasion new troubles, and frustrate the regulations he had made in that kingdom. She chose the province of Asia for her residence; at least it was there that Antony found her after the battle of Philippi, and caused her to be put to death at the instigation of her sister Cleopatra.

Before he left Alexandria, Caesar, in gratitude for the aid he had received from the Jews, caused all the privileges they enjoyed to be confirmed; and ordered a column to be erected, on which, by his command, all those privileges were engraven, with the decree confirming them.

What at length made him quit Egypt,⁵ was the war with Pharnaces, king of the Cimmerian Bosphorus, and son of Mithridates, the last king of Pontus. He fought a great battle with him near the city of Zela,⁶ defeated his whole army, and drove him out of the kingdom of Pontus. To denote the rapidity of his conquest, in writing to one of his friends, he made use of only these three words, *Veni, vidi, vici*; that is to say, I came, I saw, I conquered.

SECTION III.—CLEOPATRA CAUSES HER YOUNGER BROTHER TO BE PUT TO DEATH, AND REIGNS ALONE. THE DEATH OF JULIUS CÆSAR HAVING MADE WAY FOR THE TRIUMVIRATE FORMED BETWEEN ANTONY, LEPIDUS, AND YOUNG CÆSAR CALLED ALSO OCTAVIANUS, CLEOPATRA DECLARES HERSELF FOR THE TRIUMVIRS. SHE GOES TO ANTONY AT TARSUS, GAINS AN ABSOLUTE ASCENDANT OVER HIM, AND BRINGS HIM WITH HER TO ALEXANDRIA. ANTONY GOES TO ROME, WHERE HE

ESPOUSES OCTAVIA. HE ABANDONS HIMSELF AGAIN TO CLEOPATRA; AND AFTER SOME EXPEDITIONS RETURNS TO ALEXANDRIA, WHICH HE ENTERS IN TRIUMPH. HE THERE CELEBRATES THE CORONATION OF CLEOPATRA AND HER CHILDREN. OPEN RUPTURE BETWEEN CÆSAR AND ANTONY. THE LATTER REPUDIATES OCTAVIA. THE TWO FLEETS PUT TO SEA. CLEOPATRA DETERMINES TO FOLLOW ANTONY. BATTLE OF ACTIUM. CLEOPATRA FLIES, AND DRAWS ANTONY AFTER HER. CÆSAR'S VICTORY IS COMPLETE. HE ADVANCES SOME TIME AFTER AGAINST ALEXANDRIA, WHICH MAKES NO LONG RESISTANCE. TRAGIC DEATH OF ANTONY AND CLEOPATRA. EGYPT IS REDUCED INTO A PROVINCE OF THE ROMAN EMPIRE.

CÆSAR after the war of Alexandria, had re-established Cleopatra upon the throne, and, for form only, had associated her brother with her, who at that time was only eleven years of age. During his minority, all power was in her hands. When he

A. M. 3961. attained his fifteenth year, which Ant. J. C. 43. was the time when, according to the laws of the country, he was to govern for himself, and have a share in the royal authority, she poisoned him, and remained sole queen of Egypt.

In this interval Cæsar had been killed at Rome by the conspirators, at the head of whom were Brutus and Cassius; and the triumvirate, between Antony, Lepidus, and Octavianus Cæsar, had been formed, to avenge the death of Cæsar.

Cleopatra declared herself without hesitation for the triumvirs.² She gave Allienus, the consul, Dolabella's lieutenant, four legions, which were the remains of Pompey's and Crassus's armies, and formed part of the troops which Cæsar had left with her for the defence of Egypt.

A. M. 3962. Ant. J. C. 41. She had also a fleet in readiness for sailing, but it was prevented by storms from setting out. Cassius made himself master of those four legions, and frequently solicited Cleopatra for aid, which she resolutely refused. She sailed some time after with a numerous fleet, to join Antony and Octavianus. A violent storm occasioned the loss of a great number of her ships, and falling sick, she was obliged to return into Egypt.

Antony, after the defeat of Brutus and Cassius in the battle of Philippi, Ant. J. C. 42. having passed over into Asia, in order to establish the authority of the triumvirate there, the kings, princes, and ambassadors of the East, came thither in throngs to make their court to him. He was informed that the governors of Phœnicia, which was dependent upon the kingdom of Egypt, had sent Cassius aid against Dolabella. He cited Cleopatra before him, to answer for the conduct of her governors; and sent one of his lieutenants to oblige her to come to him in Cilicia, whither he was going to assemble the states of that province. That step was, from its consequences, very fatal to Antony, and completed his ruin. His love for Cleopatra having awakened passions in him, till then concealed or asleep, inflamed them even to madness, and finally deadened and extinguished the few sparks of honour and virtue which he might perhaps still retain.

Cleopatra, assured of her charms by the proof she had already so successfully made of them upon Julius Cæsar, was in hopes that she could also very easily captivate Antony; and the more, because the former had known her only when she was very young, and had no experience in the world; whereas she was going to appear before Antony, at the age wherein women, with the bloom of their beauty, unite the whole force of wit and address to manage and conduct the greatest affairs. Cleopatra was at that time five-and-twenty years old. She provided herself, therefore, with exceeding rich presents, great sums

of money, and especially with most magnificent habits and ornaments; and with still higher hopes in her attractions and the graces of her person, more powerful than dress, or even gold, she began her voyage.

Upon her way she received several letters from Antony, who was at Tarsus, and from his friends, pressing her to hasten her journey; but she only laughed at their eagerness, and used never the more diligence for them. Having crossed the sea of Pamphylia, she entered the Cydnus, and, going up that river, landed at Tarsus. Never was equipage more splendid and magnificent than hers. The stern of her ship flamed with gold, the sails were purple, and the oars inlaid with silver. A pavilion of cloth of gold was raised upon the deck, under which appeared the queen, robed like Venus, and surrounded with the most beautiful virgins of her court, of whom some represented the Nereides, and others the Graces. Instead of trumpets were heard flutes, hautboys, harps, and other such instruments of music, warbling the softest airs, to which the oars kept time, and rendered the harmony more agreeable. Perfumes were burning on the deck, which spread their odours to a great distance upon the river, and on each side of its banks, that were covered with an infinitude of people, whom the novelty of the spectacle had drawn thither.

As soon as her arrival was known, the whole people of Tarsus went out to meet her; so that Antony, who at that time was giving audience, saw his tribunal abandoned by every one, and not a single person with him, but his lictors and domestics. A rumour was spread that it was the goddess Venus who came in masquerade to make Bacchus a visit for the good of Asia.

She was no sooner landed, than Antony sent to compliment and invite her to supper. But she answered his deputies, that she should be very glad to regale him herself, and that she would expect him in the tents she had caused to be got ready upon the banks of the river. He made no difficulty to go thither, and found the preparations of a magnificence not to be expressed. He admired particularly the beauty of the lights, which had been disposed with abundance of art, and whose brilliancy was such, that they made midnight seem bright day.

Antony invited her in his turn, for the next day. But in spite of his utmost endeavours to exceed her in this entertainment, he confessed himself overcome, as well in the splendour as disposition of the feast; and was the first to rally the parsimony and plainness of his own, in comparison with the sumptuousness and elegance of Cleopatra's. The queen, finding nothing but what was gross in the pleasures of Antony, and more expressive of the soldier than the courtier, repaid him in his own coin; but with so much wit and grace, that he was not in the least offended at it. For the beauties and charms of her conversation, attended with all possible sweetness and gaiety, had attractions in them still more irresistible than her form and features, and left upon his mind and heart an indelible impression. She charmed whenever she spoke, such music and harmony were in her utterance, and the very sound of her voice.

Little or no mention was made of the complaints against Cleopatra, which were besides without foundation. She struck Antony so violently with her charms, and gained so absolute an ascendancy over him, that he could refuse her nothing. It was at this time, that at her entreaty he caused Arsinoë, her sister, to be put to death, who had taken refuge in the temple of Diana at Miletus, as in a secure asylum.

Great feasts were made every day.⁴ Some new banquet still outdid that which preceded it, and she seemed to study to excel herself. Antony, at a feast to which she had invited him, was astonished at seeing the riches displayed on all sides, and especially at the great number of gold cups enriched with jewels, and wrought by the most excellent workmen. She told him, with a disdainful air, that those were but trifles, and made him a present of them. The next day the banquet was still more superb. Antony, according

² Joseph. Antig. l. xv. c. 4. Porphy. p. 226.

⁴ Plut. in Anton. p. 926, 932. Dio. l. xlviii. p. 371. Appian. de Bell. Civ. l. v. p. 671.

to custom, had brought a good number of guests along with him, all officers of rank and distinction. She gave them all the vessels and plate of gold and silver used at the entertainment.

Without doubt, in one of these feasts happened what Pliny, and, after him, Macrobius, relate. Cleopatra jested, according to custom, upon Antony's entertainment, as very niggardly and inelegant. Piqued with the raillery, he asked her, with some warmth, what she thought would add to its magnificence? Cleopatra answered coldly, that she could expend more than a million of lives upon one supper. He affirmed that she was merely bragging, that it was impossible, and that she could never make it appear. A wager was laid, and Plancus was to decide it. The next day they came to the banquet. The service was magnificent, but had nothing so very extraordinary in it. Antony calculated the expense, demanded of the queen the price of the several dishes, and with an air of raillery, as secure of victory, told her, that they were still far from a million. "Stay," said the queen, "this is only a beginning. I shall try whether I cannot spend a million only upon myself." A second table was brought, and, according to the order she had before given, nothing was set on it but a single cup of vinegar. Antony, surprised at such a preparation, could not imagine for what it was intended. Cleopatra had at her ears two pearls, the finest that ever were seen, each of which was valued at above 50,000*l*. One of these pearls she took off, threw it into the vinegar, and, after having dissolved it, swallowed it. She was preparing to do as much by the other; Plancus stopped her, and deciding the wager in her favour, declared Antony overcome. Plancus was much in the wrong, to envy the queen the singular and peculiar glory of having swallowed 2,000,000 in two draughts.

Antony was embroiled with Caesar.

A. M. 3964. Whilst his wife Fulvia was very Ant. J. C. 40. tive at Rome in supporting his interests, and the army of the Parthians was upon the point of entering Syria, as if those things did not concern him, he suffered himself to be drawn away by Cleopatra to Alexandria, where they passed their time in games, amusements, and voluptuousness, treating each other every day at excessive and incredible expenses; which may be judged of from the following circumstance.

A young Greek, who went to Alexandria to study physic, upon the great noise those feasts made, had the curiosity to assure himself with his own eyes about them. Having been admitted into Antony's kitchen, he saw, amongst other things, eight wild boars roasting whole at the same time. Upon which he expressed surprise at the great number of guests that he supposed were to be at the supper. One of the officers could not forbear laughing, and told him, that they were not so many as he imagined, and that there would not be above a dozen in all; but that it was necessary every thing should be served in a degree of perfection, which every moment ceases and spoils. "For," added he, "it often happens, that Antony will order his supper, and a moment after forbid it to be served, having entered into some conversation that diverts him. For that reason, not one but many

suppers are provided, because it is hard to know at what time he will think fit to have it set on table."

Cleopatra, lest Antony should escape her, never lost sight of him, nor quitted him day or night, but was always employed in diverting and retaining him in her chains. She played with him at dice, hunted with him, and, when he exercised his troops, was always present. Her sole attention was to amuse him agreeably, and not to leave him time to conceive the least disgust.

One day when he was fishing with an angle, and caught nothing, he was very much vexed on that account, because the queen was of the party, and he was unwilling to seem to want skill or good fortune in her presence. It therefore came into his thoughts to order fishermen to dive secretly under water, and to fasten to his hook some of their large fishes, which they had taken before. That order was executed immediately, and Antony drew up his line several times with a great fish at the end of it. This artifice did not escape the fair Egyptian. She affected great admiration and surprise at Antony's good fortune; but told her friends privately what had passed, and invited them to come the next day and spectators of a like pleasantry. They did not fail. When they were all got into the fishing-boats, and Antony had thrown in his line, she commanded one of her people to dive immediately into the water, to prevent Antony's divers, and to make fast a large salt fish, one of those that come from the kingdom of Pontus, to his hook. When Antony perceived his line had its load, he drew it up. It is easy to imagine what bursts of laughter arose at the sight of that salt fish; and Cleopatra said to him, "Leave the line, good general, to us, the kings and queens of Pharos and Canopus; your business is to fish for cities, kingdoms, and kings."

Whilst Antony amused himself in these puerile sports and trifling diversions, the news he received of Labienus's conquests, at the head of the Parthian army, awakened him from his lethargy, and obliged him to march against them. But having received advice, upon his route, of Fulvia's death, he returned to Rome, where he reconciled himself to young Caesar, whose sister Octavia he married, a woman of extraordinary merit, who was lately become a widow by the death of Marcellus. It was believed this marriage would make him forget Cleopatra. But having begun his march against the Parthians, his passion for the Egyptian, which had something of enchantment in it, rekindled with more violence than ever.

This queen, in the midst of the most violent passions, and the intoxication of pleasures, still retained a taste for polite learning and the sciences. In the place where stood the famous library of Alexandria, which had been burnt some years before, as we have observed, she erected a new one, to the augmentation of which Antony very much contributed, by presenting her with the libraries of Pergamus, in which were above 200,000 volumes. She did not collect books merely for ornament; she made use of them. There were few barbarous nations to whom she spoke by an interpreter; she answered most of them in their own language, the Ethiopians, Troglodytes, Hebrews, Arabians, Syrians, Medes, Parthians. She knew, besides, several other languages; whereas the kings who had reigned before her in Egypt had scarcely been able to learn the Egyptian, and some of them had even forgotten the Macedonian, their natural tongue.

Cleopatra, pretending herself to be the lawful wife of Antony, saw him marry Octavia with great emotion, whom she looked upon as her rival. Antony, to appease her, was obliged to make her magnificent presents. He gave her Phenicia, the Lower Syria, the island of Cyprus, with a great part of Cilicia. To these he added part of Judea and Arabia. These great presents, which considerably abridged the extent of the empire, very much afflicted the Romans, and they were no less offended at the excessive honours which he paid this foreign princess.

⁷ *Epiphan. de mens. et. pond. • Plut. in Anton. p. 927*

Two years passed, during which Antony made several voyages to Rome, and undertook some expeditions against the Parthians and Armenians, in which he acquired no great honour.

It was in one of these expeditions, that the temple of Anahis was plundered, a goddess much celebrated amongst a certain people of Armenia. Her statue of massy gold was broken in pieces by the soldiers, with which several of them were considerably enriched. One of them, a veteran, who afterwards settled at Bologna, in Italy, had the good fortune to receive Augustus in his house, and to entertain him at supper. "Is it true," said that prince, during the repast, talking of this story, "that the man who made the first stroke at the statue of this goddess was immediately deprived of sight, lost the use of his limbs, and expired the same hour?"—"If it were," replied the veteran, with a smile, "I should not now have the honour of seeing Augustus beneath my roof, being myself the rash person who made the first attack upon her, which has been of great service to me. For, if I have any thing, I am entirely indebted for it to the good goddess; upon one of whose legs, my lord, you are now supping."

Antony, believing he had made every thing secure in these countries, led back his troops. From his impatience to rejoin Cleopatra, he hastened his march so much, notwithstanding the rigour of the season, and the continual snows, that he lost 8000 men upon his route, and marched into Phenicia with very few followers. He rested there in expectation of Cleopatra; and, as she was slow in coming, he fell into anxiety, grief, and languor, that visibly preyed upon him. She arrived at length with clothes and great sums of money for his troops.

Octavia, at the same time, had quitted Rome to join him, and was already arrived at Athens. Cleopatra rightly perceived that she came only to dispute Antony's heart with her. She was afraid that with her virtue, wisdom, and gravity of manners, if she had time to make use of her modest, but lively and insinuating attractions, to win her husband, that she would gain an absolute power over him. To avoid which danger, she affected to be dying for love of Antony; and with that view made herself lean and wan, by taking very little nourishment. Whenever he entered her apartment, she looked upon him with an air of surprise and amazement; and when he left her, seemed to languish with sorrow and dejection. She often contrived to appear bathed in tears, and at the same moment endeavoured to dry and conceal them, as if to hide from him her weakness and disorder. Antony, who feared nothing so much as occasioning the least uneasiness to Cleopatra, wrote letters to Octavia, to order her to stay for him at Athens, and to come no farther, because he was upon the point of undertaking some new expedition. And, in fact, at the request of the king of the Medes, who promised him powerful succours, he was making preparations to renew the war against the Parthians.

That virtuous Roman lady, dissembling the wrong he did her, sent to him, to know where it would be agreeable to him to have the presents carried which she had designed for him, since he did not think fit to let her deliver them in person. Antony received this second compliment no better than the first; and Cleopatra, who had prevented his seeing Octavia, would not permit him to receive any thing from her. Octavia was obliged therefore to return to Rome, without having produced any other effect by her voyage, than that of making Antony more inexcusable. This was what Cæsar desired, in order to have a just reason for breaking entirely with him.

When Octavia came to Rome, Cæsar, professing a high resentment of the affront she had received, ordered her to quit Antony's house, and to go to her own. She answered, that she would not leave her husband's house, and that if he had no other reasons for a war with Antony than what related to her, she conjured him to renounce her interests. She accordingly always continued there, as if he had been pre-

sent, and educated with great care and magnificence not only the children he had by her, but also those whom he had by Fulvia. What a contrast is here between Octavia and Cleopatra! In the midst of rebuffs and affronts, how worthy does the one seem of esteem and respect; and the other with all her grandeur and magnificence, of contempt and abhorrence.

Cleopatra omitted no kind of arts to retain Antony in her chains. Tears, caresses, reproaches, menaces, all were employed. By dint of presents she had gained all who approached him, and in whom he placed most confidence. Those flatterers represented to him, in the strongest terms, that it would be absolutely cruel and inhuman to abandon Cleopatra in the mournful condition she then was; and that it would be the death of that unfortunate princess, who loved and lived for him alone. They softened and melted the heart of Antony so effectually, that, for fear of occasioning Cleopatra's death, he returned immediately to Alexandria, and put off the Medes to the following spring.

It was with great difficulty then that he resolved to leave Egypt, and remove himself from his dear Cleopatra. She agreed to attend him as far as the banks of the Euphrates.

A. M. 3970
Ant. J. C. 34.

After having made himself master of Armenia, as much by treachery as force of arms, he returned to Alexandria, which he entered in triumph, dragging at his chariot-wheels the king of Armenia, laden with chains of gold, and presented him in that condition to Cleopatra, who was pleased to see a captive king at her feet. He unbent his mind at leisure after his great fatigues in feasts and parties of pleasure, in which Cleopatra and himself passed days and nights. That vain Egyptian woman, at one of these banquets, seeing Antony flushed with wine, presumed to ask him to give her the Roman empire, which he was not ashamed to promise her.

A. M. 3971.
Ant. J. C. 33.

Before he set out on a new expedition, Antony, to bind the queen to him by new obligations, and to give her new proofs of his being entirely devoted to her, resolved to solemnize the coronation of her and her children. A throne of massy gold was erected for that purpose in the palace, the ascent to which was by several steps of silver. Antony was seated upon this throne dressed in a purple robe embroidered with gold, and with diamond buttons. On his side he wore a scimitar, after the Persian mode, the hilt and scabbard of which were loaded with precious stones; he had a diadem on his brows, and a sceptre of gold in his hand; in order, as he said, that in that equipage he might deserve to be the husband of a queen. Cleopatra sat on his right hand in a brilliant robe, made of the precious linen which was appropriated to the use of the goddess Isis, whose name and habit she had the vanity to assume. Upon the same throne, but a little lower, sat Cæsarion the son of Julius Cæsar and Cleopatra, and the two other children, Alexander and Ptolemy, whom she had by Antony.

Every one having taken the place assigned him, the heralds, by the command of Antony, and in the presence of all the people, to whom the gates of the palace had been thrown open, proclaimed Cleopatra queen of Egypt, Cyprus, Libya, and Cœlesyria, in conjunction with her son Cæsarion. They afterwards proclaimed the other princes kings of kings; and declared, that, till they should possess a more ample inheritance, Antony gave Alexander, the eldest, the kingdoms of Armenia and Media, with that of Parthia, when he should have conquered it; and to the youngest, Ptolemy, the kingdoms of Syria, Phenicia, and Cilicia. Those two young princes were dressed after the mode of the several countries over which they were to reign. After the proclamation, the three princes, rising from their seats, approached the throne, and putting one knee on the ground, kissed the hands of Antony and Cleopatra. They had soon after a

• Hæc mulier Egyptia ab ebrio imperatore, pretium libidinum, Romanorum imperium petiit: et promissit Antonium. Flor. l. iv. c. 2.

train assigned them, proportioned to their new dignity, and each his regiment of guards, drawn out of the principal families of his dominions.

Antony repaired early into Armenia, in order to act against the Parthians, and had already advanced as far as the banks of the Araxes; but the news of what was passing at Rome against him prevented his going on, and induced him to abandon the Parthian expedition. He immediately detached Canidius with sixteen legions to the coast of the Ionian sea, and joined them himself soon after at Ephesus, where he might be ready to act in case of an open rupture between Cæsar and him, which there was great reason to expect.

Cleopatra was of the party; and that occasioned Antony's ruin. His friends advised him to send her back to Alexandria, till the event of the war should be known. But that queen, apprehending that by Octavia's mediation he might come to an accommodation with Cæsar, gained Canidius, by dint of money, to speak in her favour to Antony, and to represent to him, that it was neither just to remove a princess from this war who contributed so much towards it on her side, nor useful to himself; because her departure would discourage the Egyptians, of whom the greatest part of his maritime forces consisted. Besides, continued those who talked in this manner, it did not appear that Cleopatra was inferior, either in prudence or capacity, to any of the princes or kings in his army—she, who had governed so great a kingdom so long, and who might have learned, in her intercourse with Antony, how to conduct the most important and difficult affairs with wisdom and address. Antony did not oppose these remonstrances, which flattered at once his passion and vanity.

From Ephesus he repaired with Cleopatra to Samos, where the greatest part of their troops had their rendezvous, and where they passed their time in feasting and pleasure. The kings in their train exhausted themselves in making their court by extraordinary expenses, and displayed excessive luxury in their entertainments.

It was probably in one of these feasts that the circumstance¹ happened which is related by Pliny. Whatever passion Cleopatra professed for Antony, as he perfectly knew her character for dissimulation, and that she was capable of the blackest crimes, he apprehended, I know not upon what foundation, that she might have thoughts of poisoning him, for which reason he never touched any dish at their banquet till it had been tasted. It was impossible that the queen should not perceive so manifest a distrust. She employed a very extraordinary method to make him sensible how ill founded his fears were: and at the same time, if she had so bad an intention, how ineffectual all the precautions he took would be. She caused the extremities of the flowers to be poisoned, of which the wreaths, worn by Antony and herself at table, according to the custom of the ancients, were composed. When their heads began to grow warm with wine, in the height of their gayety, Cleopatra proposed to Antony to drink off those flowers. He made no difficulty; and, after having plucked off the ends of his wreath with his fingers, and thrown them into his cup filled with wine, he was upon the point of drinking it, when the queen, taking hold of his arm, said to him, "I am the poisoner against whom you take such mighty precaution. If it were possible for me to live without you, judge now whether I wanted either the opportunity or means for such an action." Having ordered a prisoner, condemned to die, to be brought thither, she made him drink that liquor, upon which he died immediately.

The court went from Samos to Athens, where they passed many days in the same excesses. Cleopatra spared no pains to obtain the same marks of affection and esteem as Octavia had received during her residence in that city. But whatever she could do, she could extort from them only forced civilities, which terminated in a trifling deputation, which Antony obliged the citizens to send to her, and at the head

of which he himself would be in quality of a citizen of Athens.

The new consuls, Caius Sosius and Domitius Enobarbus,² having declared openly for Antony, quitted Rome and repaired to him. Cæsar instead of seizing them, or causing them to be pursued, ordered it to be given out, that they went to him by his permission: and declared publicly, that all persons who were so disposed, had his consent to retire whither they thought fit. By that means he remained master at Rome, and was in a condition to decree and act whatever he thought proper for his own interests, or contrary to those of Antony.

When Antony was apprized of this, he assembled all the heads of his party; and the result of their deliberation was, that he should declare war against Cæsar, and repudiate Octavia. He did both. Antony's preparations for the war were so far advanced, that if he had attacked Cæsar vigorously without loss of time, the advantage must inevitably have been wholly on his side; for his adversary was not then in a condition to make head against him either by sea or by land. But voluptuousness prevailed, and the operations were put off to the next year. This was his ruin. Cæsar, by his delay, had time to assemble all his forces.

The deputies sent by Antony to Rome to declare his divorce from Octavia, had orders to command her to quit his house, with all her children, and, in case of refusal, to turn her out by force, and to leave nobody in it but the son of Antony by Fulvia; an indignity the more sensible to Octavia, as a rival was the cause of it. However, stifling her resentment, she answered the deputies only with her tears; and unjust as his orders were, she obeyed them, and removed with her children. She even laboured to appease the people, whom so unworthy an action had incensed against him, and did her utmost to mollify the rage of Cæsar. She represented to them, that it was inconsistent with the wisdom and dignity of the Roman people to enter into such petty differences; that it was only a quarrel between women, which did not merit that they should resent it; and that she should be very wretched if she were the occasion of a new war; she who had consented to her marriage with Antony solely from the hope that it would prove the pledge of a union between him and Cæsar. Her remonstrances had a different effect from her intentions; and the people, charmed with her virtue, had still more compassion for her misfortune, and detestation for Antony than before.

But nothing enraged them to such a height as Antony's will, which he had deposited in the hands of the Vestal virgins. This mystery was revealed by two persons of consular dignity,³ who, not being able to endure the pride of Cleopatra, and the abandoned voluptuousness of Antony, had retired to Cæsar. As they had been witnesses of this will, and knew the secret, they discovered it to Cæsar. The Vestals made great difficulty to give up an instrument confided to their care; alleging in their excuse the faith of trusts, which they were obliged to observe; and were determined to be forced to it by the authority of the people. The will accordingly being brought into the Forum, these three articles were read in it; I. That Antony acknowledged Cæsar as lawful son of Julius Cæsar. II. That he appointed his sons by Cleopatra to be his heirs, with the title of *kings of kings*. III. That he decreed, in case he should die at Rome, that his body, after having been carried in pomp through the city, should be laid the same evening on a bed of state, in order to its being sent to Cleopatra, to whom he left the care of his funeral and interment.

There are some authors, however, who believe this will to be a forgery contrived by Cæsar to render Antony more odious to the people. And indeed what probability was there, that Antony, who well knew to what degree the Roman people were jealous of their rights and customs, should confide to them the execution of a testament which violated them with so much contempt?

¹ Plin. l. xxi. c. 3.

² Plut. in Anton. p. 949—955.

³ Titius and Plancus.

When Cæsar had an army and fleet ready, which seemed strong enough to make head against his enemy, he also declared war on his side. But in the decree enacted by the people to that purpose, he caused it to be expressed, that it was against Cleopatra; it was from a refinement of policy, that he acted in that manner, and did not insert Antony's name in the declaration of war, though actually intended against him. For, besides throwing the blame upon Antony, by making him the aggressor in a war against his country, he did not hurt the feelings of those who were still attached to him, whose number and credit might have proved formidable, and whom he would have been under the necessity of declaring enemies to the commonwealth, if Antony had been expressly named in the decree.

Antony returned from Athens to Samos, where the whole fleet was assembled. It consisted of 500 ships of war of extraordinary size and structure, having several decks one above another, with towers upon the head and stern of a prodigious height; so that those superb vessels upon the sea might have been taken for floating islands. Such great crews were necessary for completely manning those heavy machines, that Antony, not being able to find mariners enough, had been obliged to take husbandmen, artificers, muleteers, and all sorts of people void of experience, and fitter to give trouble than to do real service.

On board this fleet were 200,000 foot and 12,000 horse. The kings of Libya, Cilicia, Cappadocia, Paphlagonia, Comagenia, and Thrace, were there in person; and those of Pontus, Judea, Lyconia, Galatia, and Media, had sent their troops. A more splendid and pompous sight could not be seen than this fleet when it put to sea, and had unfurled its sails. But nothing equalled the magnificence of Cleopatra's galley, all flaming with gold; its sails of purple; its flags and streamers floating in the wind, whilst trumpets, and other instruments of war, made the heavens resound with airs of joy and triumph. Antony followed her close in a galley equally splendid. That queen, intoxicated with her fortune and grandeur, and hearkening only to her unbridled ambition, foolishly threatened the Capitol with approaching ruin, and prepared with her infamous troop of eunuchs utterly to subvert the Roman empire.

On the other side, less pomp and splendour were seen, but more utility. Cæsar had only 250 ships, and 80,000 foot, with as many horse as Antony. But all his troops were chosen men, and on board his fleet were none but experienced seamen. His vessels were not so large as Antony's, but then they were much lighter and fitter for service.

Cæsar's rendezvous was at Brundisium, and Antony advanced to Corcyra. But the season of the year was over, and bad weather came on; so that they were both obliged to retire, and to put their troops into winter-quarters, and their fleets into good ports, till the approach of spring.

Antony and Cæsar, as soon as the season would admit, took the field A. M. 3973. both by sea and land. The two fleets entered the Ambracian gulf in Epirus. Antony's bravest and most experienced officers advised him not to hazard a battle by sea, to send back Cleopatra into Egypt, and to make all possible

haste into Thrace or Macedonia in order to fight there by land; because his army, composed of good troops, and much superior in numbers to Cæsar's, seemed to promise him the victory; whereas a fleet so ill manned as his, how numerous soever it might be, was by no means to be relied on. But Antony had not been susceptible of good advice for a long time, and had acted only to please Cleopatra. That proud princess, who judged of things solely from appearances, believed her fleet invincible, and that Cæsar's ships could not approach it without being dashed to pieces. Besides, she rightly perceived that in case of misfortune it would be easier for her to escape in her ships than by land. Her opinion, therefore, took place against the advice of all the generals.

The battle was fought upon the second of September,² at the mouth of the gulf of Ambracia, near the city of Actium, in sight of both the land armies; the one of which was drawn up in battle array upon the north, and the other upon the south of that strait, expecting the event. The contest was doubtful for some time, and seemed as much in favour of Antony as Cæsar, till the retreat of Cleopatra. That queen, frightened with the noise of the battle, in which every thing was terrible to a woman, took to flight when she was in no danger, and drew after her the whole Egyptian squadron, which consisted of sixty ships of the line; with which she sailed for the coast of Peloponnesus. Antony, who saw her fly, forgetting every thing, forgetting even himself, followed her precipitately, and yielded a victory to Cæsar, which, till then, he had exceedingly well disputed. It, however, cost the victor extremely dear. For Antony's ships fought so well after his departure, that, though the battle began before noon, it was not over when night came on; so that Cæsar's troops were obliged to pass it on board their ships.

The next day Cæsar, seeing his victory complete, detached a squadron in pursuit of Antony and Cleopatra. But that squadron despairing of ever coming up with them, because so far before it, soon returned to join the main body of the fleet. Antony having entered the admiral-galley, in which Cleopatra was, went and sat down at the head of it; where, leaning his elbows on his knees, and supporting his head with his two hands, he remained like a man overwhelmed with shame and rage; reflecting with profound melancholy upon his ill conduct, and the misfortunes it had brought upon him. He kept in that posture, and in those gloomy thoughts during the three days they were going to Ténarus,³ without seeing or speaking to Cleopatra. At the end of that time they saw each other again, and lived together as usual.

The land army had still remained entire, and consisted of eighteen legions and 22,000 horse, under the command of Canidius, Antony's lieutenant-general, and might have made head against Cæsar, and given him abundance of difficulty. But seeing themselves abandoned by their generals, they surrendered to Cæsar, who received them with open arms.

From Ténarus, Cleopatra took the route of Alexandria, and Antony that of Libya, where he had left a considerable army to guard the frontiers of that country. Upon his landing he was informed that Scarpus, who commanded this army, had declared for Cæsar. He was so struck with this news, which he had no reason to expect, that he would have killed himself, and was with difficulty prevented from it by his friends. He, therefore, had no other choice to make than to follow Cleopatra to Alexandria, where she was arrived.

When she approached that port, she was afraid, if her misfortune should be known, that she should be refused entrance. She therefore caused her ships to be crowned, as if she was returned victorious; and no sooner landed, than she caused all the great lords of her kingdom, whom she suspected, to be put to death, lest they should excite seditions against her, when they were informed of her defeat. Antony found her in the midst of these bloody executions.

¹ —Dum Capitolio
Regina dementes ruinas,
Funus et imperio parat,
Contaminato cum grege turpium
Morbo viorum; quidibet impotens
Sperare, fortunæque dulci.

Ebrâ — *Her. Od. xviii. l. 1.*

Whilst drunk with fortune's heady wine
Fill'd with vast hope, though impotent, in arms,
The haughty queen conceives the wild design,
So much her vain ambition charms!
With her polluted band of sapple slaves,
Her silken eunuchs, and her Phœnic knaves,
The Capitol, in dust so level low,
And give Rome's empire, and the world, a last and fatal blow!

² The 4th before the nones of September.

³ Promontory of Laconia.

A. M. 3974. Soon after she formed another very extraordinary design. To avoid falling into Cæsar's hand, who, she foresaw would follow her into Egypt, she designed to have her ships in the Mediterranean carried into the Red Sea, over the isthmus between them, which is no more than thirty leagues broad; and afterwards to put all her treasures on board those ships and others which she already had in that sea: but the Arabians who inhabited the coast having burnt all the ships she had there, she was obliged to abandon her design.

Changing, therefore, her resolution, she thought only of gaining Cæsar, whom she looked upon as her conqueror, and to make him a sacrifice of Antony, whose misfortunes had rendered him indifferent to her. Such was this princess's disposition. Though she loved even to madness, she had still more ambition than love, and the crown being dearer to her than her husband, she entertained thoughts of preserving it at the price of Antony's life. But concealing her sentiments from him, she persuaded him to send ambassadors to Cæsar, to negotiate a treaty of peace with him. She joined her ambassadors with his: but gave them instructions to treat separately for herself. Cæsar would not so much as see Antony's ambassadors. He dismissed Cleopatra's with a favourable answer. He passionately desired to make sure of her person and treasures; her person to adorn his triumph, her treasures to enable him to discharge the debts he had contracted upon account of this war. He therefore gave her reason to conceive great hopes, in case she would sacrifice Antony to him.

The latter, after his return from Libya, had retired into a country-house, which he had caused to be built expressly on the banks of the Nile, in order to enjoy the conversation of two of his friends, who had followed him thither. In his retirement it might have been expected, that he would hear with pleasure the wise discourses of those two philosophers. But as they could not banish from his heart his love for Cleopatra, the sole cause of all his misfortunes, that passion, which they had only suspended, soon resumed its former empire. He returned to Alexandria, abandoned himself again to the charms and caresses of Cleopatra, and, with design to please her, sent deputies again to Cæsar to demand life of him, upon the shameful conditions of passing it at Athens as a private person: provided Cæsar would assure Egypt to Cleopatra and her children.

This second deputation not having met with a more favourable reception than the former, Antony endeavoured to extinguish in himself the sense of his present misfortunes, and the apprehension of those that threatened him, by abandoning himself immoderately to feasting and voluptuousness. Cleopatra and he regaled one another alternately, and strove with emulation to exceed each other in the incredible magnificence of their banquets.

The queen, however, who foresaw what might happen, collected all sorts of poisons, and to try which of them occasioned death with the least pain, she made the experiment of their virtues and strength upon criminals in the prisons condemned to die. Having observed that the strongest poisons caused death the soonest, but with great torment, and that those which were gentle brought on an easy but slow death, she tried the biting of venomous creatures, and caused various kinds of serpents to be applied in her presence to different persons. She made these experiments every day, and discovered at length that the asp was the only one that caused neither torture nor convulsions; but merely throwing the persons bitten into an immediate heaviness and stupefaction, attended with a light sweating upon the face and a numbness of all the organs of sense, gently extinguished life; so that those in that condition were angry when any one awakened them, or endeavoured to make them rise, like people exceedingly sleepy. This was the poison she fixed upon.

To dispel Antony's suspicions and subjects of complaint, she applied herself with more than ordinary solicitude in caressing him. Though she celebrated

her own birth-day with little solemnity, and suitable to her present condition, she kept that of Antony with a splendour and magnificence above what she had ever displayed before; so that many of the guests who came poor to that feast went rich from it.

Cæsar, knowing how important it was to him not to leave his victory imperfect, marched in the beginning of the spring into Syria, and from thence sat down before Pelusium. He sent to summon the governor to open the gates to him; and Seleucus, who commanded there for Cleopatra, having received secret orders upon that head, surrendered the place without waiting a siege. The rumour of this treason spread in the city. Cleopatra, to clear herself of the accusation, put the wife and children of Seleucus into Antony's hands, in order that he might revenge his treachery by putting them to death. What a monster was this princess! The most odious of vices were united in her person; an avowed disregard of modesty, breach of faith, injustice, cruelty, and, what crowns all the rest, the false exterior of a deceitful friendship, which covers a fixed design of delivering up to his enemy the person she loads with the most tender caresses, and with marks of the warmest and most sincere attachment. Such are the effects of ambition, which was her predominant vice.

Adjoining to the temple of Isis she had caused tombs and halls to be erected, superb as well for their beauty and magnificence, as their loftiness and extent. Thither she ordered her most precious effects and movables to be carried: gold, silver, jewels, ebony, ivory, and a large quantity of perfumes and aromatic wood; as if she intended to raise a funeral pile, upon which she would consume herself with her treasures. Cæsar, alarmed for the latter, and apprehending lest her despair should induce her to burn them, despatched every day some person to her, to give her great hopes of the most kind and generous treatment, and nevertheless advanced towards the city by great marches.

Upon arriving there, he encamped near the Hippodrome. He was in hopes of making himself master of the city soon, by means of the intelligence which he held with Cleopatra, upon which he relied no less than upon his army.

Antony was ignorant of that princess's intrigues, and, being unwilling to believe what was told him of them, prepared for a good defence. He made a vigorous sally; and after having severely handled the besiegers, and warmly pursued to the gates of their camp a detachment of horse which had been sent against him, he returned victorious into the city. This was the last effort of expiring valour; for, after this exploit, his fortitude and sense of glory abandoned him, or were never after of any service to him. Instead of making use of this advantage, and of applying himself seriously to his defence, by observing the motions of Cleopatra, who was betraying him, he came, completely armed as he was, to throw himself at her feet, and to kiss her hands. The whole palace of Alexandria immediately resounded with acclamations, as if the siege had been raised; and Cleopatra, who had no thoughts but of amusing Antony, ordered a magnificent feast to be prepared, at which they passed the rest of the day and part of the night together.

Early on the morrow, Antony resolved to attack Cæsar, by sea and land. He drew up his land army upon some eminences in the city; and from thence kept his galleys in view, which were going out of the port in order to charge those of Cæsar. He waited without making any motion, to see the success of that attack; but was much astonished when he saw Cleopatra's admiral strike his flag when he came in view of Cæsar's, and surrender his whole fleet to him.

This treason opened Antony's eyes, and made him, when too late, give credit to what his friends had told him of the queen's perfidy. In this extremity he was for signaling himself by an extraordinary act of valour, capable, in his opinion, of doing him abundance of honour. He sent to challenge Cæsar to a single combat. Cæsar made answer, that if Antony was weary of life, there were other ways to die besides that. Antony, seeing himself ridiculed by Cæsar, and

betrayed by Cleopatra, returned into the city, and was a moment after abandoned by all his cavalry. Seized with rage and despair, he then flew to the palace, with design to avenge himself upon Cleopatra, but did not find her there.

That artful princess, who had foreseen what happened, to escape the rage of Antony, had retired into the quarter where stood the tombs of the kings of Egypt, which was fortified with strong walls, and the gates of which she had ordered to be closed. She caused Antony to be told, that preferring an honourable death to a shameful captivity, she had killed herself in the midst of her ancestor's tombs, where she had also chosen her own sepulchre. Antony, too credulous, did not give himself time to examine a piece of news which he ought to have suspected after all Cleopatra's other infidelities; and struck with the idea of her death, passed immediately from excess of rage to the most violent transports of grief, and thought only of following her to the grave.

Having taken this furious resolution, he shut himself up in his apartment with a slave; and having caused his armour to be taken off he commanded him to plunge his dagger into his breast. But that slave, full of affection, respect, and fidelity, for his master, stabbed himself with it, and fell dead at his feet. Antony, looking upon this action as an example for him to follow, thrust his sword into his body, and fell upon the floor in a torrent of his blood, which he mingled with that of his slave. At that moment an officer of the queen's guards came to let him know that she was alive. He no sooner heard the name of Cleopatra pronounced, than he opened his dying eyes; and being informed that she was not dead, he suffered his wound to be dressed, and afterwards caused himself to be carried to the fort where she had shut herself up. Cleopatra would not permit the gates to be opened to give him entrance for fear of some surprise; but she appeared at a high window, from whence she threw down chains and cords. Antony was made fast to these, and Cleopatra, assisted by two women, who were the only persons she had brought with her into the tomb, drew him up. Never was there a more moving sight. Antony, all bathed in his blood, with death painted in his face, was dragged up in the air, turning his dying eyes, and extending his feeble hands towards Cleopatra, as if to conjure her to receive his last breath; while she, with her features distorted and her arms strained, pulled the cords with her whole strength; the people below, who could give her no farther aid, encouraging her with their cries.

When she had drawn him up to her, and had laid him on a bed, she tore her clothes upon him; and beating her breast, and wiping the blood from his wound, with her face close to his, she called him her prince, her lord, her dearest spouse. Whilst she made these mournful exclamations, she cut off Antony's hair, according to the superstition of the Pagans, who believed that it gave relief to those who died a violent death.

Antony, recovering his senses, and seeing Cleopatra's affliction, said to her, to comfort her, that he thought himself happy since he died in her arms; and that, as to his defeat, he was not ashamed of it, it being no disgrace for a Roman to be overcome by Romans. He afterwards advised her to save her life and kingdom, provided she could do so with honour; to be upon her guard against the traitors of her own court, as well as the Romans in Caesar's train, and to trust only Proculeius. He expired with these words.

The same moment Proculeius arrived from Caesar, who could not refrain from tears at the sad relation of what had passed, and at the sight of the sword still reeking with Antony's blood, which was presented to him. He had particular orders to get Cleopatra into his hands, and to take her alive, if possible. That princess refused to surrender herself to him. She had, however, a conversation with him without letting him enter the tomb. He only came close to the gates, which were well fastened, but gave passage for the voice through cracks. They talked a considerable time together, during which she continually asked the kingdom for her children; whilst he exhorted

her to hope the best, and pressed her to confide all her interests to Caesar.

After having considered the place well, he went to make his report to Caesar, who immediately sent Gallus to talk again with her. Gallus went to the gates as Proculeius had done, and spoke like him through the crevices, protracting the conversation on purpose. In the meanwhile Proculeius brought a ladder to the wall, entered the tomb by the same window through which she and her women had drawn up Antony, and followed by two officers, who were with him, went down to the gate where she was speaking to Gallus. One of the two women who were shut up with her, seeing him come, cried out, quite out of her senses with fear and surprise, "O unfortunate Cleopatra, you are taken!" Cleopatra turned her head, saw Proculeius, and would have stabbed herself with a dagger which she always carried at her girdle. But Proculeius ran nimbly to her, took her in his arms, and said to her, "You wrong yourself and Caesar too, in depriving him of so grateful an occasion of showing his goodness and clemency." At the same time he forced the dagger out of her hands, and shook her robes, lest she should have concealed poison in them.

Caesar sent one of his freedmen, named Epaphroditus, with orders to guard her carefully, to prevent her making any attempt upon herself, and to behave to her at the same time with all the attention and complaisance she could desire; he likewise instructed Proculeius to ask the queen what she desired of him. Caesar afterwards prepared to enter Alexandria, the conquest of which there was no longer any to dispute with him. He found the gates of it open, and all the inhabitants in extreme consternation, not knowing what they had to hope or fear. He entered the city, conversing with the philosopher Arius, upon whom he leaned with an air of familiarity, to testify publicly the regard he had for him. Being arrived at the palace, he ascended a tribunal, which he had ordered to be erected there; and, seeing the whole people prostrate upon the ground, he commanded them to rise. He then told them, that he pardoned them for three reasons: the first, upon account of Alexander their founder; the second, for the beauty of their city; and the third, for the sake of Arius, one of their citizens, whose merit and knowledge he esteemed.

Proculeius, in the meantime, acquitted himself of his commission to the queen, who at first asked nothing of Caesar but his permission to bury Antony, which was granted her without difficulty. She spared no cost to render his interment magnificent, according to the custom of Egypt. She caused his body to be embalmed with the most exquisite perfumes of the East, and placed it amongst the tombs of the kings of Egypt.

Caesar did not think proper to see Cleopatra in the first days of her mourning: but when he believed he might do it with decency, he was introduced into her chamber, after having asked her permission; being desirous to conceal his designs under the regard he professed for her. She was laid upon a little bed, in a very simple and neglected manner. When he entered her chamber, though she had nothing on but a single tunic, she rose immediately, and went to throw herself at his feet, horribly disfigured, her hair loose and disordered, her visage wild and haggard, her voice faltering, her eyes almost dissolved by excessive weeping, and her bosom covered with wounds and bruises. That natural grace and lofty mien which were inspired by her beauty, were, however, not wholly extinct; and notwithstanding the deplorable condition to which she was reduced, even through that depth of grief and dejection, as from a dark cloud, shot forth keen glances, and a kind of radiance which brightened in her looks, and in every movement of her countenance. Though she was almost dying, she did not despair of inspiring that young victor with love, as she had formerly done Caesar and Antony.

The chamber where she received him was full of the portraits of Julius Caesar. "My lord," said she to him, pointing to those pictures, "behold those images of him who adopted you his successor in the Roman empire and to whom I am indebted for my

crown." Then taking letters out of her bosom, which she had concealed in it, "See also," said she, kissing them, "the dear testimonies of his love." She afterwards read some of the most tender of them, commenting upon them at proper intervals, with moving exclamations, and passionate glances, but she employed those arts with no success; for whether her charms had no longer the power they had in her youth, or that ambition was Cæsar's ruling passion, he did not seem affected with either her person or conversation; contenting himself with exhorting her to take courage, and assuring her of his good intentions. She was far from not discerning that coldness, from which she pressed no good; but dissembling her concern, and changing the discourse, she thanked him for the compliments Proculeius had made her in his name, and which he had thought fit to repeat in person. She added, that in return she would deliver to him all the treasures of the kings of Egypt. And in fact, she put an inventory into his hands of all her movables, jewels, and revenues. And as Seleucus, one of her treasurers, who was present, reproached her with not declaring the whole, and with having concealed part of her most valuable effects; incensed at so great an insult, she rose up, ran to him, and gave him several blows in the face. Then turning towards Cæsar, "Is it not a horrible thing," said she to him, "that while you have not disdained to visit me, and have thought fit to console me in the sad condition in which I now am, my own domestics should accuse me before you of retaining some women's jewels, not to adorn a wretch like myself, but as a slight present to your sister Octavia, and your wife Livia; that their protection may induce you to afford a more favourable treatment to an unfortunate princess."

Cæsar was exceedingly pleased to hear her talk in that manner, not doubting but the love of life inspired her with such language. He told her she might dispose as she pleased of the jewels she had reserved; and after having assured her that he would treat her with more generosity and magnificence than she could venture to hope, he withdrew, imagining that he had deceived her, and was deceived himself.

Not doubting but Cæsar intended to make her serve as an ornament to his triumph, she had no other thoughts than to avoid that shame by dying. She well knew that she was observed by the guards who had been assigned her, who, under colour of doing her honour, followed her every where; and besides that, her time was short, Cæsar's departure approaching. The better, therefore, to cajole him, she sent to desire that she might go to pay her last duty at the tomb of Antony and take her leave of him. Cæsar having granted her that permission, she went thither accordingly to bathe that tomb with her tears, and to assure Antony, to whom she addressed her discourse as if he had been present before her eyes, that she would soon give him a more certain proof of her affection.

After that fatal protestation, which she accompanied with sighs and tears, she caused the tomb to be covered with flowers, and returned to her chamber. She then went into a bath and from the bath to ta-

ble, having ordered it to be served magnificently. When she arose from table, she wrote a letter to Cæsar; and having made all quit her chamber except her two women, she shut the door, sat down upon a couch, and asked for a basket of figs, which a peasant had lately brought. She placed it by her, and a moment after laid down as if she had fallen asleep. But that was the effect of the asp, which was concealed amongst the fruit, and had stung her in the arm, which she had held to it. The poison immediately communicated itself to the heart, and killed her without pain, or being perceived by any body. The guards had orders to let nothing pass without a strict examination; but the disguised peasant, who was one of the queen's faithful servants, played his part so well, that there seemed so little appearance of deceit in a basket of figs, that the guards suffered him to enter. Thus all Cæsar's precautions were ineffectual.

He did not doubt Cleopatra's resolution, after having read the letter she had written to him, to desire that he would suffer her body to be laid in the same tomb with that of Antony; and he instantly despatched two officers to prevent it. But notwithstanding all the haste they could make, they found her dead.

That princess was too haughty and too much above the vulgar, to suffer herself to be led in triumph at the wheels of the victor's chariot. Determined to die, and thence become capable of the fiercest resolutions, she saw with a fearless and steadfast eye the mortal venom of the asp glide into her veins.

She died at thirty-nine years of age, of which she had reigned twenty-two from the death of her father. The statues of Antony were thrown down, and nose of Cleopatra remained as they were; Archibius, who had long been in her service, having given Cæsar 000 talents that they might not be treated as Antony's and been.

After Cleopatra's death, Egypt was reduced into a province of the Roman empire, and governed by a prefect sent thither from Rome. The reign of the Ptolemies in Egypt, if we date its commencement from the death of Alexander the Great, had continued 293 years, from the year of the world 3681 to 3974.

Ausa et jacentem visero regiam
Vultu sereno, fortis et asperas
Tractare serpentes, ut atrum
Corporis combiberet venenum;
Deliberata morte ferocior;
Sævæ Liburnis sollicit invidens
Privata deduci superbo
Non humilis mulier triumpho.

Hor. Od. xxxv. l. 1

Not the dark palace of the realms below
Can awe the furious purpose of her soul:
Calmly she looks from her superior woe,
That can both death and fear control!
Provokes the serpent's sting, his rage disdains,
And joys to feel his poison in her veins.
Invidious to the victor's fancied pride,
She will not for her own descend,
Disgraced a vulgar captive by his side,
His pompous triumph to attend;
But fiercely flies to death, and bids her sorrows end

CONCLUSION OF THE ANCIENT HISTORY.

WE have seen hitherto, without speaking of the first and ancient kingdom of Egypt, and of some states separate, and in a manner entirely distinct from the rest, three great successive empires, founded on the ruins of each other, subsist during a long series of ages, and at length entirely disappear; the empire of the Babylonians, the empire of the Medes and Persians, and the empire of the Macedonians and the Grecian princes, successors of Alexander the Great. A fourth empire still remains, that of the Romans, which having already swallowed up most of those which have preceded it, will extend its conquests, and, after having subjected all to its power by force of arms, will be itself torn, in a manner, into different pieces, and, by being so dismembered, make way for the establishment of almost all the kingdoms which now divide Europe, Asia, and Africa. Behold here, to speak properly, a picture on a small scale, of the duration of all ages; of the glory and power of all the empires of the world; in a word, of all that is most splendid and most capable of exciting admiration in human greatness! Every excellence, by a happy concurrence, is here found assembled; the fire of genius, delicacy of taste, accompanied by solid judgment; uncommon powers of eloquence, carried to the highest degree of perfection, without departing from nature and truth; the glory of arms, with that of arts and sciences; valour in conquering, and ability in government. What a multitude of great men of every kind does it not present to our view! What powerful, what glorious kings! what great captains! what famous conquerors! what wise magistrates! what learned philosophers! what admirable legislators! We are transported with beholding in certain ages and countries, who appear to possess them as privileges peculiar to themselves, an ardent zeal for justice, a passionate love for their country, a noble disinterestedness, a generous contempt of riches, and an esteem for poverty, which astonish and amaze us, so much do they appear above the power of human nature.

In this manner we think and judge. But, whilst we are in admiration and ecstasy at the view of so many shining virtues, the Supreme Judge, who can alone truly estimate all things, sees nothing in them but littleness, meanness, vanity, and pride; and while mankind are anxiously busied in perpetuating the power of their families, in founding kingdoms, and, if that were possible, rendering them eternal, God, from his throne on high, overthrows all their projects, and makes even their ambition the means of executing his purposes, infinitely superior to our understandings. He alone knows his operations and designs. All ages are present to him; "He seeth from everlasting to everlasting."¹ He has assigned to all empires their fate and duration. In all the different revolutions which we have seen, nothing has come to pass by chance. We know that under the image of that statue which Nebuchadnezzar saw, of an enormous height and terrible aspect, whose head was of gold, the breast and arms of silver, the belly and thighs of brass, and the legs of iron mixed with clay, God thought fit to represent the four great empires, uniting in them, as we have seen in the course of this history, all that is splendid, grand, formidable, and powerful. And of what has the Almighty occasion for overthrowing this immense colossus? "A small stone was cut out without hands," which smote the image upon his feet, that were of iron and clay, and brake them to pieces. Then was

the iron, the clay, the brass, the silver, and the gold, broken to pieces together, and became like the chaff of the summer thrashing-floors, and the wind carried them away, that no place was found for them; and the stone that smote the image became a great mountain, and filled the whole earth."

We see with our own eyes the accomplishment of this admirable prophecy of Daniel, at least in part. Jesus Christ, who came down from heaven to clothe himself with flesh and blood in the sacred womb of the blessed Virgin, without the participation of man, is the small stone that came from the mountain without human aid. The prevailing characteristics of his person, of his relations, his appearance, his manner of teaching, his disciples; in a word, of every thing that relates to him, were simplicity, poverty, and humility; which were so extreme, that they concealed from the eyes of the proud Jews the divine lustre of his miracles, how shining soever it was, and from the sight of the devil himself, penetrating and attentive as he was, the evident proofs of his divinity.

Notwithstanding that seeming weakness, and even meanness, JESUS CHRIST will certainly conquer the whole universe. It is under this idea that a prophet represents him to us; "He went forth conquering and to conquer."² His work and mission are, "to set up a kingdom for his Father, which shall never be destroyed; and the kingdom which shall not be left to other people;" like those of which we have seen the history; "but it shall break in pieces and consume all these kingdoms, and it shall stand forever."

The power granted to JESUS CHRIST, the founder of this empire, is without bounds, measure or end. The kings, who glory so much in their might, have nothing which approaches in the slightest degree to that of JESUS CHRIST. They do not reign over the will of man, which is real dominion. Their subjects can think as they please independently of them. There are an infinitude of particular actions done without their order, and which escape their knowledge as well as their power. Their designs often miscarry and come to nothing even during their own lives. At least all their greatness vanishes and perishes with them. But with JESUS CHRIST it is quite otherwise. "All power is given unto him in heaven and in earth."⁴ He exercises it principally upon the hearts and minds of men. Nothing is done without his order or permission. Every thing is disposed by his wisdom and power. Every thing co-operates, directly or indirectly, to the accomplishment of his designs.

Whilst all things are in motion and fluctuate upon earth; whilst states and empires pass away with incredible rapidity, and the human race, vainly employed with these outward appearances, are also drawn in by the same torrent, almost without perceiving it; there passes in secret an order and disposition of things unknown and invisible, which, however, determines our fate to all eternity. The duration of ages has no other end than the formation of the company of the elect, which augments and tends daily towards perfection. When it shall have received its final accomplishment by the death of the last of the elect, "Then cometh the end,"³ when JESUS CHRIST shall have delivered the kingdom to GOD, even the FATHER: when he shall have put down all rule, and all authority, and power." GOD grant that we may all have our share in that blessed kingdom, whose law is truth, whose King is love, and whose duration is eternity! Fiat, Fiat.

INTRODUCTION

ON THE BENEFIT OF ARTS AND SCIENCES TO MANKIND. THEIR ORIGIN TO BE ATTRIBUTED TO GOD

THE history of arts and sciences, and of the persons who have most eminently distinguished themselves by them, to speak properly, is the history of the powers of the human mind, which in some sense does not give place to that of princes and heroes, whom common opinion places in the highest degree of elevation and glory. I do not intend, by speaking in this manner, to strike at the difference of rank and condition, nor to confound or level the order which God himself has instituted amongst men. He has placed princes, kings, and rulers of states over our heads, with whom he has deposited his authority; and after them generals of armies, ministers, magistrates, and all those with whom the sovereign divides the cares of government. The honours paid them, and the pre-eminence they possess, are no usurpation on their side. It is the divine providence itself that has assigned them their high stations, and demands submission, obedience, and respect for those that sit in its place.

But there is also another order of things, and, if I may be permitted to say so, another disposition of the same providence, which, without regard to the first kind of greatness I have mentioned, establishes a quite different species of eminence, in which distinction arises neither from birth, riches, authority, nor elevation of place, but from merit and knowledge alone. It is the same providence that regulates rank also of this kind, by the free and entirely voluntary dispensation of the talents of the mind, which it distributes in what proportion, and to whom it pleases, without any regard to quality and nobility of person. It forms, from the assemblage of the learned of all kinds, a new species of empire, infinitely more extensive than all others, which takes in all ages and nations, without regard to age, sex, condition, or climate. Here the plebeian finds himself upon a level with the nobleman, the subject with the prince, nay, often his superior.

The principal law and most legitimate proof of deserving solid praises in this empire of literature, is, that every member of it be contented with his own place; that he be void of all envy for the glory of others; that he looks upon them as his colleagues, destined, as well as himself, by providence, to enrich society, and become its benefactors; and that he remembers with gratitude from whom he holds his talents, and for what ends they have been conferred upon him. For, indeed, how can those, who distinguish themselves most amongst the learned, believe, that they have that extent of memory, facility of comprehending, industry to invent and make discoveries; that beauty, vivacity, and penetration of mind from themselves? and if they possess all these advantages from something exterior, how can they assume any vanity from them? But can they believe they may use them at their own pleasure, and seek in the application they make of them only their own glory and reputation? As providence places kings upon their thrones solely for the good of their people, it distributes also the different talents of the mind solely for the benefit of the public. But in the same manner as we sometimes see in states, usurpers and tyrants, who, to exalt themselves alone, oppress all others, there may also arise amongst the learned, if I may be allowed to say so, a kind of tyranny of the

mind, which consists in regarding the successes of others with an evil eye, in being offended at their reputation, in lessening their merit, in esteeming only one's self, and in affecting to reign alone,—a hateful defect, and very dishonourable to learning. The solid glory of the empire of learning in the present question, I cannot repeat it too often, is not to labour for one's self, but for mankind; and this, I am bold to say, is what places it exceedingly above all the other empires of the world.

The victories which take up the greatest part of history, and attract admiration the most, have generally no other effects, but the desolation of countries, the destruction of cities, and the slaughter of men. Those so much boasted heroes of antiquity, have they made a single man the better? Have they made many men happy? And if by the founding of states and empires they have procured posterity some advantages, how dearly have they made their contemporaries pay for it, by the rivers of blood they have shed? Those very advantages are confined to certain places, and have a certain duration. What benefit do we, at this day, derive from either Nimrod, Cyrus, or Alexander? All those great names, all those victories which have astonished mankind from time to time—those princes and conquerors, with all their magnificence and vast designs, are returned into nothing with regard to us; they are dispersed like vapours, and are vanished like phantoms.

But the inventors of arts and sciences have laboured for all ages of the world. We still enjoy the fruits of their application and industry. They have provided, at a great distance for all our occasions. They have procured for us all the conveniences of life. They have converted all nature to our uses. They have reduced the most indocile matter to our service. They have taught us to extract from the bowels of the earth, and even from the deeps of the sea, the most precious riches; and what is infinitely more estimable, they have opened to us the treasures of all the sciences; and have guided us to knowledge the most sublime, the most useful, and the most worthy of our nature. They have put into our hands, and placed before our eyes, whatever is most proper to adorn the mind, to direct our manners, and to form good citizens, good magistrates, and good princes.

These are part of the benefits we have received from those who have invented, and brought arts and sciences to perfection. The better to know their value, let us transport ourselves in imagination back to the infancy of the world, and those gross ages, when man, condemned to eat his bread by the sweat of his brow, was without aids and instruments, and obliged, however, to cultivate the earth, that he might extract nourishment from it; to erect himself huts and roofs for his security; to provide clothing for his defence against the frosts and rains; and, in a word, to find out the means to satisfy all the necessities of life. What labours, what difficulties, what disquiets! all which are spared us.

We do not sufficiently consider the obligations we are under to those equally industrious and laborious men, who made the first essays in arts, and applied themselves in those useful but elaborate researches. That we are commodiously housed, that we are cloth

ed, that we have cities, walls, habitations, temples; to their industry and labour we are indebted for them all. It is by their aid our hands cultivate the fields, build houses, make stuffs and habits, work in brass and iron; and to make a transition from the useful to the agreeable, that we use the pencil, handle the chisel and graver, and touch instruments of music. These are solid and permanent advantages and emoluments, which have always been increasing from their origin; which extend to all ages and nations, and to all mankind in particular, which will perpetuate themselves throughout all times, and continue to the end of the world. Have all the conquerors together done any thing that can be imagined parallel with such services? All our admiration, however, turns generally on the side of these heroes in blood, whilst we scarce take notice of what we owe to the inventors of arts.

But we must go farther back, and render the just homage of praise and acknowledgment to him, who alone has been, and was capable of being, their author. This is a truth confessed by the Pagans themselves; and Cicero attests, most expressly, that men have all the conveniences of life from God alone: *Omnes mortales sic habent, externas commoditates a diis se habere.*¹

Pliny, the naturalist, explains himself in a still stronger manner, where he speaks of the wonderful effects of simples and herbs in regard to distempers; and the same principle may be applied to a thousand other effects which seem more astonishing than those. "It is," says he, "to understand very ill the gifts of the Divinity, and to repay them with ingratitude, to believe them capable of being invented by man. It is true, chance seems to have given birth to these discoveries; but that chance is God himself; by which name, as well as by that of nature, we are to understand him alone, who is the great parent of all things." In effect, how little soever we reflect upon the relation and proportion which appears, for instance, between the works of gold, silver, iron, brass, lead, and the rude mass as it lies hid in the earth, of which they are formed; between linen cloth, whether fine or thin, or coarse and strong, and flax and hemp; between stuffs of all sorts, and the fleece of sheep; between the glossy beauty of wrought silks, and the deformity of an hideous insect: we ought to assure ourselves, that man, abandoned to his own faculties, could never have been able to make such happy discoveries. It is true, as Pliny has observed, that chance has seemed to give birth to most inventions; but who does not see, that God, to put our gratitude to trial, takes pleasure to conceal himself under these fortuitous events, as under so many veils, through which our reason, when ever so little enlightened by faith, traces with ease the beneficent hand which confers so many gifts upon us.

The divine providence shows itself no less in many modern discoveries, which now appear to us exceedingly easy, yet nevertheless escaped, during all preceding ages, the knowledge and inquiries of the many persons always intent upon the study and perfection of arts, till it pleased God to open their eyes, and to show them what they did not see before. In this number may be reckoned both wind and water mills, so commodious for the uses of life, which however are not very ancient. The ancients engraved upon copper: whence was it that they never reflected, that by impressing upon paper what they had engraved, they might write that in a moment which they had been so long in cutting with a tool? It is, notwithstanding,

only about three hundred years² since the art of printing books has been discovered. The same may be said of gunpowder, of which our ancient conquerors were in great want, and which would have very much abridged the length of their sieges. The compass that is to say, the needle touched with the loadstone suspended upon an axis, is of such wonderful use, that to it alone we stand indebted for the knowledge of the new world, and by its means all the people of the earth are united by commerce. How came it that mankind who knew all the other properties of the loadstone were so long without discovering one of such great importance?

We may conclude in the same manner, I think, in regard to the incredible difficulty of some discoveries which do not offer themselves by any outward appearances, and yet are almost as old as the world, and the extreme felicity of other inventions, which seem to guide us to them, and yet have not been discovered till after many ages, that both the one and the other are absolutely disposed by the direction of a superior Being, who governs the universe with infinite wisdom and power. We are indeed ignorant of the reasons which have induced God to observe a different conduct in the manifestation of these mysteries of nature, at least in a great measure; but that conduct is, however, no less to be revered. What he suffers us sometimes to see of it, ought to instruct us in respect to all the rest. Christopher Columbus conceives the design to go in search of new worlds. He addresses himself for that end to several princes, who look upon his enterprise as madness, and it seemed such in effect. But he had within him, with regard to this enterprise, an inherent impulse, an ardent and continual desire which rendered him passionate, restless, and invincible to all obstacles and remonstrances. Who was it that inspired him with this bold design, and gave him such inflexible constancy, but God alone, who had resolved from all eternity, to enlighten the people of that new world with the lights of the gospel. The invention of the compass was the occasion of it. Providence had assigned a precise time for this great event. The moment could neither be advanced nor retarded. Hence it was that this discovery had been so long deferred, and was afterwards so suddenly and so courageously executed.

After these observations, which I thought useful to many of my readers, I shall proceed to my subject. I shall divide all that relates to the arts and sciences into three books. In the first I shall treat of agriculture, commerce, architecture, sculpture, painting, and music. In the second I shall treat of the art-military, and what regards the raising and maintaining troops, battles, and sieges, both by sea and land. In the last book, with which my work will conclude, I shall run over the arts and sciences that have most relation to the mind,—grammar, poetry, history, rhetoric, and philosophy, with all the branches that either depend on, or have any relation to them.

I must observe beforehand, with the same freedom I have professed hitherto, that I undertake to treat a subject of which many parts are almost entirely unknown to me. For this reason I shall have occasion for new indulgence. I demand permission therefore to make use freely, as I have always done (and am now reduced to do more than ever,) of all the helps I shall meet with in my way. I shall hazard losing the glory of being an author and inventor: but I willingly renounce it, provided I have that of pleasing my readers, and of being any way useful to them. Profound erudition must not be expected here, though the subject seems to imply it. I do not pretend to instruct the learned; my aim is to make choice of that from all the arts which may best suit the capacities of the generality of readers.

¹ It is now (1806) nearly a hundred years more since our Author wrote

¹ Lib. 3. De. nat. deer. n. 86.

THE HISTORY

OF THE

ARTS AND SCIENCES OF THE ANCIENTS.

CHAPTER I.

OF AGRICULTURE.

ARTICLE I.—ANTIQUITY OF AGRICULTURE. ITS UTILITY. THE ESTEEM IT WAS IN AMONGST THE ANCIENTS. HOW IMPORTANT IT IS TO PLACE IT IN HONOUR, AND HOW DANGEROUS TO NEGLECT THE APPLICATION TO IT.

I MAY with justice place agriculture at the head of the arts, which has certainly the advantage of all others, as well with regard to its antiquity as utility. It may be said to be as ancient as the world, having taken birth in the terrestrial paradise itself, when Adam, newly come forth from the hands of his Creator, still possessed the precious but frail treasure of his innocence; God having placed him in the garden of delights, commanded him to cultivate it; *ut operaretur illum: to dress and keep it*, Gen. ii. 15. That culture was not painful and laborious, but easy and agreeable; it was to serve him for amusement, and to make him contemplate in the productions of the earth the wisdom and liberality of his Master.

The sin of Adam having overthrown this order, and drawn upon him the mournful decree, which condemned him to eat his bread by the sweat of his brow; God changed his delight into chastisement, and subjected him to hard labour and toil, which he had never known had he continued ignorant of evil. The earth, become stubborn and rebellious to his orders, to punish his revolt against God, brought forth thorns and thistles. Violent means were necessary to compel it to pay man the tribute, of which his ingratitude had rendered him unworthy, and to force it, by labour, to supply him every year with the nourishment, which before was given him freely and without trouble.

From hence therefore we are to trace the origin of agriculture, which from the punishment it was at first, is become, by the singular goodness of God, in a manner the mother and nurse of the human race. It is, in effect, the source of solid wealth and treasures of a real value, which do not depend upon the opinion of men—which suffice at once to necessity and enjoyment, by which a nation is in no want of its neighbours, and often necessary to them—which make the principal revenue of a state, and supply the defect of all others, when they happen to fail. Though mines of gold and silver should be exhausted, and the monies made of them lost—though pearls and diamonds should remain hid in the womb of the earth and sea—though commerce with strangers should be prohibited—though all arts, which have no other object than embellishment and splendour, should be abolished, the fertility of the earth alone would afford an abundant supply for the occasions of the public, and furnish subsistence both for the people and armies to defend it. We ought not to be surprised, therefore, that agriculture was in so much honour amongst the ancients; it ought rather to seem wonderful that it ever should cease to be so, and that of all professions the most necessary and most indispensable should have fallen into so great contempt. We have seen in the whole course of our history that the princi-

pal attention of the wisest princes, and the most able ministers was to support and encourage husbandry.

Amongst the Assyrians and Persians the Satrapæ were rewarded, in whose governments the lands were well cultivated, and those punished who neglected that part of their duty. Numa Pompilius, one of the wisest kings antiquity mentions, and who best understood and discharged the duties of the sovereignty, divided the whole territory of Rome into different cantons.¹ An exact account was rendered him of the manner in which they were cultivated, and he caused the husbandmen to come before him, that he might praise and encourage those whose lands were well manured, and reproach others with their want of industry. The riches of the earth, says the historian, were looked upon as the justest and most legitimate of all riches, and much preferred to the advantages obtained by war, which are of no long duration. Ancus Martius, the fourth king of the Romans, who piqued himself upon treading in the steps of Numa, next to the adoration of the gods, and reverence for religion, recommended nothing so much to the people, as the cultivation of lands and the breeding of cattle.² The Romans long retained this disposition, and in the latter times, whoever did not discharge his duty well, drew upon himself the animadversion of the censor.³

It is known from never failing experience, that the culture of lands, and the breeding of cattle, which is a consequence and necessary part of it, has always been a certain and inexhaustible source of wealth and abundance. Agriculture was in no part of the world in higher consideration than in Egypt, where it was the particular object of government and policy; and no country was ever better peopled, richer, or more powerful. The strength of a state is not to be computed by extent of country, but by the number of its citizens, and the utility of their labour.

It is hard to conceive, how so small a tract as the land of Promise should be able to contain and nourish an almost innumerable multitude of inhabitants: this was from the whole country's being cultivated with extreme application.

What history relates of the opulence of several cities in Sicily, and in particular of the immense riches of Syracuse, of the magnificence of its buildings, of the powerful fleets it fitted out, and the numerous armies it had on foot, would appear incredible if not attested by all the ancient authors. From whence can we believe, that Sicily could raise wherewith to support such enormous expenses, if not from the produce of their lands, which were improved with wonderful industry? We may judge of their application to the culture of land, from the care taken by one of the most powerful kings of Syracuse, (Hiero II.) to compose a book upon that subject, in which he gave wise advice and excellent rules, for supporting and augmenting the fertility of the country.

¹ Dion. Halicarn. Antiq. Rom. l. ii. p. 135.

² Id. l. iii. p. 177.

³ Agrum male colere Censorium probum adjudicabatur.—Plin. l. xviii. c. 3.

Besides Hiero, other princes are mentioned,¹ who did not think it unworthy their birth and rank, to leave posterity precepts upon agriculture, so sensible were they of its utility and value: of this number were Attalus, surnamed Philometor, king of Pergamus, and Archelaus of Cappadocia. I am less surprised that Plato, Xenophon, Aristotle, and other philosophers, who have treated politics in particular, have not omitted this article, which makes an essential part of that subject. But who would expect to see a Carthaginian general amongst these authors? I mean Mago. He must have treated this matter with great extent, as his work, which was found at the taking of Carthage, consisted of twenty-eight volumes. So high a value was set on it, that the senate ordered it to be translated, and one of the principal magistrates took upon himself the care of doing it.² Cassius Dionysius of Utica had before translated them out of the Punic language into Greek.³ Cato, the censor, had however published his books upon the same subject. For Rome was not then entirely depraved, and the taste for the ancient simplicity still continued in a certain degree. She remembered with joy and admiration, that in ancient times her senators lived almost continually in the country; that they cultivated their lands with their own hands, without ever indulging rapacious and unjust desires for those of other men; and that consuls and dictators were often taken from the plough.⁴ In those happy times, says Pliny,⁵ the earth, glorious in seeing herself cultivated by the hands of triumphant victors, seemed to make new efforts, and to produce her fruits with greater abundance; that is, no doubt because those great men, equally capable of handling the plough and their arms, of sowing and conquering lands, applied themselves with more attention to their labour, and were of course more successful in it. And indeed, when a person of condition, with a superior genius, applies himself to arts, experience shows us, that he does it with greater ability, force of mind, industry, taste, and with more inventions, new discoveries, and various experiments; whereas an ordinary man confines himself servilely within the common road, and to his ancient customs. Nothing opens his eyes—nothing raises him above his old habits; and after many years of labour, he continues still the same, without making any progress in the profession he follows.

Those great men I have mentioned had never undertaken to write upon agriculture, if they had not been sensible of its importance, which most of them had personally experienced. We know what a taste Cato had for rural life, and with what application he employed himself in it. The example of an ancient Roman, whose farm adjoined his, was of infinite service to him. (This was Manius Curius Dentatus, who had thrice received the honour of a triumph.) Cato often went to walk in it, and considering the small extent of that land, the poverty and simplicity of the house, he was struck with admiration for that illustrious person, who, when he became the greatest of the Romans, having conquered the most warlike nations, and driven Pyrrhus out of Italy, cultivated this little land with his own hands, and after so many triumphs, inhabited so wretched a house.⁶ It is here, said he to himself, that the ambassadors of the Samnites found him by his fire-side, boiling roots, and received this wise answer from him, after having offered him a great sum

of money: That gold was a thing of small value to one who could be satisfied with such a dinner; and that for his part, he thought it more glorious to conquer those who had that gold, than to possess it himself.⁷ Full of these thoughts, Cato returned home, and making an estimate of his house, lands, slaves and expenses, he applied himself to husbandry with more ardour, and retrenched all needless superfluity. Though very young at that time, he was the admiration of all that knew him. Valerius Flaccus, one of the most noble and most powerful persons of Rome, had lands contiguous to Cato's small farm. He there often heard his slaves speak of his neighbour's manner of living, and of his labour in the field. He was told, that in the morning he used to go to the small cities in the neighbourhood, to plead and defend the causes of those who applied to him for that purpose. That from thence he returned into the field, where throwing a mean coat over his shoulders in winter, and almost naked in summer, he worked with his servants, and after they had done, he sat down with them at table, and ate the same bread, and drank the same wine.⁸

We see by these examples how far the ancient Romans carried the love of simplicity, poverty, and labour. I read with singular pleasure the tart and sensible reproaches which a Roman senator makes to the augur Appius Claudius, upon the magnificence of his country houses, by comparing them to the farm where they then were. "Here (said he) we see neither painting, statues, carving, nor mosaic work; but to make us amends, we have all that is necessary to the cultivation of lands, the dressing of vines, and the feeding of cattle. In your house every thing shines with gold, silver, and marble; but there is no sign of arable lands or vineyards. We find there neither ox, nor cow, nor sheep. There is neither hay in racks, vintage in the cellars, nor harvest in the barn. Can this be called a farm? In what does it resemble that of your grandfather, and great-grandfather?"⁹

After luxury was introduced to this height amongst the Romans, the lands were far from being cultivated, or producing revenues as in ancient days. At a time when they were in the hands of slaves or abject mercenaries, what could be expected from such workmen, who were forced to their labour only by ill treatment?¹⁰ This was one of the great, and most imprudent neglects, remarked by all the writers upon this subject in the latter times; because to cultivate lands properly, it is necessary to take pleasure and be delighted with the work, and for that end to find it for one's interest and gain to follow it.

It is therefore highly important, that the whole land of a kingdom should be employed to the best advantage, which is much more useful than to extend its limits; in order to this, each master of a family residing in the small towns and villages, should have some portion of land appropriated to himself; whence it would follow, that this field, by being his own, would be dearer to him than all others, and be cultivated with application; that his family would think such employment their interest, attach themselves to their farm, subsist upon it, and by that means be kept within the country. When the country people are not on their own estates, and are only employed for hire, they are very negligent in their labour, and even work with re-

⁷ Curio ad focum sedenti magnum auri pondus Somnites cum attulissent repudiati ab eo sunt. Non enim anrum habere præclarum sibi videri dixit, sed is qui haberet aurum imperare. Cicero makes Cato himself speak thus, in his book upon old age, n. 55.

⁸ This puts me in mind of a fine saying of Pliny the younger, who gave his freedmen the same wine he drank himself. When some body represented that this must be very chargeable to him: No, said he, my freedmen do not drink the same wine I drink, but I the same they do. Quia scilicet liberti mei non idem quod ego bibunt, sed idem ego quod liberi.—*Plin.* l. ii. Epist. 6.

⁹ Var. l. iii. c. 2.

gret. A lord and landholder ought to desire that their lands and estates should continue a long time in the same family, and that their farmers should succeed in them from father to son; from whence a quite different regard for them would arise: and what conduces to the interest of particulars, would also promote the general good of the state.¹ But when an husbandman or farmer has acquired some wealth by his industry and application, which is much to be desired by the landlord for his own advantage, it is not by this gain, says Cicero, the rents laid on them are to be measured, but by the lands themselves they turn so much to their account; the produce of which ought to be equitably estimated and examined into, for ascertaining what new imposition of rents they will bear.² For to rackrent and oppress those who have applied themselves well to their business, only because they have done so, is to punish, and indeed to abolish, industry; whereas, in all well regulated states, it has always been thought necessary to animate it by emulation and reward.

One reason of the small produce of the lands, is, because agriculture is not looked upon as an art that requires study, reflection, and rules: every one abandons himself to his own taste and method, whilst no body thinks of making a serious scrutiny into them, of trying experiments, and of writing precepts with experience.³ The ancients did not think in this manner.⁴ They judged three things necessary to success in agriculture. *The will:* this employment should be loved, desired, and delighted in, and followed in consequence out of pleasure. *The power:* it is requisite to be in a condition to make the necessary expenses for the breeding and fattening of cattle and fowl of all sorts, for labour, and for what ever is necessary to the manuring and improving of lands; and this is what most of our husbandmen want. *The skill:* it is necessary to have studied maturely all that relates to the cultivation of lands, without which the two first things are not only ineffectual, but occasion great losses to the master of a family, who has the affliction to see, that the produce of the land is far from answering the expenses he has been at, or the hopes he has conceived from them; because those expenses have been laid out without discretion, and without knowledge in the application of them. To these three heads a fourth may be added, which the ancients had not forgot, that is, *experience*, which presides in all arts, is infinitely above precepts, and makes even the faults we have committed our advantage: for, from doing wrong we often learn to do right.⁵

Agriculture was in quite different esteem with the ancients, to what it is with us: which is evident from the multitude and quality of the writers upon this subject. Varro cites to the number of fifty amongst the Greeks only. He wrote upon it also himself, and Columella after him. The three Latin authors, Cato, Varro, and Columella, enter into a wonderful detail upon all the parts of agriculture. Would it be an ungrateful and barren employment to compare their opinions and reflections with the modern practice?

Columella,⁶ who lived in the time of Tiberius, declares, in a very warm and eloquent manner, the general contempt into which agriculture was fallen in his time, and the persuasion men were under, that to succeed in it, there was no occasion for a master. "I see at Rome," said he, "the schools of philoso-

phers, rhetoricians, geometricians, musicians, and what is more astonishing, of people solely employed some in preparing dishes proper to whet the appetite and excite gluttony; and others to adorn the head with artificial curls, but not one for agriculture. However, the rest might be well spared; and the republic flourished long without any of those frivolous arts; but it is not possible to want that of husbandry, because life depends upon it.⁷ Besides, is there a more honest or legal means of preserving, or increasing a patrimony? Is the profession of arms of this kind, and the acquisition of spoils always dyed with human blood, and amassed by the ruin of an infinity of persons? Or is commerce so, which, tearing citizens away from their native country, exposes them to the fury of the winds and seas, and drags them into unknown worlds in pursuit of riches? Or is the trade of money and usury more laudable, odious and fatal as they are, even to those they seem to relieve?⁸ Can any one compare any of these methods with wise and innocent agriculture, which only the depravity of our manners can render contemptible, and by a necessary consequence, almost barren and useless? Many people imagine, that the sterility of our lands, which are much less fertile now than in times past, proceeds from the intemperance of the air, the inclemency of seasons, or from the alteration of the lands themselves; that weakened and exhausted by long and continual labour, they are no longer capable of producing their fruits with the same vigour and abundance. This is a mistake," says Columella: "we ought not to imagine, that the earth, to whom the author of nature has communicated a perpetual fecundity, is liable to barrenness as to a kind of disease. After its having received from its master a divine and immortal youth, which has occasioned its being called the common mother of all things, because it always has brought forth, and ever will bring forth from its womb, whatever subsists, it is not to be feared, that it will fall into decay and old age like man. It is neither to the badness of the air, nor to length of time, that the barrenness of our lands is to be imputed; but solely to our own fault and neglect: we should blame only ourselves, who abandon those estates to our slaves, which in the days of our ancestors, were cultivated by the most noble and illustrious."

This reflection of Columella seems very solid, and is confirmed by experience. The land of Canaan (and as much may be said of other countries) was very fertile at the time the people of God took possession of it, and had been seven hundred years inhabited by the Canaanites. From thence to the Babylonish captivity was almost a thousand years. In the latter days, there is no mention of its being exhausted, or worn out by time, without speaking of the after ages. If, therefore, it has been almost entirely barren during a long course of years, as is said, we ought to conclude with Columella, that it is not from its being exhausted or grown old; but because it is deserted and neglected.⁹ And we ought also to conclude, that the fertility of some countries, of which so much is said in history, arises from the particular attention of the inhabitants in tilling the land in cultivating the vines, and breeding of cattle; of which it is time to say something.

ARTICLE II.

OF TILLAGE. COUNTRIES FAMOUS AMONGST THE ANCIENTS FOR ABOUNDING WITH CORN.

I SHALL confine myself, in speaking of tillage, to what relates to wheat, as the most important part of that subject.

The countries most famous for abounding in corn

¹ Sine ludicris artibus—olim satis felices futuræque sunt urbes: at sine agricultoribus nec consistere mortales, nec alius posse manifestum est.

⁶ *Colum in præm. l. i.*

were Thrace, Sardinia, Sicily, Egypt, and Africa.¹ Athens brought every year from Byzantium four hundred thousand *medimni* of wheat, as Demosthenes informs us.² The *medimnus* contained six bushels, and was sold in his time for no more than five drachmas, that is to say, for fifty pence French. How many other cities and countries did Thrace furnish with corn, and how fertile must it consequently have been! It is not without reason that Cato the censor, whose gravity of manners occasioned him to be surnamed the *Wise*, called Sicily the magazine and nursing mother of the Roman people.³ And indeed it was from thence Rome brought almost all her corn, both for the use of the city and the subsistence of her armies. We see also in Livy, that Sardinia supplied the Romans with abundance of corn.

All the world knows how much the land of Egypt, watered and enriched by the Nile, which served it instead⁴ of the husbandman, abounded with corn.⁵ When Augustus had reduced it into a Roman province, he took particular care of the bed and canals of this beneficent river, which by degrees had been much clogged with mud, through the neglect of the kings of Egypt, and caused them to be cleansed by the Roman troops, whom he left there. From thence came regularly every year, twenty millions of bushels of wheat. Without this supply, the capital of the world was in danger of perishing by famine. She saw herself in this condition under Augustus, for there remained only three days' provision of corn in the city. That prince, who was full of tenderness for the people, had resolved to poison himself, if the expected fleets did not arrive before the expiration of that time. They came, and the preservation of the people was attributed to the good fortune of the prince. We shall see, that wise precautions were afterwards taken to avoid the like danger for the future.

Africa did not give place to Egypt in point of fertility.⁶ In one of its countries, one bushel of wheat sown has been observed to produce an hundred and fifty. From a single grain almost four hundred ears would sometimes spring up, as we find by letters to Augustus and Nero, from those who governed Africa under them. This was, no doubt, very uncommon. But the same Pliny, who relates these facts, assures us, that in Bœotia and Egypt it was a very common thing for a grain to produce an hundred and fifty ears: and he observes, upon this occasion, the attention of the divine providence, which hath ordained, that of all plants, that which it had appointed for the nourishment of man, and in consequence the most necessary, should be also the most fruitful.

I have said that Rome at first brought almost all her corn from Sicily and Sardinia. In process of time, when she had made herself mistress of Carthage and Alexandria, Africa and Egypt became her storehouses. Those cities sent numerous fleets every year, freighted with wheat for the use of the Roman people, then lords of the universe. And when the harvest happened to fail in one of these provinces, the other came in to its aid, and supported the capital of the world. Corn, by this means, was at a very low price at Rome, and sometimes sold for no more than two *asses*, or pence, a bushel.⁷ The whole coast of Africa abounded exceedingly with corn, in which part of the wealth of Carthage consisted.⁸ The city of Leptis only, situated in the lesser Syrtis, paid a daily tribute to it of a talent, that is to say, of three thousand livres. In the war against Philip, the Carthaginian ambassadors supplied the Romans with a million of bushels of corn, and five hundred thousand of barley. Those of Massinissa gave them also as much.⁹

Constantinople was supplied in the same manner when the seat of empire was transplanted thither. An admirable order was observed in both these cities, for subsisting the immense number of people that inhabited them. The emperor Constantine caused almost fourscore thousand bushels of corn, which came from Alexandria, to be distributed daily at Constantinople;¹⁰ this was for the subsistence of six hundred and forty thousand men, the Roman bushel serving only eight men. When the emperor Septimius Severus died, there was corn in the public magazines for seven years, expending daily seventy-five thousand bushels, that is to say, bread for six hundred thousand men.¹¹ What a provision was this against the dearth of any future years!

Besides these I have mentioned, there were many other countries very fruitful in corn. For the sowing of an acre, only one *medimnus* of corn was required: *medimnus*.¹² The *medimnus* consisted of six bushels each of which contained very near twenty pound weight of corn. (It is observed, in the *Spectacle de la Nature*, that the usual and sufficient quantity for sowing an acre, is an hundred and twenty pounds of corn which comes to the same amount.) The highest produce of an acre was ten *medimni* of corn, that is to say, ten for one; but the ordinary produce was eight with which the husbandmen were well satisfied. It is from Cicero we have this account; and he must have known the subject very well, as he uses it in the cause of the Sicilians against Verres. He speaks of the country of the Leontines, which was one of the most fruitful in Sicily.¹³ The highest price of a bushel of corn amounted to three sesterces, or seven pence half penny. It was less than that of France by almost one fourth. Our septier contains twelve bushels, and is often sold for ten livres. By that estimate, our bushel is worth sixteen pence and something more, that is to say, twice the price of the bushel of the ancients, and something more. All that Cicero relates upon the subject of corn, as to its price, how much of it was necessary for sowing an acre, and what quantity it produced being sown, ought not to be considered as an established rule; for these would vary considerably according to soils, countries, and times.

The ancients had different methods of thrashing their corn.¹⁴ They made use, for that purpose, either of sledges armed with points; or of horses, which they made trample upon it; or of flails, with which they beat the sheaves, as is now customary in many places. They also used various methods for preserving corn a great while, especially by shutting it up close in the ear in subterranean caverns, which they covered on all sides with straw, to defend it against damp; closing the entrance with great care, to prevent the air from getting in. Varro assures us, that corn would keep good in that manner for fifty years.¹⁵

ARTICLE III.

SECTION I.—CULTIVATION OF THE VINE. WINES CELEBRATED IN GREECE AND ITALY.

WE may believe, that mankind have been no less industrious in the cultivation of the vine, than in that of corn, though they applied themselves to it later. The scripture informs us, that the use of wine was not known till after the deluge. "Noah began to be an husbandman, and he planted a vineyard," Gen. ix. 20. It was, no doubt, known before, but only in the grape, and not as liquor. Noah planted it methodically, and discovered the use that might be made of the fruit, by pressing out and preserving the liquor. He was deceived by its sweetness and strength, which he had not experienced: "And he drank of the wine and was drunken." The Pagans transferred the honour of the invention of wine to Bacchus, of which they never had much knowledge; and what is said of Noah's drunkenness, made them consider Bacchus as the god of drunkenness and debauch.

The offspring of Noah having dispersed into the several countries of the world, carried the vine with them from place to place, and taught the use to be made of it. Asia was the first to experience the sweets of this gift, and soon imparted it to Europe and Africa. We see in Homer,¹ that, in the time of the Trojan war, part of the commerce consisted in the freight of wines. The wine was kept in those days in large earthen jars, or in the skins of beasts; which custom continues to this day in countries where wood is not plenty. It is believed that we are indebted to the Gauls, that settled on the banks of the Po, for the useful invention of preserving our wine in vessels of wood exactly closed, and for retaining it within bounds, notwithstanding its fermentation and strength. From that time the keeping and transporting it became more easy, than when it was kept in earthen vessels, which were liable to be broke, or in bags of skin, apt to unsew or grow mouldy.

Homer mentions a very famous wine of Maroneæ in Thrace, which would bear nixing with twenty times as much water.² But it was common for the natives to drink it unmix'd. Nor have authors³ been silent upon the excessive brutalities to which that nation were subject. Pliny⁴ tells us, that Mucianus,⁵ who had been thrice consul, being in that country in his own time, had experienced the truth of what Homer says, and saw that in a certain measure of wine they put fourscore times as much water; which is four times as much as the Grecian poet speaks of. The same author⁶ mentions wines much celebrated in Italy, which took their name from Opimius, in whose consulate they were made, which were preserved to his time, that is, almost two hundred years, and were not to be purchased for money. A very small quantity of this, mingled with other wines, communicated to them, as was pretended, a very surprising strength and exquisite flavour. How great soever the reputation of the wines made in the consulate of Opimius might be, or in that of Anicius, for the latter were much cried up, Cicero set no such great value upon them; and above an hundred years before Pliny writes, he found them too old to be supportable.⁷

Greece and Italy, which were distinguished in so many other respects, were particularly so by the excellency of their wines. In Greece, besides many others, the wines of Cyprus, Lesbos, and Chio were much celebrated. Those of Cyprus are in great esteem to this day. Horace often mentions those of Lesbos, and represents them as very wholesome and agreeable.⁸ But Chio carried it from all the other countries, and eclipsed their reputation so much, that the inhabitants of that island were thought to be the first who planted the vine, and taught the use of it to other nations.⁹ All these wines were in so great esteem, and of so high a price, that at Rome, so late as to the infancy of Lucullus, in their entertainments they drank only one cup of them at the end of the feast.¹⁰ Their prevailing qualities were sweetness and a delicious flavour.

Pliny was convinced that the libations of milk instituted by Romulus,¹¹ and Numa's prohibition to hon-

our the dead by pouring wine upon the funeral pile, were proofs that in those days vines were very scarce in Italy. They increased considerably in the following ages; and it is very probable that for this the Romans were obliged to the Greeks, whose vines were in high repute, as they were in process of time also, for their taste for arts and sciences. It was the wines of Italy, in the time of Camillus, that brought the Gauls again thither.¹² The charms of the liquor, which were entirely new to them, were powerful attractions to induce them to quit their country.

Two-thirds of all the places famed for the goodness of wine were in Italy. The ancient custom of that country,¹³ which it still retains, was to fasten their vines to trees,¹⁴ and especially to the poplar, to the tops of which they projected their slender circling branches: this had a very fine effect, and was a most agreeable object to the eye. In several places they made use of props, as we do. The country of Capua alone supplied them with the Massick, Calenian, Formian, Cæcuban, and Falernian, so much celebrated by Horace.¹⁵ It must be allowed, that the goodness of the soil, and the happy situation of all those places, contributed very much to the excellency of these wines; but we must also admit, that they owed it more to the care and industry of the husbandmen, who applied themselves with their utmost attention to the cultivation of the vines. The proof of which is, that in Pliny's time,¹⁶ which was about an hundred years after Horace, the reputation of these wines, formerly so famous, was entirely come to nothing, through the negligence and ignorance of the vine-dressers, who, blinded by the hope of gain, were more intent upon having a great quantity, than good wine.

Pliny cites several examples of the extreme difference which cultivation will produce in the same land.¹⁷ Amongst others, he tells us of a celebrated grammarian, who lived in the reign of Tiberius and Claudius, and purchased a vineyard at a small price, which had long been neglected by its ancient masters. The extraordinary care he took of it, and the peculiar manner in which he cultivated it, occasioned a change in a few years, that seemed little less than a prodigy *ad viz credibile miraculum perduxit*. So wonderful a success, in the midst of other vineyards, which were almost always barren, drew upon him the envy of all his neighbours, who, to cover their own sloth and ignorance, accused him of magic and sorcery.

Amongst the wines of Campania, which I have mentioned, the Falernian was in great vogue.¹⁸ It was very strong and rough, and was not deemed sufficiently improved for use till it had been kept ten years. To soften that roughness, and qualify its austerity, they made use of honey, or mingled it with Chio, and by that mixture made it excellent. This ought, in my opinion, to be ascribed to the refined and delicate taste of those voluptuous Romans, who, in the

¹² *Eam gentem (Gallorum) traditur fama, dulcedine frugum, maximeque vini nova tum voluptate captam, Alpes transisse.*—*Liv.* l. v. n. 33.

¹³ In Campano agro vitæ populus nubunt, maritoque complexæ atque per ramos earum procacibus brachiis geniculatæ curso scandentes, cæcumenæ aquant.—*Plin.* l. xvi. c. 1.

¹⁴ From this custom three elegant expressions in Horace take birth, all derived from the same metaphor. He says, *he marries the trees to the vines.* *Epod.* 2.

*Ergo aut adulta vitum propagine
Altas maritat populos.*

He calls the same trees *widowers*, when the vines are no longer fastened to them. *Od.* v. l. iv. *Aut vitum viduas ducit ad arbores.* And gives the name of *bachelors* to the trees which never had the vine annexed to them: *Platonisque cæleste evinctet utrosque.*—*Od.* 15. l. ii.

¹⁵ *Cæcubum, et prelo domitum Celeno*

Tu bilis uvam: nea nec Falerni

Temperant vites, neque Formiani

Pocula colles.—*Od.* 20. l. i.

*Cæcubus and Celenum join
To fill thy bowls with richest wine:
My humble cups do not produce
The Formian or Falernian juice.*

¹⁰ *Tanta vino Græco gratia erat, ut singulæ potiones in convictu darentur.*—*L.* Lucullus puer apud patrem nunquam lautum convivium vidit, in quo plus sœmel Græcum vinum daretur.—*Plin.* *ex Varro.* l. xiv. c. 14.

¹¹ *Plin.* l. ix. c. 12.

after times spared nothing to exalt the pleasures of the table, by whatever was most agreeable, and most capable of gratifying the senses. There were other Palernian wines more temperate and soft, but not so much esteemed.

The ancients, who so well knew the excellency of wine, were not ignorant of the dangers attending too free an use of it. I need not mention the law of Zaleucus, by which the Epizephyrian Locrians were universally forbid the use of wine upon pain of death, except in case of sickness. The inhabitants of Marseilles and Melitus showed more moderation and indulgence, and contented themselves with prohibiting it to women. At Rome,² in the early ages, young persons of liberal condition were not permitted to drink wine till the age of thirty; but as for the women, the use of it was absolutely forbid to them; and the reason of that prohibition was, because intemperance of that kind might induce them to commit the most excessive crimes. Seneca complains bitterly that this custom was almost universally violated in his times. The weak and delicate complexion of the women, says he, is not changed; but their manners are changed, and no longer the same.³ They value themselves upon carrying excess of wine to as great an height as the most robust men. Like them they pass whole nights at table, and with a full glass of unmixed wine in their hands, they glory in vying with them, and, if they can, in overcoming them.

The emperor Domitian passed an edict in relation to wine, which seemed to have a just foundation.⁴ One year having produced abundance of wine, and very little corn, he believed they had more occasion for the one than the other, and therefore decreed that no more vines should be planted in Italy; and that in the provinces, at least one half of the vines should be rooted up. Philostratus expresses himself, as if the decree ordained that they should all be pulled up, at least in Asia; because, says he, the seditions which arose in the cities of that province, were attributed to wine.⁵ All Asia deputed Scopelianus, a professor of eloquence at Smyrna, to go to Rome upon that occasion. He succeeded so well in his remonstrances, that he obtained not only that vines should continue to be cultivated, but that those who neglected to do so should be laid under a fine. It is believed that Domitian was chiefly induced to abolish his edict by the dispersing of papers with two Greek verses in them, signifying, that let him do what he would, there would still remain wine enough for the sacrifice, in which an emperor should be the offering.⁶ It seems, however, says Mr. Tillemont, that his edict subsisted throughout the greatest part of the west to the reign of Probus; that is, almost two hundred years. That emperor, who after many wars had established a solid peace in the empire, employed the troops in many different works, useful to the public, to prevent their growing enervate through sloth, and that the soldier might not eat his pay without deserving it. So that, as Hannibal had formerly planted the whole country of Africa with olive trees, lest his soldiers, for want of something to do, should form seditions; Probus, in like manner, employed his troops in planting vines upon the hills of Gaul, Pannonia, Mæsis, and in many other countries. He permitted in general the Gauls, Pannonians, and Spaniards, to have as many vines as they thought fit; whereas, from the time of Domitian, that permission had not been granted to any nation of the world.

SECTION II.—PRODUCE OF THE VINES IN ITALY IN COLUMELLA'S TIME.

BEFORE I conclude this article upon vines, I cannot omit extracting a passage of Columella, which

explains what profit was made from them, in his time. He enters for this purpose into a detail which seems sufficiently curious to me, and makes an exact calculation of the expense and produce of a vineyard of seven acres. His design is to prove, that the cultivation of vines is more beneficial than any other kind of husbandry, not excepting that of corn itself. That might be true in his times, but it is not so in ours, at least in the general opinion. This difference arises, perhaps, from the various accidents to which the vine is subject in France: frosts, rains, blights, which are not so much to be apprehended in hot countries. To these may be added the high price of casks in plentiful years, which swallows up the greatest part of the vine-dresser's profit, and the customs, which very much diminish (to the grower) the price of wines. Even amongst the ancients, all were not of Columella's opinion. Cato, indeed, gave vines the first rank, but those only which produced the most excellent liquor, and in great abundance.⁷ With the same conditions, we still think in the same manner. Many gave the preference to pasture lands; and their principal reason was, that the charges in the culture of vines were almost equal to their produce.

I.—The charges necessary for seven acres of vines.

These are,	livres.
1. For the purchase of a slave, whose labour sufficed for the cultivation of seven acres of vines, eight thousand sestertii, . . .	1000
2. For a field of seven acres, seven thousand sestertii, . . .	875
3. For the props and other necessary expenses for seven acres, fourteen thousand sestertii, . . .	1750
These three sums added together amount to twenty-nine thousand sestertii, . . .	3625
4. For the interest of the aforesaid sum of twenty-nine thousand sestertii for two years, during which the land does not bear, and the money lies dead, three thousand four hundred and fourscore sestertii, . . .	435
The total of the expense amounts to thirty-two thousand, four hundred and eighty sestertii, . . .	4060

II.—PRODUCE OF SEVEN ACRES OF VINES.

The yearly produce of seven acres of vines, is six thousand three hundred sesterces; that is, seven hundred fourscore and seven livres, ten sols. *Of which what follows is the proof.*

The *Culeus* is a measure which contains twenty amphoræ, or forty urnæ. The amphora contains twenty-six quarts, and somewhat more. The *Culeus*, in consequence, contains five hundred and twenty quarts, which make two hogsheds of the Paris measure, wanting fifty-six quarts. The lowest value of the *Culeus* is three hundred sestertii; that is to say, thirty-seven livres, ten sols. The least produce of each acre was three *Culei*, which were worth nine hundred sestertii, or an hundred and twelve livres, ten sols. The seven acres therefore produced a profit of six thousand three hundred sestertii, which make seven hundred fourscore and seven livres, ten sols. The interest of the total expense, which is thirty-two thousand four hundred and fourscore sestertii, that is, four thousand and sixty livres; this interest, I say, at six per cent. per annum, amounts to one thousand nine hundred and forty-four sestertii and something more, or two hundred and forty-three livres. The interest of the sum arising from the annual produce of a vineyard of seven acres, is six thousand three hundred sestertii; that is, seven hundred fourscore and seven livres, ten pence. From whence may be seen how much the latter interest exceeds the former, which

¹ Athen. l. x. p. 429.

⁶ Sueton in Domitian. c. 14.

⁷ Cato quidem dicit [primum agrum esse] ubi vinem possunt esse bono vino et multo.—Alii dant primum bonis pratis.—Vineam sicut qui putent sumpta fructum devorare.—*Farr. de Re Rustic. l. i. c. 7, 8.*

⁸ Columella observes, that each acre of Seneca's vineyards produced eight *Culei*.—*Lib. iii. c. 3.* And Varro, that in many places an acre produced from ten to fifteen, *l. l. c. 2.*

was, however, the common interest of money. This is what Columella would prove.

Besides this produce, Columella reckons another profit, arising from layers. The layer is a young shoot¹ or branch of a vine, which is set in the earth, where it takes root in order for propagation of the plant. Each acre produced yearly ten thousand of these layers at least, which sold for three thousand sesterii, or three hundred and seventy-five livres. The layers produced therefore from the seven acres, twenty-one thousand sesterii, or two thousand six hundred and twenty livres. Columella computes the produce of these layers at the lowest value; for as to himself, he assures us his own vineyards produced regularly twice as much. He speaks only of the vines of Italy, and not of those of other provinces.

Adding the produce of the wine to that of the plants or layers, the profit upon seven acres of vines amounted to three thousand four hundred livres. The produce of these layers, unknown to our vine-dressers, proceeded, no doubt, from the vine's being very rare in a great number of provinces; and the reputation of the vines of Italy having spread universally, people came from all parts to buy those layers, and to enable themselves, by their means, to plant good vineyards in places which had none before, or which had only such as were indifferent.

ARTICLE IV.

OF THE BREEDING OF CATTLE.

I HAVE said that the breeding of cattle is a part of agriculture. It certainly is an essential part of it, not only because cattle, from the abundance of their dung, supply the earth with the manure which is necessary to the preservation and renovation of its vigour, but because they share with man in the labours of husbandry, and spare him the greatest part of the toil. Hence it was that the ox, the laborious companion of man in tilling the ground, was so highly regarded by the ancients, that whoever had killed one of them was punished with death, as if he had killed a citizen; no doubt, because he was esteemed a kind of murderer of the human race, whose nourishment and life stood in absolute need of the aid of this animal.²

The farther we look back into antiquity, the more we are assured, that in all nations the breeding of cattle produced considerable revenues.³ Without speaking of Abraham, whose numerous family of domestics shows the multitude of his flocks and herds, or of his kinsman Laban, the holy scripture observes, Job i. 3, that the greatest part of Job's riches consisted in cattle; and that he possessed seven thousand sheep, three thousand camels, five hundred yoke of oxen, and five hundred she-asses. It was by this the land of promise, though of very moderate extent, enriched its princes, and the inhabitants of the country, whose numbers were incredible, amounting to more than three millions of souls, including women and children. We read that Ahab, king of Israel, 2 Kings iii. 4, imposed an annual tribute upon the Moabites, whom he had conquered, of an hundred thousand sheep. How much must this number have multiplied in a short time, and what abundance occasioned throughout the whole country!

The holy scripture, in representing Uzziah, 2 Chron. xxvi. 10, as a prince accomplished for every part of a wise government, does not fail to inform us, that he had a great number of husbandmen and vineyards, and that he fed abundance of cattle. He caused great enclosures to be made in the countries, and vast houses for foddering the flocks and herds, with lodges fortified with towers, for the shepherds to retire to with their flocks, and to secure them against irruptions. He also took care to have great numbers of cisterns cut for watering the flocks; works not so

splendid, but no less estimable, than the most superb palaces. It was, without doubt, the particular protection which he gave to all who were employed in the cultivation of lands, or the breeding of cattle, that rendered his reign one of the most opulent Judea had ever seen. And he did thus, saith the scripture, "because he loved husbandry;" *Erat enim homo agricultura deditus*. The text is still stronger in the Hebrew: *QUIA DILIGEBAT TERRAM*, "because he loved the ground." He took delight in it, perhaps cultivated it with his own hands; at least, he made husbandry honourable; he knew all the value of it, and was sensible that the earth, manured with diligence and skill, was an assured source of riches both to the prince and people; he therefore thought attention to husbandry one of the principal duties of the sovereignty, though often the most neglected.

The scripture says also of the holy king Hezekiah, 2 Chron. xxxii. 29: "Moreover he provided him cities and possessions of flocks and herds in abundance, for God had given him substance very much." It is easy to conceive, that the shearing of sheep alone, without mentioning other advantages from them, could not but produce a very considerable revenue in a country where an almost innumerable multitude were continually fed. And hence we find, that the time for shearing of sheep was a season of festivity and rejoicing.

Amongst the ancient pagans the riches of the kings consisted in cattle, as we find from Latinus in Virgil, and Ulysses in Homer. It was the same amongst the Romans, who by the ancient laws did not pay fines in money, but in oxen and sheep.

We must not be surprised, after having considered the great advantages produced by the breeding and feeding of cattle, that so wise a man as Varro has not disdained to give us an extensive account of all the beasts that are of any use to the country, either for tillage, breed, or for carriage, and the other conveniences of man. He speaks first of small cattle, sheep, goats, and hogs; *greges*. He proceeds next to the large beasts, oxen, asses, horses, and camels; *armmenta*. And concludes with fowl, which may be called domestic animals, *villatica pecudes*; pigeons, turtle-doves, fowls, geese, and many others. Columella enters into the same detail;⁴ and Cato the censor runs over part of it. The latter, upon being asked what was the surest and shortest method to enrich a country, replied, the feeding of cattle, which is attended with an infinity of advantages to those who apply themselves to it with diligence and industry. And, indeed, the beasts that labour in the field render mankind continual and important services; and the advantages he reaps from them do not conclude even with their lives. They divide with him, or rather spare him the most laborious part of the work, without which the earth, however fruitful in itself, would continue barren, and not produce him any increase. They serve him in bringing home with safety into his house the riches he has amassed without doors, and carry him on his journeys. Many of them cover his table with milk, cheese, wholesome food, and even the most exquisite dishes; and supply him with the rich materials of the stuffs he is in want of for clothing himself, and with a thousand other conveniences of life.

We see, from what has been said hitherto, that the country, covered with corn, wine, flocks, and herds, is a real Peru to man, and a much more valuable and estimable one than that from whence he extracts gold and silver, which, without the other, would not preserve him from perishing with hunger, thirst, and cold. Placed in the midst of a fertile territory, he beholds around him at one view all his riches; and without quitting his little empire, he finds immense and innocent treasures within his reach. These he regards, no doubt, as gifts from the liberal hand of that supreme Master to whom he is indebted for all things; but he regards them also as the fruits of his own labour, and that renders them still more grateful to him.

³ In rusticatione vel antiquissima est ratio pascendi, eademque est questuosissima.—Ibid.

SECTION V.—INNOCENCY AND PLEASURE OF A RURAL LIFE, AND OF AGRICULTURE.

THE revenues and profits which arise from the culture of lands, is neither the sole nor the greatest advantage accruing from it. All the authors who have wrote upon rural life,¹ have always spoken of it with the highest praises, as of a wise and happy state, which inclines a man to justice, temperance, sobriety, sincerity, and, in a word, to every virtue; which in a manner shelters him from all passions, by keeping him within the limits of his duty, and of a daily employment, that leaves him little leisure for vices. Luxury, avarice, injustice, violence, and ambition, the almost inseparable companions of riches, take up their ordinary residence in great cities, which supply them with the means and occasions: the hard and laborious life of the country does not admit of these vices. This gave room for the poets to feign that Astræa, the goddess of justice, had her last residence there, before she entirely quitted the earth.

We see in Cato the form of a prayer used by the country people, wherein may be discerned the precious tokens of the ancient tradition of men, who attributed every thing to God, and addressed themselves to him in all their temporal necessities, because they knew he presided over all things, and that all things depended on him. I shall repeat a good part of it, and hope it will not be unacceptable. It is in a ceremony called *Solitautilia*, and according to some *Suovetaurilia*, in which the country people made a procession round their lands, and offered libations and sacrifices to certain gods.

"Father Mars," said the suppliant, "I humbly implore and conjure you, to be propitious and favourable to me, my family, and all my domestics, in regard to the occasion of the present procession in my fields, lands, and estate; to prevent, avert, and remove from us all diseases, known and unknown, desolations, storms, calamities, and pestilential air; to make our plants, corn, vines, and trees grow and come to perfection; to preserve our shepherds and flocks; to grant thy preservation of life and health to me, my family, and all my domestics." What a reproach is it that Christians, and often those who have the greatest share in the goods of this world, should in these days be so little careful to demand them from God, and be ashamed to thank him for them! Amongst the Pagans all their meals began and ended with prayers, which are now banished from almost all our tables.

Columella enters into a detail upon the duties of the master or farmer,² in regard to his domestics, which seems full of reason and humanity. "Care ought to be taken," says he, "that they are well clad, but without finery; that they are defended against the wind, cold, and rain. In directing them,³ a medium should be observed between too great indulgence and excessive rigour, in order to make them rather fear than experience severities and chastisements; and they should be prevented from doing amiss by diligence, and their master's presence; for good conduct consists in preventing, instead of punishing, faults. When they are sick, care should be taken that they are well tended, and that they want for nothing; which is the certain means to make their business grateful to them."⁴ He recommends also the same usage of slaves, who often worked laden with chains, and who were generally treated with great rigour.

What he says with regard to the mistress of a country family is very remarkable.⁵ Providence, in

uniting man and woman, intended they should be a mutual support to each other, and for that reason assigned to each of them their peculiar functions. The man, designed for business without doors, is obliged to expose himself to heat and cold; to undertake voyages by sea, and journeys by land; to support the labours of peace and war, that is, to apply himself to the works of the field, and in carrying arms; all exercises which require a body robust, and capable of bearing fatigues. The woman, on the contrary, too weak to sustain these offices, is reserved for affairs within doors. The care of the house is confided to her; and as the proper qualities for her employment are attention and exactitude, and as fear renders us more exact and attentive, it was necessary that the woman should be more timorous. On the contrary, because the man acts and labours almost always without doors, and is often obliged to defend himself against injuries, God has infused boldness and courage into him. Hence from all ages, both amongst the Greeks and Romans, the government of the house devolved upon the women, that their husbands, after having transacted their business abroad, might return to their houses free from all cares, and find a perfect tranquillity at home.⁶ This is what Horace describes so elegantly in one of his odes,⁷ [which Dryden translates thus:

But if a chaste and pleasing wife,
To ease the business of his life,
Divides with him his household care,
Such as the Sabine matrons were,
Such as the swift Apulian's bride,
Sunburnt and swarthy though she be
Will fire for winter's nights provide,
And without noise will oversee
His children and his family;
And order all things till he come,
Sweaty, and over-labour'd home;
If she in pens his flock will fold,
And then produce her dairy store,
And wine to drive away the cold,
And unbought dainties of the poor, &c.]

The ancients seem to have excelled themselves in treating this subject, which supplies so many fine thoughts and beautiful expressions. [Mr. Rollin gives here a prose translation of the passage at bottom in the Georgics,⁸ which it was conceived would be no less agreeable in Mr. Dryden's version.

O happy, if he knew his happy state,
The swain, who free from business and debate,
Receives his easy food from nature's hand,
And just returns of cultivated land!
No palace, &c.
But easy, quiet, a secure retreat,
A harmless life, that knows not how to cheat,
With homebred plenty the rich owner bless,
And rural pleasures crown his happiness.
Unvex'd with quarrels, undisturbed with noise,
The country-king his peaceful realm enjoys:
Cool grots, and living lakes, the flowery pride
Of meads, and streams that through the valleys glide;

* Nam et apud Græcos, et mox apud Romano susque patrū nostrorum memoriam, fere domesticus labor manū nalis fuit, inquam ad requiem forensium exercitationū omni cura deposita patribus familiis intradomesticos pates se recipientibus.

³ The lands were cultivated by slaves.

⁴ Colum. l. xii. c. 1.

⁵ Colum. in præf. l. xii.

And shady groves, that easy sleep invite,
And after toilsome days, a soft repose at night.
Wild beasts of nature in his wood abound,
And youth, of labour patient, plough the ground,
Inured to hardship, and to homely fare.
Nor venerable age is wanting there,
In great examples to the youthful train:
Nor are the gods adored with rights profane.
From hence *Antrea* took her flight, and here
The prints of her departing steps appear.

Georg. lib. ii. l. 439.]

The fine description Cicero gives us, in his essay upon old age, of the manner in which corn and grapes gradually arrive at perfect maturity, shows his taste for the country life, and instructs us, at the same time, in what manner we ought to consider those wonderful productions, that merit our admiration no less from their being common and annual. And indeed, if a simple description gives so much pleasure, what effect, in a mind rationally curious, ought the reality itself to have, and the actual view of what passes in vineyards and fields of corn, till the fruits of both are brought in, and laid up in cellars and barns? And as much may be said of all the other riches, with which the earth annually clothes herself. This is what makes a residence in the country so agreeable and delightful, and so much the desire of magistrates and persons employed in serious and important affairs. Tired and fatigued with the continual cares of the city, they naturally cry out with Horace, "O country, when shall I see you? When will it be allowed me to forget, in thy charming retreats, my cares and solicitude, either in amusing myself with the books of the ancients, or enjoying the pleasure of having nothing to do, or reposing myself in sweet slumber?" The purest pleasures are, no doubt, to be found there. The country seems, according to the happy expression of the same poet, to restore us to ourselves, in relieving us from a kind of slavery, and in placing us where we may justly be said to live and reign. We enter, in a manner, into a conversation with the trees and plants; we question them; we make them give us an account of the fruits they produce; and receive such excuses as they have to make when defective in bearing; alleging sometimes the great rains, sometimes excessive heats, sometimes the severity of the cold.¹ It is Horace who lends them this language.

All I have said sufficiently implies, that I speak no longer of that painful and laborious tillage, to which man was at first condemned: but that I have another in view, intended for his pleasure, and to employ him with delight; an employment perfectly conformable to his original institution, and the design of his Creator, as it was commanded Adam immediately after his formation. In effect, it seems to suggest to us the idea of the terrestrial paradise, and to partake in some measure of the happy simplicity and innocence which reigned there. We find that in all times, it has been the most grateful amusement of princes and the most powerful kings. Without mentioning the famous hanging gardens, with which Babylon was adorned, the scripture informs us, that Ahasuerus (Darius, son of Darius Hystaspes) had planted part of the trees of his garden, and that he cultivated it

with his own royal hands. *Jussit concivium prapari in vestibulo horti et nemoris, quod regio cultu et manu, consitum erat.*² [I do not find the latter part of this text in the English Bible.] We have said, that Cyrus the younger answered Lysander, who admired the beauty, economy, and disposition of his gardens, that himself had drawn the plan, laid them out, and planted many of the trees with his own hands. *Ego omnia ista sum dimensus: mei sunt ordines, mea descriptio: multae etiam istarum arborum mea manu sunt salæ.*³

We should never be willing to quit so delightful a residence, were it possible for us to possess it always; and have endeavoured, at least, for our consolation, to impose a kind of illusion upon ourselves, by transporting the country in a manner into the midst of cities; not a simple and almost wild country, but a trim, laid out, embellished, I had almost said, painted country. I mean those adorned and elegant gardens, which present so grateful and splendid a view to our eyes. What beauty, riches, abundance, variety of sweets, colours, and objects! To see the unvariable constancy and regularity of flowers in succeeding each other, (and as much may be said of fruits) one would think that the earth, attentive to pleasing its master, endeavours to perpetuate her presents, by continually paying him the new tributes of every season.⁴ What a throng of reflections does not this suggest to a curious, and still more to a religious mind!

Pliny, after having confessed, that no eloquence was capable of expressing duly the incredible abundance, and wonderful variety of the riches and beauties, which nature seems to spread with complacency and delight throughout gardens, adds a very just and instructive remark. He observes upon the difference nature has made as to the duration of trees and flowers.⁵ To the trees and plants designed for the nourishment of man with their fruits, and for the structure of ships and edifices, she has granted years and even ages of time. To flowers and sweets, which serve only for pleasure, she has given only some moments and days of life; as if she intended to admonish us, that what is most shining and splendid soonest fades, and passes away with rapidity. Malherbe expresses this latter thought in a very lively manner, where he deplores the death of a very young and beautiful person.

*Et rose elle a vecu ce qui vivent les roses,
L'espace d'un matin.*

And lived a rose, as roses live,
A single morning's space.

It is the great advantage of agriculture to be more strictly united with religion and also moral virtue, than any other art; which made Cicero say, as we have seen, that the country life came nearest to that of the wise man; that is, it was a kind of practical philosophy.

To conclude this small treatise where I began it, it must be confessed, that of all human employments, which have no immediate relation to God and justice, the most innocent is agriculture. It was, as has been said, that of the first man in his state of innocence and duty. It afterwards became part of the penance imposed on him by God. So that, both in the states of innocence and sin, it was commanded to him, and in his person to all his descendants.⁶ It is, however, become, in the judgment of pride, the meanest and most contemptible of employments; and whilst useless arts, which conduce only to luxury and voluptuousness, are protected and honoured, all those who labour for the welfare and happiness of others are abandoned to poverty and misery.

¹ O rus, quando ego te aspiram, quandoque licebit
Nunc veterum libris, nunc somno, et inertibus horis,
Ducere sollicitæ juvanda oblivis vitæ?

O rural scenes, and O serene abodes,
Wherein we seem to emulate the gods,
When, void of care, of passion, and of strife,
And all the busy ills of tedious life,
With you my happy hours shall I employ
In sweet vicissitudes of rest and joy.
In books that raise the soul, and learn'd ease,
In sleep, in leisure, and in what I please? *Paraph.*

OF COMMERCE.

ARTICLE I.

EXCELLENCY AND ADVANTAGES OF COMMERCE.

It may be said, without fear of being suspected of exaggeration, that commerce is the most solid foundation of civil society, and the most necessary principle to unite all men, of whatever country or condition they are, with each other. By its means the whole world is but one city, and one family. It is the source of universal plenty to every part of it. The riches of one nation become those of all people, and no country is barren, or at least sensible of its sterility. All its necessities are provided for in time from the extremities of the universe; and every region is amazed to find itself abound in foreign productions, and enriched with a thousand commodities, unknown to itself, and which, however, compose all that is most agreeable in life. It is by the commerce of the sea and rivers, that is to say, by navigation, that God has united all mankind amongst themselves in so wonderful a manner, by teaching them to direct and govern the two most violent things in nature, the sea and the winds, and to render them subservient to their use and occasion.¹ He has joined the most remote people by this means, and preserved amongst the different nations an image of the dependence he has ordained in the several parts of the same body by the veins and arteries. This is but a weak, a slight idea of the advantages arising from commerce to society in general. With the least attention to particulars, what wonders might we not discover! But this is not the proper place for such inquiries.

I shall confine myself to one reflection, which seems very proper for our understanding at once the weakness and grandeur of man. I shall consider him, at first, in the highest degree of elevation to which he is capable of attaining. I mean upon the throne: lodged in superb palaces; surrounded with all the splendour of the royal dignity; honoured and almost adored by throngs of courtiers, who tremble in his presence, and vie with each other for his favour; placed in the centre of riches; and supported by numerous armies, who wait only to obey his orders. Behold the height of human greatness! But what becomes of this so powerful, so awful, prince, if commerce happens to cease on a sudden; if he is reduced to himself, to his own industry and personal endeavours? Abandoned to himself in this manner; divested of that pompous outside, which is not him, and is absolutely foreign to his person; deprived of the support of others, he falls back into his native misery and indigence; and to sum up all in a word, he is no longer any thing.

Let us now consider man in a mean condition, inhabiting a little house; reduced to subsist on a little bread, meat, and drink; covered with the plainest clothes; and enjoying in his family, not without difficulty, the other conveniences of life. What seeming solitude, what a forlorn state, what oblivion seems he in with regard to all other mortals! We are much deceived when we think in this manner. The whole universe is attentive to him. A thousand hands work for his occasions, and to clothe and nourish him. For him manufactures are established, granneries and cellars filled with corn and wine, and different metals extracted from the bowels of the earth with so much danger and difficulty. There is nothing, even to the things that minister to pleasure and voluptuousness, which the most remote nations are not solicitous to transfer to him through the most stormy seas. Such are the supplies which commerce, or, to speak more

properly, divine providence, always employed for our occasions, continually procures for us all, for each of us in particular:—supplies which, to judge aright of them, are in a manner miraculous, which ought to fill us with perpetual admiration, and make us cry out with the prophet, in the transports of a lively gratitude, “O Lord, what is man, that thou art mindful of him; or the son of man, that thou visitest him!”²

It would be to no purpose for us to say, that we lie under no obligation to those who labour for us in this manner, because their particular interest puts them in motion. This is true; but is their work therefore of less advantage to us? God, to whom alone it belongs to produce good from evil itself, makes use of the covetousness of some for the benefit of others. It is with this view providence has established so wonderful a diversity of conditions amongst us, and has distributed the goods of life with so prodigious an inequality. If all men were easy in their fortunes, were rich and opulent, who amongst us would give himself the trouble to till the earth, to dig in the mine, or to cross the seas? Poverty or covetousness charge themselves with these laborious, but useful toils. From whence it is plain, that all mankind, rich or poor, powerful or impotent, kings or subjects, have a mutual dependence upon each other for the demands of life; the poor not being able to live without the rich, nor the rich without the labour of the poor. And it is commerce, subsisting from these different interests, which supplies mankind with all their necessities, and at the same time with all their conveniences.

ARTICLE II.

ANTIQUITY OF COMMERCE. COUNTRIES AND CITIES MOST FAMED FOR IT.

It is very probable, that commerce is no less ancient than agriculture. It began, as was natural, between private persons, mankind assisting each other with whatsoever surplus they had of things useful and necessary to human life. Cain, no doubt, supplied Abel with corn and the fruits of the earth for his food; and Abel, in exchange, supplied Cain with skins and fleeces for his clothing, and with milk, curds, and perhaps meat for his table. Tubal-Cain, solely employed in works of copper and iron, for the various uses and occasions of life, and for arms to defend men either against human enemies or wild beasts, was certainly obliged to exchange his brass and iron works for other merchandise, necessary for his food, clothing, and lodging. Commerce afterwards, extending gradually from neighbour to neighbour, established itself between cities and adjacent countries, and after the deluge, enlarged its bounds to the extremities of the world.

The holy scripture gives us a very ancient example of traffic by the caravans of the Ishmaelites and Midianites, to whom Joseph was sold by his brethren.³ They were upon their return from Gilead, with their camels laden with spices, aromatic goods, and with other precious merchandise of that country. These they were carrying into Egypt, where there was a great demand for them, occasioned by their custom of embalming the bodies of men, after their death, with great care and expense.

Homer informs us, that it was the custom of the heroic age of the siege of Troy, for the different nations to exchange the things that were most necessary for life, with each other;⁴ a proof, says Pliny, that

¹ Quas res violentissimas natura gennit, earum moderationem nos sibi habemus, maris atque ventorum, propter nauticarum rerum scientiam.—Cic. de Nat. Deor. l. ii. n. 15.

² Psal. viii. 4.

³ Gen. xxvii. 23.

⁴ Quantum feliciter vivo, cum res ipsæ permittantur inter sese sicut et Trojanis temporibus factita vult Homerus

it was rather necessity than avarice that gave birth to this primitive commerce. We read in the seventh book of the *Iliad*, that upon the arrival of certain vessels, the troops went in crowds to purchase wine, some with copper, and others with iron, skins, oxen, and slaves.

We find no navigators in history so ancient as the Egyptians and Phœnicians. These two neighbouring nations seem to have divided the commerce by sea between them: the Egyptians had possessed themselves chiefly of the trade of the East, by the Red Sea; and the Phœnicians of that of the West, by the Mediterranean. What fabulous authors say of Osiris, who is the Bacchus of the Greeks, that he undertook the conquest of the Indies, as Sesostris did afterwards, makes it probable that the Egyptians carried on a great trade with the Indians.

As the commerce of the Phœnicians was much more to the west than that of the Egyptians, it is no wonder that they are more celebrated upon that account by the Greek and Roman authors. Herodotus says that they were the carriers of the merchandise of Egypt and Assyria, and transacted all their trade for them, as if the Egyptians had not employed themselves in it; and that they have been believed the inventors of traffic and navigation, though the Egyptians have a more legitimate claim to that glory.¹ Certain it is, the Phœnicians distinguished themselves more by ancient commerce, and are also a proof to what a height of glory, power, and wealth a nation is capable of raising itself merely by trade.

This people possessed a narrow tract of land upon the sea-coast, and Tyre itself was built in a very barren district; which, had it been richer and more fertile, would not have been sufficient for the support of the great number of inhabitants, which the early success of its commerce drew thither. Two advantages made them amends for this defect. They had excellent ports upon the coasts of their small state, particularly that of their capital; and they had naturally so happy a genius for trade, that they were looked upon as the inventors of commerce by sea, especially of that carried on by long voyages.

The Phœnicians knew so well how to improve both these advantages, that they soon made themselves masters of the sea, and of trade. Libanus and other neighbouring mountains supplying them with excellent timber for building of vessels, in a little time they fitted out numerous fleets of merchant vessels, which hazarded voyages into unknown regions, in order to establish a trade with them. They did not confine themselves to the coasts and ports of the Mediterranean; they entered the ocean by the straits of Cadiz or Gibraltar, and extended their correspondence to the right and left. As their people multiplied almost infinitely by the great number of strangers, whom the desire of gain, and the certain opportunity of enriching themselves, drew to their city; they saw themselves in a condition to plant many remote colonies, and particularly the famous one of Carthage, which retaining the Phœnician spirit with regard to traffic, did not give place to Tyre itself in trading, and surpassed it exceedingly in extent of dominion and glory of military expeditions.

The degree of glory and power to which commerce and navigation elevated the city of Tyre, rendered it so famous, that we could scarce believe there is no exaggeration in what profane authors report of it, if the prophets themselves had not spoke of it with still greater magnificence. "Tyre," says Ezekiel, to give us some idea of its power, "is a superb vessel. They have made all thy ship-boards of fir-trees of Senir; they have taken cedars from Lebanon to make masts for thee. Of the oaks of Bashan have they made thine oars: the company of the Ashurites have made thy benches of ivory, brought out of the isles of Chittim. Fine linen, with brodered work from Egypt, was that which thou spreadest forth to be thy sail: blue

and purple from the isles of Elishah was that which covered thee. The inhabitants of Zidon and Arvad were thy mariners: thy wisemen, O Tyrus, that were in thee, were thy pilots."² The prophet, by this figurative language, designs to show us the power of this city. But he gives with more energy a circumstantial account of the different people with whom it traded. The merchandises of the whole earth seemed to be laid up in this city, and the rest of the world appeared less its allies than tributaries.

The Carthaginians trafficed with Tyre for all sorts of riches, and filled its markets with silver, iron, pewter, and lead.³ Greece, Tubal, and Meshech,⁴ brought it slaves and vessels of copper. Togarmah⁵ supplied it with horses and mules. Dedan,⁶ with elephants' teeth and ebony. The Syrians exposed to sale in it pearls, purple, wrought cloths, lawn, silk, and all sorts of precious merchandise. The people of Judah and Israel brought thither the finest wheat, balm, honey, oil, and fruits. Damascus sent it excellent wine and wool of the most lively and most exquisite dyes; other people furnished it with iron work, myrrh, the aromatic calamus, and carpets of exquisite workmanship to sit upon. Arabia,⁷ and all the princes of Kedar, brought thither their flocks of lambs, sheep, and goats. Sheba and Raamah,⁸ the most excellent perfumes, precious stones, and gold; and others, cedar-wood, bales of purple, embroidered clothing and every kind of rich goods.

I shall not undertake to distinguish exactly the situation of the different nations of whom Ezekiel speaks, this not being the proper place for such a disquisition. It suffices to observe, that this long enumeration, into which the Holy Spirit has thought fit to descend with regard to the city of Tyre, is an evident proof, that its commerce had no other bounds than the world, as known at that time. Hence it was considered as the common metropolis of all nations, and as the queen of the sea. Isaiah paints its grandeur and state in most lively, but very natural colours, where he says that Tyre wore the diadem upon her brows; that the most illustrious princes of the universe were her correspondents, and could not be without her traffic; that the rich merchants, enclosed within her walls, were in a condition to dispute precedence with crowned heads, and pretended, at least, to an equality with them: "Who hath taken this counsel against Tyre, the crowned city, whose merchants are princes whose traffickers are the honourable of the earth."⁹

I have related elsewhere the destruction of the ancient Tyre by Nebuchadonosor, after a siege of thirteen years; and the establishment of the New Tyre, which soon repossessed itself of the empire of the sea, and continued its commerce with more success and more splendour than before; till at length, being stormed by Alexander the Great, he deprived it of its maritime strength and trade, which were transferred to Alexandria, as we shall soon see.

Whilst both the old and the new Tyre experienced such great revolutions, Carthage, the most considerable of their colonies, was become very flourishing. Traffic had given it birth; traffic augmented it, and put it into a condition to dispute the empire of the world for many years with Rome. Its situation was much more advantageous than that of Tyre. It was equally distant from all the extremities of the Mediterranean sea; and the coast of Africa, upon which it was situated, a vast and fertile region, supplied it abundantly with the corn necessary to its subsistence. With such advantages, those Africans, making the best use of the happy genius for trade and navigation

³ Tubal and Meshech. The holy scripture always joins these two people. The latter intends Muscovy; the former, without doubt, was its neighbour.

⁴ Togarmah. Cappadocia, from whence came the finest horses, of which the emperors reserved the best for their own stables.

⁵ Dedan. The people of Arabia.

⁶ Arabia Deserta. Kedar was near it.

⁷ Sheba and Raamah. People of Arabia Felix. **A**n antiquity mentions the riches and spices of this people.

⁸ Isa. xxiii. 8.

eredi venit! Ita enim, ut opinor, commercia victus gratia inventa. Alios coriis homin, alios ferro captivique rebus emptitasse tradit.—*Plin.* xxxiii. c. 1.

¹ Herod. l. c. 1.

which they had brought from Phœnicia, attained so great a knowledge of the sea, that in that point, according to the testimony of Polybius, no nation was equal to them. By this means they rose to such a height of power, that in the beginning of their third war with the Romans, which occasioned their final ruin, Carthage had seven hundred thousand inhabitants, and three hundred cities in its dependence upon the continent of Africa only. They had been masters not only of the tract of land extending from the great Syrtis to the pillars of Hercules, but also of that which extends itself from the same pillars to the southward, where Hanno, the Carthaginian, had founded so many cities, and settled so many colonies. In Spain, which they had almost entirely conquered, Adrubal, Hannibal's father, who commanded there after Barca, had founded Carthagena, one of the most celebrated cities of those times. Great part also of Sicily and Sardinia had formerly submitted to their yoke.

Posterity might have been indebted for great lights to the two illustrious monuments of the navigation of this people, in the history of the voyages of Hanno, styled king of the Carthaginians, and of Imilco, if time had preserved them. The first related the voyages he had made in the ocean, beyond the pillars of Hercules, along the western coast of Africa; and the other, his voyages on the western coast of Europe, both wrote by order of the senate of Carthage. But time has consumed those writings.

This people spared neither pains nor expenses to bring navigation to perfection. That was their only study. The other arts and sciences were not cultivated at Carthage. They did not pique themselves upon polite knowledge. They professed neither poetry, eloquence, nor philosophy. The young people, from their infancy, heard of nothing in conversation but merchandise, accounts, ships, and voyages. Address in commerce was a kind of inheritance in families, and was the best part of their fortunes; and as they added their own observations to the experience of their fathers, we ought not to be surprised that their ability in this way always increased, and made such a wonderful progress. Hence it was that commerce raised Carthage to so high a degree of wealth and power, that it cost the Romans two wars, the one of twenty-three, and the other of seventeen years, both bloody and doubtful, to subdue that rival; and that, at last, victorious Rome did not believe it in her power to subject her enemy entirely, but by depriving her of the resources she might still have found in trade, and which, during so long a series of years, had supported her against all the forces of the republic.

Carthage had never been more powerful by sea, than when Alexander besieged Tyre, the metropolis of her people. Her fortune began to decline from that time. Ambition was the ruin of the Carthaginians. Their being weary of the pacific condition of merchants, and preferring the glory of arms to that of traffic, cost them dear. Their city, which commerce had peopled with so great a multitude of inhabitants, saw its numbers diminished to supply troops and recruit armies. Their fleets, accustomed to transport merchants and merchandise, were no longer freighted with any thing but munitions of war and soldiers; and out of the wisest and most successful traders, they elected officers and generals of armies, who acquired them an exalted degree of glory indeed, but one of short duration, and soon followed with their utter ruin.

The taking of Tyre by Alexander the Great, and the founding of Alexandria, which soon followed, occasioned a great revolution in the affairs of commerce. That new settlement was, without dispute, the greatest, the most noble, the wisest, and the most useful design that conqueror ever formed. It was not possible to find a more happy situation, nor one more likely to become a mart for all the merchandise of the east and west. That city had on one side a free commerce with Asia and the whole East, by the Red Sea. The same sea and the river Nile gave it a communication with the vast and rich countries of Ethio-

pia. The commerce of the rest of Africa and Europe was open to it by the Mediterranean; and for the inland trade of Egypt, it had, besides the navigation of the Nile and the canals cut out of it, the assistance of the caravans, so convenient for the security of merchants, and the conveyance of their effects. This induced Alexander to believe it a proper place for founding one of the finest cities and ports in the world. For the isle of Pharos, which at that time was not joined to the continent, supplied him with the happiest situation, after he had joined them by a mole, having two entrances, in which the vessels of foreign nations arrived from all parts, and from whence the Egyptian ships were continually sailing to carry their factors and commerce to all parts of the world then known.

Alexander lived too short a time to see the happy and flourishing condition to which commerce raised his city. The Ptolemies, to whose share, after his death, Egypt fell, took care to improve the growing trade of Alexandria, and soon raised it to a degree of perfection and extent, that made Tyre and Carthage be forgotten, which for a long series of time had transacted, and engrossed to themselves, the commerce of all nations.

Of all the kings of Egypt, Ptolemæus Philadelphus was the prince who contributed most to the bringing of commerce to perfection in his country. For that purpose he kept great fleets at sea, of which Athenæus gives us the number and description, that cannot be read without astonishment.¹ Besides upwards of six score sail galleys of an extraordinary size, he gives him more than four thousand other ships, which were employed in the service of the state and the improvement of trade. He possessed a great empire, which he had formed by extending the bounds of the kingdom of Egypt into Africa, Ethiopia, Syria, and beyond the sea, having made himself master of Cilicia, Pamphylia, Lycia, Caria, and the Cyclades, possessing almost four thousand cities in his dominions. To raise the happiness of these provinces as high as possible, he endeavoured to draw into them, by commerce, the riches and commodities of the East; and to facilitate their passage, he built a city expressly on the western coast of the Red Sea, cut a canal from Coptos to that sea, and caused houses to be erected along that canal, for the convenience of merchants and travellers, as I have observed in its place. It was the convenience of this staple for merchandise at Alexandria, which diffused immense riches over all Egypt; riches so considerable, that it is affirmed, the customs only for the importation and exportation of merchandise at the port of Alexandria, amounted yearly to more than thirty-seven millions of livres, though most of the Ptolemies were moderate enough in the imposts they laid on their people.²

Tyre, Carthage, and Alexandria were, without dispute, the most famous cities of antiquity for commerce: it was also followed with success at Corinth, Rhodes, Marseilles, and many other cities, but not with such extent and reputation.

ARTICLE III.

THE END AND MATERIALS OF COMMERCE

THE passage of Ezekiel, which I have cited in regard to Tyre, includes almost all the materials in which the ancient commerce consisted: gold, silver, iron, copper, tin, lead, pearls, diamonds, and all sorts of precious stones; purple, stuffs, cloths, ivory, ebony, cedar, myrrh, aromatic reeds, or the calamus; perfumes, slaves, horses, mules, grain, wine, cattle, and, in a word, all kind of precious merchandise. I shall not dwell here upon any thing but what relates to mines of iron, copper, gold, silver, pearls, purple, and silk; nor treat even these heads with any great extent. Pliny the naturalist will be my ordinary guide as to those of my subjects he has wrote upon. And I shall make great use of the learned remarks of the author of the natural history of gold and silver, ex-

¹ Athen. l. v. p. 203.

² Cin. apud Strab. l. xvii. p. 708.

sted from the thirty-third book of Pliny, and
dated at London.

SECTION I.—MINES OF IRON.

It is certain that the use of metals, especially of iron and copper, is almost as old as the world; but it does not appear that gold or silver were much regarded in the first ages. Solely intent upon the necessities of life, the first inhabitants of the earth did what new colonies are obliged to do. They applied themselves in building them houses, clearing lands, and furnishing themselves with the instruments necessary for cutting wood, hewing stone, and other mechanical uses. As all these tools could be formed only of iron, copper or steel, those essential materials became, by a necessary consequence, the principal objects of their pursuit. Those who were settled in countries which produced them, were not long without knowing their importance. People came from all parts in quest of them; and their land, though in appearance poor and barren in every other respect, became an abundant and fertile soil to them. They wanted nothing, having that merchandise; and their iron bars were ingots, which procured them all the conveniences and elegancies of life.

It would be very grateful to know where, when, how, and by whom these materials were first discovered. Concealed as they are from our eyes, and hid in the bowels of the earth in small and almost imperceptible particles, which have no apparent relation, or visible disposition for the different works composed of them, who was it that instructed man in the uses to be made of them? It would be doing chance too much honour to impute to it this discovery. The infinite importance, and almost indispensable necessity for the instruments with which they supply us, well deserve that we should acknowledge it to proceed from the concurrence and goodness of divine providence. It is true, that providence commonly takes delight in concealing its most wonderful gifts under events, which have all the appearance of chance and accident. But attentive and religious eyes are not deceived in them, and easily discover, under these disguises, the beneficence and liberality of God, so much the more worthy of admiration and acknowledgment, as less visible to man. This is a truth confessed by the Pagans themselves, as I have already observed elsewhere. It is remarkable that iron, which of all metals is the most necessary, is also the most common, the easiest to be found, less deep in the earth than any other, and most abundant.¹

As I find little in Pliny upon the manner in which the ancients discovered and prepared metals, I am obliged to have recourse to what the moderns say upon that head, in order to give the reader at least some slight idea of the usual methods in the discovery, preparation, and melting of those metals, which were in part practised by the ancients. The matter from which iron is extracted, (which the term of art calls *iron-ore*), is found in mines of different depth, sometimes in stones as big as the fist, and sometimes only in sand.² After having amassed the quantity of matter to be melted, it is put into large furnaces, where a great fire has been kindled. When the ore is melted and well skimmed, they make it run out of the furnace through a hole prepared for that purpose, from which, running with rapidity like a torrent of fire, it falls into different moulds, according to the variety of works to be cast, as kettles, and such kind of utensils. In the same manner they form also the large lumps of iron called *sows*, of different sizes, which weigh sometimes two or three thousand pounds and upwards. These are afterwards carried to the forge, or foundry, to be forged or fined with the assistance of mills, which keep great hammers continually going.

Steel is a kind of iron refined and purified by fire, which renders it whiter, more solid, and of a smaller

and finer grain. It is the hardest of all metals, when prepared and tempered as it ought. That temper is derived from cold water, and requires a nice attention in the workman, in taking the steel out of the fire when it has attained a certain degree of heat.³ When we consider a sharp and well polished knife or razor, could we believe it was possible to form them out of a little earth, or some blackish stones? What a difference is there between so rude a matter, and such polished and shining instruments! Of what is not human industry capable?

Mr. Reaumur observes, in speaking of iron, one thing well worthy of observation.⁴ Though fire seldom or never renders it so liquid as it does gold, brass, pewter, and lead, of all metals, however, there is not one that takes the mould so perfectly, insinuates itself so well into the most minute parts of it and receives impressions with such exactitude.

SECTION II.—MINES OF COPPER OR BRASS.

COPPER, which is otherwise called brass, is a hard, dry, weighty metal. It is taken out of mines like other metals, where it is found as well as iron, either in powder or stone. Before it is melted, it must be washed very much, in order to separate the earth from it, with which it is mixed. It is afterwards melted in the furnaces by great fires, and, when melted, poured off into moulds. The copper which has had only one melting, is the common and ordinary copper. To render it purer and finer, it is melted once or twice more.⁵ When it has passed the fire several times, and the grossest parts are separated from it, it is called *roseite*, or the purest and finest copper.

Copper is naturally red, of which brass is a species made yellow with *lapis calaminaris*. The *lapis calaminaris*, which is also called *cadmia*, is a mineral or fossil, which foundries use to change the colour of copper yellow.⁶ This stone does not become yellow till after it has been baked in the manner of bricks; it is then used either to make yellow, or increase the red fine copper. The yellow copper, or brass, is therefore a mixture of the red with *lapis calaminaris*, which augments its weight from ten to fifty in the hundred, according to the different goodness of the copper. It is also called *latten*, and in the Roman language *arrichalcum*.

Bronze is a made metal, consisting of a mixture of several metals. For the fine statues of this metal, the mixture is half fine copper and half brass. In the ordinary sort, the mixture is of pewter, and sometimes of lead, to save cost. There is also another species of mixed copper, called by the French *fonte*, which differs from the bronze only by being more or less mixed.

The art of founding, or, as it is vulgarly called, of casting in brass, is very ancient. All ages have made their vessels and other curious works in metal. Casting must have been very common in Egypt when the Israelites left it, as they could form in the desert, without any great preparations, a statue with lineaments and shape representing a calf. Soon after they made the molten sea, and all other vessels for the tabernacle, and afterwards for the temple. It was not uncommon to form statues of plates hammered into form, and rivetted together. The invention of these images, either cast or hammered, took birth in the East, as well as idolatry, and afterwards communicated itself to Greece, which carried the art to the highest degree of perfection.

The most celebrated and valuable copper amongst the Greeks was that of Corinth, of which I have spoken elsewhere, and that of Delos. Cicero joins them together in one of his orations, where he mentions a vessel of brass, called *authepsa*, in which meat was

dressed with very little fire, and almost of itself: this vessel was sold so dear, that those who passed by and heard the sum bid for it at the sale, imagined the purchase of an estate was in question.

It is said that brass was used before iron for the making of arms. It certainly was in use for money before gold and silver, at least with the Romans. It consisted at first of pieces of different sizes, and was taken by weight, without having any fixed marks or figure upon it; from whence came the form of speaking used in sales, *per æs et libram*. Servius Tullius, the sixth king of the Romans, was the first that reduced it to form, and stamped it with a particular impression: and as at that time the greatest riches consisted in cattle, oxen, sheep, hogs, &c., the figure of those animals, or of their heads, was stamped upon the first money that was coined, and it was called *pecunia*, from the word *pecus*, which signifies cattle in general.¹ It was not till the consulship of Q. Fabius and Ogulnius, five years before the first Punic war, in the 485th year of Rome, that silver money was used at Rome.² They, however, always retained the ancient language and denomination, taken from the word *æs*, brass. From thence the expression *as grave* (heavy brass), to signify, at least in the origin of that term, the *asses* of a pound weight; *ararium*, the public treasury, wherein, in ancient times, there was only brass money; *as alienum*, borrowed money; with many others of like signification.

SECTION III.—MINES OF GOLD.

To find gold, says Pliny, we have three different methods. It is extracted either from rivers, the bowels of the earth, or the ruins of mountains, by undermining and throwing them down.⁴

I.—GOLD FOUND IN RIVERS.

Gold is gathered in small grains or little quantities upon the shores of rivers, as in Spain upon the brink of the Tagus, in Italy upon the Po, in Thrace upon the Hebrus, in Asia upon the Pactolus, and lastly, upon the Ganges in India; and it is agreed, that the gold found in this manner is the best of all; because having long ran through rocks and over sands, it has had time to cleanse and purify itself.⁵ The rivers I mention were not the only ones in which gold was to be found. Our Gaul had the same advantage. Diodorus says, that nature had given it gold in a peculiar manner, without obliging the natives to hunt after it with art and labour; that it was mingled with the sands of the rivers; that the Gauls knew how to wash these sands, extract the gold, and melt it down; and that they made themselves rings, bracelets, girdles, and other ornaments of it.⁶ Some rivers of France are said to have retained this privilege: the Rhine, the Rhone, the Garonne, the Dour in Franche-Comte, the Ceze, and the Gardon, which have their sources in the Cerennes, the Arriege in the country of Foix, and some others.⁷ The gathering of it indeed does not turn to any considerable account, scarce sufficing to the maintenance of the country people, who employ themselves for some months in that work. They have sometimes their lucky days, when they get more than a pistole for their trouble; but they pay for them on others, which produce little or nothing.

II.—GOLD FOUND IN THE BOWELS OF THE EARTH.

Those who search after gold, begin by finding what we call in French *la Manne*, manna, a kind of earth, which, by its colour and the exhalations that arise from it, informs those who understand mines, that there is gold underneath it. As soon as the vein

of gold appears, the water must be turned off, and the ore dug out industriously, which must be taken away and washed in proper layers. The ore being put into them, a stream of water is poured on continually, in proportion to the quantity of the ore to be washed; and to assist the force of the water an iron fork is used, with which the ore is stirred and broke, till nothing remains in the laver but a sediment of black sand, with which the gold is mingled. This sediment is put into a large wooden dish, in the midst of which four or five deep lines are cut, and by washing it and stirring it well in several waters, *conjectura*, the terrene parts dissolve, and nothing remains but pure gold dust. This is the method now used in Chili, and the same as was practised in the time of Pliny:⁸ *Aurum quæ querunt, ante omnia segullum tollunt: illa vocatur i'vicium. Alvens hic est: arena lavantur atque ex eo quod resedit, conjectura capitur.* Every thing is comprehended in these few words. *Segullum*, which is what the French call *la manne*, or manna. *Alvens hic est*: that is, the vein of gold ore. *Arena avantur*: this implies the lavers. *Atque ex eo quod resedit*: this, the sediment of black sand, in which the gold is contained. *Conjectura capitur*: here the stirring of the sediment, the running off of the water, and the gold dust that remains, are intimated.

It sometimes happens, that without digging far, the gold is found upon the superficies of the earth: but this good fortune is not frequent, though there have been examples of it. For not long ago, says Pliny, gold was found in this manner in Nero's reign, and in so great a quantity, that fifty poun's a day, at least, has been gathered of it.⁹ This was in Dalmatia.

It is commonly necessary to dig a great way, and to form subterraneous caverns, in which coarse and small flints are found, covered with the gold. These caverns are carried on to the right or left, according to the running of the vein; and the earth above it is supported with strong props at proper distances. When the metallic stone, commonly called the ore, in which the gold forms itself, is brought out of the mine, it is broke, pounded, washed, and put into the furnace. The first melting is called only silver, for there is always some of it mingled with the gold. The scum which rises in the furnace, is called *scoria* in Latin. This is the dross of the metal, which the fire throws up, and is not peculiar to gold, but common to all metallic bodies. This dross is not thrown away, but pounded and calcined over again, to extract what remains of good metal in it. The crucible in which this preparation is made, ought to be of a certain white earth, not unlike that used by the potters.¹⁰ There is scarce any other which can bear the fire, bellows, and excessive heat of this substance melted.

This metal is very precious, but costs infinite pains in getting it. Slaves, and criminals condemned to death, were employed in working the mines. The thirst of gold has always extinguished all sense of humanity in the human heart. Diodorus Siculus observes, that these unhappy creatures, laden with chains, were allowed no rest either by night or day; that they were treated with excessive cruelty; and that, to deprive them of all hope of being able to escape by corrupting their guards, soldiers were chosen for that office who spoke a language unknown to them, and with whom, in consequence, they could have no correspondence, nor form any conspiracy.¹¹

III.—GOLD FOUND IN THE MOUNTAINS.

There is another method to find gold, which regards properly only high and mountainous places, such as are frequently met with in Spain.¹² These are dry and barren mountains in every other respect, which are obliged to give up their gold, to make amends in some measure for their sterility in every thing else.¹³

⁷ Diod. l. iii.

⁸ Plin. l. xxxiii. c. 4.

⁹ Diod. l. iii.

The work begins at first by cutting great holes to the right and left. The interior of the mountain itself is afterwards attacked by the assistance of torches and lamps; for the day is soon lost, and the night continues as long as the operations, that is, for several months. Before any great progress is made, great flaws appear in the earth, which falls in, and often crushes the poor miners to death; so that, says Pliny, people are much more bold and venturesome in searching after pearls at the bottom of the waves in the East, than in digging for gold in the bowels of the earth, which is become by our avarice more dangerous than the sea itself.¹ It is therefore necessary in these mines, as well as in the first I spoke of, to form good arches at proper distances, to support the hollowed mountain. There are great rocks and veins of stone found also in these, which must be broke by fire and vinegar. But as the smoke and steam would soon suffocate the workmen, it is often more necessary, and especially when the work is a little advanced, to break these enormous masses with pick-axes and crows, and to cut away large pieces by degrees, which must be given from hand to hand, or from shoulder to shoulder, till thrown out of the mine. Day and night are passed in this manner. Only the hindmost workmen see daylight; all the rest work by lamps. If the rock is found to be too long or too thick, they proceed on the side, and carry on the work in a curve line. When the work is finished, and the subterraneous passages carried their proper length, they cut away the props of the arches, that had been formed at due distances from each other. This is the usual signal of the ruin which is to follow, and which those who are placed to watch it perceive first by the sinking in of the mountain, which begins to shake; upon which they immediately, either by halloing or beating upon a brazen instrument, give notice to the workmen to take care of themselves, and then run away the first for their own safety. The mountain, sapped on all sides in this manner, falls upon itself, and breaks to pieces with a dreadful noise. The victorious workmen then enjoy the sight of nature overturned.² The gold, however, is not yet found; and when they began to pierce the hill, they did not know whether there was any in it. Hope and avarice were sufficient motives for undertaking the labour, and confronting such dangers.

But this is only the prelude to new toils, still greater and more heavy than the first. For the waters of the higher neighbouring mountains must be carried through very long trenches, in order to their being poured with impetuosity upon the ruins thus formed, and to carry off the precious metal.³ For this purpose new canals must be made, sometimes higher or lower, according to the ground, and hence the greatest part of the labour arises; for the level must be well placed, and the heights well taken, in all the places over which the torrent is to pass to the lower mountain that has been thrown down, in order that the water may have sufficient force to tear away the gold wherever it passes, which obliges the workmen to make it fall from the greatest height they can. And as to the inequality of the ground in its course, they remedy that by artificial canals, which preserve the descent, and keep the water within their bounds; and if there are any large rocks which oppose its passage, they must be hewn down, made level, and have tracks cut in them for the wood-work, which is to receive and continue the canal. Having united the waters of the highest neighbouring mountains, from whence they are to fall, they make great reservoirs, of the breadth of two hundred, and the depth of ten, feet. They generally leave five openings, of three or four feet square, to receive the water at several places. After which, when the reservoirs are full, they open the sluice, from whence falls so violent and impetuous a torrent, that it carries away all before it, and even stones of considerable magnitude.

There is another work in the plain at the foot of the mine. New trenches must be dug there, which form several beds for the falling of the torrent from height to height, till it discharges itself into the sea. But to prevent the gold from being carried off with the current, they lay, at proper distances, good dams of *ulex*, a sort of shrub much resembling our rosemary, but something thicker of leaves, and consequently fitter for catching this prey as in nets. Add to this, that good planks are necessary on each side of these trenches, to keep the water within them; and where there are any dangerous inequalities of ground, these new canals must be supported with shores,⁴ till the torrent loses itself at last in the sand of the ocean, in the neighbourhood of which the mines commonly are. The gold got in this manner at the foot of the mountains, has no need of being purified by fire, for it is at first what it ought to be. It is found in lumps of various sizes, as it is also in deep mines, but not so commonly. As to the wild rosemary branches used on this occasion, they are taken up with care, dried, and then burned; after this the ashes are washed on the turf, upon which the gold falls and is easily gathered.

Pliny examines wherefore gold is preferred to other metals, and gives several reasons for it.⁵ It is the only metal which loses nothing, or almost nothing by the fire, not even of funeral piles or conflagrations, in which the flames are generally most violent. It is even affirmed to be rather the better for having passed the fire several times. It is by fire, also, that proof is made of it; for when it is good, it takes its colour from it. This the workmen call *obryzum*, refined gold. What is wonderful in this proof is, that the hottest charcoal has no effect on it: to melt it, a clear fire of straw is necessary, with a little lead thrown in to refine it.⁶

Gold loses very little by use, and much less than any other metal; whereas silver, copper, and pewter soil the hands, and draw black lines upon any thing, which is a proof that they waste, and lose their substance more easily. It is the only metal that contracts no rust, nor any thing which changes its beauty or diminishes its weight. It is a thing well worthy of admiration, that of all substances gold preserves itself best and entire, without rust or dirt, in water, the earth, dung, and sepulchres, and that throughout all ages. There are medals of it in being which have been struck above two thousand years, which seem just come from the workman's hands. It is observed, that gold resists the impressions and corrosion of salt and vinegar, which melt and subdue all other matter.⁷

There is no metal which extends better, nor divides into so great a number of particles of different kinds.⁸ An ounce of gold, for instance, will form seven hundred and fifty leaves, each leaf of four inches square and upwards. What Pliny says here is certainly very wonderful; but we shall presently see that our modern artificers have carried their skill much farther than the ancients in this, as well as many other points. In fine, gold will admit to be spun and wove like wool into any form. It may be worked even without wool or silk or with both. The first of the Tarquins triumphed in a vest of cloth made of gold; and Agrippina, the mother of Nero, when the emperor Claudius, her husband, gave the people the representation of a sea-fight, appeared at it in a long robe made entirely of gold wire, without any mixture whatsoever. What is related of the extreme smallness of gold and silver, when reduced into wire, would seem incredible, if not confirmed by daily experience.

¹ Machines to support these canals, made of board.

² Plin. l. xxxiii. c. 33.

³ Strabo makes the same remark, and gives the reason for this effect.—*Palaedia facilius liquefit aurum: quia flamma mollis cum sit, proportionem habet temperatum ad id quod cedit et facile funditur; carbo autem multum absumit, nimis colligans sua vehementia et elevans.*—Strab. l. iii. p. 146.

⁷ Spectant victrices ruinam naturæ: nec tamen adhuc aurum est.—Plin.

⁸ A centesimo plerumque lapidis.

I shall only copy here what I find in the Memoirs of the Academy of Sciences upon this head.¹

We know, says those Memoirs, that gold wire is only silver wire gilt. By the means of the engine for drawing wire, a cylinder of silver, covered with leaf-gold, being extended, becomes wire, and continues gilt to the utmost length it can be drawn. It is generally of the weight of forty-five marks; its diameter is an inch and a quarter French, and its length almost two and twenty inches. Mr. Reaumur proves that this cylinder of silver, of two and twenty inches, is extended by the engine to thirteen million, nine hundred and sixty-three thousand, two hundred and forty inches, or one million, one hundred and sixty-three thousand, five hundred and twenty feet; that is to say, six hundred and thirty-four thousand, six hundred and ninety-two times longer than it was, which is very near ninety-seven leagues in length, allowing two thousand perches to each league. This wire is spun over silk thread, and before spun is made flat from round as it was when first drawn, and in flattening generally lengthens one-seventh at least; so that its first length of twenty-two inches is changed into that of an hundred and eleven leagues. But this wire may be lengthened a fourth in flattening, instead of a seventh, and in consequence be six-score leagues in extent. This should seem a prodigious extension, and yet is nothing.

The cylinder of silver of forty-five marks, and twenty-two inches length, requires only to be covered with one ounce of leaf-gold. It is true the gilding will be light, but it will always be gilding; and though the cylinder in passing the engine attains the length of an hundred and twenty leagues, the gold will still continue to cover the silver without variation. We may see how exceedingly small the ounce of gold, which covers the cylinder of silver of forty-five marks, must become, in continuing to cover it throughout so vast an extent. Mr. Reaumur adds to this consideration, that it is easy to distinguish that the silver is more gilt in some than in other places; and he finds by a calculation of wire the most equally gilt, that the thickness of the gold is $\frac{1}{103000}$ of a line, or twelfth part of an inch; so enormous a smallness, that it is as inconceivable to us as the infinite points of the geometricians. It is, however, real, and produced by mechanical instruments, which, though ever so fine to our senses, must still be very gross in fact. Our understanding is lost and confounded in the consideration of such objects; and how much more in the infinitely small of God!

ELECTRUM.

It is necessary to observe, says Pliny, whom I copy in all that follows, that in all kinds of gold there always is some silver, more or less: sometimes a tenth, sometimes a ninth or an eighth.² There is but one mine in Gaul from whence gold is extracted, that contains only a thirtieth part of silver, which makes it far more valuable than all others. This gold is called *Albicratense*, of *Albicrate* (an ancient place in Gaul near Tarbæ.) There were several mines in Gaul, which have been since either neglected or exhausted. Strabo mentions some of them, amongst which are those of Tarbæ, that were, as he says, very fruitful in gold; for without digging far, they found it in quantities large enough to fill the palm of the hand, which had no great occasion for being refined.³ They had also abundance of gold dust,⁴ and gold in grains, of equal goodness with the other.

To the gold, continues Pliny, which was found to have a fifth part of silver in it, they gave the name of *Electrum*. (It might be called white gold, because it came near that colour, and is paler than the other.) The most ancient people seemed to have set a great value upon it. Homer, in his description of Menelaus' palace, says it shone universally with gold, *electrum*, silver, and ivory.⁵ The *electrum* had this pro-

perty peculiar to it, that it brightens much more by the light of lamps than either gold or silver.

SECTION IV.—SILVER MINES.

SILVER mines, in many respects, resemble those of gold.⁶ The earth is bored, and long caverns cut on the right or left, according to the course of the vein. The colour of the metal does not enliven the hopes of the workmen, nor the ore glitter and sparkle as in the others. The earth which contains the silver is sometimes reddish, and sometimes of an ash colour which the workmen distinguish by use. As for the silver, it can only be refined by fire, with lead or with pewter ore.⁷ This ore is called *galena*, and is found commonly in the veins of silver mines. The fire only separates these substances; the one of which it reduces into lead or pewter, and the other into silver; but the last always swims at top, because it is lightest, almost like oil upon water.

There were silver mines in almost all the provinces of the Roman empire. That metal was found in Italy near Vercellæ; in Sardinia, where there was abundance of it; in several parts of Gaul; even in Britain in Alsace, witness Strasburg, which took its name *Argentoratum*, as Colmar did *Argentaria*, from it; in Dalmatia and Pannonia, now called Hungary; and lastly, in Spain and Portugal, which produced the finest qualities.

What is most surprising in the mines of Spain, is, that the works, begun in them by Hannibal's orders,⁸ subsist in our days, says Pliny;⁹ that is to say, above three hundred years, and that they still retain the names of the first discoverers of them, who were all Carthaginians. One of these mines, amongst the rest exists now, and is called *Bebulo*. It is the same from which Hannibal daily extracted three hundred pounds of silver, and has been extended fifteen hundred paces in length, and even through the mountains, by the Accittanian people;¹⁰ who, without suspending their operations either by night or day, and directed in their operations solely by the light of their lamps, have drawn off all the water from them. There are also veins of silver discovered in that country, almost upon the surface of the earth. For the rest, the ancients easily knew when they were come to the end of the vein, which was when they found alum; after that they searched no farther: though lately [it is still Pliny who speaks] beyond the alum, they have found a white vein of copper, which served the workmen as a new token that they were at the end of the vein of silver.

The discovery of the metals we have hitherto spoken of, is a wonder we can never sufficiently admire. There was nothing more hidden in nature than gold and silver. They were buried deep in the earth, mingled with the hardest stones, and in appearance perfectly useless; the parts of these precious metals were so confounded with foreign bodies, so imperceptible from that mixture, and so difficult to separate, that it did not seem possible to cleanse, collect, refine, and apply them to their uses. Man, however, has surmounted this difficulty, and by experiments has brought his first discoveries to such perfection, that one would imagine gold and silver were formed from the first in solid pieces, and were as easily distinguished as the flints which lie on the surface of the earth. But was man of himself capable of making such discoveries? Cicero says, in express terms that God in vain had formed gold, silver, copper, and iron in the bowels of the earth, if he had not vouchsafed to teach man the means by which he might come at the veins that conceal those precious metals.¹¹

SECTION V.—PRODUCT OF GOLD AND SILVER MINES, ONE OF THE PRINCIPAL SOURCES OF THE RICHES OF THE ANCIENTS.

It is easy to conceive that mines of gold and silver must have produced great profits to the private persons and princes who possessed them, if they took the least trouble to work them.

Philip, the father of Alexander the Great, had gold mines near Pydna, a city of Macedonia, from which he drew yearly a thousand talents, that is to say, three millions.¹ He had also other mines of gold and silver in Thessaly and Thrace; and it appears that these mines subsisted as long as the kingdom of Macedonia;² for the Romans, when they had conquered Persens, prohibited the use and exercise of them to the Macedonians.³

The Athenians had silver mines not only at Laurium in Attica, but particularly in Thrace, from which they were great gainers. Xenophon mentions many citizens enriched by them.⁴ Hipponius had six hundred slaves; Nicias, who was killed in Sicily, had a thousand. The farmers of their mines paid daily to the first fifty livres, clear of all charges, allowing an obolus⁵ a-day for each slave; and as much in proportion to the second; which amounted to a considerable revenue.

Xenophon, in the treatise wherein he proposes several methods for augmenting the revenues of Athens, gives the Athenians excellent advice upon this head, and exhorts them above all, to make commerce honourable; to encourage and protect those who applied themselves to it, whether citizens or strangers; to advance money for their use, taking security for the payment; to supply them with ships for the transportation of merchandise; and to be assured that, with regard to trade, the opulence and strength of the state consisted in the wealth of individuals and of the people. He insists very much in relation to mines, and is earnest that the republic should work them, in its own name and for its own advantage, without being afraid of injuring private individuals by that conduct; because they sufficed for the enriching both the one and the other, and that mines were not wanting to workmen, but workmen to the mines.

But the produce of the mines of Attica and Thrace was nothing in comparison with that of the Spanish mines. The Tyrians had the first profits of them, the inhabitants of the country not knowing their value. The Carthaginians succeeded them; and as soon as they had set foot in Spain, perceived the mines would be an inexhaustible source of riches for them. Pliny informs us,⁶ that one of them alone supplied Hannibal daily with three hundred pounds of silver, which amounts to twelve thousand six hundred livres, as the same Pliny observes elsewhere. Polybius, cited by Strabo, says, that in his times there were forty thousand men employed in the mines in the neighbourhood of Carthage, and that they paid daily twenty-five thousand drachmas to the Roman people; that is, twelve thousand five hundred livres.

History mentions private persons who had immense and incredible revenues. Varro speaks of one Ptolemy, a private person, who, in the time of Pompey, commanded in Syria, and maintained eight thousand horse at his own expenses; and had generally a thousand guests at his table, who had each a gold cup, which was changed at every course.⁷ This is nothing to Pythius of Bithynia, who made king Darius a present of the plantain and vine, so much extolled in history, both of massy gold, and feasted the whole army of Xerxes one day in a splendid manner, though it consisted of seventeen hundred thousand men; offering that prince five months' pay for that prodigious

host, and the necessary provisions for the whole time.⁸ From what source could such enormous treasures arise, if not principally from the mines of gold and silver possessed by these individuals? We are surprised to read in Plutarch the account of the sums carried to Rome, for the triumphs of Paulus Emilius Lucullus, and many other victorious generals. But all this is inconsiderable to the endless millions amassed by David and Solomon, and employed in the building and ornaments of the temple of Jerusalem. Those immense riches, of which the recital astonishes us, was partly the fruits of the commerce established by David in Arabia, Persia, and Indostan, by the means of two ports⁹ he had caused to be built in Idumea, at the extremity of the Red Sea; which trade Solomon must have considerably augmented, as in one voyage only his fleet brought home four hundred and fifty talents of gold, which amount to above one hundred and thirty-five millions of livres.¹⁰ Judea was but a small country, and nevertheless the annual revenue of it, in the time of Solomon, without reckoning many other sums, amounted to six hundred and sixty-six talents of gold, which make near two hundred millions of livres.¹¹ Many mines must have been dug in those days, for supplying so incredible a quantity of gold, and those of Mexico and Peru were not then discovered.

SECTION VI.—OF COINS AND MEDALS

THOUGH commerce began by the exchange of commodities, as appears in Homer, experience soon made the inconvenience of that traffic evident, from the nature of the several merchandises, that could neither be divided nor cut, without considerable prejudice to their value; which obliged the dealers in them, by little and little, to have recourse to metals, which diminished neither in goodness nor fabric by division. Hence, from the time of Abraham, and without doubt before him, gold and silver were introduced in commerce, and perhaps copper also for the lesser wares. As frauds were committed in regard to the weight and quality of the metal, the civil government and public authority interposed, for establishing the security of commerce, and stamped metals with impressions to distinguish and authorize them. From thence came the various dies for money, the names of the coiners, the effigies of princes, the years of consulships, and the like marks.

The Greeks put enigmatical hieroglyphics upon their coins, which were peculiar to each province. The people of Delphos represented a dolphin upon theirs; this was a kind of speaking blazonry; the Athenians, the bird of their Minerva, the owl, the symbol of vigilance, even during the night; the Boeotians, a Bacchus, with a bunch of grapes and a large cup, to imply the plenty and deliciousness of their country; the Macedonians, a shield, in allusion to the force and valour of their soldiery; the Rhodians, the head of Apollo, or the sun, to whom they had dedicated their famous Colossus. In fine, every magistrate took pleasure to express in his money the glory of his province, or the advantages of his city.

The making bad money has been practised in all ages and nations. In the first payment made by the Carthaginians of the sum to which the Romans had condemned them at the end of the second Punic war the money brought by their ambassadors was not of good alloy, and it was discovered, upon melting it, that the fourth part was bad.¹² They were obliged to make good the deficiency by borrowing money at Rome. Antony the Triumvir, at the time of his greatest necessity, caused iron to be mixed with money coined by his order.¹³ This bad coin was either made by a mixture of copper, or wanted more or less

of its just weight. A pound of gold and silver ought to be, as Pliny observes, fourscore and sixteen, or an hundred drachmas in weight. Marius Gratidianus, brother of the famous Marius, when he was prætor, suppressed several disorders at Rome, relating to the coin, by wise regulations. The people, always sensible of amendments of that kind, to express their gratitude, erected statues to him in all the quarters of that city. It was this Marius! whom Sylla, to avenge the cruelties committed by his brother, ordered to have his hands cut off, his legs broke, and his eyes put out, by the ministration of Cataline.²

The inconveniences of exchanges were happily remedied by the coining of gold and silver moneys, that became the common price for all merchandise, of which the painful, and often useless carriage, was thereby saved. But the ancient commerce was still in want of another advantage, which has been since wisely contrived; I mean the method of remitting money from place to place, by bill directing the payment of it.

It is not easy to distinguish with certainty the difference between coins and medals, opinions differing very much upon that head. What seems most probable is, that a piece of metal ought to be called coin, when it has, on one side, the head of the reigning prince, or some divinity, and is always the same on the reverse. Because money being intended to be always current, the people ought to know it with ease, that they may not be ignorant of its value. Thus the head of Janus, with the oak of a galley on the reverse, was the first money of Rome.³ Servius Tullius, instead of the head of a ship, stamped that of a sheep or an ox on it; from whence came the word *pecunia*, because those animals were of the kind called *pecus*. For the head of Janus, a woman armed was afterwards substituted, with the inscription *Roma*; and on the other side, a chariot drawn by two or four horses, of which were the pieces of money called *Bigati* and *Quadrigati*. Victories were also put on them, *Victoriati*. All these different species are allowed to be coins, as are those which have certain marks on them; as an X, that is to say *Denarius*; an L, *Libra*; an S, *Semis*. These different marks explain the weight and value of the piece.

Medals are pieces of metal, which generally express on the reverse some considerable event. The parts of a medal are its two sides, of which the one is called the face or head, and the other the reverse. On each side of it there is a field, which is the middle of the medal; the circumference or border, and the exergue, which is the part at the bottom of the piece, upon which the figures represented by the medal are placed. Upon these two faces the type, and the inscription or legend, are distinguished. The figures represented are the type; the inscription or legend is the writing we see on it, and principally that upon the border or circumference of the medal.

To have some idea of the science of medals, it is necessary to know their origin and use; their division into ancient and modern, into Greek and Roman; what is meant by the medals of the early or later empire; of the great or small bronze; what a series is in the language of antiquarians. But this is not the proper place for explaining all these things. The book of father Joubert le Jesuit, on the knowledge of medals, contains what is necessary to be known, when a profound knowledge of them is not required.

I content myself with informing young persons, who are desirous to study history in all its extent, that the knowledge of medals is absolutely necessary to that kind of learning. For history is not to be learned in books only, which do not always tell the whole, or the truth of things. Recourse must therefore be had to pieces which support it; and which neither malice nor ignorance can injure or vary; and such are the monuments which we call medals. A

thousand things equally important and curious are to be learnt from them, which are not to be found elsewhere. The pious and learned Mr. Tillemont, author of the Memoirs upon the History of the Emperors gives us a proof and model of the use which may be made of the knowledge of medals.

As much may be said of antique seals, and carved stones, which have this advantage of medals, that being of a harder substance, and representing the figures upon them in hollow, they preserve them perpetually in all their perfection; whereas medals are more subject to spoil, either by being rubbed, or by the corrosion of saline particles, to which they are always exposed. But to make amends, the latter, being all of them far more abundant than the former in their various species, they are of much greater use to the learned.

The royal academy of inscriptions and polite learning, established and renewed so successfully under the preceding reign, and which takes in all erudition, ancient and modern, for its object, will not a little contribute to preserve amongst us, not only a good taste for inscriptions and medals, which consists in a noble simplicity, but also a general taste for all works of art, that are principally founded upon ancient authors, whose writings this academy make their peculiar study. I dare not express here all that I think of a society, into which I am admitted, and of which I am a member. I was chosen into it upon its being revived, without making any interest for so honourable a place, and indeed without knowing any thing of it; an introduction, in my opinion, highly worthy of learned bodies. I could wish that I had merited it better, and had discharged the functions of a fellow of the academy with greater abilities.

SECTION VII.—OF PEARLS.

THE pearl is a hard, white, clear substance, formed in the inside of a certain kind of oysters. The testaceous fish, in which the pearls are found, is three or four times as large as the common oyster. It is commonly called *pearl*, or *mother of pearl*. Each mother of pearl generally produces ten or twelve pearls. An author, however, who has treated of their production, pretends to have seen to the number of an hundred and fifty in one of them, but in various degrees of perfection. The most perfect always appear the first; the rest remain under the oyster, at the bottom of the shell.

Pearl-fishing amongst the ancients was followed principally in the Indian seas, as it still is, as well as in those of America and some parts of Europe. The divers, under whose arms a cord is tied, of which the end is made fast to the bark, go down into the sea several times successively, and after having torn the oysters from the rocks, and filled a basket with them, they come up again with great agility. This fishing is followed in a certain season of the year. The oysters are commonly put into the sand, where they corrupt by the extraordinary heat of the sun, and, opening of themselves, show their pearls, which after that need only to be cleaned and dried. The other precious stones are quite rough when taken from the rocks where they grow, and derive their lustre only from the industry of man. Nature alone furnishes the substance, which art must finish by cutting and polishing. But as to pearls, that clear and shining water, for which they are so much esteemed, comes into the world with them.⁴ They are found completely polished in the abysses of the sea, and nature puts the last hand to them before they are torn from their shells.

The perfection of pearls, according to Pliny, consists in their being of a glittering whiteness, large, round, smooth, and of a great weight, qualities seldom united in one subject.⁵ It is chimerical to ima-

M. Mario cui vicinim populus status posuerat cui thure et vino Romanus Populus supplicabat. L. Sylla perfringi crura, oculos erui, amputari manus jussit; et quasi totiens occideret, quotiens vulnerabat, paulatim et per singulos artus increavit.—*Senece. de Ira*. l. iii. c. 18.

² Flor. l. ii. c. 21.

³ Plin. l. xxxiii. c. iij.

⁴ In the terms of jewellers, they call the shining colour of pearls, *water*; from their being supposed to be made of water. Hence the pearl pendants of Cleopatra were said to be inestimable, both for their water and large size.

⁵ Dos omnis in candore, magnitudine orbe, favore, pondere, heud promptis rebas.—*Plin.* l. ix. c. 25

gine that pearls take birth from dew drops; that they are soft in the sea, and only harder when exposed to the air; that they waste and come to nothing when it thunders, as Pliny and several authors after him say.¹

Many things are highly prized only for being scarce, whose principal merit consists in the danger people are at to get them.² It is strange that men should set so small a value upon their lives, and should judge them of less worth than shells hidden in the sea. If it were necessary, for the acquiring of wisdom to undergo all the pains taken to find some pearl of uncommon beauty and magnitude, (and as much may be said of gold, silver, and precious stones,) we ought not to hesitate a moment in resolving to venture life, and that often, for such inestimable treasure. Wisdom is the greatest of all fortunes; a pearl, the most frivolous of riches; men, however, do nothing for the former, and hazard every thing for the latter.

SECTION VIII.—PURPLE.

STUFFS dyed with purple were one of the most considerable branches of the commerce of the ancients, especially of Tyre, which by industry and extreme skill had carried that precious dye to the highest possible degree of perfection. The purple disputed value with gold itself in those remote times, and was the distinguishing marks of the greatest dignities of the universe, being principally appropriated to princes, kings, senators, consuls, dictators, emperors, and those to whom Rome granted the honour of a triumph.³

The purple is a colour, compounded between red and violet, taken from a sea-fish covered with a shell, called also the *purple*.⁴ Notwithstanding various treatises wrote by the moderns upon this colour so highly prized by the ancients, we are little acquainted with the nature of the liquor which produced it. Aristotle and Pliny have left many remarkable things upon this point, but such are more proper to excite, than fully to satisfy curiosity.⁵ The latter, who has spoken the most at large upon the preparation of purple, has confined all he says of it to some few lines.⁶ These might suffice for the description of a known practice in those times; but it is too little to give a proper idea of it to ours, after the use of it has ceased for many ages.

Pliny divides the several species of shells, from which the purple dye is taken, into two kinds;⁷ the first of which includes the small kind of *buccinum*, so called from the resemblance between that fish's shell and a hunting horn; and the second, the shells called purple, from the dye they contain. It is believed that this latter kind were called also *murex*. Some authors affirm, that the Tyrians discovered the dye we speak of by accident.⁸ A hungry dog, it is alleged, having broke one of these shells with his teeth upon the sea-side, and devoured one of these fish, all around his mouth and throat were dyed by it with so fine a colour, that it surprised every body that saw it, and gave birth to the desire of making use of it.⁹ The purple of *Getulia*¹⁰ in Africa, and that of *Laconia*¹¹ in Europe, were in great estimation;¹² but the Tyrian in Asia was preferred to all others; and

that principally which was twice dyed, called for that reason *diapha*. A pound of it was sold at Rome for a thousand denarii, that is, five hundred livres. The *buccinum* and *murex* scarce differed in any thing but the bigness of shell, and the preparation of them. The *murex* was fished for generally in the open sea; whereas the *buccinum* was taken from the stones and rocks, to which it adhered. I shall speak here only of the *buccinum*, and shall extract a small part of what I find upon it, in the learned dissertation of Monsieur Reaumur.¹³

The liquor could not be extracted from the *buccinum*, without employing a very considerable length of time for that purpose. It was first necessary to break the hard shell that covered them. This shell being broke at some distance from its opening, or the head of the *buccinum*, the broken pieces were taken away. A small vein then appeared, to use the expression of the ancients, or, with greater propriety of speech, a small reservoir, full of the proper liquor for dying purple. The colour of the liquor contained in this small reservoir made it very distinguishable, as it differed much from the flesh of the animal. Aristotle and Pliny say it is white; and it is indeed inclining to white, or between white and yellow. The little reservoir in which it is contained, is not of equal bigness in all the *buccina*; it is, however, commonly about a line, the twelfth part of an inch, in breadth, and two or three in length. It was this little reservoir the ancients were obliged to take from the *buccinum*, in order to separate the liquor contained in it. They were under the necessity of cutting it from each fish, which was a tedious work, at least with regard to what it held; for there is not above a large drop of liquor in each reservoir, from whence it is not surprising that fine purple should be of so high a price amongst them. Aristotle and Pliny say, indeed, that they did not take the pains to cut these little vessels from the smaller fish of this kind separately, but only pounded them in mortars, which was a means to shorten the work considerably. Vitruvius seems even to give this as the general preparation.¹⁴ It is, however, not easy to conceive how a fine purple colour could be attained by this means. The excrements of the animal must considerably change the purple colour, when heated together, after being put into the water; for that substance is itself of a brown greenish colour, which, no doubt, it communicated to the water, and most very much have changed the purple colour; the quantity of it being exceedingly greater than that of the liquor.

In the preparation of purple, the cutting out the small reservoir of liquor from each *buccinum*, was not the whole trouble. All those small vessels were afterwards thrown into a great quantity of water, which was set over a slow fire for the space of ten hours. As this mixture was left so long upon the fire, it was impossible for it not to take the purple colour: it took it much sooner, as I am well convinced, says Mr. Reaumur, by a great number of experiments. But it was necessary to separate the fleshy parts, or little vessels wherein the liquor was contained; which could not be done without losing much of the liquor, except by making those fleshy membranes dissolve in hot water, to the top of which they rose at length in scum, which was taken off with great care. This was one manner in which the ancients made the purple dye, that was not entirely lost, as is believed, or at least was discovered again about fifty years ago by the Royal Society of England. One species of the shells from which it is extracted, a kind of *buccinum*, is common on the coast of that country. The observations of an Englishman upon this new discovery, were printed in the journals of France in 1686. Another *buccinum*, which gives also the purple dye, and is evidently one of those described by Pliny, is found upon the coast of Poitou. The greatest shells of this kind are from twelve to thirteen lines (of an inch) in length, and from seven to eight in diameter in the thickest part of them.

¹³ *Memoirs of the Acad. of Sciences, an. 1711*

¹⁴ *Architect. l. vii. c. 13.*

They are a single shell turned spirally, like that of a garden snail, but somewhat longer.

In the *Journal de l'Apprenti* for 1686, the various changes of colour through which the *buccinum's* liquor passes are described. If, instead of taking out the vessel which contains it, according to the method of the ancients in making their purple, that vessel be only opened, and the liquor pressed out of it, the linen or other stuffs, either of silk or wool, that imbibe this liquor, will appear only of a yellowish colour. But the same linen or stuffs, exposed to a moderate heat of the sun, such as it is in summer mornings, in a few hours take very different colours. That yellow begins at first to incline a little to the green; thence it becomes of a lemon colour. To that succeeds a livelier green, which changes into a deep green; this terminates in a violet colour, and afterwards fixes in a very fine purple. Thus these linens or stuffs, from their first yellow, proceed to a fine purple through all the various degrees of green. I pass over many very curious observations of Monsieur Reaumur upon these changes, which do not immediately come into my subject. It seems surprising that Aristotle and Pliny, in speaking of the purple dye, and the shells of several countries from which it is extracted, should not say a word of the changes of colour, so worthy of remark, through which the dye passes before it attains the purple. Perhaps, not having sufficiently examined these shells themselves, and being acquainted with them only from accounts little exact, they make no mention of changes which did not happen in the ordinary preparation of purple; for, in that, the liquor being mingled in caldrons with a great quantity of water, it turned immediately red.

Mr. Reaumur, in the voyage he made in the year 1710, upon the coast of Poitou, in considering the shells called *buccinum*, which the sea in its ebb had left upon the shore; he found a new species of purple dye, which he did not search after; and which, according to all appearances, had never been known to the ancients, though of the same species with their own. He observed that the *buccina* generally thronged about certain stones and arched heaps of sand, in such great quantities that they might be taken up here by handfuls, though dispersed and single every where else. He perceived, at the same time, that those stones or heaps of sand were covered with certain grains, of which the form resembled that of a small oblong bowl. The length of these grains was somewhat more than three lines, (a quarter of an inch,) and their bigness something above one line. They seemed to him to contain a white liquor, inclining to yellow. He pressed out the juice of some of them upon his ruffle, which at first seemed only a little soiled with it; and he could perceive with difficulty only a small yellowish speck here and there in the spot. The different objects which diverted his attention made him forget what he had done, and he thought no farther of it, till, casting his eyes by accident upon the same ruffle about a quarter of an hour after, he was struck with an agreeable surprise to see a fine purple colour on the places where the grains had been squeezed. This adventure occasioned many experiments, which give a wonderful pleasure in the relation, and show what great advantage it is to a nation to produce men of a peculiar genius, born with a taste and natural disposition for making happy discoveries in the works of nature.

Mr. Reaumur remarks that the liquor was extracted from these grains, which he calls the *eggs of purple*, in an infinitely more commodious manner than that practised by the ancients for the liquor of the *buccinum*; for there was nothing more to do, after having gathered these eggs, than to have them well washed in the sea-water, to take off as much as possible the filth, which might change the purple colour by mixing with it; there was, I say, nothing more to do than to put them into clean cloths. The liquor was then pressed out, by twisting the ends of these cloths different ways, in the same manner almost that the juice is pressed out of gooseberries to make jelly. And to a ridge this trouble still more, small presses

might be used, which would immediately press out all the liquor. We have seen before, how much time and pains were necessary for extracting the liquor from the *buccina*.

The *coccus* or *coccum* supplied the ancients with the fine colour and dye we call scarlet, which in some measure disputed beauty and splendour with the purple.¹ Quintilian joins them together, where he complains that the parents of his times dressed their children, from their cradles, in scarlet and purple, and inspired them, at that early age, with a taste for luxury and magnificence.² Scarlet, according to Pliny,³ supplied men with more splendid garments than purple, and at the same time more innocent, because it was not necessary to hazard life in attaining it.

Scarlet is generally believed the seed of a tree of the holm-tree kind. It has been discovered to be a small round excrescence, red, and of the bigness of a pea, which grows upon the leaves of a little shrub of the holm species, called *ilex aculeata cocciglandifera*. This excrescence is caused by the bite of an insect, which lays its eggs in it. The Arabians term this grain *kermes*; the Latins, *coccus* and *vermiculus*; from whence the words *vermilion*, and *cusculum* or *quisquillum*, are derived. A great quantity of it is gathered in Provence and Languedoc. The water of the Gobelins river is proper for dying scarlet.

There are two kinds of scarlet. The scarlet of France or of the Gobelins, which is made of the grain I have mentioned; and the scarlet of Holland, which derives itself from cochineal. This is a drug that comes from the East Indies. Authors do not agree upon the nature of cochineal. Some believe it a kind of worm; and others, that it is only the seed of a tree. The first kind is seldom used since the discovery of cochineal, which produces a much more beautiful and lively scarlet than that of the *kermes*, which is deeper, and comes nearer to the Roman purple. It has, however, one advantage of the cochineal-scarlet, which is, that it does not change colour when wet falls upon it, as the other does, which turns blackish immediately after.

SECTION IX.—OF SILKEN STUFFS.

SILK, as Monsieur Mahudel observes in the dissertation he has given us on this subject,⁴ of which I shall make great use in this place; silk, I say, is one of the things made use of for many ages almost throughout all Asia, in Africa, and many parts of Europe, without people's knowing what it was; whether it was that the people, amongst whom it grew, gave strangers little access to them; or that, jealous of an advantage peculiar to themselves, they apprehended being deprived of it by foreigners, is uncertain. It was undoubtedly from the difficulty of being informed of the origin of this precious thread, that so many singular opinions arose among the most ancient authors respecting it.

To judge of it after the manner Herodotus has described it, viz. as a kind of wool much subtler and more beautiful than the ordinary kind, and which, he says, was the growth of a tree in the Indies, (the most remote country known by the eastern people of his times to the eastward,) seems the first idea they had of silk.⁵ It was not extraordinary that the people sent into that country to make discoveries, seeing only the bags of the silk-worms hanging from the trees in a climate where those insects breed, feed upon the leaves, and naturally ascend the branches should take those bags for lumps of wool.

It is likely that Theophrastus, upon the relation of those mistaken persons, might conceive these a rea-

species of trees, and rank them in a particular class, which he enumerates, of trees bearing wool. There is good reason to believe Virgil of the same opinion:—

Valleraque ut foliis depectant tenuia Seres.
Georg. l. ii. v. 121.

As India's sons

Comb the soft, slender fleeces of the bough.

Aristotle, though the most ancient of the naturalists, has given a description of an insect, that comes nearest the silk-worm.¹ It is where he speaks of the different species of the caterpillar, that he describes one which comes from a horned worm, to which he does not give the name of *Βυρς* till it has shut itself up in a cod or bag, from whence, he says, it comes out a butterfly: it passes through these several changes, according to him, in six months. About four hundred years after Aristotle, Pliny, to whom that philosopher's history of animals was perfectly known, has repeated the same fact literally in his own.² He places also, under the name *boubyx*, not only this species of worm, which, as some report, produced the silk of Cos; but several other caterpillars found in the same island, and which he supposes to form there the cods or bags, from which, he says, the women of the country spin silk, and make stuffs of great fineness and beauty. Pausanias, who wrote some years after Pliny, informs us that this worm was of Indian extraction, and that the Greeks called it *Σαπύς*, from whence it derived the name of *Seres*, the inhabitants of the Indies, amongst whom, we are since convinced, this insect was first found.³

The worm which produces silk is an insect still less wonderful for the precious matter it supplies for the making of different stuffs, than for the various forms it takes, either before or after its having wrapt itself up, in the rich bag or cod it spins for itself. From the grain or egg it is at first, it becomes a worm of considerable size, and of a white colour, inclining to yellow. When it is grown large, it encloses itself within its bag, where it takes the form of a kind of grey bean, in which there seems neither life nor motion. It comes to life again to take the form of a butterfly, after having made itself an opening through its tomb of silk. At last, dying in reality, it prepares itself, by the egg or seed it leaves, a new life, which the fine weather and the heat of the summer are to assist it to resume. In the first volume of the *Spectacle de la Nature* may be seen a more extensive and more exact description of these various changes.

It is from this bag or cod, into which the worm shuts itself, that the different kinds of silken manufactures are made, which serve not only for the luxury and magnificence of the rich, but the subsistence of the poor, who spin, wind, and work them. Each bag or cod is found to contain more than nine hundred feet of thread; and this thread is double, and glued together throughout its whole length, which in consequence amounts to almost two thousand feet. How wonderful it is that out of a substance so slight and fine as almost to escape the eye, stuffs should be composed of such strength and duration, as those made of silk! But what lustre, beauty, and delicacy are there in those stuffs! It is not surprising that the commerce of the ancients consisted considerably in them, and that, as they were very scarce in those times, their price ran exceeding high. Vopiscus assures us, that the emperor Aurelian, for that reason, refused the empress his wife a habit of silk, which she earnestly solicited him to give her; and that he said to her, "the gods forbid that I should purchase silk at the price of its weight in gold;"⁴ for the price of a pound of silk was at that time a pound of gold.

It was not till very late that the use of silk was known and became common in Europe. The histo-

rian Procopius dates the era of it about the middle of the fifth century, under the emperor Justinian.⁵ He gives the honour of this discovery to two monks, who soon after their arrival at Constantinople from the Indies, heard, in conversation, that Justinian was exceedingly solicitous about depriving the Persians of their silk trade with the Romans. They found means to be presented to him, and proposed a shorter way to deprive the Persians of that trade, than that of a commerce with the Ethiopians, which he had thoughts of setting on foot; and this was by teaching the Romans the art of making silks for themselves. The emperor, convinced by the account they gave him of the possibility of the means, sent them back to Serinda (the city where they had resided) to get the eggs of the insects, which they told him could not be brought alive. Those monks, after their second voyage, returning to Constantinople, hatched the eggs they had brought from Serinda in warm dung. When the worms came out of them, they fed them with white mulberry leaves, and demonstrated by the success of that experiment all the mechanism of silk, in which the emperor had desired to be informed. From that time the use of silk spread by degrees into several parts of Europe. Manufactures of it were set up at Athens, Thebes, and Corinth. It was not till about 1130, that Roger, king of Sicily, established one at Palermo. It was at that time, and in this island and Calabria, that workmen in silk were first seen, who were part of the booty that prince brought from the cities of Greece I have mentioned, which he conquered in his expedition to the Holy Land. In fine, the rest of Italy and Spain having learned of the Sicilians and Calabrians to breed the worms, and to spin and work their silk, the stuffs made of it began to be manufactured in France, especially in the south parts of that kingdom, where mulberry trees were raised with most ease. Louis XI., in 1470, established silk manufactures at Tours. The first workmen employed in them were brought from Genoa, Venice, Florence, and even from Greece. Works of silk were, however, so scarce even at court, that Henry II. was the first prince that wore silk stockings, which he did at the nuptials of his sister.

These insects are now become very common, but do not cease to be one of the most astonishing wonders of nature. Have the most skilful artificers been able hitherto to imitate the curious work of the silk-worm? Have they found the secret to form so fine, so strong, so even, so shining, and so extended a thread? Have they a more valuable substance for the fabric of the richest stuffs? Do they know in what manner this worm converts the juice of a leaf into threads of gold? Can they give a reason why a matter, liquid before the air comes to it, should condense and extend to infinitude afterwards? Can we explain how this worm comes to have sense to form itself a retreat for the winter, within the innumerable folds of the silk, of which itself is the principal; and to expect, in that rich tomb, a kind of resurrection, which supplies it with the wings its first birth had not given it? These are the reflections made by the author of the new commentary upon Job, upon account of these words: *Quis posuit in mentibus sapientiam?* "Who hath given wisdom to certain animals, that have the industry to spin?"⁶

CONCLUSION.

FROM what has been said hitherto, we may conclude commerce one of the parts of government capable of contributing the most to the riches and plenty of a state; and therefore that it merits the particular attention of princes and their ministers. It does not appear, indeed, that the Romans set any value upon it. Dazzled with the glory of arms, they would have believed it a disgrace to them to have applied their cares to the interest of trade, and in some measure

⁴ Vestem holosericeam neque lpee in vestuario suo habuit, neque alteri utendum dedit. Et cum ab eo uxor sua peteret, ut unico pallio blatto Serico uteretur, ille respondit: *Abiit ut euro fila pensetur. Libra enim auri tunc libra Serice fuit.*—Vopisc. in Aurel.

⁵ Procop. de Bell. Vandal. l. ii.

⁶ This, Mr. Rollin says in the margin, is the sense, according to the Hebrew, of the 36th verse of the 38th chapter of Job; which in the English version is only "Who hath put wisdom in the inward parts?"

to have become merchants; they, who believed themselves intended by fate to govern mankind, and were solely intent upon the conquest of the universe. Neither does it seem possible that the spirit of conquest and the spirit of commerce should not mutually exclude each other in the same nation. The one necessarily introduces tumult, disorder, and desolation, and carries trouble and confusion along with it into all places; the other, on the contrary, breathes nothing but peace and tranquillity. I shall not examine in this place, whether the aversion of the Romans for commerce were founded in reason; or if a people, solely devoted to war, are thereby the happier. I only say, that a king who truly loves his subjects, and endeavours to plant abundance in his dominions, will spare no pains to make traffic flourish and succeed in them without difficulty. It has been often said, and it is a maxim generally received, that commerce demands only liberty and protection: liberty, within wise restrictions, in not tying down such as exercise it to the observance of inconvenient, burdensome, and frequently useless regulations; protection, in granting them all the supports they have occasion for. We have seen the vast expenses Ptolemy

Philadelphus was at, in making commerce flourish in Egypt; and how much glory the success of his measures acquired him. An intelligent and well-inclined prince will intermeddle only in commerce, to banish fraud and bad arts from it by severity, and will leave all the profits to his subjects, who have the trouble of it; well convinced that he shall find sufficient advantages from it, by the great riches it will bring into his dominions.

I am sensible that commerce has its inconveniences and dangers. Gold, silver, diamonds, pearls, rich stuffs, in which it consists in a great measure, contribute to support an infinity of pernicious arts; which tend only to enervate and corrupt a people's manners. It were to be desired, that the commerce might be removed from a Christian nation, which regards only such things as promote luxury, vanity, effeminacy, and idle expenses. But this is impossible. As long as bad desires shall have dominion over mankind, all things, even the best, will be abused by them. The abuse merits condemnation, but is no reason for abolishing uses, which are not bad in their own nature. This maxim will have its weight, with regard to all the sciences I shall treat of in the sequel of this work

OF THE LIBERAL ARTS AND SCIENCES.

INTRODUCTION.

WE come now to treat of the *arts* which are called *liberal*, in opposition to such as are *mechanical*, because the first are considered as the most noble, and more immediately dependent upon the understanding. These arts are principally architecture, sculpture, painting, and music.

The arts as well as sciences have had their happy ages, in which they have appeared with greater splendour, and cast a stronger light; but, as the historian observes, this light and splendour was soon obscured, and the duration of these times of perfection of no great continuance. They triumphed longer in Greece than in any other part of the world.¹ To begin the reign of the liberal arts no higher than the time of Pericles, and make it endure only to the death of Alexander's first successors, (and each of these eras may be extended both at their beginning and end,) the space will be at least two hundred years, during which appeared a multitude of persons illustrious for excelling in all the arts.

It is not to be doubted but rewards, honours, and emulation contributed very much in forming these great men. What ardour must the laudable custom have excited, which prevailed in many cities of Greece, of exhibiting in the shows such as succeeded best in the arts, of instituting public disputes between them, and of distributing prizes to the victors in the sight, and with the applauses of a whole people! Greece as we shall soon see, thought herself obliged to render as much honour to the celebrated Polygnottus as she could have paid to Lyncurgus and Solon; to prepare magnificent entries for him into the cities where he had finished some paintings; and to appoint, by a decree of the Amphictyons, that he should be maintained at the public expense in all the places to which he should go. What honours have not the greatest princes paid in all ages to such as distinguished themselves by the arts! We have seen Alexander the Great and Demetrius Poliorcetes forget their rank, to familiarize themselves with two illus-

trious painters, and come where they worked, to pay homage in some manner to the rare talents and superior merit of those extraordinary persons. One of the greatest emperors, Charles V., that reigned in the West since Charlemagne, showed the value he set upon painting, when he made Titian Count Palatine, and honoured him with the golden key and all the orders of knighthood.² Francis I., king of France, his illustrious rival as well in the actions of peace as those of war, outdid him much, when he said to the lords of his court, of Leonardo di Vinci, then expiring in his arms, "You are in the wrong to wonder at the honour I pay this great painter: I can make a great many such lords as you every day, but only God can make such a man as he I now lose."³ Princes who speak and act in this manner, do themselves at least as much honour as those whose merit they extol and respect. It is true, the arts, by the esteem kings profess for them, acquire a dignity and splendour that render them more illustrious and exalted; but the arts, in their turn, reflect a like lustre upon kings, and ennoble them also in some measure, in immortalizing their names and actions by works transmitted to the latest posterity.⁴

Paterculus, whom I have already cited when noticing the short duration of arts when they have attained their perfection, makes another very true remark, confirmed, not only by the experience of the remote, but latter ages; which is, that great men of every class in arts, sciences, policy, and war, are generally contemporaries.⁵

If we recal the times when Apelles, Praxiteles, Lysippus, and other excellent artists, flourished in Greece, we find her greatest poets, orators, and philosophers were then alive. Socrates, Plato, Aristotle, Demosthenes, Isocrates, Thucydides, Xenophon, Æschylus, Euripides, Sophocles, Aristophanes, Me-

ander and many others, lived all of them almost in the same age. What men, what generals, had Greece at the same time! Had ever the world any so consummate? The Augustan age had the same fate in every respect. In that of Louis XIV., what a number of great men lived of every kind, whose names, actions, and works, will celebrate that glorious reign for ever! It seems as if there were certain periods of time, in which I know not what spirit of perfection universally diffuses itself in the same country throughout all professions, without its being possible to assign how or why it should happen so. We may

say, however, that all arts and talents are allied in some manner to each other. The taste of perfection is the same in whatever depends upon genius. If cultivation be wanting, an infinity of talents lie buried. When true taste awakes, those talents deriving mutual aid from each other, shine out in a peculiar manner. The misfortune is, that this perfection itself, when arrived at its supreme degree, is the forerunner of the decline of arts and sciences, which are never nearer their ruin than when they appear the most remote from it: such are the instability and variation of all human things!

OF ARCHITECTURE.

ARTICLE I.

OF ARCHITECTURE IN GENERAL.

SECTION I.—RISE, PROGRESS, AND PERFECTION OF ARCHITECTURE.

IT is not to be doubted but the care of building houses immediately succeeded that of cultivating lands, and that architecture is not of a much later date than agriculture. Hence Theodoretus calls the latter the eldest sister of architecture.¹ The excessive heats of summer, the severity of winter, the inconvenience of rain, and the violence of wind, soon instructed mankind to seek for shelter, and provide themselves retreats to defend them against the inclemencies of the weather. At first, these were only little huts, built very rudely with the branches of trees, and very indifferently covered.² In the time of Vitruvius, they showed at Athens, as curious remains of antiquity, the roof of the Areopagus, made of clay; and at Rome, in the temple of the capitol, the cottage of Romulus, thatched with straw. There were afterwards buildings of wood, which suggested the idea of columns and architraves. Those columns took their model from the trees which were used at first to support the roof, and the architrave is only the large beam, as its name implies, that was laid between the columns and the roof.

The workmen, in consequence of their application to building, became every day more industrious and expert. Instead of those slight huts with which they contented themselves at first, they began to erect walls of stone and brick upon solid foundations, and to cover them with boards and tiles. In process of time, their reflections, founded upon experience, led them on to the knowledge of the just rules of proportion; the taste of which is natural to man, the Author of his being having implanted in him the invariable principles of it, to make him sensible that he is born for order in all things. Hence it is, as St. Austin observes, that in a building, where all the parts have a mutual relation to each other, and are ranged each in its proper place, the symmetry catches the eye, and occasions pleasure; whereas, if the windows, for instance, are ill disposed, some large and others small, some placed higher and some lower, the irregularity offends the sight, and seems to do it a kind of injury, as St. Austin expresses it.³ It was, therefore, by degrees that architecture attained the height of perfection, to which the masters in the art have carried it. At first it confined itself to what was necessary to man in the uses of life, having nothing in view but solidity, healthfulness, and convenience. A

house should be durable, situated in a wholesome place, and have all the conveniences that can be desired. Architecture afterwards laboured to adorn buildings and make them more splendid, and for that reason called in other arts to its aid. At last came pomp, grandeur, and magnificence, highly laudable on many occasions, but soon strangely abused by luxury.

The holy scripture⁴ speaks of a city built by Cain after God had cursed him for the murder of his brother Abel; which is the first mention of edifices in history. From thence we learn the time and place in which architecture had its origin. The descendants of Cain, to whom the same scripture ascribes the invention of almost all the arts, carried this, no doubt, to a considerable height of perfection. And it is certain, that after the deluge, men, before they separated from each other, and dispersed themselves into the different regions of the world, resolved to signalize themselves by a superb building, which again drew down the wrath of God upon them. Asia, therefore, was the cradle of architecture, where it had its birth, where it attained a great degree of perfection, and from whence it spread into the other parts of the world. Babylon and Nineveh, the largest and most magnificent cities mentioned in history were built by Nimrod, Noah's great grandson, and the most ancient of conquerors. I do not believe that they were carried at first to that prodigious magnificence, which was afterwards the astonishment of the world; but certainly they were very great and extensive from thenceforth, as the names⁵ of several other cities, built in the same times after the model of the capital, testify.

The erection of the famous pyramids, the lake Mœris, the labyrinth, the considerable number of temples in Egypt, and the obelisks which are to this day the admiration and ornament of Rome, show with what ardour and success the Egyptians applied themselves to architecture. It is, however, neither to Asia nor Egypt that this art is indebted for that degree of perfection to which it attained; and there is reason to doubt whether the buildings so much boasted by both, were as estimable for their justness and regularity, as their enormous magnitude, in which perhaps their principal merit consisted. The designs which we have of the ruins of Persepolis, prove that the kings of Persia, of whose opulence ancient history says so much, had but indifferent artists in their pay. However this may be, it appears from the very names of the three principal orders of architecture, that the invention, if not perfection of them is to be ascribed to Greece, and that it was she who prescribed the rules, and supplied the models of them. As much may be said with regard to all the other arts, and almost all the sciences. Not to speak in this place of

the great captains, philosophers of every sect, poets, orators, geometricians, painters, sculptors, architects, and, in general, of that pre-eminence in all that relates to the understanding, which Greece attained; whither we must still go as to the school of good taste in every kind, if we desire to excel.

It is a misfortune that there is nothing written by the Greeks upon architecture now extant.¹ The only books we have of theirs upon this subject, are the structures of those ancient masters still subsisting, whose beauty, universally acknowledged, has for almost two thousand years been the admiration of all good judges; works infinitely superior to all the precepts they could have left us; practice in all things being infinitely preferable to theory.² For want of Greeks, Vitruvius, a Latin author, will come in to my assistance. His being architect to Julius and Augustus Cæsar (for according to the most received opinion he lived in their times), gives good reason to presume upon the excellence of his work and the merit of the author, and the critics accordingly place him in the first class of the great geniuses of antiquity. To this first claim on our confidence, may be added the character of the age in which he lived, when good taste prevailed universally, and the emperor Augustus piqued himself upon adorning Rome with buildings equal to the grandeur and majesty of the empire; which made him say, that he found the city of brick, but left it almost entirely of marble.³ I had great occasion for so excellent a guide as Vitruvius, in a subject entirely new to me. I shall make great use of the notes Mr. Perrault has annexed to his translation of this author, as well as of Mr. Chambray's reflections, in his work entitled *Ancient and Modern Architecture Compared*, which I know is in high esteem with the judges; and those of Mr. Felibien, in his book called *Of the Principles of Architecture*, &c.

The ancients had, as well as we, three sorts of architecture: the civil, the military, and the naval. The first lays down rules for all public and private buildings for the use of citizens in time of peace. The second treats of the fortification of places, and every thing of that kind relating to war. And the third, the building of ships, and whatever is consequential of or relates thereto. I shall speak here only of the first, intending to say something elsewhere of the two others; and shall begin by giving a general idea of the several orders of building.

SECTION II.—OF THE THREE ORDERS OF ARCHITECTURE OF THE GREEKS, AND THE TWO OTHERS WHICH HAVE BEEN ADDED TO THEM.

The occasion there was for erecting different sorts of buildings, made artists also establish different proportions, in order to have such as were proper for every kind of structure, according to the magnitude, strength, splendour, and beauty they were directed to give them; and from these different proportions they composed different orders.

Order as a term of architecture, signifies the different ornaments, measures, and proportions of the columns and pilasters, which support or adorn great buildings. There are three orders of the architecture of the Greeks; the Doric, Ionic, and Corinthian. They may with reason be called the supreme perfection of the orders, as they contain not only all that is fine, but all that is necessary in the art; there being

only three ways of building, the solid, the middle, and the delicate, which are all perfectly executed in these three orders. To these the Latins have added two others, the Tuscan and Composite orders, which are far below the former in value and excellency.

I.—THE DORIC ORDER.

The Doric order may be said to have been the first regular idea of architecture, and as the eldest son of this art, had the honour to be also the first in building temples and palaces. The antiquity of its origin is almost immemorial; Vitruvius,⁴ however, ascribes it, with probability enough, to a prince of Achaia, named Dorus, the same evidently who gave his name to the Dorians, and who, being sovereign of Peloponnesus, caused a magnificent temple to be erected in the city of Argos to the goodess Juno. That temple was the first model of this order; in imitation of which, the neighbouring people built several others. The most famous of these was that consecrated by the inhabitants of the city of Olympia to Jupiter, surnamed the Olympic.

The essential character and specific quality of the Doric order, is solidity. For this reason it ought principally to be used in great edifices and magnificent structures, as in the gates of citadels and cities the outsides of temples, in public halls, and the like places, where delicacy of ornaments seem less consistent; whereas the bold and gigantic manner of this order has a wonderfully happy effect, and carries a certain manly and simple beauty, which forms properly what is called the grand manner.

II.—THE IONIC ORDER.

After the appearance of these regular buildings, and famous Doric temples, architecture did not confine itself long to these first essays: the emulation of the neighbouring people soon enlarged and carried it to its perfection.⁵ The Ionians were the first rivals of the Dorians; and as they had not the honour of the invention, they endeavoured to refine upon the authors. Considering, therefore, that the form of a man, such for example as Hercules was, from which the Doric order had been formed, was too robust and heavy to agree with sacred mansions, and the representation of heavenly things, they composed one after their own manner, and chose a model of a more delicate and elegant proportion, which was that of a woman, having more regard to the beauty than the solidity of the work; to which they added abundance of ornaments. Amongst the celebrated temples built by the people of Ionia, the most memorable, though the most ancient, is the famous temple of Diana at Ephesus, of which I shall soon speak.

III.—THE CORINTHIAN ORDER.

The Corinthian order, which is the highest degree of perfection architecture ever attained, was invented at Corinth. Though its antiquity be not exactly known, nor the precise time in which Callimachus lived, to whom Vitruvius gives the whole glory of it, we may judge, however, from the nobleness of its ornaments, that it was invented during the magnificence and splendour of Corinth, and soon after the Ionic, which it much resembles, except only in the capital or chapter. A kind of chance gave birth to it. Callimachus having seen, as he passed by a tomb, a basket which had been set upon a plant of acanthus or bearsfoot, was struck with the accidental symmetry and happy effect produced by the leaves of the plant growing through and encircling the basket; and though the basket with the acanthus had no natural relation to the capital of a column and a massy building, he imitated the manner of it in the columns he afterwards made at Corinth, establishing and regulating by this model the proportions and ornaments of the Corinthian order.⁶

This Callimachus was called by the Athenians, καλλιμαχός, expert and excellent in art, from his delicacy and address in cutting marble; and according to Pliny and Pausanias,⁷ he was also called καλλιμαχός.

¹ [Almost all the works of the ancients on the arts of design, which were familiar to them, are lost to us. It may be remarked, as a leading cause of this, that the Greek and Italian monks of the 9th, 10th, and 11th centuries, to whom we owe the preservation of the classics, being incompetent to the imitation of the several embellishments with which they found MSS. on the subject of the arts frequently elucidated, laid them aside in despair; and by this neglect, they have perished. Vitruvius is preserved to us at the expense of the figures.]

² In omnibus fere minus valent præcepta, quam experientia.—Quintil.

³ Urbem necque pro majestate imperit ornatum, et inundationibus incendisque obnoxium, excolunt adeo, ut jure sit gloriosius, marmoream se relinquere, quam lateritiam accepisse.—Sueton. in Aug. c. 28.

because he was never contented with himself, and was always re-touching his works, with which he was never entirely satisfied: full of superior ideas of the beautiful and the grand, he never found the execution sufficiently equal to them; *semper calumniator sui, nec finem habens diligentia*, says Pliny.

IV.—THE TUSCAN ORDER.

The Tuscan order, according to the general opinion, had its origin in Tuscany, of which it retains the name. Of all the orders it is the most simple, and has the fewest ornaments. It is even so gross, that it is seldom used except for some rustic building, where-in there is occasion only for a single order, or at best for some great edifice, as an amphitheatre, or other works of the like kind.

In Mr. Chambers's judgment, the Tuscan column, without any architrave, is the only one that deserves to be used; and to confirm his opinion of this order, he cites an example of it from Trajan's pillar, one of the most superb remains of Roman magnificence now in being, and which has more immortalized that emperor than all the pens of historians could have done. This mausoleum, if it may be called so, was erected to him by the senate and people of Rome, in acknowledgment of the great services he had done his country. And that the memory of them might subsist throughout all ages, and endure as long as the empire, they caused them to be engraved in marble, and in the richest style that ever was conceived. Architecture was the writer of this ingenious kind of history; and because she was to record a Roman, she did not make use of the Greek orders, though incomparably more perfect, and more used even in Italy than the two others of their own growth; lest the glory of that admirable monument should in some measure be divided, and to show, at the same time, that there is nothing so simple to which art cannot add perfection. She chose, therefore, the column of the Tuscan order, which till then had been only used in gross and rustic things, and made that rude mass bring forth the choicest and most noble masterpiece of art in the world, which time has spared and preserved entire down to us, amidst the infinity of ruins with which Rome abounds. And indeed it is a kind of wonder to see that the Coliseum, the theatre of Marcellus, the great circuses, the baths of Dioclesian, Caracalla, and Antoninus, the superb mole of Adrian's burying-place, the Septizonium of Severus, the Mausoleum of Augustus, and so many other structures, which seemed to be built for eternity, are now so defaced and ruinous, that their original form can scarce be discerned; whilst Trajan's pillar, of which the structure seemed far less durable, still subsists entire in all its parts.

V.—THE COMPOSITE ORDER.

The Composite order was added to the others by the Romans. It participates and is composed of the Ionic and Corinthian, which occasioned its being called the Composite; but it has still more ornaments than the Corinthian. Vitruvius, the father of the architects, says nothing of it. Mr. Chambers objects strongly against the bad taste of the modern Compositors, who, amidst so many examples of the incomparable architecture of the Greeks, which alone merits that name, abandoning the guidance of those great masters, take a quite different route, and blindly give into that bad taste of art, which has by their means crept into the orders, under the name of Composite.

GOthic ARCHITECTURE.

That which is remote from the ancient proportions, and is loaded with chimerical ornaments, is called the Gothic architecture, and was brought by the Goths from the north.

There are two species of Gothic architecture: the one ancient, the other modern. The ancient is that which the Goths brought from the north in the fifth century. The edifices built in the ancient Gothic manner were massy, heavy, and gross. The works of the modern Gothic style were more delicate, easy, light,

and of an astonishing boldness of workmanship. It was long in use, especially in Italy. It is surprising that Italy, abounding with monuments of so exquisite a taste, should quit its own noble architecture, established by antiquity, success, and possession, to adopt a barbarous, foreign, confused, irregular, and hideous manner. But it has made amends for that fault, by being the first to return to the ancient taste, which is now solely and universally practised. The modern Gothic continued from the thirteenth century till the re-establishment of the ancient architecture in the fourteenth. All the ancient cathedrals are of Gothic architecture. There are some very ancient churches built entirely in the Gothic taste, that want neither solidity nor beauty, and which are still admired by the greatest architects, upon account of some general proportions remarkable in them.

A plate of the five orders of architecture, of which I have spoken, will enable youth, whom I have always in view, to form some idea of them. I shall prefix to it an explanation of the terms of art, which Mr. Camus, fellow of the Academy of Sciences, and professor and secretary of the Academy of Architecture, was pleased to draw up expressly for my work. At my request he abridged it very much, which makes it less complete than it might otherwise have been.

SECTION III.—EXPLANATION OF THE TERMS OF ART, RELATING TO THE FIVE ORDERS OF ARCHITECTURE.

AMONGST the Greeks, an order was composed of columns and an entablature. The Romans added pedestals under the columns of most orders, to increase their height.

The Column is a round pillar, made either to support or adorn a building.

Every column except the Doric, to which the Romans give no base, is composed of a base, a shaft, and a capital or chapter.

The Base is that part of the column which is beneath the shaft, and upon the pedestal, when there is any. It has a plinth, of a flat and square form like a brick, called in Greek *πλινθος*, and mouldings, that represent rings, with which the bottoms of pillars were bound, to prevent their cleaving. These rings, when large, are called *Torus*, and when small *Astragals*. The Tori generally have hollow spaces cut round between them, called *Rundels*, *Scotia*, or *Trochylus*.

The Shaft of the column is the round and even part extending from the base to the capital. This part of the column is narrower at top than at bottom. Some architects are for giving the column a greater breadth at the third part of their height, than at the bottom of their shaft. But there is no instance of any such practice amongst the ancients. Others make the shaft of the same size from the bottom to the third, and then lessen it from the third to the top. And some are of opinion, that it should begin to lessen from the bottom.

The Capital is that upper part of the column which is placed immediately upon the shaft. The Entablature is the part of the order above the columns, and contains the architrave, the frieze, and the cornice. The Architrave represents a beam, and lies next immediately to the capitals of the columns. The Greeks call it *Epistyle*, *ἐπιστύλιον*. The Frieze is the space between the architrave and the cornice; it represents the ceiling of the building. The Cornice is the beginning of the whole order. It is composed of several mouldings, which, projecting over one another, serve to shelter the order from the waters of the roof. The Pedestal is the lowest part of the order. It is a square body, containing three parts: the foot, which stands on the area or pavement; the die, that lies upon the foot; and the base (*cymatium*), which is the cornice of the pedestal, upon which the column is placed.

Architects do not agree among themselves about the proportion of the columns to the entablature and pedestals. In following that of Vignola, when an order with pedestals is to be made to a height given,

the height must be divided into nineteen equal parts, of which the column, with its base and capital, is to have twelve, the entablature three, and the pedestals four. But if the order is to have no pedestal, the height given must be divided into fifteen parts only, of which the column is to have twelve, and the entablature three. It is by the diameter of the bottom of the shaft of the columns, that all the parts of the orders are regulated. But this diameter has not the same proportion with the height of the column in all the orders. The semidiameter of the bottom of the shaft is called *module* or *model*. This model serves as a scale to measure the smaller parts of the orders. Many architects divide it into thirty parts, so that the whole diameter contains sixty, which may be called *minutes*.

The difference between the relation of the heights of columns to their diameters, and between their bases, capitals, and entablature, forms the difference between the five orders of architecture. But they are principally to be distinguished by their capitals; except the Tuscan, which might be confounded with the Doric, if only their capitals were considered. The Doric and Ionic pillars have in their capitals only mouldings in the form of rings, with a flat square stone over them, called *Plinth* or *Abacus*. But the Doric is easily distinguished from the Tuscan by the frieze. In the Tuscan order, the frieze is plain, and in the Doric adorned with *Triglyphs*, which are long square rustics, not unlike the ends of several beams which project over the architrave to form a roof or ceiling. This ornament is affected by the Doric order, and is not to be found in the others. The Ionic capital is easily distinguished by its *volute*s, ears, or spiral rolls, projecting underneath the plinth or abacus. The Corinthian capital is adorned with two rows of eight leaves each, and with eight small volutes, which project between the leaves. And lastly, the Composite capital is compounded from the Corinthian and Ionic capitals. It has two rows of eight leaves and four great volutes, which seem to project under the abacus.

To relate at large all the particularities affected by the different orders, it would be necessary to expatiate upon particulars much more than is consistent with the plan of my work. Mr. Buache, fellow of the Academy of Sciences, has given himself the trouble to trace the plan of the five orders of architecture in the plate annexed.

ARTICLE II.

OF THE ARCHITECTS AND BUILDINGS MOST CELEBRATED BY THE ANCIENTS.

I CAN only touch very lightly upon this subject, which would require whole volumes to treat in its extent; and shall make choice of what seems most proper to inform the reader, and satisfy his just curiosity, without excluding what the Roman history may supply, or I have before observed.

The holy scripture,¹ in speaking of the building of the tabernacle, and afterwards of the temple of Jerusalem that succeeded it, tells us one circumstance highly to the honour of architecture, which is, that God vouchsafed to be the first architect of those two great works, and traced the plans of them himself with his own divine hand, which he afterwards gave to Moses and David, to be the models for the workmen employed in them. This was not all. That the execution might fully answer his designs, "he filled Bezaleel with the Spirit of God,"² whom he had appointed to preside in building the tabernacle; that is to say, in the express words of the scripture, "he had filled him with the Spirit of God in wisdom, and in understanding, and in knowledge, and in all manner of workmanship: to devise cunning works; to work in gold, and in silver, and in brass; and in cutting of stones to set them; and in carving of timber, to work in all manner of workmanship." And he joined Aholiab with him, "whom he had filled with

wisdom as well as all the other artificers, that they may make all that I have commanded thee." It is said in like manner, that Hiram, who was employed by Solomon in building the temple, "was filled with wisdom, and understanding, and cunning, to work in all works of brass."³ The words I have now quoted, especially those from Exodus, show that the knowledge, skill, and industry of the most excellent workmen is not their own, but the gift of God, of which they seldom know the origin, and make the use they ought. We must not expect to find such purity of sentiments amongst the Pagans, of whom we have to speak.

I shall pass over in silence the famous buildings of Babylonia and Egypt, that I have mentioned more than once elsewhere, and in which brick was used with so much success. I shall only insert here a remark from Vitruvius, that has some relation to them. This excellent architect observes,⁴ that the ancients in their buildings made most use of brick, because brick-work is far more durable than that of stone. Hence there were many cities in which both the public and private buildings, and even the royal palaces, were only of brick. Amongst many other examples, he cites that of Mausolus, king of Caria. In the city of Halicarnassus, says he, the palace of the potent king Mausolus is walled with brick, though universally adorned with the marble of Proconnesus; and those walls are still⁵ very fine and entire, cased over with a plaster as smooth as glass. It cannot, however, be said, that this king could not build walls of more costly materials, who was so powerful, and at the same time had so great a taste for fine architecture, as the superb buildings with which he adorned his capital sufficiently prove.

TEMPLE OF EPHEBUS.

The temple of Diana of Ephesus was deemed one of the seven wonders of the world.⁶ Ctesiphon or Chersiphron (for authors differ in the name) made himself very famous by building this temple. He traced the plans of it, which were partly executed under his own direction, and that of his son Metagenes; and the rest by other architects, who worked upon it after them for the space of two hundred and twenty years, which that superb edifice took up in building. Ctesiphon worked before the 60th Olympiad, A. M. 3464. Vitruvius says,⁷ that the form of this temple is *dipterick*; that is to say, that it was surrounded with two rows of columns in form of a double portico. It was almost one hundred and forty-two yards in length, and seventy-two in breadth. In this edifice there were an hundred and twenty-seven columns of marble, sixty feet high, given by as many kings. Thirty-six of these columns were carved by the most excellent artists of their times. Scopas, one of the most celebrated sculptors of Greece, finished one of them, which was the finest ornament of this magnificent structure. All Asia had contributed with incredible ardour to the erecting and adorning it.

Vitruvius relates the manner of getting the marble for this pile.⁸ Though the account seems a little fabulous, I shall, however, repeat it. A shepherd, named Pyxodorus, often drove his sheep to feed in the country about Ephesus, at the time when the Ephesians proposed to bring the marble that was necessary for building the temple of Diana from Paros, Proconnesus, and other places. One day, whilst he was with his flock, it happened, two rams that were fighting, missed each other in their career, and one of them hit his horns so violently against a rock, that he struck off a piece of it, which seemed so exquisitely white to the shepherd, that immediately leaving his flock upon the mountains, he ran with that splinter to Ephesus, at that time in great difficulty about the importation of marble. Great honours were instantly decreed him. His name Pyxodorus was changed into Evangelus, which signifies the mes-

senger of good news; and to this day, adds Vitruvius, the magistrate of the city goes every month to sacrifice upon the spot; and in case he fails to do so, is subject to a severe penalty.

It was not sufficient to have found marble; it was necessary to remove it into the temple, after being worked upon the spot, which could not be executed without difficulty and danger. Ctesiphon invented a machine, which very much facilitated the carriage of it.¹ His son Metagenes invented another for carrying the architraves. Vitruvius has left us the description of both these machines.

The same Vitruvius informs us,² that Demetrius, whom he calls the servant of Diana, *servus Dianæ*, and Pæonius the Ephesian, finished the building of this temple, which was of the Ionic order. He does not precisely mark the time when these two architects lived.

The frantic extravagance of a private man destroyed in one day the work of two hundred years. Every body knows that Herostratus, to immortalize his name, set fire to this famous temple, and consumed it to ashes. This happened on the day Alexander the Great was born; which suggested the frigid conceit to an historian, that Diana was so busy at the labour of Olympia, that she could not spare time to preserve her temple. The same Alexander, who was insatiably fond of every kind of glory, offered afterwards to supply the Ephesians with all the expenses necessary for the rebuilding of their temple, provided they would consent that he should have the sole honour of it, and that no other name should be added to his in the inscription upon it. The Ephesians did not approve this condition; but they covered their refusal with a flattery, with which that prince seemed satisfied, in answering him, That it was not consistent for one god to erect a monument to another. The temple was rebuilt with still greater magnificence than the first.

BUILDINGS ERECTED AT ATHENS,³ ESPECIALLY UNDER PERICLES.

I should never have done, if I undertook to describe all the famous buildings with which the city of

Athens was adorned. I shall place the Piræum at the head of the rest, because that port contributed most to the grandeur and power of Athens. Before Themistocles, it was a simple hamlet, the Athenians at that time having no port but Phalerus, which was very small and inconvenient.⁴ Themistocles, whose design was to make the whole force of Athens maritime, rightly observed, that to accomplish a design truly worthy of so great a man, it was necessary to provide a secure retreat for a very considerable number of ships. He cast his eyes upon the Piræum, which by its natural situation afforded three different ports within the same enclosure. He immediately caused it to be worked upon with the utmost despatch, took care to fortify it well, and soon put it into a condition to receive numerous fleets. This port was about two leagues (forty stadia) from the city: an advantageous situation, as Plutarch observed, for removing from the city the licentiousness which generally prevails in ports. The city might be supported by the Piræum, and the Piræum by the city, without prejudice to the good order it was necessary to observe in the city. Pausanias mentions a great number of temples which adorned this part of Athens, that in a manner formed a second city distinct from the first.

Pericles joined these two parts by the famous wall, that extended two leagues, and was the beauty and security of both the Piræum and the city: it was called *the long wall*. Demetrius Phaleræus, whilst he governed Athens, applied himself particularly in fortifying and embellishing the Piræum.⁵ The arsenal, built at that time, was looked upon as one of the finest pieces of work Greece ever had. Demetrius gave the direction of it to Philo, one of the most famous architects of his time. He discharged that commission with all the success which could be expected from a man of his reputation. When he gave an account of his conduct in the public assembly, he expressed himself with so much elegance, perspicuity, and precision, that the people of Athens, excellent judges in point of eloquence, conceived him as fine an orator as he was an architect, and admired no less his talent for speaking than his ability for building.⁶ The same philosopher was charged with the alterations it was thought proper to make in the magnificent temple of Ceres and Proserpine at Eleusis, of which I shall soon speak.⁷

To return to Pericles: it was under his equally long and glorious government that Athens, enriched with temples, porticoes, and statues, became the admiration of all the neighbouring states, and rendered herself almost as illustrious by the magnificence of her buildings, as she was for the glory of her military exploits.⁸ Pericles, finding her the depository and dispenser of the public treasures of Greece, that is to say, of the contributions paid by the several states for the support of troops and fleets, believed, after having sufficiently provided for the security of the country, that he could not employ the sums that remained to better purpose, than to adorn and improve a city, that was the honour and great defence of all the rest.

I do not examine here whether he were in the right

¹ Vitruv. l. x. c. 6. ² In præf. l. vii.
³ [Athens was situated on the Saronic gulf, opposite the eastern coast of Peloponnesus. It was enclosed in a sort of peninsula, formed by the confluence of the Cephissus and the Ilissus. In the centre of the city itself, and constituting its chief ornament, stood the Acropolis, the glory of Grecian art. On this elevation the whole of Athens was originally built; but as the city extended, the Acropolis came to serve merely the purpose of a citadel. Here, as in the safest and most conspicuous situation, were accumulated all those works of ornament for which Athens was so prolific. The Acropolis became the grand depository of painting, sculpture, and architecture. Its chief ornament was the Parthenon, or virgin temple of Minerva. Destroyed by the Persians, it was rebuilt by Pericles, with great additional splendour. It would be superfluous to expatiate on the beauties of the Parthenon, which are so well known and have been so often described. In the majestic simplicity of its general design, the grandeur of its proportions, and the exquisite taste and skill displayed in the execution of its ornamental parts, it is undoubtedly the most perfect, as well as deservedly the most celebrated production of Grecian art. The Propylææ, of white marble, formed a magnificent entrance to the Parthenon. This edifice was on the north side of the Acropolis, and near it was the Erechtheum, also of white marble, consisting of two temples, one of Minerva Polius, another of Neptune, besides a remarkable edifice, called the Pandroseum. In front of the Acropolis, and at each end, were two theatres, called the theatre of Bacchus and the Odeum: the one designed for dramatic representations, and the other for music. Both, and particularly the last, were of extraordinary magnificence.]

The city itself, although the principal treasures of Athenian art were accumulated in the Acropolis, contained many noble structures. Among these may be mentioned the Pæcile, the Tower of the Winds, by Andronicus Cyrrhestes; and numerous monuments of illustrious men. Two of its most splendid monuments, however, were without the walls; namely, the temple of Theseus and of Jupiter Olympius, situated, the one on the north, and the other on the south side of the city. The temple of Jupiter Olympius was of the Corinthian order. Immense sums were spent upon it by the Athenians; additions were made to it by successive sovereigns; and the fabric was at length completed by Alexander the Great.

drian. The exterior contained about 190 columns, fluted, 60 feet in height, and 6 in diameter. The enclosure was about half a mile in circumference.

After all that time and barbarism have effected towards the devastation of Athens, her ruins still excite astonishment and admiration in every beholder. Of these, it would be impossible to give an adequate description in a limited note like the present; but we refer the reader particularly to Messrs. Stuart and Rivett's work, entitled "Antiquities of Athens," Lond. 1782, 4 vols. fol., which contains many magnificent plates, calculated to illustrate the descriptions.]

or not; for this conduct was imputed to him as a crime; nor whether this use of the public money was conformable to the intention of those who supplied it; I have said elsewhere what we ought to think of it; and content myself with observing, that a single man inspired the Athenians with a taste for all the arts; that he set all the able hands at work, and raised so lively an emulation amongst the most excellent workmen in every kind, that, solely intent upon immortalizing their names, they used their utmost endeavours, in all the works confided to their care, to surmount each other, and surpass the magnificence of the design by the beauty and spirit of the execution. One would have believed that there was not one of those buildings, but must have required a great number of years, and a long succession of men, to complete it; and yet, to the astonishment of every body, they were all carried to so supreme a degree of perfection during the government of one man; and that too in no considerable number of years, considering the difficulty and excellency of the workmanship.

Another consideration, which I have already touched upon elsewhere, still infinitely exalts their value: I only copy Plutarch in this place, and should be very glad if I could come near the energy and vivacity of his expressions. Facility and expedition do not generally communicate solid and lasting graces, nor perfect beauty to works; but time, united with labour, pays delay with usury, and gives the same works a force capable of preserving, and of making them triumph through all ages. This renders the works of Pericles the more admirable, which were finished in so short a time, and yet had so long a duration. For from the moment they came from the workman's hands, they had the beauty and spirit of antiques; and even now, says Plutarch, that is to say, about six hundred years after, they have the freshness of youth, as if but lately finished; so much do they still retain a bloom of grace and novelty, that prevents time itself from diminishing their beauty, as if they possessed within themselves a principle of immortal youth, and an animating spirit incapable of growing old.

Plutarch afterwards mentions several temples and superb edifices, in which the most excellent artists had been employed. Pericles had chosen Phidias to preside in erecting these structures. He was the most famous architect, and at the same time the most excellent sculptor and statuary, of his time. I shall speak of him presently, when I come to treat the article of sculpture.

THE MAUSOLEUM.

The superb monument which Artemisia erected for her husband Mausolus, king of Caria, was one of the most famous buildings of antiquity, as it was thought worthy of being ranked amongst the seven wonders of the world. I shall cite, in the article upon sculpture, what Pliny says of it.

CITY AND LIGHT-HOUSE OF ALEXANDRIA.

It is natural to expect, that whatever derives itself from Alexander, must have something great, noble, and majestic in it; which are the characters of the city he caused to be built, and called after his name, in Egypt. He charged Dinocrates with the direction of this important undertaking. The history of that architect is very singular.

He was a Macedonian. Confiding in his genius and great ideas, he set out for the army of Alexander, with design to make himself known to the prince, and to propose views to him such as he conceived would suit his taste.¹ He got letters of recommendation from his relations and friends to the great officers and leading men at the court, in order to obtain a more easy access to the king. He was very well received by those to whom he applied, who promised to introduce him as soon as possible to Alexander. As they deferred doing it from day to day, under pretence of wanting a favourable opportunity, he took their delays to imply evasion, and resolved to present himself. His stature was advantageous, his visage agreeable, and his address spoke a person of condition. Relying, therefore, upon his good mien, he

stripped himself of his usual habit, anointed his whole body with oil, crowned himself with a wreath of poplar, and throwing a lion's skin over his shoulders, took a club in his hand, and in that equipage approached the throne, upon which the king sat dispensing justice. The novelty of the sight having opened his way through the crowd, he was perceived by Alexander, who, surprised at his appearance, ordered him to approach, and asked him who he was. He replied, "I am Dinocrates the Macedonian, an architect, who brings thoughts and designs to Alexander worthy his greatness." The king gave him the hearing. He told him that he had formed a design of cutting mount Athos into the form of a man, that should hold a great city in his left hand, and in his right a cup to receive all the rivers which ran from that mountain, and to pour them into the sea. Alexander relishing this gigantic design, asked him whether there were lands enough about this city to supply corn for its subsistence. And having been answered, that it would be necessary to bring that by sea, he told him that he applauded the boldness of the design, but could not approve the choice of the place he had pitched upon for the execution of it. He, however, retained him near his person, adding, that he would employ his ability in other undertakings.

Alexander accordingly, in the voyage he made into Egypt, having discovered a port there that was very well sheltered and of easy access, surrounded by a fertile country, and abounding with conveniences on account of its neighbourhood to the Nile, he commanded Dinocrates to build a city adjoining to it, which was called Alexandria after his name. The architect's skill and the prince's magnificence vied with each other in embellishing it, and seemed to exceed themselves in order to render it one of the greatest and most superb cities of the world. It was enclosed within a vast extent of walls, and fortified with towers.² It had a port, aqueducts, fountains, and canals of great beauty; an almost infinite number of houses for the inhabitants, squares, lofty edifices, public places for the celebration of games and shows; in a word, temples and palaces so spacious, and in so great a number, that they took up almost a third part of the whole city. I have observed elsewhere in what manner Alexandria became the centre of the commerce of the east and west.

A considerable structure, afterwards erected in the neighbourhood of this city, still rendered it more famous; I mean the light-house of the island of Pharos. Seaports were usually fortified with towers, as well for the defence, as to guide those who sailed in the night by means of fires kindled upon them. These towers were at first of a very simple species; but Ptolemæus Philadelphus caused one so great and magnificent to be erected in the island of Pharos, that some have ranked it amongst the wonders of the world; it cost eight hundred talents, or one million eight hundred thousand livres.

The isle of Pharos was about seven stadia, or something more than a quarter of a league, from the continent.³ It had a promontory or rock, against which the waves of the sea broke. It was upon this rock Ptolemæus Philadelphus built the tower of Pharos, of white stone, of surprising magnificence, with several arched stories, not unlike the tower of Babylon which had eight such stories. He gave the direction of this work to a celebrated architect, called Sostratus, who cut this inscription upon the tower: "Sostratus of Cnidos, son of Dexiphanes, to the gods preservers, in favour of those who go by sea." In the history of Philadelphus, the reader may see what has been said upon this inscription.

The Nubian geographer, who lived about six hundred years ago, speaks of the tower of Pharos as of an edifice subsisting in his time. The height of the tower, according to him, was three hundred cubits that is to say, four hundred and fifty feet, or an hundred and fifty yards. A manuscript scholiast upon Lucian, cited by Isaac Vossius,⁴ affirms that, for its size,

¹ Strab. l. xvii. p. 791, &c.

⁴ Is. Voss, ad. Pomp. Mel. p. 205.

¹ Vitruv. in præfat. l. ii

it might be compared with the pyramids of Egypt; that it was square; that its sides were almost a stadium, near two hundred and eighty yards; that its top might be described an hundred miles, or about thirty or forty leagues. This tower soon took the name of the island, and was called Phoros; which name was afterwards given to other towers erected for the same use. The isle on which it was built became a peninsula in process of time. Queen Cleopatra joined it to the main land by a mole, and a bridge from the mole to the island; a considerable work, in which Dexiphanes, a native of the isle of Cyprus, presided.¹ She gave him, by way of reward, a considerable office in her court, and the direction of all the buildings she afterwards caused to be erected.

We find, from more than one example, that expert architects were very much honoured and esteemed amongst the ancients. The inhabitants of Rhodes had settled a considerable pension upon Diogenetus, one of their citizens, to reward him for the machines of war which he had made for them.² It happened that a foreign architect, who called himself Callias, had made a model in miniature of a machine capable, as he pretended, of lifting and removing any weight whatsoever, and thereby excelling all other machines. Diogenetus, judging the thing absolutely impossible, was not ashamed to confess that it surpassed his skill. The pension of the latter was transferred to Callias, as far the more expert artist. When Demetrius Poliorcetes was preparing to make his terrible Helepolis approach the walls of Rhodes, which he besieged, the inhabitants called upon Callias to make use of his machine. He declared it to be too weak to remove so great a weight. The Rhodians then perceived the enormous fault they had committed, in treating a citizen to whom they had such great obligations with so much ingratitude. They beseeched Diogenetus in the most earnest manner to assist his country, exposed to the utmost danger. He refused at first, and remained for some time inflexible to their entreaties. But when he saw the priests, and the most noble children of the city, bathed in their tears, come to implore his aid, he complied at last, and could not withstand so moving a spectacle. The question was to prevent the enemy's approaching their formidable machine to the wall. He effected it without much difficulty, having laid the land under water, over which the Helepolis was to pass, which rendered it absolutely useless, and obliged Demetrius to raise the siege, by an accommodation with the Rhodians. Diogenetus was loaded with honours, and double his former pension settled upon him.

THE FOUR PRINCIPAL TEMPLES OF GREECE.

Vitruvius says³ that there were, amongst others, four temples in Greece, entirely built of marble, and adorned with such exquisite ornaments, that they were the admiration of all good judges, and became the rule and model of buildings in three orders of architecture. The first of these structures is the temple of Diana at Ephesus. The second that of Apollo in the city of Miletus: both of these were of the Ionic order. The third is the temple of Ceres and Proserpine at Eleusis, which Ictinus built in the Doric order, of extraordinary dimensions, capable of containing thirty thousand persons; for there were as many, and often more, at the celebrated procession of the feast of Eleusis.⁴ This temple at first had 30 columns without, in order to leave the more room for sacrifices. But Philo afterwards, when Demetrius Phalerens governed Athens, placed some pillars in front, to render the edifice more majestic. The fourth is the temple of Jupiter Olympius at Athens, of the Corinthian order. Pisistratus had begun it, but it remained unfinished after his death, upon account of the troubles in which the republic was involved.⁵ More than three hundred years after, Antiochus Epiphanes, king of Syria, took upon him to defray the expenses that were necessary for finish-

ing the body of the temple, which was very large, and the columns of the portico.⁶ Cosutius a Roman citizen, who had made himself famous amongst the architects, was chosen to execute this great work. He acquired great honour by it, this pile being esteemed to have very few equal to it in magnificence. The same Cosutius was one of the first amongst the Romans who built in the Grecian taste. He gives me occasion to speak of several edifices at Rome, which often employed Greek architects, and thereby in some measure to resume my plan.

CELEBRATED BUILDINGS AT ROME.

The art of building was almost as soon known in Italy as Greece, if it be true that the Tuscans had not had any communication with the Greeks, when they invented the particular order which retains their name to this day. The tomb which Porcenna, king of Etruria, caused to be erected for himself during his lifetime, shows the great knowledge they had in those days of this art.⁷ This structure was of stone, and built almost in the same manner as the labyrinth of Dædalus, in the island of Crete, if the tomb were such as Varro has described it in a passage cited by Pliny.

Tarquinius Priscus had a little before erected very considerable works at Rome; for it was he who first enclosed that city with a wall of stone, and laid the foundations of the temple of Jupiter Capitolinus, which his grandson Tarquinius Superbus finished at a great expense, having for that purpose called in the best workmen from Etruria. The Roman citizens were not dispensed with from sharing in that work, which, though very painful and laborious, being added to the fatigues of war, they did not think too heavy; so much joy they conceived, and so much honour they thought it, to build the temples of their gods with their own hands.

The same Tarquinius Priscus raised two other works, not so splendid, indeed, in outward appearance, but far more considerable in regard to labour and expense; works, says Livy, to which the magnificence of our days, in its most supreme degree, has scarce been capable of producing any thing comparable.⁸

One of these works was the subterraneous sewers and canals, that received all the dirt and filth of the city; the remains of which still raise admiration and astonishment from the boldness of the undertaking and the greatness of the expense it must necessarily have cost to complete it. And, indeed, of what thickness and solidity must these vaulted water-courses have been, which ran from the extremity of the city as far as the Tiber, to support for so many ages, without ever giving way in the least, the enormous weight of the vast streets of Rome erected upon them, through which an infinity of carriages of immense weight were continually passing!

M. Scæurus, to adorn the stage of a theatre during his edileship, which was to continue only a month at most, had caused three hundred and sixty columns of marble to be prepared, many of which were thirty-eight feet high.⁹ When the time for the shows was expired, he had all those pillars carried into his own house. The undertaker for making good the common sewers obliged that edile to give him security for repairing the damage that the carriage of so many heavy pillars might occasion to those vaults, which from the time of Tarquinius Priscus, that is to say, for almost eight hundred years, had continued immovable; and still bore so excessive a load without giving way. Besides which, these subterraneous canals contributed exceedingly to the cleanliness of

the houses and streets, as well as to the purity and wholesomeness of the air. The water of seven brooks, which had been united together, and which was frequently turned into these subterranean beds, cleansed them entirely, and carried off along with them all the filth into the Tiber.

Works of this kind, though hid under the earth, and buried in darkness, will no doubt appear to every good judge more worthy of praise, than the most magnificent edifices, and most superb palaces. These suit the majesty of kings indeed, but do not exalt their merit, and, properly speaking, reflect no honour but on the skill of the architect: whereas the others argue princes, who know the true value of things; who do not suffer themselves to be dazzled by false splendour; who are more intent upon the public utility than their own glory; and who are studious to extend their services and beneficence to the latest posterity: objects worthy the ambition of a prince!

After the Tarquins were expelled Rome, the people having abolished monarchical government, and resumed the sovereign authority, were solely intent upon extending the bounds of their empire. When in process of time they came to have more commerce with the Greeks, they began to erect more superb and more regular buildings. For it was from the Greeks that the Romans learned to excel in architecture. Till then, their edifices had nothing to recommend them but their solidity and magnitude. Of all the orders they knew only the Tuscan. They were almost entirely ignorant of sculpture, and did not even use marble: at least they never knew how to polish it, nor make pillars and other works of it, that by their beauty and excellent workmanship might make a magnificent appearance when applied in proper places.¹

It was not, properly speaking, till towards the latter times of the republic, and under the emperors, that is to say, when luxury was grown to a great height at Rome, that architecture appeared there in all its splendour. What a multitude of superb buildings and magnificent works were erected, which still adorn Rome! The pantheon, the baths, the amphitheatre called the Coliseum, the aqueducts, the causeways, the pillars of Trajan and Antonine!—The famous bridge over the Danube, built by the order of Trajan, was a work which alone would have sufficed to have immortalized his name.² It had twenty piles to support the arches, each sixty feet thick, an hundred and fifty high, without including the foundations, and an hundred and seventy feet distant from one another, which makes in all a breadth of fifteen hundred fourscore and ten yards. This was, however, that part of the whole country in which the Danube was narrowest, but at the same time deepest and most rapid; which seemed an obstacle not to be surmounted by human industry. It was impossible to make dams in it for laying the foundation of the piles. Instead of which, it was necessary to throw into the bed of the river a prodigious quantity of different materials, and by that means to form a kind of bases equal to the height of the water, in order afterwards to erect the piles upon them, and the whole superstructure of the bridge. Trajan made this bridge with the view of using it against the barbarians. His successor Adrian, on the contrary, apprehended its being used by the barbarians against the Romans, and caused the arches of it to be demolished. Apollodorus of Damascus was the architect who presided in erecting this bridge: he had been employed in many other works by Trajan. His end was very unfortunate.

The emperor Adrian had caused a temple to be built in honour of Rome and of Venus, at the extremities of which they were placed, each sitting upon a throne: there is reason to believe that he had drawn the plan, and given the dimensions himself, because he piqued himself upon excelling in all arts and sciences.³ After it was built, Adrian sent the draught of it to Apollodorus. He remembered, that one day inclining to give his opinion upon a building Trajan

was discoursing about to Apollodorus, that architect had rejected what he said with contempt, as talking of what he did not understand. It was therefore by way of insult, and to show him that something great and perfect might be done without him, that he sent him the design of this temple, with express orders to let him know his opinion of it. Apollodorus was naturally no flatterer, and saw plainly the affront intended him. After having praised the beauty, delicacy, and magnificence of the building, he added, that since he was ordered to give his opinion of it, he could not deny but it had one fault; which was, that if the goddesses should have an inclination to rise up, they would be in danger of breaking their heads, because the arch of the roof was too confined, and the temple not high enough. The emperor was immediately sensible of the gross and irreparable fault he had committed, and was inconsolable upon it. But the architect paid for it, and his too great ingenuity, which was not perhaps sufficiently discreet and respectful, cost him his life.

I have not ranked, in the number of the magnificent buildings of Rome, the palace called the Golden House,⁴ which Nero caused to be erected there, though perhaps nothing like it was ever seen, either for the extent of its walls, the beauty of its gardens, the number and delicacy of its porticoes, the sumptuousness of its buildings, or the gold, pearls, jewels, and other precious materials, with which it glittered. I do not think it allowable to give the name of magnificence to a palace built with the spoils, and cemented with the blood of the Roman citizens. Whence, says Suetonius, the buildings of Nero were more destructive to the empire than all his other follies. *Non in alia re damnosior quam in edificando.* Cicero had passed a still more severe judgment upon it,⁵ who held no expenses to be really laudable, but such as had the public utility in view; as the walls of cities and citadels, arsenals, ports, aqueducts, causeways, and others, of a like nature. He carried his rigour so far as to condemn theatres, piazzas, and even new temples; and supported his opinion by the authority of Demetrius Phalereus, who absolutely condemned the excessive expenses of Pericles in such structures.

The same Cicero makes excellent reflections⁶ upon the buildings of private persons: for there is certainly a difference to be made in this point, as well as all others, in regard to princes. He is for having persons of the first rank in the state lodged in an honourable manner, and that they should support their dignity by their habitations; but at the same time that their houses should not be their principal merit, and that the master should do honour to the dwelling, and not the dwelling to the master.⁷ He recommends to the great men that build, carefully to avoid the excessive expenses incurred by the magnificence of structures: expenses, which become of fatal and contagious example to a city; the generality not failing, and making it a merit, to imitate, and sometimes even to exceed, the great. Palaces thus multiplied are said to do honour to a city. They rather dishonour it, because they corrupt it, by rendering luxury and pomp continually

⁴ [Suetonius (in Neron. c. xxi.) gives some curious details of this enormous edifice. In the vestibule stood a colossal statue of Nero, 130 feet in height; there were three porticoes, each a mile in length, and supported by three rows of pillars: the garden seems to have resembled a park, and contained an immense piece of water, woods, vineyards, and pasture ground, herds, and even wild beasts. On the banks of the lake rose various edifices that resembled towns. In the palace itself the rooms were lined with gold, gems, and mother of pearl. The ceilings of the dining rooms were adorned with ivory panels, so contrived as to scatter flowers, and shower perfumes on the guests. The principal banquetting room revolved upon itself, representing the motions of the heavens: the baths were supplied with salt water from the sea, and mineral water from the Albulæ, now Solfatara near Tibur.]

³ Dio, l. lxxi. pp. 789, 790.

necessary, by the costliness of furniture, and the other expensive ornaments, required in lofty buildings; which are, besides, often the cause of the ruin of families.

Cato, in his book upon rural life, gives very wise advice. When, says he, to build is the question, we should deliberate a great while, (and often not build at all,) but when to plant, we should not deliberate but plant directly.¹

In case we build, prudence requires our taking good precautions. "Formerly," says Vitruvius,² "there was a very severe but very just law at Ephesus, by which the architects who undertook a public building, were obliged to declare what it would cost, and to do it for the price they had demanded, for the performance of which their whole estate was bound. When the work was finished, they were publicly honoured and rewarded, if the expense was according to their estimate. If the expense exceeded the agreement only a fourth, the public paid the surplus. But if it went beyond that, the architect made good the deficiency. It were to be wished," continues Vitruvius, "that the Romans had such a regulation in regard to their buildings, as well public as private: it would prevent the ruin of many persons."

This is a very just reflection, and argues a very estimable character in Vitruvius, and a great fund of probity, which indeed distinguishes itself throughout his whole work, and does him no less honour than his great capacity. He followed his profession with a noble disinterestedness, very uncommon in those who practise it. Reputation, not gain, was his motive.³ He had learned from his masters, that an architect ought to stay till he is desired to undertake a work; and that he cannot, without shame, make a demand, but shows him interested in it, because every body knows people do not solicit others to do them good,

¹ *Ædificare diu cogitare oportet, conserere cogitare non oportet, sed facere.*

² *Vitruv. prefat. l. x.*

³ *Ego autem, Cæsar, non ad pecuniam parandam ex arte ledi studium, sed potius tenuitatem cum bona famâ quam abundantiam cum infamia sequendum probavi. Ceteri architecti rogant et ambiunt, ut architectentur: mihi autem præceptoribus est traditum, rogatum non rogantem oportere suscipere curam, quod ingenuus color movetur pudore petendo rem suspiciosam. Nam beneficium dantes, non recipientes, ambiuntur.—*Vitro. prefat. l. vi.**

but to receive it from them. He requires in his profession an extent of knowledge, that occasions astonishment.⁴ According to him, an architect must be both ingenious and laborious: for capacity without application, and application without capacity, never make an excellent artist. He must therefore know how to design, understand geometry, not be ignorant of optics, have learned arithmetic, know much of history, have well studied philosophy, and have some knowledge of music, physic, civil law, and astronomy. He afterwards proceeds to show particularly, in what manner each of these branches of learning may be useful to an architect.

When he comes to philosophy, besides the knowledge necessary to his art to be derived from the physics, he considers it with regard to morals. "The study of philosophy," says he, "serves also to render the architect more complete, who ought to have a soul great and bold without arrogance, equitable and faithful, and what is still more important, entirely exempt from avarice: for it is utterly impossible ever to do any thing well, or to attain any excellence without fidelity and honour. He ought therefore to be disinterested, and to have less in view the acquiring of riches, than honour and reputation, by architecture; never doing any thing unworthy of so honourable a profession: for this is what philosophy prescribes."

Vitruvius has not thought fit to require in his architect the talent of eloquence, which it is often proper even to distrust, as a very happy saying Plutarch has preserved explains. It was occasioned by a considerable building that the Athenians intended to erect for the execution of which two architects offered themselves to the people. The one, a fine speaker, but not very expert in his art, charmed and dazzled the whole assembly by the elegant manner in which he expressed himself in explaining the plan he proposed to follow. The other, as bad an orator as he was an excellent architect, contented himself with telling the Athenians:—"Men of Athens, I will do what he has said."⁵ I conceived, that I could not conclude this article upon architecture better, than with giving some idea of the ability and manners of him (Vitruvius,) who in the opinion of all good judges, practised and taught it with most reputation.

⁵ *Ἀνδρῶν, ὡς εὖρος εὐκλεῖς ἰδὲ πείρα*

OF SCULPTURE.

SECTION I.—OF THE DIFFERENT SPECIES OF SCULPTURE.

SCULPTURE is an art, which by the means of design or plan and solid matter, imitates the palpable objects of nature. Its matter is wood, stone, marble, ivory; different metals, as gold, silver, copper; precious stones, as agate, and the like. This art includes also casting or founding, which is subdivided into the art of making figures of wax, and that of casting them in all sorts of metals. By sculpture, I understand here, all these different species.

The sculptors and painters have often had great disputes amongst themselves upon the pre-eminence of their several professions; the first founding the preference upon the duration of their works, and the latter opposing them with the effects of the mixture and vivacity of colours. But without entering into a question not easy to decide, sculpture and painting may be considered as two sisters, that have but one origin, and whose advantages ought to be common; I might almost say as the same art, of which design is the soul and rule, but which work in a different manner, and upon different materials.

It is difficult and little important, to trace, through

the obscurity of remote ages, the first inventors of sculpture. Its origin may be dated with that of the world, and we may say that God was the first statuary, when having created all beings, he seemed to redouble his attention in forming the body of man, for the beauty and perfection of which he seems to have wrought with a kind of satisfaction and complacency. Long after he had finished this masterpiece of his all-powerful hands, he was willing to be honoured principally by the sculptor's application in building the ark of the covenant, of which himself gave the idea to the legislator of the Hebrews. But in what terms does he speak of the admirable artist he thought fit to employ in it? "I have chosen," says he to his prophet, "a man of the tribe of Judah, and I have filled him with the Spirit of God, in wisdom, and in understanding, and in knowledge, and in all manner of workmanship, to devise cunning works, to work in gold, and in silver and in brass and in cutting of stones, to set them, and in cutting of timber, to work in all manner of workmanship."¹ He speaks in the same manner in respect to the work-

¹ *Exodus xxii.*

men that were to build and adorn the temple of Jerusalem.

Nothing could exalt the merit of sculpture so much as so noble a destination, if it had fulfilled it faithfully. But long before the building of the temple, and even the tabernacle, it had shamefully prostituted itself for hire to idolatry, which by its means filled the world with statues of false divinities, and exposed them for the adoration of the people. We find in the scripture, that one of the causes which had conducted most to the spreading of this impious worship, had been the extreme beauty which the workmen in emulation of each other had exerted themselves to give those statues.¹ The admiration excited by the view of these excellent works of art, was a kind of enchantment, which by strongly affecting the senses, conveyed the illusion to the mind, and drew in the multitude. It is against this universal delusion Jeremiah admonished the Israelites to beware, when they should see in Babylon the statues of gold and silver carried about in pomp upon the days of solemnity. At that time, says the prophet, when the whole multitude, filled with veneration and awe, shall prostrate themselves before idols, (for the captivity, in which the people of God were in a strange land, would not admit them to express themselves aloud) say within yourselves: IT IS ONLY THOU, O LORD, THAT OUGHT TO BE ADORED.² It must be owned also that sculpture did not contribute a little to the corruption of manners, by the nudity of the images, and representations contrary to modesty, as the Pagans themselves have confessed.³ I thought it proper to premise this remark, that in what I shall say hereafter in praise of sculpture, the reader may see I distinguish the excellency of the art in itself from the abuse which men have made of it.

The first sculptors made their works of earth, whether they were statues, or moulds and models. This made the statuary Pasiteles say, that the works which were either cast, or cut with a chisel or graver, owed their being to the art of making figures of earth, called *Plastice*. It is said that Demaratus, the father of Tarquinius Priscus, who took refuge from Corinth in Etruria, brought thither abundance of workmen with him who excelled in that art, and introduced the taste for it there, which afterwards communicated itself to the rest of Italy. The statues erected in that country to the gods, were at first only of earth, to which for their whole ornament, was added a red colour. We ought not to be ashamed of the men, says Pliny, who adored such gods.⁴ They set no value upon gold and silver either for themselves or their deities. Juvenal calls a statue, like that erected by Tarquinius Priscus in the temple of the father of the Gods:

Pictilis, et nullo vitulæ Jupiter auro,
A Jove of earth, not yet by gold profaned.

It was very late before they began to set up golden or gilt statues at Rome.⁵ This was first done in the consulship of P. Corn. Cethegus, and M. Bæbius Tamphilus, in the 571st or 573d year of Rome, A. M. 3820. Portraits were afterwards made also of plaster and wax, the invention of which is ascribed to Lysistratus of Sicyone, the brother of Lysippus.⁶

We find that the ancients made statues of almost all sorts of wood. There was an image of Apollo at

Sicyone made of box.⁷ At Ephesus, according to some writer, that of Diana was of cedar, as well as the roof of the temples. The lemon-tree, the cy press, the palm, the olive, the ebony, the vine, in a word, all trees not subject to rot, or to be worm-eaten, were used for statues.

Marble soon became the most usual, and the most esteemed material for works of sculpture.⁸ It is believed that Dipænes and Scyllis, both of Crete, were the first who used it at Sicyone, which was long, in a manner, the centre and school of arts: they lived about the 50th Olympiad, A. M. 3424, a little before Cyrus reigned in Persia. Bupalus and Anthermus, two brothers, made themselves famous for the art of carving marble, in the time of Hipponax, that is to say, in the 60th Olympiad, A. M. 3464. That poet had a very ugly face. They made his portrait in order to expose it to the laughter of spectators. Hipponax conceived a more than poetic fury against them, and made such virulent verses upon them, that, according to some, they hanged themselves through grief and shame. But this fact cannot be true, because there were works of their making after that time.

At first the artists used only white marble, brought from the isle of Paros.⁹ It was reported that in cutting these blocks of marble, they sometimes found natural figures of a Silenus, a good Pan, a whale, and other fishes. Jasper and spotted marble became afterwards the fashion. It was brought principally from the quarries of Chio; and soon was commonly found in almost all countries. It is believed, that the manner of cutting large blocks of marble into many thin pieces, to cover the walls of houses, was invented in Caria. The palace of king Mausolus at Halicarnassus is the most ancient house, that had these incrustations of marble, which were one of its greatest ornaments.

The use of ivory in works of sculpture was known from the earliest ages of Greece. Homer speaks of such sculptures, though he never mentions elephants.¹⁰

The art of casting gold and silver is of the greatest antiquity, and cannot be traced to its origin. The gods of Laban, which Rachel stole, seem to have been of this kind. The jewels offered to Rebecca were of cast gold. Before the Israelites left Egypt, they had seen cast statues, which they imitated in casting the golden calf, as they did afterwards in the brazen serpent. From that time all the nations of the east cast their gods, *deos conflantes*, and God forbade his people to imitate them upon pain of death. In the building of the tabernacle, the workmen did not invent the art of founding: God only directed their taste. It is said, that Solomon caused the figures used in the temple and elsewhere, to be cast near Jericho, because it was a clayey soil, in *argillosa terra*: which shows that they had even then the same manner of founding great masses as we have.

It were to be wished, that the Greek or Roman authors had informed us in what manner the ancients cast their metals in making figures. We find by what Pliny II writes upon that head, that they sometimes made use of stone moulds. Vitruvius speaks, of a kind of stones found about the lake Volsenus, and in other parts of Italy, which would bear the force of fire without breaking, and of which moulds were made for casting several sorts of works. The ancients had the art of mingling different metals in the mould, to express different passions and sentiments by the diversity of colours.¹¹

There are several manners of carving metals and precious stones: for in both the one and the other they work in relief, and in hollow, which is called engraving. The ancients excelled in both ways. The basso relievo, which we have of theirs, are infinitely esteemed by good judges; and as to engraved stones, as the fine agates and crystals, of which there are abundance in the king of France's cabinet, it is generally said, that there is nothing so exquisite as those remains of the ancient masters.

¹ Also the singular diligence of the artificer did help to set forward the ignorant to more superstition. For he per adventure willing to please one in authority, forced all his skill to make the resemblance of the best fashion. And so the multitude allured by the grace of the work, took him now for a god, whom a little before, was but honoured as a man. And this was an occasion to deceive the world.—Wisd. xiv. 18, 19, 20, 21.

Though they engraved upon almost all kinds of precious stones, the most finished figures, which we have of theirs, are cut upon onyxes, which is a kind of agate not transparent, or on cornelians, which they found more fit for engraving than any other stones, because they are more firm and even, and cut more neatly; and also because there are different colours that run one above the other in the onyx, by the means of which in rilievo the bottom continues of one colour, and the figures of another. To engrave upon gems and crystals they used, as now, the point of a diamond.¹

The ancients highly extolled the gem in the ring of Polycrates, tyrant of Samos, which he threw into the sea, and which was brought back to him by a very extraordinary accident: in Pliny's time it was pretended to be an Opale.² It was, according to some, a sardonyx, at Rome an emerald. That of Pyrrhus was no less esteemed; upon which might be seen Apollo with his harp and the nine muses, each with their particular symbol: and all this not the effect of art, but of nature: *non arte, sed sponte natura*.

The art of sculpture was principally employed upon

¹ It is probable that no stone of sufficient hardness was excluded from receiving the engravings of the ancients; but it has been doubted whether they were acquainted with the means of cutting the diamond, or sculpturing the emerald and topaz. The most favourite stones for engraving, as stated in the text, were the cornelian and onyx. The former is of different shades, from cherry red to flesh colour, and sometimes of a yellowish tinge or brownish colour; but exposed to moderate heat it becomes white. It was obtained from India, Arabia, and other parts of Asia, as well as the Mediterranean islands. The latter is considered a calcadony, the colours of which are disposed in alternate zones or strata. Generally they do not exceed two or three; five or six are extremely rare. The proper gems of onyx consist of parallel zones, as these only can be worked to advantage: but there are other two varieties with undulated zones, or concentric nuclei, resembling the eye of animals. It is not known where onyx was obtained by the ancients, but it is now found principally in Germany and Scotland. The largest onyx said to exist is an oval of eleven inches by nine, on which is sculptured the apotheosis of Augustus in four zones, two of which are brown and the others white. Several stones of the same species have attracted the particular notice of antiquaries: such is the Brunswick vase six inches in height, representing Ceres in the quest of Proserpine; Venus on a marine animal surrounded by Cupids, engraved upon an onyx of two zones; Marcus Aurelius and Faustina in one of four zones, two of white and two of lilac. Engraved gems of two colours, as the onyx, are called *cameas*, a word of uncertain etymology—more usually, however, applied to such subjects as are in relief or elevated; while all hollow engravings are called *intaglios*, a name adopted from the Italian.

The Egyptians had gems both in intaglio and relief, but more commonly the former; and those preserved are for the most part called *scarabei*, from the figure resembling a beetle being engraved upon them. The Jews perhaps learned engraving from the Egyptians among whom they dwelt; and some notices respecting it are preserved in sacred writ. In the book of Genesis, Bezabab and Aholiab are mentioned as being professedly engravers, and are designated as "filled with wisdom of heart to work all manner of work with the graver, as well as to devise running works; to work in gold, and in silver, and in brass, and in cutting of stones, and to set them." Of the jewels which were in the ephod, Moses was directed to take two onyx stones and grave on them the names of the children of Israel, six of their names on one stone, and six on the other, according to their birth. "With the work of an engraver on stone, like the engravings of a signet, shalt thou engrave the two stones with the names of the children of Israel."

The art of die-sinking for stamping coins, though by no means of so early a date as the engraving of seals, was practised at a very early period. It is uncertain whether the coining of money was invented by the Greeks or Lydians, though some suppose that the art was brought from Hindostan. The first Greek money is supposed to have been struck by Phidon, king of the Argives, whose reign is fixed by the Arundelian marbles at about eight centuries before the Christian era, or soon after the age of Homer. Many of the early Greek and Sicilian coins are beautiful and in high relief: to this, however, the coins of Athens form a remarkable exception, being in a very inferior style of execution. This art seems to have been communicated to the Romans in the reign of Servius Tullius, about 460 years before the commencement of our era, by the Lydian colony settled in Etruria. The best of the Roman medals are the work of Greek artists, executed during the reign of Hadrian.]

² Rin. l. vii. c. i.

cups used at feasts: these pieces were very rich and curious, as well as of the most costly materials.

One of the greatest advantages the art of making portraits ever received for the eternizing its works, is that of engraving upon wood and copper-plates, by the means of which a great number of prints are taken off, that multiply a design almost to infinity, and convey the artist's thought into different parts, which before could only be known from the single piece of his own work. There is reason to wonder, that the ancients, who engraved so many excellent things upon hard stones and crystals, did not discover so fine a secret, which indeed did not appear till after printing, and was, no doubt, an effect and imitation of it. For the impression of figures and cuts did not begin to be used till the end of the fourteenth century. The world is indebted for the invention of them to a goldsmith, that worked at Florence.³

After having related, by way of abridgment, the greatest part of what employed the sculpture of the ancients, it remains for me to give an account of some of those, who practised it with most success and reputation.

SECTION II.—SCULPTORS MOST CELEBRATED AMONGST THE ANCIENTS.

THOUGH sculpture had its birth in Asia and Egypt, it was from Greece, properly speaking, that it derived its lustre and perfection. Not to mention the first rude essays of this art, which always carry with them the marks of their infantile state, Greece produced, especially in the time of Pericles and after him, a multitude of excellent artists, who laboured in emulation of each other, to place sculpture in honour by an infinite number of works, which have been, and will be, the admiration of all ages.⁴ Attica, fertile in quarries of marble, and still more abundant in happy geniuses for the arts, was soon enriched with an infinite number of statues.⁵

I shall mention here only such of them as were most distinguished by their ability and reputation. The most celebrated are Phidias, Polycletus, Myron, Lysippus, Praxiteles, and Scopas. There is another still more illustrious than all I have named, but in a different way: this is the famous Socrates. I ought not to envy sculpture the honour she had of reckoning Socrates amongst her pupils. He was the son of a statuary, and was one himself before he commenced philosopher.⁶ The three graces, which were carefully preserved in the citadel of Athens, were generally ascribed to him. They were not naked, as it was usual to represent them, but covered: which shows what inclination he had at that time for virtue. He said, that this art had taught him the first precepts of philosophy; and that as sculpture gives form to its subjects by removing its superfluities, so that science introduces virtue into the heart of man, by gradually retrenching all his imperfections.

PHIDIAS.

PHIDIAS, for many reasons, deserves to be placed at the head of the sculptors. He was an Athenian, and

¹ [Rollin here alludes to Thomas Finiguerra, a goldsmith of Florence, who, about the year 1460, having engraved some figures on a silver plate which he intended to enamel, in order to try the effect of his work, poured upon the plate some liquid sulphur, and the dirt or black lodged in the crevices adhering to the sulphur, produced an impression like a pen drawing, and suggested to him the idea of an impression upon paper, in which he ultimately succeeded. Before this, however, the art of taking impressions upon paper from blocks of wood, by means of the printing or rolling press, was known to the Germans, and seems to have originated with the *brief makers*, or makers of playing cards, who at first coloured or illuminated their figures with the hand; but afterwards performed the operation in a much more expeditious manner by blocks cut for the purpose, each colour requiring a separate stamp.]

² Multas artes ad animum corporumque cultum nobis eruditissima omnium gens (Grecæ) invenit. *Liv. l. xxxix. n. 8.*

³ Exorata eo genere eperum eximie terra Attica, et opus domesticæ marmoris, et ingenio artificum. *Liv. l. xxi. n. 26.* These marbles were dug in the Pentelie mountain which was in Attica.

⁴ Diog. Laert. in Socr.

flourished in the 83d Olympiad, A. M. 3556, happy times, wherein, after the victories obtained over the Persians, abundance, the daughter of peace, and mother of arts, produced various talents by the protection Pericles afforded them. Phidias was not one of those artists, who only know how to handle the tools of their profession. He had a mind adorned with all the knowledge that could be useful to a man of his profession; history, poetry, fable, geometry, and optics. A fact not a little curious, will show in what manner the latter was useful to him. Alcámenes and he were each employed to make a statue of Minerva, in order that the finest of them might be chosen, and placed on a very high column. When the two statues were finished, they were exposed to the view of the public. The Minerva of Alcámenes, when seen near, seemed admirable, and carried all the voices. That of Phidias, on the contrary, was thought insupportable: a great open mouth, nostrils which seemed drawn in, and something rude and gross throughout the whole visage. Phidias and his statue were ridiculed. *Set them, said he, where they are to be placed:* which was accordingly done alternately. The Minerva of Alcámenes appeared then like nothing, whilst that of Phidias had a wonderful effect from its air of grandeur and majesty, which the people could never sufficiently admire. Phidias received the approbation his rival had before, who retired with shame and confusion, very much repenting that he had not learnt the rules of optics.

The statues so much extolled before the times we now speak of, were more estimable for their antiquity than merit. Phidias was the first who gave the Greeks a taste for the Fine in nature, and taught them to copy it. Hence, as soon as his works appeared, they were universally admired: and what is still more astonishing than that he made admirable statues, is, his making so many of them: for their number, according to authors, seems incredible; and he perhaps is the only one that ever united so much facility with such perfection.

I believe he worked with great pleasure upon a block of marble, found in the Persian camp after the battle of Marathon, in which those barbarians were entirely defeated.¹ They had assured themselves of victory, and had brought that stone thither, in order to erect it as a trophy. Phidias made a Nemesis of it, the goddess whose function it is to humble and punish the insolent pride of men. The natural hatred of the Greeks for the barbarians, and the grateful pleasure of avenging their country, undoubtedly animated the sculptor's genius with new fire, and lent new force and address to his hands and chisel. At the price of the spoils taken from the same enemies, he made a statue of Minerva also for the Plataeans.² It was of wood, gilt. The face, as well as the hands and feet, were of Pentelic marble.

His talent lay principally in representing the gods. His imagination was great and noble: so that, according to Cicero, he did not copy their features and resemblance from any visible objects, but by the force of genius, formed an idea of true beauty, to which he continually applied himself, and which became his rule and model, and directed his art and execution.³ Hence Pericles, who had a higher opinion of him than of all the other architects, made him director and a kind of superintendent of the buildings of the republic.

When the Parthenon, that magnificent temple of Minerva, was finished, of which some remains not ill preserved, still charm travellers, and it was to be dedicated, which consisted in setting up the statue of the goddess in it, Phidias was charged with the work, in which he excelled himself. He made a statue of gold and ivory, of twenty-six cubits (or thirty-nine feet)

high. The Athenians chose to have it of ivory which at that time, was much more scarce and valuable than the finest marble. How rich soever this prodigious statue was, the sculptor's art infinitely surpassed the materials of it.⁴ Phidias had carved upon the convex part of Minerva's shield, the battle of the Athenians with the Amazons; and upon the concave, that of the giants with the gods; upon the buskins of the goddess, he added the battle of the Centaurs and Lapithæ; on the pedestal the birth of Pandora, with all that fable says of it. Cicero, Pliny, Plutarch, Pausanias, and several other great writers of antiquity, all connoisseurs, and eye-witnesses of it, have spoke of this statue. Their testimony leaves no room to doubt its having been one of the finest pieces of workmanship that ever was in the world.

Some assure us, says Plutarch, that Phidias put his name upon the pedestal of his Minerva at Athens.⁵ Pausanias does not mention this circumstance, which Cicero entirely denies, who says expressly, that Phidias not being permitted to put his name to the statue, had cut his portrait upon the goddess' shield.⁶ Plutarch adds, that Phidias had represented himself in the form of an old man, quite bald, raising a large stone with both his hands; and had also represented Pericles fighting with an Amazon, but in such an attitude, that his hand which was extended to throw a javelin hid part of his face.

The most excellent artists have always affected to insert their names in their works, in order to partake of the immortality they gave others. Myron, that famous statuary, to immortalize his name, put it in characters almost imperceptible, upon one of the thighs of the statue of Apollo.⁷ Pliny relates, that two Lacedæmonian architects, Saurus and Batrachus, without accepting any reward, built some temples in a part of the city of Rome, which Octavia caused afterwards to be enclosed with galleries. They flattered themselves, that they should have liberty to set their names upon them, which indeed seems the least recompense due to their generous disinterestedness. But we find that in those days, the persons who employed the most able artists, took all possible precautions to avoid sharing the esteem and attention of posterity with simple workmen. These were absolutely refused their demand. Their address, however, supplied them with an amends. They threw in by way of ornaments lizards and frogs upon the bases and capitals of all the columns. The name of Saurus was implied by the lizard, which the Greeks call *σαῦρος*, and that of Batrachus by the frog, which they call *βάτραχος*.

The prohibition I speak of was not general in Greece, of which we shall soon see a very extraordinary instance in relation to Phidias himself: it was perhaps peculiar to Athens. However it were, his having given the two portraits a place in the shield of Minerva was made criminal.⁸ Nor was that all; Menon, one of his pupils, demanded to be heard, and made himself his accuser. He alleged that he had applied to his own use part of the forty-four talents of gold, which were to have been used in the statue of Minerva.⁹ Pericles had foreseen what would happen, and by his advice, Phidias had used the gold in his Minerva in such a manner, that it could easily be taken out and weighed. It was weighed accordingly, and to the accuser's shame, found to amount to the forty-four talents. Phidias, who plainly saw that his innocence would not secure him against the malignant jealousy of those who envied him, and the intrigues of Pericles' enemies, who had hatched this affair against him, withdrew privately to Elis.

He there conceived thoughts of avenging himself.

¹ Plin. l. xxxvi. c. 5.

⁴ Phidius, cum facere Jovis formam aut Minervæ, non contemplatus aliquem a quo similitudinem duceret: sed ipse in mente insculpat species pulchritudinis eximia quædam, quam intuens, in eaque defixus, ad illius similitudinem ætem et animum dirigebat. *Cic. in Orat.* n. 9.

in a manner pardonable and allowable in an artist, if ever revenge could be so, which was by employing his whole industry in making a statue for the Eleans, that might eclipse his Minerva, which the Athenians looked upon as his master-piece. This he effected. His Jupiter Olympius was a prodigy of art; and so perfectly such, that to set a just value upon it, it was thought that it deserved to be ranked amongst the seven wonders of the world. Nor had he forgot any thing that might conduce to its perfection. Before he had entirely finished it, he exposed it to the view and judgment of the public, hiding himself in a corner, whence he overheard all that was said of it.¹ One thought the nose too thick, another the face too long; and different persons found different faults. He made the best use he could of all the criticisms that seemed to have any just foundation; convinced, says Lucian, who relates this fact, that many eyes see better than one. An excellent reflection in every kind of work!

This statue of gold and ivory, sixty feet high, and of a proportionate magnitude, made all succeeding statues despair. None of them had the presumption even to imagine that they could imitate it: *Præter Jovem Olympium, quem nemo æmulari*, says Pliny.² According to Quintilian,³ the majesty of the work equalled that of the god, and even added to the religion of all who saw it; *Ejus pulchritudo adjectis æ aliquando receptæ religionis videtur, adeo majestas operis deum æquavit*. Those who beheld it, were struck with astonishment, and asked whether the god had descended from heaven to show himself to Phidias, or Phidias had been carried thither to contemplate the god. Phidias himself, upon being asked whence he had taken his idea of his Jupiter Olympius, repeated the three fine verses of Homer, in which the poet represents the majesty of that god in the most sublime terms; thereby signifying that the genius of Homer had inspired him with it.⁴

At the base of the statue was this inscription: PHIDIAS THE ATHENIAN, THE SON OF CHARMIDES, MADE ME.⁵ Jupiter seems here to glory in a manner that he is the work of Phidias, and to declare so by this inscription; tacitly to reproach the Athenians with their vicious delicacy, in not suffering that excellent artist to annex his name or portrait to the statue of Minerva. Pausanias, who had seen and carefully examined this statue of Jupiter Olympius, has left us a very long and very fine description of it. The Abbe Gedyon has inserted it in his dissertation upon Phidias, which he has read in the Academy of Inscriptions, and was pleased to communicate to me. I have made use of it in what I have related of this famous statue.

The statue of Jupiter Olympius raised the glory of Phidias to its highest degree, and established him a reputation which two thousand years have not obliterated. He finished his labours with this great masterpiece. The shop where he worked, was preserved long after his death, and travellers used to visit it out of curiosity. The Eleans, in honour of his memory, instituted an office in favour of his descendants, the whole duty of which consisted in keeping this magnificent statue clean, and in preserving it from whatever might sully its beauty.⁶

POLYCLETUS.

POLYCLETUS was of Sicyone, a city o Peloponnesus, and lived in the 87th Olympiad.⁷ A. M. 3771. Ageladas was his master, and several very famous sculptors his disciples, of which number was Myron, of whom we shall soon speak. He made several statues of brass, which were highly esteemed. One of them represented a beautiful young man with a crown on his head, which was sold for an hundred talents, that is, an hundred thousand crowns. But what gave him most reputation was the statue of a Doryphorus,⁸ in which all the proportions of the human body were so happily united, that it was cal-

led *the Rule*;⁹ and the sculptors came from all parts to form in themselves, by studying this statue, a just idea of what they had to do, in order to excel in their art. Polycletus is universally admitted to have carried the art of sculpture to its highest perfection, as Phidias is for having been the first to place it in honour.¹⁰

Whilst he was at work upon a statue, by order of the people, he had the complaisance to hearken to all the advice they thought fit to give him, to retouch his work, and to change and correct in it whatever displeased the Athenians.¹¹ But he made another in private, in which he followed only his own genius, and the rules of art. When they were exposed together to the view of the public, the people were unanimous in condemning the first, and admiring the other. *What you condemn*, says Polycetus to them *is your work, what you admire, is mine*.

MYRON.

Little is known of this statuary. He was an Athenian, or at least passed for one, because the inhabitants of Eleutheria, the place of his nativity, had taken refuge at Athens, and were regarded as citizens of it. He lived in the 87th Olympiad, A. M. 3771. His works rendered him very famous, especially a heifer which he made in brass, and which gave occasion for abundance of fine Greek epigrams, inserted in the fourth book of the Anthologia. (*Florilega*.)

LYSIPPUS.

LYSIPPUS was a Sicyonian, and lived in the time of Alexander the Great, in the 114th Olympiad,¹² A. M. 3676. He followed at first the business of a locksmith; but his happy genius soon induced him to take up a profession more noble and more worthy of him. He used to say, that the Doryphorus of Polycletus had served him instead of a master.¹³ But the painter Eupompus directed him to a much better and more certain guide. For upon Lysippus' asking him, which of his predecessors in the art of sculpture it was best to propose to himself as a model and a master; *No man in particular*, replied he *but nature herself*.¹⁴ He afterwards studied her solely and made great improvements from her lessons.

He worked with so much ease, that of all the ancients none made so great a number of statues as himself; they are said to amount to six hundred.

He made amongst others the statue of a man rubbing himself after bathing, of exquisite beauty. Agrippa set it up in Rome before his baths. Tiberius, who was charmed with it, having attained the empire, could not resist his desire to possess it, though in the first years of his reign, in which he was sufficiently master of himself to moderate his passions: so that he removed the statue into his own chamber, and caused another very fine one to be put up in the same place.¹⁵ The people, who feared Tiberius, could not, however, refrain from crying out in the full theatre, that they desired the statue might be replaced: with which the emperor, how fond soever he was of the statue, was obliged to comply, in order to appease the tumult.

Lysippus had made several statues of Alexander according to his several ages, having began at his infancy. It is well known, that prince had forbade all statues but Lysippus to make his statue, as he had done all painters but Apelles to draw his picture;!

rightly judging, says Cicero, that the skill of those two great masters in perpetuating their own names, would also immortalize his: for it was not to please them he published that edict, but with a view to his own glory.¹

Amongst these statues, there was one of exquisite beauty, upon which Nero set a high value, and was particularly fond of. But as it was only of copper, that prince, who had no taste, and was struck with nothing but glare, thought fit to have it gilt.² This new decoration, costly as it was, made it lose all its value, by covering the delicacy of the art! All this gaudy supplement was obliged to be taken off, by which means the statue recovered part of its original beauty and value, notwithstanding the traces and scars the putting on and taking off the gold had left upon it. In the bad taste of Nero methinks I see that of some people, who industriously substitute the tinsel of conceits and witticism to the precious and inestimable simplicity of the ancients.

Lysippus is said to have added much to the perfection of statuary, in expressing the hair better than those who preceded him, and in making the heads less, and the bodies not so large; upon which he said of himself, *that others represented men in their statues as they were; but he, as they appeared*; that is to say, if I mistake not, in the manner that was most proper to make them appear with all their beauty.³ The chief point in sculpture as well as in painting, is to follow and imitate nature: Lysippus we see made it his guide and rule. But art does not stop there. Without ever departing from nature it throws in strokes and graces, which do not change, but only embellish it, and catch the eye in a more lively and agreeable manner. Demetrius, otherwise an excellent statuary, was reproached with confining himself too scrupulously to truth, and for being more studious of likeness than beauty in his works.⁴ This Lysippus avoided.

PRAXITELES.

PRAXITELES lived in the 104th Olympiad, A. M. 3640. We must not confound him with another Praxiteles, who made himself famous in the time of Poinpey by excellent works in the goldsmith's art. Him we speak of is of the first rank amongst the statuarys. He worked chiefly in marble, and with extraordinary success.

Amongst the great number of statues made by him, it would have been hard to know which to prefer, unless himself had informed us:⁵ which he does in a manner that has something singular enough in it. Phryne, the celebrated courtesan, was much in his favour. She had often pressed him to make her a present of one of the best of his works, and that which he believed the best finished; and he could not refuse it. But when he was to judge which it was, he deferred doing so from day to day; either because he found it difficult to determine himself, or rather strove to evade her warm and earnest solicitations, by protracting the affair. Persons of Phryne's profession seldom want industry and address. She found a means to get the secret out of Praxiteles, in spite of himself. One day when he was with her, she made his own servant, whom she had gained to her purpose, come running to tell him; "Your workhouse is on fire, and part of your works already spoiled: which of them shall I save?" The master quite out of his senses, cried out, "I am ruined and undone,

if the flames have not spared my Satyr and my Cupid." "Be in no pain, Praxiteles," resumed Phryne immediately, "there is nothing burned: but now I know what I wanted." Praxiteles could hold out no longer. She chose the Cupid, which she afterwards set up at Thespiae, a city of Bœotia, where she was born, and whither people went long after to see it out of curiosity. When Mummius took several statues from Thespiae to send them to Rome, he paid some regard to this, because consecrated to a god. The Cupid of Verres, mentioned by Cicero, was also done by Praxiteles, though not the same with this.

It is undoubtedly of the first that mention is made in Mr. De Thou's memoirs. The fact is very curious, wherefore I shall transcribe it as related there. Mr. De Thou when young, went into Italy with Mr. De Foix, whom the court sent thither. They were then at Pavia. Amongst other rarities which Isabella of Este, the Duke of Mantua's grandmother, had disposed with great care and order in a magnificent cabinet, Mr. De Thou was shown an admirable piece of sculpture; this was a Cupid sleeping, made of the fine marble of Spezzia, upon the coast of Genoa, by the celebrated Michael Angelo Buonarrotti, who revived the arts of painting, sculpture, and architecture, which had long been neglected before him. De Foix, upon the account given him of this masterpiece, went to see it. All his train, and De Thou himself, who had a very exquisite taste for works of this kind, after having attentively considered it on all sides, declared unanimously, that it was infinitely above all praise that could be given it.

When they had admired it for some time, another Cupid was shown them, that had been wrapt up in a piece of silk. This monument of antiquity, such as the many epigrams written by Greece & of old in its praise represent it, was still soiled with the earth out of which it had been taken. Upon comparing the one with the other, the whole company were ashamed of having judged so much to the advantage of the first, and agreed that the ancient Cupid seemed instinct with life, and the modern a mere block of marble without expression. Some persons of the house then assured them, that Michael Angelo, who was more sincere than great artists generally are, had earnestly requested the countess Isabella, after having made her a present of his Cupid, and seen the other, that the ancient one should be shown last; that the connoisseurs might judge on seeing them both, how much the ancients excelled the moderns in works of this kind.

But the most judicious are sometimes mistaken, as the same Michael Angelo himself has given us a proof.⁷ Having made the figure of a Cupid, he carried it to Rome; and having broken off one of its arms which he kept, he buried the rest in a place which he knew was to be dug. This figure being found, it was admired by the connoisseurs, and sold for an antique to the cardinal San Gregorio. Michael Angelo soon undeceived them, by producing the arm he had kept. There is something very extraordinary in having ability enough to imitate the ancients so perfectly, as to deceive the eyes of the best judges; and at the same time so much modesty, as to confess ingenuously a great superiority on their side, as we see Michael Angelo did.

Something like this is related on a different occasion. Joseph Scaliger, the most learned critic of his times, boasted that it was impossible for him to be deceived in regard to the style of the ancients. Six verses were sent abroad as lately discovered; they are,

Here, si querelis, ejulatu, fletibus
Medicini fieret miserii mortualem,
Auro parandæ lacrum æ contra forem.
Nunc hæc ad minuenda mala non magis valent,
Quam Nenia Præfixæ ad excitandos mortuos,
Res turbidæ consilium non dictum expetunt.

These verses, which are admirable, and have all

the air of antiquity, deceived Scaliger's effectually, that he cited them in his commentary upon Varro, as a fragment from Trabea, not long since discovered in an ancient manuscript. Trabea was a comic poet, and lived six hundred years after the foundation of Rome. They were, however, made by Muretus, who played Scaliger, his rival and competitor, this trick.

We may believe that Praxiteles, abandoned as he was to Phryne, did not fail to employ the work of his hands for her, who had made herself the mistress of his heart.¹ One of Phryne's statues was placed afterwards in Delphos itself, between those of Archidamus king of Sparta, and Philip king of Macedon. How infamous this! If riches were a title to a place in that temple, she might well pretend to it: for hers were immense. She had the impudence (for by what other name can I call the fact I am going to relate?) to engage to rebuild the city of Thebes at her own expense, provided this inscription were placed on it: ALEXANDER DESTROYED, AND PHRYNE REBUILT THESES.

The inhabitants of the Isle of Cos, had demanded a statue of Venus from Praxiteles.² He made two, of which he gave them their choice at the same price. The one was naked, the other covered; but the first was infinitely the most beautiful: *immensa differentia fame*. The people of Cos had the wisdom to give the preference to the latter; convinced that decency, politeness, and modesty did not admit them to introduce an image into their city, that might be of infinite prejudice to their manners: *Severum id ac pudicum arbitantes*. How many Christians does this chaste conduct disgrace? The Cnidians were less attentive in point of morals. They bought the rejected Venus with joy, which afterwards became the glory of their city; whither people went from remote parts to see that statue, which was deemed the most finished work of Praxiteles. Nicomedes, king of Bithynia, set so high a value upon it, that he offered to release all the debts the Cnidians owed him, which were very considerable, provided they would give it him. They thought it would dishonour, and even impoverish them to sell for any price whatsoever, a statue, which they considered as their glory and riches.

SCOPAS.

SCOPAS was both an excellent architect and an excellent sculptor.³ He was of the Island of Paros, and flourished in the 87th Olympiad, A. M. 3572. Amongst all his works, his Venus held the first rank. It was even pretended, that it was superior to the so much renowned one of Praxiteles. It was carried to Rome; but, says Pliny, the number and excellency of the works which abound in this city obscured its lustre; besides which, the employments and affairs that engross people here, scarce afford them time to amuse themselves with these curiosities; to consider and admire the beauties of which, require persons of leisure, and such as have no business, as well as places quiet and remote from noise.⁴

I have observed elsewhere that the pillar which he made for the temple of Diana at Ephesus, was reputed the finest in that building. He also very much contributed to the beauty and ornament of the famous Mausoleum, erected by queen Artemisia, to the memory of her husband Mausolus, in the city of Halicarnassus, which was reckoned one of the seven wonders of the world, as well for its magnitude and loftiness of architecture, as the quantity and excellence of the works of sculpture, with which it was enriched.⁵ Several illustrious competitors divided the glory of this structure with Scopas. I purposely referred to this place the description Pliny has left us of part of

this superb pile, because it relates more to sculpture than architecture.

The extent of this Mausoleum was sixty-three feet from north to south. The fronts not quite so broad, and the circumference four hundred and eleven feet.⁶ It was thirty-six feet and a half high, and had thirty-six pillars around it. Scopas undertook the east side. Timotheus had the south, Leochares the west, and Briaix the north. These were the most famous sculptors of those times. Artemisia died before they had finished the work: but they believed it not for their honour to leave it imperfect. It is doubted to this day, says Pliny, which of the four succeeded best. *Hodieque certant manus*. Pythis joined them, and added a pyramid to the top of the Mausoleum, upon which he placed a chariot of marble drawn by four horses. Anaxagoras of Clazomena said coldly when he saw it, Here's a great deal of money turned into stone.⁷

I ought not to conclude this article, without mentioning a very singular dispute, in which two of the most celebrated statuarys I have spoke of were engaged: these were Phidias and Polyclethus.⁸ I have observed above, that the temple of Diana at Ephesus was not finished till after a long series of years. The question was, at a time Pliny does not fix, to place in it some statues of Amazons, very probably to the number of four. Several had been done by the greatest masters both dead and living. The majesty of the temple required, that none should be admitted which were not exquisitely finished. It was necessary, upon this occasion, to consult the most accomplished sculptors in being, how interested soever they might be in the dispute. Each gave himself the first place, and afterwards named those they believed to have succeeded best; and it was the sculptors who had the majority of these latter suffrages, that were declared victorious. Polyclethus had the first place, Phidias the second, and Ctesilas and Cylon the two others.⁹ Something of the same nature had happened long before, but on a different occasion. After the battle of Salamis, the Grecian captains, according to a custom observed in those times, were to set down on a paper him they believed to have distinguished himself most in the action. Each named himself first, and Themistocles second; which was in reality giving him the first place.

It is plain, that in the short enumeration I have made of the ancient statuarys, I have chosen only the very flower of the most famous.¹⁰ There are many others, and of great reputation, which I am obliged to omit, to avoid enlarging my work too much. Cicero highly extols the statue of Sappho in copper, done by the celebrated statuary Silanion.¹¹ Nothing was more perfect than this statue: Verres had taken it from the Prytanæum of Syracuse. Pliny relates,¹² that the same Silanion had cast the statue of Apollodorus, his brother sculptor, in brass, who was a passionate man, and violent against himself; and who often, in the heat of his disgust, broke his own works to pieces, because he could not carry them to that supreme degree of perfection, of which he had the idea in his thoughts. Silanion represented this furious humour in so lively a manner, that it did not seem so much to express Apollodorus, as rage itself personified. *Hoc in eo expressit, nec hominem exars fecit, sed iracundiam*.

The same Pliny also very much extols a Laocoon,¹³ which was in the palace of Titus, and gives it the preference to all other works of painting and sculpture. Three excellent artists, Agesander, Polydorus, and Athenodorus, Rhodians, had joined in executing it, and had made out of one stone Laocoon, his children, and the serpents in all their different folds. The work

must have been admirable, if equal to the beautiful description of this fact in Virgil,¹ or indeed if it came near it.

It remains for me to draw the character of those illustrious artists, who excelled so much in representing the gods and men naturally. I shall do it after Quintilian and Cicero, two admirable painters of characters and portraits, but who generally cannot be copied without being spoiled.

The first having enumerated the different manners in painting, he continues thus: "There is the same difference also in sculpture. For the first statuary of whom we have any account, Calon and Egesias, worked in a rude manner, and almost in the Tuscan taste. Calamis came next, and his works had less constraint in them. Those of Myron afterwards had still a more natural and easy air. Polycletus added regularity and gracefulness to them. The first place is generally given to him: however, as there is nothing entirely perfect, his statues are said to want a little more force. And indeed he represented men with infinite graces, and better than they are: but he did not entirely come up to the majesty of the gods. It is even said, that the manly age confounded his skillful hands, for which reason he scarce ever expressed any thing but tender youth. But what Polycletus wanted, fell to the share of Phidias and Alcamenes. However, Phidias was judged to have represented the gods better than men. Never did artist use ivory with so much success, if we only consider his Minerva of Athens, and his Jupiter Olympius, the beauty of which seemed to improve the religion of the beholders, so much did the work express the majesty of the god. Lysippus and Praxiteles were reckoned to have copied nature best. For, as to Demetrius, he is blamed for having carried that care to excess, and for having confined himself more to resemblance than beauty."²

The passage of Cicero is shorter, in which he also mentions several of the ancients very little known. "I observe," says he, "that Canachus, in his statues, has something dry and rude. Calamis, rude as he is, has not so much of that character as Canachus. Myron does not come near enough to the just; though, strictly speaking, whatever comes from his hands is fine. Polycletus is much above them in all, and in my opinion has attained perfection."³

I have already observed more than once, that sculpture is indebted to Greece for the supreme perfection to which it attained. The grandeur of Rome, which was to erect itself upon the ruins of that of Alexander's successors, long retained the rustic simplicity of its dictators and consuls, who neither esteemed, nor practised, any arts but those which were subservient to war and the occasions of life. They did not begin to have a taste for statues and the other works of sculpture, till after Marcellus, Scipio, Flaminius, Paulus Emilius, and Mummius, had exposed to the view of the Romans whatever Syracuse, Asia, Macedonia, Corinth, Achaia, and Boeotia, possessed in works of art. Rome saw with admiration the paintings and sculpture in brass and marble, with all that serves for the ornament of temples and public places. The people piqued themselves upon studying their

beauties, discerning their excellencies, and knowing their value; and this kind of science became a new merit, but at the same time the occasion of an abuse fatal to the republic. We have seen, that Mummius after the taking of Corinth, in directing the persons who had undertaken the carriage of a great number of statues and paintings of the greatest masters to Rome, threatened them, if they lost or spoiled any of them upon the way, that they should make them good at their own costs and charges. Is not this gross ignorance, says an historian, infinitely preferable to the pretended knowledge which soon succeeded it? Strange weakness of human nature. Is innocence then inseparable from ignorance; and cannot knowledge, and a taste estimable in itself, be attained without the manners suffering thereby through an abuse, which sometimes, though unjustly, reflects reproach and disgrace upon the arts themselves?⁴

This new taste for extraordinary pieces was soon carried to an excess. They seemed to contend, who should adorn their houses in town and country with most magnificence. The government of conquered countries supplied them with occasions of doing this. As long as their manners remained uncorrupted, the governors were not permitted to purchase any thing from the people they were set over; because, says Cicero,⁵ when the seller is not at liberty to sell things at the price they are worth, it is not a sale on his side, but a violence done to him: *Quod putabant ereptionem esse non emptionem, cum venditori suo arbitrato vendere non liceret*. It is well known, that these wonders of art, performed by the greatest masters, were very often without price,⁶ nor indeed have they any other, than what the imagination, passion, and to use Seneca's expression, the phrenzy of certain people set upon them.⁷ The governors of provinces bought what was highly esteemed for little or nothing; and these were very moderate; for most of them made their collections by force and violence.

History gives us instances of this in the persons of Verres, prætor of Sicily; who was not the only one that acted in this manner. He indeed carried his impudence in this point to an inconceivable excess, which Cicero knew not by what term to express; passion, phrenzy, folly, robbery!⁸ He could find no name strong enough to convey the idea of it. Neither decency, sense of honour, nor fear of the laws, could restrain him. He reckoned himself in Sicily as in a conquered country. No statue, great or small, of any value or reputation, escaped his rapacious hands. In a word, Cicero affirms, that the curiosity of Verres had cost Syracuse more gods, than the victory of Marcellus had cost it men.⁹

OF PAINTING.

ARTICLE I.

OF PAINTING IN GENERAL.

SECTION I.—ORIGIN OF PAINTING.

PAINTING, like all other arts, was very gross and imperfect in its beginnings. The shadow of a man marked by the outlines gave birth to it, as well as to sculpture. The first manner of painting, therefore, derived its origin from a shadow, and consisted only in some strokes, which multiplying by degrees, formed design. Colour was afterwards added. There was no more than one colour at first in each draught, without any mixture; which manner of painting was called *Monochromaton*, that is to say, of one colour. The art at length improving every day, the mixture of only four colours was introduced; of which we shall speak in its place.

I do not examine here the antiquity of painting. The Egyptians boast themselves the inventors of it; which is very possible; but it was not they who placed it in honour and estimation. Pliny, in his long enumeration of excellent artists in every kind, and of masterpieces of art, does not mention one Egyptian. It was therefore in Greece, whether at Corinth, Sicione, Athens, or in the other cities, that painting attained its perfection. It is believed to be of later date than sculpture, because Homer, who often speaks of statues, reliefs, and carved works, never mentions any piece of painting or portrait.¹

These two arts have many things common to both of them, but attain their end, which is the imitation of nature, by different means: sculpture by moulding substance; painting by laying colours upon a flat superficies; and it must be confessed that the chisel, in the hands of a man of genius, effects almost as much as the pencil. But without pretending to establish the precedence between these two arts, or to give one the preference to the other, how wonderful is it to see, that the artist's hand, by the strokes of a chisel, can animate marble and brass; and by running over a canvass with a pencil and colours, imitate by lines, lights, and shades, all the objects of nature! If Phidias forms the image of Jove, says Seneca, the god seems about to dart his thunder: if he represents Minerva, one would say that she was going to instruct the beholders, and that the goddess of wisdom was only silent out of modesty.² Charming delusion, grateful imposture, which delude without inducing error, and deceive the senses only to enlighten the soul!

SECTION II.—OF THE DIFFERENT PARTS OF PAINTING. OF THE JUST IN PAINTING.

PAINTING is an art, which by lines and colours represents upon a smooth and even surface all visible objects. The image it gives of them, whether of many figures together, or only one, is called a picture, in which three things are to be considered, the COMPOSITION, the DESIGN, and the COLOURS, or COLOURING: which are the three essential parts in forming a good painter.

1. COMPOSITION, which is the first part of painting, consists of two things: invention and disposition.

Invention is the choice of the objects, which are to enter into the composition of the subject the painter intends to treat. It is either simply historical, or allegorical. Historical invention is the choice of objects, which simply and of themselves repre-

sent the subject. It takes in not only true or fabulous history, but includes the portraits of persons, the representation of countries, and all the productions of art and nature. Allegorical invention is the choice of objects to represent in a picture, either in whole or in part, something different from what they are in reality. Such, for instance, was the picture of Apelles, that represented Calumny, which Lucian has described in a passage I shall repeat in the sequel. Such was the moral piece representing Hercules between Venus and Minerva, in which these pagan divinities are only introduced, to imply the attractions of pleasure opposed to those of virtue.

Disposition very much contributes to the perfection and value of a piece of painting. For how advantageous soever the subject may be, the invention however ingenious, and the imitation of the objects chosen by the painter however just, if they are not well disposed, the work will not be generally approved. Economy and good order gives the whole its best effect, attracts the attention, and engages the mind, by an elegant and prudent disposition of all the figures into their natural places. And this economy and distribution is called disposition.

2. The DESIGN, considered as a point of painting, is taken for the outlines of objects, for the measures and proportions of exterior forms. It regards painters, sculptors, architects, engravers, and all artists in general, whose works require beauty and proportion. Several things are considered in the design: correctness, good taste, elegance, character, diversity, expression, and perspective. My design is to treat the principles of painting only so far as they may be necessary to the reader's understanding what I shall relate of the painting of the ancients, and to his judging of it with some discernment and propriety.

Correctness is a term by which the painters generally express the condition of a design, when exempt from faults in its measures. This correctness depends upon the justness of proportions, and the knowledge of anatomy.

Taste is an idea either proceeding from the natural genius of the painter, or formed in him by education. Each school has its peculiar taste of design; and since the revival of the polite arts in Europe, that of Rome has always been esteemed the best, because formed upon the antique. The antique is therefore the best taste of design.

Elegance of design is a manner of being that embellishes without destroying the justness of objects. This part, which is of great importance, will be treated more at large in the sequel.

Character is that proper and peculiar mark, that distinguishes and characterizes every species of object, which all require different strokes to express the spirit of their character.

Diversity consists in giving every person in a picture their proper air and attitude. The skillful painter has the penetration to discern the character of nature, which varies in all men. Hence the countenances and gestures of the persons he paints continually vary. A great painter, for instance, has an infinity of different joys and sorrows, which he knows how to diversify still more by the ages, humours and characters of nations and persons, and a thousand other different means. The most worn-out subject becomes a new one under his pencil.

The word *Expression* is generally confounded in the language of painting with that of *Passion*. They are however different. Expression is a general term, which signifies the representation of an object according to its character in nature; and the use the painter designs to make of it in conformity to the plan of his work. And *Passion*, in painting, is a certain gesture of the body attended with the lineaments of the face, which together denote emotion

¹ Plin. l. xxxv. c.

² Non vidit Phidias Jovem, fecit tamen velut tonantem: nec stetit ante oculos ejus Minerva, dignus tamen illa arte animus, et concepit deos, et exhibuit. Senec. Controp. l. v. c. 34.

Verecundè admodum silenti, ut hinc responsuras paulo minus voces præstoleris. Lactant.

of the soul. So that every passion is an expression, but not every expression a passion.

Perspective is the art of representing the objects in a plan, according to the difference their distance may occasion, either with respect to figure or colour. Perspective therefore is distinguished into two sorts, the lineal and the aerial. The lineal perspective consists in the just contraction or abridgment of lines; the aerial in the just decrease or gradation of colours. This *gradual decrease*, in painting, is the management of the strong and faint, in lights, shades, and tints, according to the different degrees of distance or remoteness. Mr. Perrault, out of a blind zeal for the moderns, pretended, that perspective was absolutely unknown to the ancients; and founded his opinion upon the want of perspective in the column of Trajan. The Abbe Salier, in a brief but elegant dissertation upon this subject,¹ proves in many passages, that perspective was not unknown to the ancients, and that it was this industrious artifice, which taught them to impose so happily on the senses in their performances, by the modification of magnitudes, figures, and colours, of which they knew how to increase or diminish the boldness and lustre. As to the column of Trajan, if perspective be not exactly observed in it, it is not through ignorance of the rules of art, but because the greatest masters depart from, and even set themselves above, all rule, for the more certain attainment of their end. Mr. de Piles owns, that the defect of gradual decrease or gradation in that pillar is to be ascribed solely to the workman's design, who, superior to the rules of his art, to assist the sight, purposely made the objects stronger and more palpable.

3. The *COLORIS* or *COLOURING*, is different from colour. The latter renders the objects sensible to the eye. The *coloris* or *colouring* is one of the essential parts of painting, by which the painter knows how to imitate the colour of all natural objects, by a judicious mixture of the simple colours upon his pallet. This is a very important part. It teaches the manner in which colours are to be used, for producing those fine effects of the *Chiaro-oscuro* (*light and shade*), which add boldness and a kind of relief to the figures, and show the remoter objects in their just light.

Pliny explains it with sufficient extent. After having spoke of the very simple and gross beginnings of painting, he adds, that by the help of time and experience, it gradually threw off its defects: 2 that it discovered light and shade with the difference of the colours which set off each other; and that it made use of the *chiaro-oscuro*, the shadowing, as the most exquisite degree and perfection of the *coloris*. For this *chiaro-oscuro* (light and shade, or shadowing,) is not properly light, but the mean between the lights and shades in the composition of a subject. And from thence the Greeks called it *TONOS*, that is, the tone of painting; to signify, that as in music, there are a thousand different tones from the insensible union of which the harmony results: so in painting, there is an almost imperceptible force and gradation of light, which still vary, according to the proper or local colours of the different objects upon which they fall. It is by this enchanting distribution of lights and shades, and, if I may be allowed to say it, by the delusion of this kind of magic, that the painters impose upon the senses, and deceive the eyes of spectators. They employ, with an art never to be sufficiently admired, all the various alloys or diminutions of colour gradually to soften and enforce the colour of objects. The progression of shade is not more exact in nature, than in their paintings.

It is this insinuating charm that strikes and attracts all mankind: the ignorant, the connoisseurs, and even painters themselves. It suffers nobody to pass by a painting that has this character with indif-

ference, without being in a manner surprised, and without stopping to enjoy the pleasure of that surprise for some time. True painting therefore is that which in a manner calls us to it by surprising us: it is only by the force of the effect it produces, that we cannot help going to it, as if to know something it had to say to us. And when we approach it, we really find that it delights us by the fine choice and novelty of the things it presents to our view; by the history and fable it makes us call to mind; and the ingenious inventions and allegories, of which we take pleasure either to discover the sense, or criticise the obscurity. It does more, as Aristotle observes in his *Poetics*. Monsters, and dead or dying men, which we should be afraid to look upon, or should see with horror, we behold with pleasure imitated in the works of the painters. The better the likeness, the fonder we are to gaze upon them. One would think, that the murder of the Innocents should leave the most offensive ideas in the imagination of those, who actually see the furious soldiers butchering infants in the bosoms of their mothers covered with their blood. Le Brun's picture, in which we see that tragical event represented, affects us sensibly, and softens the heart, whilst it leaves no painful idea in the mind. The painter afflicts us no more than we are pleased he should; and the grief he gives us, which is but superficial, vanishes with the painting; whereas, had we been struck with the real object, we should not have been capable of giving bounds, either to the violence or duration of our sentiments.

But what ought absolutely to reign in painting, and constitutes its supreme excellency, is the *True*.² Nothing is good, nothing pleases but the True. All the arts, which have imitation for their object, are solely intended to instruct and divert mankind by a faithful representation of nature. I shall insert here some reflections upon this subject, which I hope will be agreeable to the reader. I have extracted them from a little treatise of Mr. de Piles,⁴ upon the *True in painting*; and still more, from a letter of Mr. du Guet, annexed to it, which was written to a lady who had desired his opinion of that short tract.

OF THE TRUE IN PAINTING.

Though painting is only an imitation, and the object in the picture but feigned, it is however called *True*, when it perfectly represents the character of its model.

The true in painting is distinguished into three kinds:—the simple, the ideal, and the compound or perfect True.

The Simple, which is called the first True, is a simple imitation of the expressive movements (or *affectations*) of nature, and of the objects, such as they really are and present themselves immediately to the eye, which the painter has chosen for his model: so that the carnations or naked parts of a human body appear to be real flesh, and the draperies real habits, according to their diversity, and each particular object retains the true character it has in nature.

The Ideal True is the choice of various perfections, which are never to be found in a single model, but are taken from several, and generally from the antique.

The third, or Compound True, which is compounded or formed of the simple and ideal True, constitutes in that union, the highest excellency of the art, and the perfect imitation of the *Fine Nature*. Painters may be said to excel according to the degree in which they are masters of the first and second True, and the happy facility they have acquired of forming out of both a good composite or compound True.

This union reconciles two things which seem opposite: to imitate nature, and not confine one's self to that imitation; to add to its beauties, and yet correct it to express it the better.

The Simple True supplies the movements (*affect-*

³ Picture præbui non debent quæ non sunt similes veri tati. *Vitrub.* l. vii. c. 5.

⁴ M. de Piles' Cours de Peinture. Paris edit.

tions or passions) and the life. The Ideal chooses with art whatever may embellish it, and render it more striking; but does not depart from the Simple, which, though poor in certain parts, is rich in its whole.

If the second True does not suppose the first, if it suppresses or prevents it from making itself more sensible than any thing the second adds to it, the art departs from nature; it shows itself instead of her; it assumes her place instead of representing her; it deceives the expectation of the spectator and not his eyes; it apprizes him of the snare, and does not know how to prepare it for him.

If, on the contrary, the first True, which has all the real of affection and life, but not always the dignity, exactitude, and graces to be found elsewhere, remains without the support of the second True, which is always grand and perfect, it pleases only so far as it is agreeable and finished, and the picture loses every thing that was wanting in its model.

The use therefore of the second True consists in supplying in each subject what it had not, but what it might have had, and what nature has dispersed in several others; and in thus uniting what she almost always divides. This second True, strictly speaking, is almost as real as the first: for it invents nothing, but collects universally. It studies whatever can please, instruct, and affect. Nothing in it is the result of chance, even when it seems to be so. It determines by the design what it suffers to appear but once; and enriches itself with a thousand different beauties in order to be always regular, and to avoid falling into repetitions. It is for this reason that the union of the Simple and Ideal True have so surprising an effect. For that union forms a perfect imitation of whatever is most animated, most affecting, and most perfect in nature. All then is probable, because all is true; but all is surprising, because all is curious and extraordinary. All makes impression, because all has been called in that was capable of doing so; but nothing appears forced or affected, because the Natural has been chosen in choosing the wonderful and the perfect. It is this fine Probable, which often appears more true than truth itself: because in this union the first True strikes the spectator, avoids various defects, and exhibits itself without seeming to do so. This third True (or union) is an end to which none ever perfectly attained. It can only be said, that those, who have come nearest to it, have most excelled.

What I have said hitherto of the essential parts of painting, will facilitate the understanding of what I shall soon add of the painters themselves, in the brief account I shall give of them. The greatest masters agree, that there never was a painter who entirely excelled in all the parts of his art. Some are happy in Invention, others in the Design: some in the Coloris, others in Expression: and some paint with abundance of grace and beauty. No one ever possessed all these excellencies together. These talents, and many others which I omit, have always been divided: the most excellent painter is he, who possesses the most of them. To know the bent of nature is the most important concern. Men come into the world with a genius determined not only to a certain art, but to certain parts of that art, in which only they are capable of any eminent success. If they quit their sphere, they fall below even mediocrity in their profession. Art adds much to natural endowments, but does not supply them where they are wanting.¹ Every thing depends on genius. The aptitude a man has, received from nature to do certain things well and with ease, which others cannot do but very ill though they take great pains, is called genius. A painter often pleases without observing rules; whilst another displeases, though he does observe them, because the latter has not the happiness to be born with a genius.² This genius is that fire,

which exalts painters above themselves, imparts a kind of soul to their figures, and is to them what is called spirit, rapture, or enthusiasm in poetry.

For the rest, though a painter does not excel in all the parts of his art, it does not follow, that most of the works of the great masters should not be considered as perfect in their kind, according to the measure of perfection of which human weakness is capable. The certain proof of their excellency is the sudden impression they make alike upon all spectators ignorant and skilful; with this sole difference, that the first only feel pleasure in seeing them, and the latter know why they are pleased.³ In regard to works of poetry or painting, the impression they have upon us, is a judgment not to be despised. We weep at a tragedy, or at the sight of a picture, before we reflect whether the object exhibited by the poet or painter be capable of moving us, or well imitated. The impression has told us that, before we think of such an inquiry. The same instinct, which at first sight would draw a sigh from us, on meeting a mother following her son to the grave, has a like effect, when the stage or a painting shows us a faithful representation of a like event. The public therefore is capable of judging aright of verses and painting; because, as Cicero observes, all men, by the sense implanted in them by nature, know, without the help of rules, whether the productions of art be well or ill executed.⁴

The reader will not be surprised that I make a parallel here between painting and poetry. All the world knows the saying of Simonides, *A picture is a silent poem, and a poem a speaking picture*. I do not examine which, of the two succeeds best in representing an object and painting an image. That question would carry me too far. It has been very well treated by the author of the critical reflections upon poetry and painting, from whom I have borrowed many things on this point. I content myself with observing, that as a picture, which represents an action, shows us only the instant of its duration, the painter cannot express many affecting circumstances, which precede or follow that instant, and still less make us sensible of the passions and discourse which very much exalt their spirit and force: whereas the poet has it in his power to do both at his leisure, and to give them their due extent.

It only remains for me, before I proceed to the history of the painters, to give a brief idea of the several species of painting.

SECTION III.—DIFFERENT SPECIES OF PAINTING.

BEFORE the secret of painting in oil was discovered, all the painters worked either in fresco or water colours.⁵

¹ Docti rationem artis intelligunt, indocti voluptatem. *Quinctil.* l. ix. c. 4.

² Illud ne quis admiretur quomodo modo hæc vulgus imperitum notet, cum in omni genere, tum in hoc ipso, magna quædam sit in incredibilibus naturæ. Omnes enim tacito quodam sensu, sine ulla arte aut ratione, quæ sint in artibus sac rationibus recta ac prava dijudicant. *Cic. l. iii. de orat.* n. 185.

³ [Of the various modes of painting, consisting of oil, fresco, water colours, both body and transparent, mosaic, enamel, glass, porcelain, tapestry, and what the French call pastel and camæaux, there is but the first which is peculiar to modern practice: although even with regard to it, there is reason to suspect that the varnish used by Apelles and his successors was not very different from oil painting. Until the seventh century before the Christian era, the Greeks seem to have been confined to the simple operation of designing with only one colour, to which the colour of the ground formed a relief. This was called by them monochromatic, and is styled camæaux by the French. Some of the Egyptian hieroglyphics are executed in this manner the Etruscan vases also furnish abundant examples of it consisting of a simple coloured background of black or orange, upon which the figures are drawn in contrast with the ground colour. When the ancients began to introduce more colours into their works, it was looked upon as degrading the art, and was confined at least to the use of a very few, in which case it was called polychromatic. We find Pliny and Cicero lamenting the corruption of taste in their day, by the introduction of a gaudy mode of painting abounding in variety of colours, more than grace and parity of taste.]

¹ Ut vere dictum esse caput esse artis, docere quod facias: ita id neque sine arte esse; neque totum artis tradi potest. *Quinctil.* l. xi. c. 3.

² In quibusdam virtutes non habet gratiam, in quibusdam vitia ipsa delectant. *Ibid.*

Fresco is a kind of painting upon fresh plaster with colours mixed with water.¹ This work was done either upon walls or arched roofs. The painting in fresco incorporating with the plaster, decayed and mouldered only with it. The walls of the Dioscuri² at Athens had been painted in fresco by Polygnotus and Diogenes during the Peloponnesian war. Pausanias observes, that these paintings had been well preserved to his time, that is, almost six hundred years after Polygnotus. The good painters, however, according to Pliny, seldom painted in fresco. They did not think it proper to confine their works to private houses, nor to leave their irretrievable master-pieces at the mercy of the flames. They fixed upon portable pieces which, in case of accident, might be saved from the fire, by being carried from place to place. All the monuments of those great painters, in a manner kept guard in palaces, temples, and cities, in order to be ready to quit them upon the first alarm; and a great painter, to speak properly, was a common and public treasure, to which all the world had a right.³

Painting in water colours is a kind performed with colours, diluted only with water, and size or gum.

The invention of *painting in oil* was not known to the ancients. It was a Flemish painter named John Van Eyck, but better known by the name of John of Bruges, who discovered this secret, and used it in the fifteenth century. This invention, which had been so long unknown, consists however only in grinding the colours with oil of walnuts or linseed. It has been of great service to painting, because all the colours mingling better together, make the colors or colouring more soft, delicate, and agreeable; and give a smoothness and mellowness to the whole work, which it could not have in the other methods. Paintings in oil are done upon wall, wood, canvass, stones, and all sorts of metals. It is said that the ancient painters painted only upon tables of wood, whitened with chalk, from whence came the word *tabula*, a picture; and that even the use of canvass amongst the moderns is of no great standing.⁴

Pliny, after having made a long enumeration of all the colours used in painting in his time, adds, "Upon the sight of so great a variety of colours, I cannot forbear admiring the wisdom and economy of the ancients. For with only the four simple and primitive colours, the painters of antiquity executed their immortal works, which are to this day our admiration: the *white* of Melos, the *yellow* of Athens, the *red* of Sinope, and the common *black*.⁵ These are all they used, and yet it was with these four colours well managed, that an Apelles, and a Melanthos, the

greatest painters that ever lived, produced those wonderful pieces, of which only one was of such value, that the whole wealth of a great city were scarce sufficient to purchase it." It is probable that their works would have been still more perfect, if to these four colours two more had been added, which are the most general and the most amiable in nature, the *blue* which represents the heavens, and the *green* which so agreeably clothes and adorns the whole earth.⁶

The ancients had a manner of painting such in use even in Pliny's time, which they called *Caustick*.⁷ It was a kind of painting in wax, in which the pencil had little or no part.⁸ The whole art consisted in preparing wax of different colours, and applying them upon wood or ivory by the means of fire.⁹

MINIATURE is a kind of painting done with simple and very fine colours, mixed with water and gum without oil. It is distinguished from other paintings by its being more delicate, requiring a nearer view, not being easily performed except in little compass, and only upon vellum, or tablets of ivory.

Paintings upon glass are done in the same manner as upon jasper and other fine stones: but the best manner of executing it is by painting under the glass, that the colours may be seen through it. The art of incorporating the colours with the glass was known in former days, as may be seen at La Sainte Chapelle, (our *Lincoln's Inn chapel*), and in abundance of other churches. This secret is said to be lost.

Enamel painting. Enamel is a kind of glass coloured. Its principal substance is tin and lead in equal quantities, calcined in the fire; to which are added separately such metallic colours as it is to have. The painting and work performed with mineral colours by the heat of the fire, is called *Enamelling*. China, Delft, and pots varnished or glazed with earth, are so many different kinds of *Enamel*. The use of *Enamelling* upon earth is very ancient, as vessels enamelled with various figures were made in the time and dominions of Porseenna king of the Tuscans.

*Mosaic work*¹⁰ is composed of many little pieces

¹ [See a preceding Note.]

² This word is derived from *καίω*, which signifies to burn.

³ *Ceris pingere, ac picturam inuere quis primus excogitavit, non constat.* Plin.

⁴ [Our information of the encaustic mode of painting practised by the ancients is very limited, as no specimens of that kind have reached our day, and ancient writers have left no particular account regarding it. According to Pliny, it would appear that the colours mixed with wax were made up into crayons, and melted as used on the picture, upon which the subject was previously traced with a metal point; when the picture was finished, a waxen varnish was spread over all, in a melted state. By this means the colours obtained great brilliancy, and the work became protected from the injuries of the weather. The surface, after it was sufficiently dry, was well polished. Various attempts have been made in modern times to revive this art, but as yet without perfect success. Indeed, the introduction of the more perfect system of oil-painting seems to supersede altogether the occasion for its re-discovery, except to gratify antiquarian curiosity. The ancients made use of encaustic painting in ornamenting their ships.]

⁵ [This species of painting, like other branches of the fine arts, seems to have originated in the east, to have been perfected in Greece, and thence transferred to Rome. It became so prevalent in both of these latter countries, as a favourite mode of ornamenting their buildings, that remains of it are discovered wherever any vestiges of ancient towns appear. The name *Musæum* was only applied to it about the fourteenth century. The words *parietum Lithostrata, scitilia, secta, or tessellata*, were used to denote mosaics properly so understood by the ancients. Isidorus* designs real mosaic very distinctly by *lithostrata parietis crustis ac tessellis junctis in variis coloribus*. Athenæus† speaks of the rich pavements in the palace of Demetrius Phalerius; and Hiero, king of Syracuse is said, by the same author, to have had an extraordinary ship constructed, in which the tessellated pavements of the cabins represented the whole fable of the Iliad. Suetonius mentions, that Julius Cæsar had such pavements carried every where along with him, to exclude the damps of the northern climates which he visited. There were several kinds of mosaic; one where the morsels of marble used were pretty

¹ [Of the ancient stucco or fresco paintings, we have examples still preserved in the relics of Herculaneum, in which no particular is more remarkable than the very great ease of the flowing outline, which, though deeply marked, possesses all the spirit of a masterly sketch. Many fine examples are also preserved at Pompeii, besides what were discovered in the ancient baths of Rome. The plaster was prepared with great care, for which various articles were selected, and laid on in different coats: volcanic ashes, or terra pozzuolana, was the first, and upon this a coat of calcareous matter, finely prepared, followed. The plaster was generally allowed to dry before the paint was applied, usually consisting of black, red, or white, if brilliancy was required, to serve as a ground colour. The colours were mixed with a very strong glue. The arabesque paintings seem to have been the favourite subject of the ancient frescoes, representing capricious compositions of every variety, and generally displaying very considerable elegance and taste, as well as fertility of invention. Raphael was much captivated by the merit of these ancient performances, and not only revived that mode of ornamental work, but made very great use of it, as his immortal works in the lodges of the Vatican testify.]

² Castor and Pollux were so called, because the sons of Jupiter.

³ *Omnis eorum ars urbibus excelebat, pictorque communis terrarum erat.*

⁴ *Nero princeps jussit coloremque on pingi 120 pedum in linteis, incognitum ad hoc tempus.* Plin. l. xxv. c. 7.

⁵ *Quatuor coloribus solis immortalia illa opera fecere—Apelles, Melanthius—clarissimi pictores.* *tabulae eorum ad gulæ oppidorum venient opibus.* Plin. l. xxv. c. 11.

* De Origin. lib. xv. cap. 8.

† Lib. xiii. c. 60. and lib. x. c. 41.

inlaid, and diversified with colours and figures cemented together upon a bottom of plaster of Paris.¹ At first compartments were made of it to adorn ceilings and floors. The painters afterwards undertook to cover walls with it, and to make various figures, with which they adorned their temples and many other edifices. They used glass and enamel in these works, which they cut into an infinity of little pieces of different sizes and colours: these having an admirable lustre and polish, had all the effect at a distance that could be desired, and endured the inclemencies of the weather as well as marble. This work had the advantage in this point of every kind of painting, which time effaces and consumes; whereas it embellishes the mosaic, which subsists so long, that its duration may almost be said to have no end. There are several fragments of the antique mosaic to be seen at Rome, and in several other parts of Italy. We should form an ill judgment of the pencil of the ancients, if we were to find it upon these works. It is impossible to imitate, with the stones and bits of glass used in this kind of painting, all the beauties and graces the pencil of an able master gives a picture.

large, which was called *settile*; and one where the cubes were very small, which was called *tessellated pavement*.—The art of colouring glass practised in the age of Augustus greatly promoted the use of mosaic; it became so common that we find Seneca^{*} complaining of the luxury of his contemporaries, in seeming unwilling to tread, unless upon precious stones: "*Et deliciarum pervenimus, ut nisi gemmas calcare nolumus.*" Mosaic painting began to decline about the fifth and sixth centuries, and is supposed to have been almost totally lost, until Andrea Taffi learned it from a Greek artist, Apollonius, who was employed on the church of St. Mark at Venice, in the thirteenth century. This is to be viewed as the source of the modern mosaic, which has attained a much greater perfection than that of the ancients.

One of the finest ancient mosaic pavements extant, supposed to have been constructed anterior to the reign of Domitian, was discovered at a village near Seville in Spain, towards the close of the last century, at the depth of three feet and a half from the surface, from a description of which the nature of others may be comprehended. It extends above 40 feet in length, by nearly 30 in breadth, and contains a representation of the circus games in a parallelogram in the centre, three sides of which are surrounded by circular compartments, containing portraits of the Muses, interspersed with the figures of animals, and some imaginary subjects. In the race course are seen a chariot overturned, the charioteer thrown out of his seat, horsemen dismounted, fractious steeds, and broken harness. The charioteer, having been injured by his fall, is supported by two men belonging to a different faction or party, as may be ascertained by their costume, which, in all the figures, is well represented. The horses are of a deep brown colour; they have a cut tail, like our modern fashion, and are apparently full of spirit. Various persons interested in the games appear in other portions of the course and beyond it; but part of the whole pavement has been destroyed by the waste of time, and the injury of the workmen by whom it was discovered. A double row of circular compartments bound the sides of the course, some of which are very entire. Each is about three feet and a half in diameter, ornamented by a broad circular border as a frame. The whole plan is finished by an exterior border, highly embellished. Nine of these compartments are occupied by busts of the nine Muses, arranged after the manner prescribed by Hesiod, and in the order of the books of Herodotus, but alternately, so that a compartment containing a mask, or an animal, or some other subject, is always interposed between two. The floor also between the different compartments exhibits various birds, fruits, and flowers.

Another fine mosaic pavement, ascribed to the first century of the Christian era, was discovered at Lyons in 1805. Its subject is similar to that of the preceding, but it is of smaller dimensions. Another valuable specimen, is the exquisite little picture of the four pigeons at the Museum of the Capitol at Rome. The pigeons are represented on the edge of a basin filled with water, out of which one of them is drinking. It is a work of singular truth and elegance, and has been frequently copied. It was found at Hadrian's villa of Tivoli, and was bought by Pope Clement XIII. for 13,000 crowns. The ordinary subjects of mosaics seem to have been the Circensian games, theatrical scenes, marine deities, tritons, and nereids. Many of them were devoted to the embellishments of halls and baths, and exhibited lively representations; but with the decay of the Roman empire, they were employed in the decoration of churches, and their subjects altered to those of a grave character.]

¹ Or stucco, a composition of lime and white marble powdered.

^{*} Ep. lxxvii.

ARTICLE II.

BRIEF HISTORY OF THE MOST FAMOUS PAINTERS OF GREECE.

I propose to speak only in this place of the most celebrated painters, without examining who were the first that used the pencil. Pliny, in the eighth, ninth, and tenth chapters of the thirty-fifth book of his *Natural History*, will supply me with a great part of what I have to say. I shall content myself with observing this once for all, and shall cite him but seldom any more.

PHIDIAS AND PANENUS.

PHIDIAS, who flourished in the 84th Olympiad, A. M. 3560, was a painter before he was a sculptor. He painted at Athens the famous Pericles, surnamed the Olympic, from the majesty and thunders of his eloquence. I have spoken at large of Phidias in the article of sculpture. Panenus his brother distinguished himself also amongst the painters of his time. He painted the famous battle of Marathon, in which the Athenians defeated the whole army of the Persians in a pitched battle. The principal officers on both sides were represented in this piece as large as the life, and with exact likeness.

POLYGNOTUS.

POLYGNOTUS, the son and disciple of Aglaophon, was of Thasos, an island in the north of the Egean sea. He appeared before the 90th Olympiad, A. M. 3582. He was the first that gave some grace to his figures; and contributed very much to the improvement of the art. Before him no great progress had been made in that part which regards expression. He at first cast some statues: but at length returned to the pencil, and distinguished himself by it in different manners.

But the painting which did him the most honour in all respects, was that which he performed at Athens in the 104th Olympiad, in which he represented the principal events of the Trojan war. However important and valuable this work was, he refused to be paid for it, out of a generosity the more estimable as uncommon in persons who make money of their arts. The council of the Amphictyons, who represented the states of Greece, returned him their thanks by a solemn decree, in the name of the whole nation, and ordained, that in all the cities to which he should go, he should be lodged and maintained at the public expense. Mycon, another painter, who worked upon the same priceto, but on a different side, less generous, and perhaps not so rich as Polygnotus, took money, and by that contrast augmented the glory of the latter.

APOLLODORUS.

THIS painter was of Athens, and lived in the 93d Olympiad, A. M. 3596. It was he that at last discovered the secret of representing to the life, and in their greatest beauty, the various objects of nature, not only by the correctness of design, but principally by the perfection of the colors, and the distribution of shades, lights, and chiaro-oscuro; in which he carried painting to a degree of force and delicacy it had never been able to attain before. Pliny observes, that before him there was no painting which in a manner called upon and seized the spectator: *Necque ante eum tabula ullius ostenditur, quæ teneat oculos*. The effect every excellent painting ought to produce is to fix the eyes of the spectator, and to attract and keep them in admiration. Pliny the younger, after having described in a very lively manner a Corinthian antique, which he had bought, and which represented an old man standing, concludes that admirable description with these words: "In fine, every thing in it is of a force to engage the eyes of artists, and to delight those of the unskilful." *Talia denique omnia, ut possint artificum oculos tenere, declare imperitiorum*. Plin. Ep. 6. l. 3.

^{*} This was a portion, so called from the variety of the paintings and ornaments with which it was embellished.

ZEUXIS.

ZEUXIS was a native of Heraclea,¹ and learnt the first elements of painting about the 85th Olympiad, A. M. 3564. Pliny says,² that having found the door of painting opened by the pains and industry of his master Apollodorus, he entered without difficulty, and even raised the pencil, which already began to assume a lofty air, to a very distinguished height of glory. *The gate of the art* means here the excellency of colouring, and the practice of the chiaro-oscuro, light and shade, which was the last perfection painting wanted. But as those who invent do not always bring their inventions to perfection, Zeuxis, improving upon his master's discoveries, carried those two excellent parts still farther than him. Hence it was, that Apollodorus, exasperated against his disciple, for this species of robbery so honourable to him, could not forbear reproaching him with it very sharply by a satire in verse, in which he treated him as a thief, who, not content with having robbed him of his art, presumed to adorn himself with it in all places as his lawful right. All these complaints had no effect upon the imitator, and only served to induce him to make new efforts to excel himself, after having excelled his master. He succeeded entirely in his endeavours, by the admirable works he performed, which at the same time acquired him great reputation, and great riches. His wealth is not the happiest part of his character. He made a puerile ostentation of it. He was fond of appearing and giving himself great airs, especially on the most public occasions, as in the Olympic games, where he showed himself to all Greece dressed in a robe of purple, with his name embroidered upon it in letters of gold.

When he became very rich, he began to give away his works liberally, without taking any thing for them. He gave one reason for this conduct, which does no great honour to his modesty. *If, says he, I gave my works away for nothing, it was because they were above all price.*³ I should have been better pleased if he had let others say so. An inscription which he affixed to one of his pieces does not argue more modesty. It was the figure of an *ATHELETA*, or *Wrestler*, which he could not forbear admiring, and extolling as an inimitable masterpiece. He wrote at the bottom of it a Greek verse of which the sense is:

À l'aspect de l'acteur, dans lequel je m'admire,
En vain tous mes rivaux voudront se tourmenter;
Ils pourront peut-être en médire
Sans pouvoir jamais l'imiter.
My Wrestler, when my rivals see,
They hate its wondrous charms and me;
A thousand things perhaps they blame;
But no'er could imitate the same:

The Greek verse is in Plutarch,⁴ but applied to the works of Apollodorus. It is:

Μυμήσεται τις μάλλον, ἢ μιμήσεται.

This is more easy to criticise than imitate.

Zeuxis had several rivals, of whom the most illustrious were Timanthes and Parrhasius. The latter was competitor with him in a public dispute, for the prizes of painting. Zeuxis, in his piece, had represented grapes in so lively a manner, that as soon as it was exposed, the birds came to peck at them. Upon which, in a transport of joy, and highly elated at the declaration of such faithful and undeniable judges in

his favour, he called upon Parrhasius to produce immediately what he had to oppose to his picture. Parrhasius obeyed, and showed a painting seemingly covered with a fine piece of stuff in form of a curtain. Remove your curtain, added Zeuxis, and let us see this masterpiece. That curtain was the picture itself, and Zeuxis confessed himself conquered. *For, says he, I only deceived the birds, but Parrhasius has deceived me, who am myself a painter.*⁵ The same Zeuxis, sometime after painted a young man carrying a basket of grapes: and seeing that the birds came also to peck at them, he owned, with the same frankness, that if the grapes were well painted, the figure must be done very ill, because the birds were not afraid of it.

Quintilian informs us that the ancient painters used to give their gods and heroes the same features and characters as Zeuxis gave them, from whence he was called the Legislator.⁶ Festus relates, that the last painting of this master was the picture of an old woman, which work made him laugh so excessively, that he died of it. It is surprising that no author should mention this fact but Verrius Flaccus, cited by Festus. Though it is hard to believe it, says Mr. de Piles, the thing is not without example.

PARRHASIUS.

PARRHASIUS was a native of Ephesus the son and disciple of Evenor, and, as we have seen, the rival of Zeuxis. They were both esteemed the most excellent painters of their time, which was the most glorious age of painting; and Quintilian says, they carried it to a high degree of perfection, Parrhasius for design, and Zeuxis for the colouring.⁷

Pliny gives us the character and praise of Parrhasius at large. If we may believe him, the exact observation of symmetry was owing to that master; and also the expressive, delicate and passionate airs of the head; the elegant disposition of the hair; the beauty and dignity of features and person; and by the consent of the greatest artists, that finishing and boldness of the figures, in which he surpassed all that went before, and equalled all that succeeded him. Pliny considers this as the most difficult and most important part of painting. For, says he, though it be always a great addition to paint the middle of bodies well, it is however what few have succeeded in. But to trace the contours, give them their due decrease, and by the means of those insensible weakenings, to make the figure seem as going to show what it conceals; in these certainly the perfection of the art consists.⁸ Parrhasius had been formed for painting by Socrates, to whom such a disciple did no little honour.

Xenophon has preserved a conversation, short indeed, but rich in sense, wherein that philosopher, who had been a sculptor in his youth, gives Parrhasius such lessons, as show, that he had a perfect knowledge of all the rules of painting.

It is agreed, that Parrhasius excelled in what regards the characters and passions of the soul, which appeared in one of his pictures, that made abundance of noise, and acquired him great reputation. It was a faithful representation of the *PEOPLE OR GENIUS OF ATHENS*, which shone with a thousand elegant and surprising beauties, and argued an inexhaustible fund of imagination in the painter. For intending to forget nothing in the character of that state, he represented it, on one side capricious, rascible, unjust and inconstant; on the other, humane, merciful and compassionate; and with all this, proud, haughty, vainglorious, fierce and sometimes even base, tim-

¹ It is not known which Heraclea authors mean, for there were several cities of that name. Some seem to suppose it Heraclea in Macedonia, or that in Italy near Crotona.

² Ab hoc (Apollodoro) fores apertas Zeuxis Heracleotes intravit—audientemque jam aliquod penicillum ad magnam gloriam perduxit.

³ Postea donare opera sua instituit, quod eo nullo satia digno pretio permutari posse diceret. *Plin.*

⁴ These verses are by the author of L'Histoire de la Peinture Ancienne, extracted from the 35th book of Pliny's Natural History, which he has translated, or rather paraphrased, with the Latin text. This book was printed at London in 1735. There are excellent reflections in it, of which I have made great use.

⁵ Plut. de Glor. Athen. p. 346.

⁸ Ambire enim debet extremitas ipsa, et sic desinere, ut promittat alia post se, ostendatque etiam quæ occultat.

orous, and cowardly.¹ This picture was certainly a lively sketch of nature. But in what manner could the pencil describe and group so many different images? There lay the Wonderful of the art. It was undoubtedly an allegorical painting.

Different authors have also drawn our painter to the life. He was an artist of a vast genius and infinite fertility of invention, but one to whom none ever came near in point of presumption, or rather in that kind of arrogance, which a glory justly acquired, but ill sustained, inspires sometimes in the best artificers.² He dressed himself in purple, wore a crown of gold; had a very rich cane, gold clasps in his shoes, and magnificent buskins; in short, every thing about him was in the same lofty style. He bestowed upon himself abundantly the finest epithets, and most exalted names, which he was not ashamed to inscribe at the bottom of his pictures; *the delicate, the polite, the elegant Parrhasius, the man who carried the art to its perfection, originally descended from Apollo, and born to paint the gods themselves.* He added, that in regard to his Hercules, he had represented him exactly, *feature for feature, such as he had often appeared to him in his dreams.* With all this show and vanity he gave himself out for *a man of virtue*, less delicate in this point than Mr. Boileau, who called himself

Ami de la vertu, plutôt que vertueux.

The friend of virtue, rather than virtuous.

The event of his dispute with Timanthes, in the city of Samos, must have humbled him extremely, and not a little mortified his self-love. He that succeeded best in a subject was to have a prize. This subject was an Ajax enraged against the Greeks for having adjudged the arms of Achilles to Ulysses. Upon this occasion, by the majority of the best judges, Timanthes was declared victor. Parrhasius covered his shame, and comforted himself for his defeat, with a smart saying, which seems to savour a little of rodomontade. *Alas poor hero! said he, his fate affects me more than my own. He is a second time overcome by one of less merit than himself.*

PAMPHILUS.

PAMPHILUS was a native of Amphipolis, upon the borders of Macedonia and Thrace. He was the first that united erudition with painting. He confined himself to mathematics, and more especially to arithmetic and geometry; maintaining strongly, that without their aid it was impossible to carry painting to its perfection. It is easy to believe that such a master would not make his art cheap. He took no disciple under ten talents (ten thousand crowns) for so many years, and it was at that price Melanthes and Apelles became his scholars. He obtained, at first at Sicione, and afterwards throughout all Greece, the establishment of a kind of Academy, in which the children of free condition, that were inclined to the polite arts, were carefully educated and instructed. And lest painting should come to degenerate, and grow into contempt, he obtained farther from the states of Greece a severe edict to prohibit the use of it to slaves. The excessive price paid by disciples to their masters, and the institution of academies for free persons, with the exclusion of slaves, shows how highly this art was esteemed, with what emulation they applied to it, and with what success and expedition it must have attained its perfection. Zeuxis, Parrhasius, Melanthes and Pamphilus were cotenporaries and lived about the 95th Olympiad, A. M. 3604.

TIMANTHES.

TIMANTHES, according to some, was of Sicione, and according to others, of Cythnus, one of the Cy-

clades. His peculiar character was invention.³ This part, so rare and difficult, is acquired neither by industry nor the advice and precepts of masters: it is the effect of a happy genius, a lively imagination, and that noble fire which animates painters as well as poets with a kind of enthusiasm.

The Iphigenia of Timanthes, celebrated by so many writers,⁴ was looked upon as a masterpiece of the art in its kind, and occasioned its being said, that his works made those who saw them conceive more than they expressed, and that though art in them rose to its highest degree of perfection, genius still transcended it.⁵ The subject was fine, grand, tender, and entirely proper for painting: but the execution gave it all its value. This piece represented Iphigenia standing before the altar, as a young and innocent princess, upon the point of being sacrificed for the preservation of her country. She was surrounded by several persons, all of them strongly interested in this sacrifice, though in different degrees. The painter has represented the priest Calchas in great affliction, Ulysses much more sad, and Menelaus the victim's uncle, with all the grief it was possible for a countenance to express: Agamemnon, the princess' father, still remained. All the lineaments of sorrow were however exhausted.⁶ Nature was called in to the support of art. It is not natural for a father to see his daughter's throat cut: it sufficed for him to obey the gods who required it, and he was at liberty to abandon himself to all the excess of sorrow. The painter not being able to express that of the father, chose to throw a veil over his face, leaving the spectators to judge of what passed in his heart: *Velavit ejus caput, et suo cuique animo dedit astimandum.*

This idea is finely conceived, and does Timanthes great honour. It is not known, however, whether he was the real author of it, and it is probable that the Iphigenia of Euripides supplied him with it. The passage says: *When Agamemnon saw his daughter led into the grove to be sacrificed, he groaned, and turning away his head wept, and covered his face with his robe.*

One of our own illustrious painters, Le Poussin, has happily imitated the same circumstance, in his picture of the death of Germanicus. After having treated the different kinds of affliction of the other persons, as passions capable of being expressed, he places on the side of Germanicus' bed, a woman remarkable for her mien and habit, who hides her face with her hands, whilst her whole attitude expresses the most excessive grief, and clearly intimates that she is the wife of the prince whose death they are lamenting.

I cannot help adding in this place a very curious fact in relation to allegorical painting. A picture, in which a fiction and an emblem are used to express a real action, is so called. The prince of Conde had the history of his father, known in Europe by the name of the Great Conde, painted in his gallery at Chantilly. There was a great inconvenience to get over in the execution of this project. The hero, during his youth, had been engaged in interest with the enemies of the state, and had done great part of his exploits, whilst he did not carry arms for his country. It seemed necessary therefore not to display this part of his warlike actions in the gallery of Chantilly. But, on the other side, some of his actions, as the relief of Cambray, and the retreat before Arras, were so glorious, that it must have been a great mortification to a son so passionate for his father's renown, to have suppressed them in

the monument *Le* erected to the memory of that hero. The prince himself discovered an happy evasion: for he was not only the prince, but the man of his time, to whom nature had given the most lively conceptions, and the most shining imaginations. He therefore caused the muse of history to be designed, an allegoric but well known person, holding a book, upon the back of which was written, *Life of the Prince of Conde*. That muse tore leaves out of the book which she threw upon the ground, and on those leaves were inscribed, *Relief of Cambray, relief of Valenciennes, retreat before Arras*; in short, the title of all the great actions of the prince of Conde, during his stay in the Netherlands; all very shining exploits, with no other exception than the service in which they were done. The piece unhappily was not executed according to so elegant and simple an idea. The prince, who had conceived so noble a plan, had, upon this occasion, an excess of complaisance, and paying too great a deference to art, permitted the painter to alter the elegance and simplicity of his thought by figures, which render the painting more uniform, but make it convey nothing more than he had already designed in so sublime a manner. I have extracted this account from the critical reflections upon poetry and painting.

APELLES.

APELLES, whom fame has placed above all other painters, appeared at length in the 112th Olympiad, A. M. 3672. He was the son of Pithius, of the island of Cos,¹ and the disciple of Pamphilus. He is sometimes called an Ephesian, because he settled at Ephesus, where, without doubt, a man of his merit soon obtained the freedom of the city. He had the glory of contributing more in his own person than all the other painters together, to the perfection of the art, not only by his excellent works, but by his writings, having composed three volumes upon the principal secrets of painting, which subsisted in the time of Pliny, but unfortunately have not come down to us.

His chief excellency lay in the GRACES, that is to say, something free, noble, and at the same time beautiful, which moves the heart, whilst it informs the mind. When he praised and admired the works of others, which he did very willingly, after having owned, that they excelled in all the other parts, he added, that they wanted grace; but that as to himself, that quality had fallen to his share; which praise nobody could dispute with him. A pardonable ingenuity in men of real merit, when not proceeding from pride and arrogance.

The manner in which he became acquainted and contracted a friendship with Protogenes, a celebrated painter of his time, is curious enough, and worth relating. Protogenes lived at Rhodes, known only to Apelles by reputation and the fame of his works. The latter, desiring to be assured of their beauty by his own eyes, made a voyage expressly to Rhodes. When he came to Protogenes' house, he found nobody at home, but an old woman who took care of the place where he worked, and a canvass on the easel, on which there was nothing painted. Upon the old woman's asking his name, I am going to set it down, says he: and taking a pencil with colour, he designed something in a most exquisite taste. Protogenes, on his return, being informed of what had passed by the servant, and considering with admiration what he saw designed, was not long before he guessed the author. *This is Apelles*, cried he; *there is no man in the world capable of so fine and delicate a design beside himself*. Taking another colour, he drew a contour upon the same lines still more correct and admirable, and bade his house-keeper, if the stranger returned, show him what he had done, and tell him that it was the work of the man he came to inquire for. Apelles came again soon after; but being ashamed to see himself excelled by his rival, he took a third colour, and amongst the strokes already done, introduced others of so

sublime and wonderful a nature, as entirely exhausted all that was most refined and exquisite in the art. When Protogenes perceived these last strokes, *I am overcome*, said he, *and fly to embrace my conqueror*. Accordingly he ran to the port, where finding Apelles, they contracted a strict friendship which continued ever after: a circumstance something extraordinary between persons of the greatest merit in the same way. They agreed between them, in regard to the painting in which they had tried their skill with each other, to leave it to posterity as it was, without touching it any more, rightly foreseeing what really came to pass, that it would one day prove the admiration of the whole world, and particularly of the connoisseurs and masters of the art. But this precious monument of the two greatest painters of antiquity was reduced to ashes, when the house of Augustus, in the Palatium, was first burnt; where it was exposed to the curiosity of spectators, always surprised, in the midst of a multitude of other most exquisite and finished paintings, to find in this only a kind of void space by so much the more admirable, as it had only the outlines of three designs in it of the most perfect beauty, scarce visible owing to their smallness, and for that reason still the more valuable and the more attractive to the most judicious eyes. It is almost in this sense the passage of Pliny is to be understood, where he says, *arreplo penicillo lineam ex colore duxit summe lenitatis per tabulam*; by *lineam* he does not mean a simple geometrical line, but a stroke of the pencil in an exquisite taste. The other notion is contrary to common sense, says Mr. de Piles, and shocks every body that has the least idea of painting.

Though Apelles was very exact in his works, he knew how far it was necessary to take pains without tiring his genius, and did not carry his exactitude to the utmost scruple. He said one day of Protogenes, that he confessed that rival might equal, or even excel him in every thing else, but *did not know when to take off the pencil*, (that is to say, to have done;) and that he often spoiled the fine things he did, by endeavouring to give them a higher degree of perfection.² A reflection worth noting, says Pliny, and which shows that a too scrupulous exactitude often becomes prejudicial.

Apelles did not say this because he approved negligence in those who applied themselves to painting. He was of a quite different opinion, both with regard to himself and others. He passed no day of his life, whatever other affairs he might have to transact, without exercising himself either in crayons, with the pen, or the brush, as well to preserve the freedom and facility of his hand, as to improve his perfection in all the refinements of an art, that has no bounds.

One of his disciples showing him a draught for his opinion of it, and telling him, that he had done it very fast, and in a certain space of time: *I see that very plain*, says he, *without your telling it me, and am surprised that in so short a time you did no more of this kind*.

Another painter showing him a picture of an Helen, which he had drawn with care, and adorned with abundance of jewels, he told him: *My friend, not being able to make her beautiful, you were resolved at least to make her rich*.

If he spoke his own opinion with simplicity, so took that of others in the same manner. His custom was, when he had finished a work, to expose it to the eyes of such as passed by, and to hear what was said of it behind a curtain, with design to correct the faults they observed in it. A shoemaker having perceived something wanting in a sandal, said so freely; and the criticism was just. The next day passing the same way he saw the fault corrected. Proud of the good success of his remark, he thought

¹ Idem et aliam gloriam usurpavit cum Protogenis opus immensi laboris ac curæ supra modum anxie, muraretur. Dixit enim omnia sibi cum illo paria, aut illi reliqua: sed uno se præstare, quod munus ille de tabula non secret tollere; memorabili præcepto, nocere sæpe unum diligentiam. Plin.

² An isle in the Egean sea.

fit to censure also a leg, to which there was nothing to object: the painter then came from behind the screen, and bade the shoemaker keep to his trade and his sandals: which gave birth to the proverb, *ne sutor ultra crepidam*: that is,

Let not the cobbler go beyond his last.

Apelles took pleasure in doing justice to the merit of great masters, and was not ashamed to prefer them to himself in some qualities. Thus he confessed ingenuously that Amphion excelled him in disposition, and Asclepiodorus in the regularity of design.

We have seen his judgment in favour of Protogenes. Nor did he confine himself to mere words. That excellent painter was in no great esteem with his own country. Whilst Apelles was with him at Rhodes, he asked him what he would take for his works when finished, and the other having set a very moderate price upon them: and for me, replied Apelles, *I offer you fifty talents for each of them, and will take them all at that price*; adding, that he should easily get them off, and would sell them all as his own. This offer, which he made in earnest, opened the eyes of the Rhodians to the merit of their painter; who on his side made the best of it, and would not sell any more of his pictures but at a very considerable price.

His supreme excellency in painting was not the only merit of Apelles. Polite learning, knowledge of the world, and his affable, insinuating, elegant behaviour, made him highly agreeable to Alexander the Great, who did not disdain to go often to the painter's house, as well to enjoy the charms of his conversation, as to see him work, and to be the first witness of the wonders performed by his pencil. This affection for a painter, who was polite, agreeable, and full of wit, is not a matter of wonder. A young monarch easily grows fond of a genius of this kind, who, with the goodness of his heart, unites the beauty of his mind, and the delicacy of his pencil. This sort of familiarity between heroes of different characters, is not uncommon, and does honour to the greatest princes. Alexander had so high an idea of Apelles, that he published an edict to declare, that it was his will that no other person should paint his portrait; and by the same edict granted permission to none but Pygoteles to cut the dies for his medals, and Lysippus to represent him in cast metals.

It happened that one of the principal of Alexander's courtiers being one day with Apelles, whilst he was painting, he vented abundance of injudicious questions and reflections upon painting, as is common with those who talk of what they are ignorant.¹ Apelles, who had no reason to apprehend any thing from explaining himself freely to the greatest lords, said to him, "Do you see those boys that are grinding my colours? Whilst you were silent they admired you, dazzled with the splendour of the purple and gold with which your habits glitter. But ever since you began to talk of what you don't understand, they have done nothing but laugh." Plutarch relates this. According to Pliny,² Apelles ventured to reprove Alexander himself in this manner, though in softer terms, advising him only to express himself with more reserve before his workmen: such an ascendant had the witty painter acquired over a prince, who was at that time the terror and admiration of the world, and naturally very warm. Alexander gave him still more extraordinary proofs of his affection and regard.

The simple and open character of Apelles was not equally agreeable to all the generals of that young monarch. Ptolemy, one of them, to whom Egypt was afterwards allotted, was not of the number of those that affected our painter most; for what reason history does not say. However it was, Apelles having embarked, sometime after the death of Alexander, for a city of Greece, was unfortunately thrown by a tempest upon the coast of Alexandria, where

the new king gave him no reception. Besides this mortification, which he expected, there were some persons, that envied him, malicious enough to endeavour to enbroil him much more. With this view, they engaged one of the officers of the court to invite him to sup with the king, as from himself; not doubting but such a liberty, which he would seem to take of himself, would draw upon him the indignation of a prince, who did not love him, and knew nothing of this little knavish trick. Accordingly, Apelles went to supper out of deference, and the king highly offended at his presumption, asked him freely, which of his officers had invited him to his table? and showing him his usual inviters, he added, that he would know which of them had occasioned him to take such a liberty. The painter, without any emotion, extricated himself from this difficulty like a man of wit, and a consummate designer. He immediately took a piece of charcoal out of a chafing-dish, in the room, and with three or four strokes upon the wall, sketched the person that had invited him, to the great astonishment of Ptolemy, who from the first lines knew the face of the impostor. This adventure reconciled him with the king of Egypt, who afterwards loaded him with wealth and honours.

But this did not deliver him from envy, which only became the more violent against him. He was accused, some time after, before that prince, of having entered with Theodotus into the conspiracy formed against him in the city of Tyre.³ The accuser was another painter of reputation, named Antiphilus. There was not the least probability in the charge. Apelles had not been at Tyre; had never seen Theodotus; and was neither of a character nor profession to be concerned in such affairs: the accuser, who was also a painter, though very inferior to Apelles in merit and reputation, might, without injury, be suspected of jealousy in point of art. But the prince, without hearing or examining any thing, as is too common, taking it for granted that Apelles was criminal, reproached him warmly with his ingratitude and badness of heart; and he would have been carried to execution, but for the voluntary confession of one of the accomplices; who, touched with compassion upon seeing an innocent man upon the point of being put to death, confessed his own guilt, and declared that Apelles had no share in the conspiracy. The king, ashamed of having given ear to calumny so hastily, reinstated him in his friendship, gave him an hundred talents,⁴ to make him amends for the wrong he had done him, with Antiphilus to be his slave.

Apelles, on his return to Ephesus, revenged himself upon all his enemies by an excellent picture of Calumny, disposed in this manner. Upon the right of the piece sat a man of considerable authority with great ears, not unlike those of Midas, holding out his hand to Calumny, to invite her to approach him. On each side of him stood a woman, one of whom represented Ignorance, and the other Suspicion.⁵ Calumny seems to advance in the form of a woman of exquisite beauty. There is however to be discerned in her aspect and mien an air of violence and fierceness, like one actuated by anger and fury. In one hand she holds a torch to kindle the fire of discord and division; and with the other she drags a young man by the hair, holding up his hands to heaven, and imploring the assistance of the gods. Before her goes a man with a pale face, a withered lean body, and piercing eyes, who seems to lead the band: this was Envy.⁶ Calumny is attended by two other women, who exult, animate, and busy themselves about her, to exalt his charms and adjust her attire. By their wary and composed air these are easily conjectured to be Fraud and Treachery. At a distance behind all the rest follows Repentance, clothed in a black torn habit, who looking back with abundance of confusion and tears, sees near her Truth advancing

¹ Fifty thousand crowns. This sum seems exorbitant. It is common enough to meet with errors in ciphers.

⁷ Envy, in the Greek is masculine: *ἔνvyς*.

surrounded with light. Such was the useful and ingenious revenge of this great man. I do not believe it would have been safe for him, during his stay in Egypt, to have drawn, or at least exposed, such a painting. Those great ears, that hand extended to invite the approach of Calumny, and the like strokes, do no honour to the principal character, and express a prince suspicious, credulous, open to fraud, who seems to invite accusers.

Pliny makes a long enumeration of the paintings of Apelles. That of Antigonos is one of the most famous.¹ This prince had but one eye, wherefore he drew him turning sideways, to hide that deformity.

He drew a great many pictures of Alexander, one of which was looked upon as the most finished of his works. He was represented in it with thunder in his hand. This picture was done for the temple of Diana at Ephesus. The hero's hand with the thunder in it, says Pliny, who had seen it, seems actually projected from the piece. And that prince himself said, that he reckoned two Alexanders, the one of Philip, who was invincible; the other of Apelles, that was inimitable.

Pliny mentions one of his paintings, which must have been of singular beauty. He made it for a public dispute between the painters: the subject given them to work upon was a mare. Perceiving that intrigue was upon the point of adjudging the prize to one of his rivals, he appealed from the judgment of men to that of mute animals, more just than men.² He caused the pictures of the other painters to be set before horses brought thither for that purpose; they continued without motion to all the other pieces, and did not begin to neigh till that of Apelles appeared.

His Venus, called *Anadyomene*, that is to say, rising from the sea, was his masterpiece. Pliny says, that this piece was celebrated by the verses of the greatest poets, and that if the painting was excelled by the poetry, it was also made illustrious by it.³ Apelles had made another at Cos, his native country, which in his own opinion, and that of all judges, would have excelled the first; but invidious death put a stop to the work when half executed.⁴ Nobody afterwards would presume to put pencil to it. It is not known, whether it was this second Venus, or the first, that Augustus bought of the people of Cos, by discharging them of the tribute of an hundred talents⁵ laid on them by the Roman republic. If it were the second, as is very likely, it had as bad a fate, and still worse than the first. In the time of Augustus, the damp had begun to spoil the lower part of it. Inquiry was made by that prince's order for somebody to retouch it; but there were none bold enough to undertake it, which augmented the glory of the Greek painter, and the reputation of the work itself.⁶ This fine Venus, which no one dared to retouch out of veneration and awe, was insulted by the worms, that got into the wood and devoured it. Nero, who reigned then, caused another to be set up in its place, done by *Dorotheus*, a painter of little note. Pliny observes to the reader, that all these wonderful paintings, which were the admiration of all mankind, were painted only with the four primitive colours, of which we have spoke.

Apelles brought up several disciples, to whom his inventions were of great advantage: but, says Pliny, he had one secret which nobody could ever discover, and that was the composition of a certain varnish, which he applied to his paintings, to preserve them during a long series of ages, in all their freshness and spirit. There were three advantages in the use of this varnish: 1. It gave a lustre to every kind of colour, and made them more mellow, smooth, and

tender: which is now the effect of oil. 2. It preserved his works from dirt and dust. 3. It helped the sight of the spectator which is apt to dazzle, in softening the strength of the most lively colours, by the interposition of this varnish, which served instead of glasses to his works.⁷

ARISTIDES.

ONE of the most famous cotemporaries of Apelles was Aristides the Theban. He did not indeed possess the elegance and graces in so high a degree as Apelles: but was the first, that by genius and application established unerring rules for expressing the soul, that is to say, the inmost workings of the mind.⁸ He excelled as well in the strong and vehement, as the soft and tender passion: but his colouring had something harsh and severe in it.

The admirable piece was his, (still in Pliny's words) in which, in the storming of a town, a MOTHER is represented expiring by a wound she has received in her bosom, and an INFANT creeping to suck at her breast.⁹ In the visage of this woman, though dying, there appears the warmest sentiments, and the most passionate solicitude of the maternal tenderness. She seems to be sensible of her child's danger, and at the same time to be afraid, that instead of her milk he should find only blood. One would think Pliny had the pencil in his hand, he paints all he describes in such lively colours. Alexander, who was so fond of whatever was fine, was so enamoured of this piece, that he caused it to be taken from Thebes, where it was, and carried to Pella, the place of his birth, at least so reputed.

The same person painted also the battle of the Greeks with the Persians, wherein, within a single frame, he introduced an hundred persons at a thousand drachmas¹⁰ (about twenty-four pounds) each figure, by an agreement made between him and the tyrant Mnason, who reigned at that time at Elatea in Phocis. I have spoken elsewhere of a Bacchus which was reckoned the masterpiece of Aristides, and was found at Corinth when that city was taken by Mummus.

He was so excellent in expressing the languor of the body or mind, that Attalus, who was a great connoisseur in things of this kind, made no scruple to give an hundred talents¹¹ for one of his paintings, wherein only something of this nature was expressed: only riches as immense as those of Attalus, which became a proverb, (*Attalus Conditionibus*) could make so exorbitant a price for a single picture probable.

PROTOGENES.

PROTOGENES was of the city of Cannus, which depended on the city of Rhodes, and was situated upon the southern coast of the island of that name. He employed himself at first only in painting ships, and lived a great while in extreme poverty. Perhaps that might be of no prejudice to him; for poverty often induces men to take pains, and is the sister, or rather mother of invention and capacity.¹² By the works he was employed to do at Athens, he became the admiration of the most discerning people in the world.

The most famous of his paintings was the JALYSOS who was a hunter, and reputed the son or grandson of the Sun, and founder of Rhodes. What was most admired in this piece was the froth at the dog's mouth.¹³

⁶ Ipse injuria cessit in gloriam artificis.

I have related this circumstance at length, in speaking of the siege of Rhodes.

Another very celebrated picture of Protagenes, was the satyr leaning against a pillar. He executed it at the very time Rhodes was besieged: wherefore it was said to have been painted under the sword. At first there was a partridge perched upon the pillar.¹ But because the people of the place, when it was first exposed, bestowed all their attention and admiration upon the partridge, and said nothing of the satyr, which was much more admirable; and the tame partridges, brought where it was, called upon the sight of that upon the pillar, as if it had been a real one; the painter, offended at that bad taste, which in his opinion was an injury to his reputation, desired leave of the directors of the temple, to which the painting was consecrated, to retouch his work; which being granted, he struck out the partridge.

He also painted the mother of Aristotle, his good friend. That celebrated philosopher, who during his whole life cultivated the polite arts and sciences, highly esteemed the talents of Protagenes. He even wished, that he had applied them better than in painting hunters or satyrs, or in making portraits. And accordingly he proposed to him, as a subject for his pencil, the battles and conquests of Alexander, as very proper for painting, from the grandeur of ideas, elevation of circumstances, variety of events, and immortality of facts. But a certain peculiar taste, a natural inclination for more calm and grateful subjects, determined him to works of the kind I have mentioned. All that the philosopher could obtain of the painter at last, was the portrait of Alexander, but without a battle. It is dangerous to make excellent artists quit their taste and natural talent.

PAUSIAS.

PAUSIAS was of Sicyone. He distinguished himself particularly by that kind of painting called *Causitick* from the colours being made to adhere either upon wood or ivory, by the means of fire. Pamphilus was his master in this art, whom he far excelled in it. He was the first that adorned arches and ceilings with paintings of this kind. There were many considerable works of his doing. Pausanias speaks of a DRUNKENNESS, so well painted, says he, that all the features of her ruddy face may be distinguished through a large glass she is swilling.

The courtesan Glycera, of Sicyone also, excelled in the art of making wreaths, and was looked upon to be the inventress of them. Pausias, to please and imitate her, applied himself also in painting flowers.² A fine dispute arose betwixt art and nature, each using their utmost endeavours to carry the prize from their competitor, without its being possible to adjudge the victory to either.

Pausias passed the greater part of his life at Sicyone his country, which was in a manner the nursing mother of painters and painting. It is true, that this city being so much indebted in the latter times, that all the public and private paintings were pledged for large sums of money, M. Scaurus, Sylla's son-in-law by his mother Metella, with design to immortalize his edileship, paid all the creditors, and took out of their hands all the paintings of the most famous masters, and amongst the rest those of Pausias, carried them to Rome, and set them up in the famous theatre, which he caused to be erected to the height of three stories, all supported by magnificent pillars of thirty feet high, to the number of three hundred and sixty, and embellished with statues of marble and bronze, and with antique pieces of the greatest painters. This theatre was to continue only during the celebration of the games. Pliny says of this edileship, that it completed the subversion of the manners of the Roman citizens. *Cujus (M. Scauri) nescio an Edi-*

litas maxime prostraverit mores civiles; and he goes so far as to add, that it did more prejudice to the republic than the bloody proscription of his father-in-law Sylla, that cut off so many thousand Roman citizens.

NICIAS of Athens distinguished himself very much amongst the painters. There were abundance of his pictures in exceeding estimation; amongst others, that wherein he had drawn Ulysses's descent into hell, called *æneis*. Attalus, or rather according to Plutarch, Ptolemy, offered him for this picture sixty talents (sixty thousand crowns) which seems almost incredible: but he refused them and made it a present to his country. He laboured upon this piece with such application, that he often forgot the time of the day, and would ask his servant, *Have I dined?* When Praxiteles was asked upon which of his works of marble he set the highest value; he answered, *That to which Nicias has set his hand.*³ He meant by that the excellent varnish added by that painter to his marble statues, which exalted their beauty.

I shall not mention abundance of other great painters, not so well known, nor so illustrious as those I have spoken of, who did so much honour to Greece. It is very unfortunate that none of their works have come to us, and that we are not capable of judging of their merit by our own eyes. We have it in our power to compare the antique sculpture of the Greeks with our own, because we are certain that we still have masterpieces of it, that is to say, the finest works of that kind antiquity produced. The Romans, in the age of their greatest splendour, which was that of Augustus, disputed with the Greeks only ability in the art of government. They acknowledged them their masters in all others, and expressly in that of sculpture.

Excedunt alii spirantia mollius æra
Credo equidem; vivos ducent de marmore vultus.
Tu regere imperio populos, Romane, memento:
Hæ tibi erant artes. *Virg. Æneid. l. vi*

What I have related of Michael Angelo, who preferred the Cupid of Praxiteles so much to his own, is an evident proof, that the modern can no more than the ancient Rome, dispute sculpture with the Greeks.

We cannot judge in the same manner of the excellency of the ancient painters. That question is not to be decided from mere relations. To understand that, it were necessary to have their pieces to compare with each other, and with ours. These we want. There are still some antique Mosaic paintings at Rome; but few done with the pencil, and those in bad condition. Besides which, what remains, and was painted at Rome, upon the walls, were not done till long after the death of the celebrated painters of Greece. It must however be owned, that, every thing considered, the prejudices are extremely in favour of antiquity, even in regard to painting. In the time of Crassus, whom Cicero introduces as a speaker, in his books *de Oratore*, people could never sufficiently admire the works of the ancient painters, and were soon tired with those of the moderns: because in the former there was a taste of design and expression, that perpetuated the raptures of the connoisseurs, and in the latter scarce any thing to be found, but the variety of the colouring. "I do not know," says Crassus, "how it happens, that things which strike us at first view by their vivacity, and which even give us pleasure by that surprise, almost as soon disgust and satiate us. Let us for instance, consider our modern paintings. Can any thing be more splendid and lively? What beauty, what variety of colours! How superior are they in this point to those of the ancients! However, all these new pieces, which charm us at first sight, have no long impression; whilst, on the contrary, we are never tired with contemplating the others, notwithstanding all their simplicity, and even the grossness of

¹ Hic est Nicias, de quo dicebat Praxiteles interrogatus quæ maximè opera sua probaret in marmoribus: Quibus Nicias manum admoovit; tantum circumlitioni ejus tribuebat. *Plin. l. xxxv. c. 11.*

¹ *Strab. l. xiv. p. 632.*

² *Amavit in juvenia Glyceram municipem suam invectum coronarum: certandoque imitatione ejus, ad novissimum florum varietatem perduxit artem illam—cum opera ejus picturâ imitaretur, et illa provocans varietat, essetque certamen artis ac naturæ. *Plin. l. xxxv. c. 11. et l. xxi. c. 3**

their colouring."¹ Cicero gives no reason for these effects: but Dionysius Halicarnassensis,² who lived also in the time of Augustus, does. "The ancients," says he, "were great designers, and understood perfectly all the grace and force of expression, though their colouring was simple and little various. But the modern painters, who excel in colouring and shades, are vastly far from designing so well, and do not treat the passions with the same success." This double testimony shows us, that the ancients had succeeded no less in painting than in sculpture: and their superiority in the latter nobody ever contested. It appears, at least, without carrying any thing to extremes, that the ancients rose as high in the parts of design, *chiaro-oscuro*, (*light and shade*) expression and composition, as the most excellent moderns can have done, but as to colouring, that they were much inferior to the latter.

I cannot conclude what regards painting and sculpture, without deploring the abuse made of it, even by those who have most excelled in it: I speak equally of the ancients and moderns. All the arts in general, but especially the two we are now upon, so estimable in themselves, so worthy of admiration, which produce such amazing effects, that by the strokes of the chisel animate marble and brass; and by the mixture of colours, represent all the objects of nature to the life: these arts, I say, owe a particular homage to virtue; to the honour and advancement of which, the original author of all arts, that is to say, the Divinity himself, has peculiarly allotted them. This is the use which even the Pagans believed themselves obliged to make of sculpture and painting, by consecrating them to the memory of great men, and the expression of their glorious actions. Fabius, Scipio, and the other illustrious persons of Rome, confessed, that upon seeing the images of their predecessors, they found themselves animated to virtue in an extraordinary manner.³ It was not the wax of which those figures were formed, nor the figures themselves, that produced such strong impressions in their minds; but the sight of the great men, and the great actions of which they renewed and perpetuated the remembrance, and inspired at the same time an ardent desire to imitate them. Polybius⁴ observes, that these images, that is to say, the busts of wax, which were exposed on the days of solemnity in the halls of the Roman magistrates, and were carried with pomp at their funerals, kindled an incredible ardour in the minds of the young men, as if those great men had quitted their tombs, and returned from the dead, to animate them in person to follow their example.

Agrippa, Augustus's son-in-law, in a magnificent harangue, worthy of the first and greatest citizen of Rome, shows, by several reasons, says Pliny,⁵ how useful it would be to the state to expose publicly the finest pieces of antiquity in every kind, in exciting a noble emulation in the youth: which, no doubt, adds he, would be much better than to banish them into the country, to the gardens and other places of pleasure of private men. Accordingly Aristotle says, that

¹ Difficile dictu est, quoniam causa sit earum, quæ maximè sensus nostros impellunt voluptate et specie prima acerrime commovent, ab his celeritè fastidio quodam et satietate aboleantur. Quamvis colorum pulchritudine in variatè floridiora sunt in picturis ovium pleraque quam et veteribus: quæ tamen, etiamvis primo aspectu nos ceperunt, diutius non delectant: cùm iidem nos, in antiquis tabulis, illo ipso horrido obsoletoque teneantur. Cic. de Orat. l. iii. n. 98.

³ Sæpe audiui Q. Maximum, P. Scipionem, præterea civitatis nostræ præclaros viros solitos ita dicere, cùm majorum imagines intuerentur, vehementissimè sibi animum ad virtutem accendi. Scilicet non ceram illam neque, figuram, tantam vim in sese habere: sed memoria rerum gestarum eum flammam egregiis viris in pectore crescere, neque prius sedari, quam virtus eorum famam atque gloriam adæquaverit. Sallust in præfat. bel. Jugurth.

⁴ Polyb. l. vi. pp. 495, 496.

⁵ Extat ejus (Agrippæ) oratio magnifica, et maximo civium digna, de tabulis omnibus signisque publicandis quod fieri autis fuisset, quam in villarum exilia pellit. Plin. l. xxv. c. 4.

sculptors and painters instruct men to form their manners by a much shorter and more effectual method than that of the philosophers; and that there are paintings as capable of making the most vicious reflect within themselves, as the finest precepts of morality. St. Gregory Nazianzen relates a story of a courtesan, who, in a place where she did not come to make serious reflections, cast her eyes by accident on the picture of Polemon, a philosopher famous for a change of life, that had something prodigious in it; which occasioned her to reflect seriously, and brought her to a due sense of herself. Cedrenus tells us, that a picture of the last judgment contributed very much to the conversion of a king of the Bulgarians. The sense of seeing is far more lively than that of hearing; and an image which represents an object in a lively manner, strikes us quite otherwise than a discourse.⁶ St. Gregory of Nyssa declares, that he was touched, even to shedding of tears, at the sight of a painting.

This effect of painting is still more instantaneous in regard to bad than good. Virtue is foreign, vice natural to us.⁷ Without the help of guides or examples, (and those we meet with every where) an easy propensity leads us to the latter, or rather hurries us on to it. What then must we expect, when sculpture, with all the delicacy of art, and painting, with all the vivacity of colours, unite to inflame a passion already but too apt to break out, and too ardent of itself? What loose ideas do not those naked parts of young persons suggest to the imagination, which sculptors and painters so commonly take the liberty to exhibit? They may do honour to the art, but never to the artists.⁸ Without speaking of Christianity in this respect, which abhors all licentious sculptures and paintings, the sages of the Pagan world, blind as they were, condemn them almost with equal severity. Aristotle in his books *De re publica*, recommends it to magistrates, as one of the most essential parts of their duty, to be attentive in preventing statues and paintings of this kind from appearing in cities, as they are capable of teaching vice, and corrupting all the youth of a state.⁹ Seneca degrades painting and sculpture, and denies them the name of liberal arts, whenever they tend to promote vice.¹⁰ Pliny the naturalist, all enthusiasm as he is, for the beauty of the antique works, treats as dishonourable and criminal the behaviour of a painter in this point, who was otherwise very famous: *Fuit Arellius Roma celebris, nisi FLAGITIO INSIGNI corrupisset artem*. Plin. l. xxxv. c. 10. He expresses a just indignation against the sculptors, who carved obscene images upon cups and goblets, that people might not drink, in some measure, without obscenity; as if, says he, drunkenness did not sufficiently induce debauchery, and it were necessary to excite it by new attractions. *Vasa adulterii colata, quasi per se parum doceat libidinem temulentia*—*Haec vina ex libidine hauriuntur, atque etiam premio invitatur ebrietas*.¹¹ The very poets themselves declare warmly against this indecency. Propertius¹² wonders, that temples are erected in public to chastity, whilst immodest pictures are tolerated in private houses, which cannot but corrupt the imaginations of young virgins; that under the allurements of objects

⁷ Ad deteriora faciles sumus; quia nec dux potest, nec comes de ease; et res etiam ipsa scire ducit, sine comite proredit: non primum est tantum ad vitia, sed præcepta iter.—Senec. Epist. 97.

⁸ Non hic per nudam pictorum corporum pulchritudinem turpis prostat historia, quæ, sicut ornat artem, sic devenerat artificem. Sidor. Apollin. l. xi Ep. 2.

⁹ Peccare ducentes historiam monet. Hor.

¹⁰ Non enim adducit ut in numerum liberalium artium pictores recipiam, non magis quam statuarios aut marmorarios, aut ceteros luxurii ministros. Senec. Ep. 88.

¹¹ Id. l. xiv. c. 22.

¹² Propert. l. ii Eleg. 5.

grateful to the eye, convey a mortal poison to the heart, and seem to give public lessons of impurity. He concludes with saying, that those indecent figures were unknown to our ancestors; the walls of their apartments were not painted by obscene hands, to place vice in honour; nor exhibit it as a spectacle for admiration. The passage is too fine not to be inserted here at large.

Templa Pudicitie: quid opus statuere, puellis,
 Sic curvis nuptæ quiddam esse licet?
 Quæ manus obscenas depinxit prima tabellas,
 Et posuit castâ turpia visa domo:
 Illa puellarum ingenios corruptit ocellos,
 Nequitique suæ voluit esse rudes,
 Ah! gemat in terris, ista qui protulit arto
 Jurgia sub tacita condita lætitia,
 Non istis olim variabant tecta figuris:
 Tum paries nullo crimine pictu erat.

Whence rise those fæces to virgin modesty,
 If every wife to every thing is free?
 Who first obscenity in colours drew,
 In the chaste house who placed it first to view,
 Didst thou the harmless maid's ingenious eyes,
 And would not leave her ignorant of vice,
 Wo to the man! whose vicious pencil taught
 In graceful tints to urge a guilty thought:
 Our fathers' homes ne'er own'd those noxious arts
 No crimes were painted on their walls or hearts.

We have seen a city, that had the choice of two statues of Venus, both done by Praxiteles, (that is saying every thing,) the one covered, and the other naked, prefer the former, though much the less esteemed, because more conformable to modesty and chastity. Can any thing be added to such an example? What a reproach were it to us, if we were ashamed to follow it!

OF MUSIC.

THE Music of the ancients was a science of far greater extent than is generally imagined. Besides the composition of musical airs, and the execution of those airs with voices and instruments, to which ours is confined, the ancient music included the art of poetry, which taught the rules for making verses of all kinds, as well as to set those susceptible of them to notes; the art of *Saltation*, dancing or gesture, which taught the step and attitude, either of the dance properly so called, or the usual manner of walking and the gesture proper to be used in declaiming, contained also the art of composing and writing notes to the simple declamation; to direct as well the tone of the voice by those notes, as the degree and motions of gesture; an art very much in use with the ancients, but absolutely unknown to us. All these different parts, which have actually a natural relation to each other, composed originally one and the same art, exercised by the same artists: though they divided in process of time, especially poetry, which became an order by itself. I shall briefly treat all these parts, except that which relates to versification, which will have its place elsewhere; and shall begin with music properly so called, and such as it is known amongst us.

ARTICLE I.

OF MUSIC PROPERLY SO CALLED.

Music is an art which teaches the properties of sounds capable of producing melody and harmony.

SECTION I.—ORIGIN AND WONDERFUL EFFECTS OF MUSIC.

SOME authors pretend, that the birds learned men to sing, in suggesting, by their various notes and warbling, how capable the different modulations and tones of the voice are of pleasing the ear: but man had a more excellent master, to whom alone he ought to direct his gratitude. The invention of music, and of the instruments in which a principal part of it consists, is a present from God, as well as the invention of the other arts. It adds to the simple gift of speech, which of itself is so highly valuable, something more lively, more animated, and more proper to give utterance to the sentiments of the soul. When it is penetrated and fired with some object that strongly possesses it, the usual language does not suffice for its transports. It springs forth in a manner out of itself, it abandons itself to the emotions that agitate it, it invigorates and redoubles the tone of the voice, and repeats its words at different pauses; and not contented with all these efforts, calls in instruments to its aid, which seem to give it ease by lending sounds a variety, extent, and continuation.

VOL. II—51

which the human voice could not have. This gave birth to music, made it so affecting and estimable, and shows at the same time, that, properly speaking, its right use is in religion solely, to which alone it belongs, to impart to the soul the lively sentiments which transport and ravish it, which exalt its gratitude and love, which are suited to its admiration and ecstasies, and which make it experience it to be delightful to sing praise, that in this manner it may express its joy and happiness, as David did in all his divine songs, which he employs solely in adoring, praising, giving thanks, and singing the greatness of God, and proclaiming the wonders of his power.

Such was the first use men made of music, simple, natural, and without art or refinement, in those times of innocence, and in the infancy of the world; and without doubt the family of Seth, with whom the true worship was deposited, preserved it in all its purity. But secular persons, more enslaved to sense and passion, and more intent upon softening the pains of this life, upon rendering their exile agreeable, and alleviating their distresses, abandoned themselves more readily to the charms of music, and were more industrious to improve it, to reduce it into an art, to establish their observations upon certain rules, and to support, strengthen, and diversify it by the help of instruments. The scripture accordingly places this kind of music in the family of Cain, which was that of the outcasts, and makes Jubal, one of the descendants of that chief of the unrighteous, the author of it. And we see in effect, that music is generally devoted to the objects of the passions. It serves to adorn, augment, and render them more affecting; to make them penetrate the very soul by additional charms; to render it the captive of the senses; to make it dwell wholly in the ears; to inspire it with a new propensity, to seek its consolation from without; and to impart to it a new aversion for useful reflections and attention to truth. The abuse of music, almost as ancient as its invention, has occasioned Jubal to have more imitators than David. But this ought not to cast any reproach upon music itself. For, as Plutarch observes upon this subject, few or no persons of reason will impute to the sciences themselves the abuse some people make of them: which is solely to be ascribed to the disposition to vice of those who profane them.

This exercise has in all times been the delight of all nations, of the most barbarous, as well as of those who valued themselves most upon their civility. And it must be confessed, that the author of nature has implanted in man a taste and secret tendency for

¹ Gen. iv. 21.

² Plut. de Music.

song and harmony, which serve to nourish his joy in times of prosperity, to dispel his anguish in affliction, and to comfort him in supporting the pains and fatigues of his labours.¹ There is no artificer that has not recourse to this innocent invention; and the slightest air makes him almost forget all his fatigues. The harmonious cadence with which the workmen strike the glowing mass upon the anvil, seems to lessen the weight of their heavy hammers. The very rowers experience a kind of relief in the sort of concert formed by the harmonious and uniform motion of their oars. The ancients successfully employed musical instruments, as is still the custom, to excite martial ardour in the hearts of the soldiery; and Quintilian partly ascribes the reputation of the Roman troops, to the impressions made by the warlike sounds of the fifes and trumpets upon the legions.²

I have said, that music was in use amongst all nations; but it was the Greeks who placed it in honour, and by the value they set upon it, raised it to a very high degree of perfection. It was a merit with their greatest men to excel in it, and a kind of shame to be obliged to confess their ignorance in it.³ No hero ever made Greece more illustrious than Epaminondas; his dancing gracefully, and touching musical instruments with skill, were reckoned amongst his fine qualities. Some years before his time, the refusal of Themistocles, at a feast, to play an air upon the lyre, was made a reproach, and was a kind of dishonour to him. To be ignorant of music, passed in those times for a great defect of education.

It is in consequence of this that the most celebrated philosophers, who have left us treatises upon policy, as Plato and Aristotle, particularly recommended the teaching of music to young persons. Amongst the Greeks it was an essential part of education. Besides which, it has a necessary connexion with that part of Grammar called *Prosody*, which treats upon the length or shortness of syllables in pronunciation, upon the measure of verses, their rhyme and cadence, (or *pauses*); and principally upon the manner of accenting words: the ancients were assured that it might conduce very much to form the manners of youth, by introducing a kind of harmony into them which might incline them to whatsoever was laudable and polite; nothing being of greater use, according to Plutarch,⁴ than music to excite persons at all times to virtuous actions, and especially to confront the dangers of war.

Music was far from being much esteemed in the happy times of the (Roman) republic. It passed in those days for a thing of little consequence, as Cornelius Nepos⁵ tells us, where he observes, upon the different taste of nations, in regard to several things. Sallust's reproach⁶ of a Roman lady, that she knew better how to sing and dance, than was consistent with the character of a woman of honour and probity; *saltare et saltare elegantius quam necesse est probæ*; sufficiently shows what the Romans thought of music. As to dancing, they had a strange idea of it; and would say, that to practise it, one should either be drunk or mad: *Nemo saltat fere sobrius, nisi forte*

insanit.⁷ Such was the Roman severity, till their commerce with the Greeks, and still more, their riches and opulence, made them give into excesses, with which the Greeks cannot so much as be reproached.

The ancients attributed wonderful effects to music either to excite or suppress the passions, or to soften the manners, and humanize nations naturally savage and barbarous. Pythagoras seeing a young stranger, who was heated with the fumes of wine, and at the same time animated by the sound of a flute played on in the Phrygian measure, upon the point of committing violence in a chaste family, restored the young man's tranquillity and reason, by ordering the female minstrel to change the measure, and to play in more solemn and serious numbers, according to the cadence called after the foot *Spondeæ*.⁸ Galen⁹ relates something exactly of the same nature of a musician of Miletus, named Damon. He tells us of some young people, that a female performer upon the flute had made frantic, by playing in the Phrygian measure, and whom she brought to their senses again by the advice of this Damon, in changing the music from the Phrygian to the Doric measure. Dion Chrysostome,¹⁰ and some others, inform us, that the musician Timotheus, playing one day upon the flute before Alexander the Great, in the measure called *Ἰατρικὴ*, which is of the martial kind, that prince immediately ran to his arms. Plutarch¹¹ says almost the same thing of Antigenides the flute-nist, who at a banquet fired that prince in such a manner, that, rising from the table like one out of his senses, he caught up his arms, and clashing them to the sound of the flute, was almost ready to charge the guests.

Amongst the wonderful effects of music, nothing more affecting perhaps, nor better attested, can be instanced, than what regards the Arcadians. Polybius,¹² a wise, exact historian, well worthy of entire belief, is my authority. I shall only abridge his narrations and reflections.—The study of music, says he, has its utility with all men, but is absolutely necessary to the Arcadians. This people, in establishing their republic, though otherwise very austere in their manner of life, had so high an opinion of music, that they not only taught that art to their children, but obliged young people to apply to it till the age of thirty. It is not shameful amongst them to profess themselves ignorant of other arts: but it is highly dishonourable not to have learnt to sing, and not to be able to give proofs of it on occasion. Now, says Polybius, their first legislators seem to me, in making such institutions, not to have designed to introduce luxury and effeminacy, but only to soften the ferocity of the Arcadians, and to divert, by the practice of music, their gloomy and melancholy disposition, undoubtedly occasioned by the coldness of the air, which the Arcadians breathe almost throughout their whole country. But the Cynethians having neglected this aid, of which they had the most need, as they inhabited the rudest and most savage part of Arcadia, both as to the air and climate, at length became so savage and barbarous, that there was no city in Greece wherein so great and so frequent crimes were committed, as in that of Cynethia. Polybius concludes this account, with observing, that he had insisted the more upon it for two reasons. The first, to prevent any of the Arcadian states, out of the false prejudice that the study of music is only a superfluous amusement amongst them, from neglecting that part of their discipline. The second, to induce the Cynethians to give music the preference to all other sciences, if ever God, (the expression is remarkable) if ever God should inspire them, to apply themselves to arts that humanize a people. For that was the sole means to correct their natural ferocity.

¹ Atque eam (musicam), natura ipsa videtur ad tolerandos facilius labores velut muneri nobis dedisse. Si quidem et remiges cantus hortatur; nec solum in ipsis operibus in quibus plurimum conatus præstare aliqua jucunda voce conspirat, sed etiam singulorum fatigatio quamlibet se rudi modulatione solatur. *Quintil.* l. i. c. 10.

² Duces maxime et fidibus et tibiis cecinisse traditum, et exercitus Lacedæmoniorum musica accensus modis. Quid autem aliud in nostra Legionibus cornu ac tubæ faciunt? quorum concentus, quanto est vehementior, tanto Romano in bellis gloria ceteris præstat. *Quintil.* l. i. c. 10.

³ Summam eruditionem Græci sitam censebant in nervorum vocumque cantibus. Igitur Epaminondas princeps, meo judicio, Græciæ, fidibus præclarè cecinisse, dicitur: Themistoclesque, aliquot ante annis, cum in opulenti recussasset lyram, habitus est inductor. Ergo in Græcia musici floruerunt dischanteque id omnes; nec, qui nesciebat, satis exultare doctrinâ putabatur. *Cic. Tusc.* l. n. 4.

¹³ *Polyb.* l. iv. c. 289 291

I do not know whether it be possible to find any thing in antiquity which equals the praise Polybius here gives music: and every one knows what kind of personage Polybius was. Let us add here what the two great lights of the ancient philosophy, Plato and Aristotle, say of it, who frequently recommend the study of it, and very much extol its advantages. Can a more authentic and favourable testimony be desired? But that the authority of these great men may not impose upon us, I ought here to mention what kind of music they would be understood to mean. Quintilian,¹ who had the same thoughts upon this head, will explain their opinion: it is in a chapter, where he has given music the highest praise. "Though the examples I have cited," says he, "sufficiently show what species of music I approve, I think myself, however, obliged to declare here, that it is not the same, with which the theatres in these days resound, that by its wanton and effeminate airs, has not a little contributed to extinguish and suppress in us whatever remained of our ancient manly virtue." *Aperitius profectum puto, non hanc a me præcipi, quæ nunc in scenis effeminata, et impudicis modis fructa, non ex parte minima, si quid in nobis virilis roboris maneat, excidit.* "When I recommend music therefore, it is that of which men filled with honour and valour made use, in singing the praises of others like themselves. It is as far from my intent to mean here those dangerous instruments, whose languishing sounds convey softness and impurity into the soul, and which ought to be held in horror by all persons of sense and virtue. I understand that agreeable art of affecting the soul by the powers of harmony, in order either to excite or assuage the passions, according to occasion and reason." It is this sort of music that was in so much esteem with the greatest philosophers and wisest legislators amongst the Greeks, because it civilizes savage minds, softens the roughness and ferocity of dispositions, renders people more capable of discipline, makes society more grateful and joyous, and causes those vices to be regarded with horror, which incline men to inhumanity, cruelty, and violence.

Music is not without its advantages to the body, and conduces to the cure of certain distempers. What is related of the wonderful effects of music upon such as have been bit by the Tarantula, would appear incredible, if not supported by authorities, to which we cannot, without reason, refuse our belief. The Tarantula is a large spider with eight eyes and as many legs.² It is not only to be found about Taranto, or in Puglia, but in several other parts of Italy, and in the island of Corsica. Soon after a man is bit by a Tarantula, the part affected feels a very severe pain, succeeded in a few hours by a numbness. He is next seized with a profound melancholy, can scarce respire; his pulse grows faint, his sight is interrupted and suspended, till at last he loses all sense and motion, and dies, unless assisted in time. Physicians use several remedies for the cure of this illness, which would be useless, if music did not come in to their aid. When the person bit is without sense and motion, a performer upon musical instruments tries different airs; and when he hits upon that, which in its tones and modulation suits the patient, he begins to stir a little; at first he moves his fingers to the time, then his arms and legs, and by little and little his whole body; at last he gets up and dances, continually increasing his activity and force. Some of these will dance six hours without resting. After this they are put to bed, and when it is supposed that they have sufficiently recovered their first dance, they are brought out of bed by the same tune to begin again. This exercise continues several days, about six or seven at most, till the patient finds himself tired, and incapable to dance any longer, which denotes his being cured. For as long as the poison operates upon him he would dance, if he were suffered, without ceasing, and die by exhausting his spirits. The patient that begins to perceive himself

weary, recovers his understanding and senses by degrees, and comes to himself, as if he waked out of a deep sleep, without remembering what had past during his disorder, not even his dancing. This is a very extraordinary case, but absolutely true; of which I must leave it to physicians to explain the cause.

SECTION II.—INVENTORS AND IMPROVERS OF MUSIC, AND MUSICAL INSTRUMENTS.

THE profane historians ascribe the discovery of the first rules of music to their fabulous Mercury, others to Apollo, and some to Jupiter himself. They undoubtedly intended thereby to insinuate, that so useful an invention ought to be attributed only to the gods, and that it was an error to do any man whatsoever the honour of it.

Plutarch's treatise upon music, explained and set in a true light by the learned remarks of Mr. Barret, will supply me with a great part of what I shall relate of the history of those, who are said to have contributed most to the improvement of this art. I shall content myself with simply pointing out the most ancient, who are almost known only in fabulous history, without confining myself to the order of time.

AMPHION.

AMPHION is held by some to be the inventor of the *Cithara* or lyre;³ for these two instruments were very little different, as I shall show in the sequel, and are often confounded with each other by authors. It is conjectured, that the fable of Thebes being built by the sound of Amphion's lyre, is later than Homer's time, who does not mention it, and would not have failed to have adorned his poems with it, had he known it.

The contemporaries of Amphion were *Linus*, *Antes*, *Pierius*, and *Philammon*. The last was father to the famous *Thamyris*, who had the finest voice of his time, and was the rival of the muses themselves, but who having been abandoned to the vengeance of those goddesses, lost his sight, voice, understanding, and even the use of his lyre.

ORPHEUS.

THE reputation of Orpheus flourished from the expedition of the Argonauts, of which number he was; that is to say, before the Trojan war. *Linus* was his master in music, as he was also of *Hercules*. Orpheus' history is known by all the world.

HYAGNIS.

HYAGNIS is said to have been the first player upon the flute. He was the father of *Marsyas*, to whom the invention of the flute is ascribed. The latter ventured to challenge *Apollo*, who only came off victor in this dispute, by joining his voice with the sound of his lyre. The vanquished was flayed alive.

OLYMPIUS.

THERE were two of this name, both famous players upon the flute. The most ancient, who was by birth a Mysian, lived before the Trojan war. He was the disciple of *Marsyas*, and excelled in the art of playing upon string-instruments. The second *Olympus* was a Phrygian and flourished in the time of *Midas*.

DEMODOCUS. PHEMIUS.

HOMER praises these two musicians in several parts of the *Odyssey*. *Demodocus* had composed two poems: the one upon the taking of *Troy*, the other upon the nuptials of *Venus* and *Vulcan*. Homer makes them both sing in the palace of *Alcinous* king of the *Pheaciens*, in the presence of *Ulysses*. He speaks of *PheMIUS* as of a singer, inspired by the gods themselves. It is he, who by the singing of his

³ I shall call this instrument so, as often as I shall have occasion to speak of it: because our *Guitar* or *Lute*, which derives its name from it, is quite different kind of instrument.

¹ Quintil. l. i. c. 10.

² Memoirs of the Acad. of Sciences. An. 1702

poetry set to music, and accompanied with the sounds of his lyre, enlivens the banquets, in which the suitors of Penelope pass whole days. The author of the life of Homer, ascribed to Herodotus, affirms, that Phœmus settled at Smyrna; that he taught youth grammar and music, and married Critheis there, whose illegitimate son Homer was. He tells us, Homer was born before this marriage, and was educated with great care by his father-in-law, after he had adopted him.

TERPANDER.

AUTHORS do not agree with each other concerning Terpander's country, nor the time in which he lived. Eusebius places it in the 33d Olympiad. This epocha ought to be of later date, if it be true, that this poet and musician was the first who obtained the prize in the Carian games, which were not instituted at Lacedæmon till the 36th Olympiad. Besides this victory, which did great honour to Terpander's ability in musical poetry, he signalized himself by this art upon several other very important occasions. Much is said of the sedition which he had the address to appease at Lacedæmon by his melodious songs, accompanied with the sounds of his cithara. He also carried the prize four times successively at the Pythian games.

It appears that the elder Olympus and Terpander, having found the lyre in their youth only with four strings, they used it as it was, and distinguished themselves by their admirable execution upon it. In process of time, to improve that instrument, they both made additions to it, especially Terpander, who made its strings amount to seven. This alteration very much displeased the Lacedæmonians, amongst whom it was expressly forbid to change or innovate anything in the ancient music. Plutarch tells us, that Terpander had a fine laid on him by the Ephori, for having added a single string to the usual number of the lyre; and had his own hung up by a nail for an example. From whence it appears, that the lyre of those times was already strung with six chords.

From what Plutarch says, it appears that Terpander at first composed lyric poems in a certain measure, proper to be sung, and accompanied with the cithara. He afterwards set these poems to such music as might best suit the cithara, which at that time repeated exactly the same sounds as were sung by the musician. In fine, Terpander put the notes of this music over the verses of the songs composed by him, and sometimes did the same upon Homer's poems; after which, he was able to perform them himself, or cause others to do so, in the public games.

Prizes of poetry and music, which were seldom or ever separate, were proposed in the four great games of Greece, especially in the Pythian, of which they made the greatest and most considerable part. The same thing was also practised in several other cities of the same country, where the like games were celebrated with great solemnity, and a vast concourse of spectators.

PHRYNIS.

PHRYNIS was of Mitylene, the capital of the island of Lesbos. He was the scholar of Aristocritus for the harp, and could not fall into better hands; that master being one of Terpander's descendants. He is said to have been the first who obtained the prize of this instrument in the games of the Panathenæa, celebrated at Athens the fourth year of the 80th Olympiad. He had not the same success when he disputed that prize with the musician Timotheus.

Phrynis may be considered as the author of the first alterations made in the ancient music, with regard to the cithara. These changes consisted, in the first place, in the addition of two new strings to the seven, which composed that instrument before him; in the second place, in the compass and modulation, which had no longer the noble and manly simplicity of the ancient music. Aristophanes reproaches him with it in his comedy of the *Clouds*, wherein Justice speaks in these terms of the ancient education of

youth. They went together to the house of the player upon the Cithara — where they learnt the hymn of the dreadful Pallas, or some other song, which they sung according to the harmony delivered down to them from their ancestors. If any of them ventured to sing in a buffoon manner, or to introduce inflections of voice, like those which prevail in these days in the airs of Phrynis, he was punished severely.

Phrynis having presented himself in some public games at Lacedæmon, with his cithara of nine strings Eprepes, one of the Ephori, would have two of them cut away, and suffered him only to choose whether they should be the two highest or the two lowest. Timotheus, some short time after, being present upon the same occasion at the Carnian games, the Ephori acted in the same manner with regard to him.

TIMOTHEUS.

TIMOTHEUS, one of the most celebrated musician poets, was born at Miletus, an Ionian city of Caria, in the third year of the 93d Olympiad. He flourished at the same time with Euripides and Philip of Macedon, and excelled in lyric and dithyrambic poetry. He applied himself particularly to music and playing on the cithara. His first endeavours were not successful, and he was hissed by the whole people. So bad a reception might have discouraged him forever; and he actually intended to have entirely renounced an art, for which he did not seem intended by nature. Euripides undeceived him in that mistake, and gave him new courage, by making him hope extraordinary success for the future. Plutarch, in relating this fact, to which he adds the examples of Cimon, Themistocles, and Demosthenes, who were reassured by counsels of a like nature, observes with reason, that it is doing the public great service, to encourage young persons in this manner, who have a fund of genius and fine talents; and to prevent their being disgusted in effect of some faults they may commit in an age subject to error, or of some bad successes, which they may at first experience in the exercise of their profession. Euripides was not deceived in his views and expectation. Timotheus became the most excellent performer upon the cithara of his times. He greatly improved this instrument, according to Pausanias, by adding four strings to it, or as Suidas tells us, only two, the tenth and eleventh to the ninth, of which the cithara was composed before him. Authors differ extremely upon this point, and often even contradict themselves upon it.

This innovation in music had not the general approbation. The Lacedæmonians condemned it by a public decree, which Boetius has preserved. It is wrote in the dialect of the country, in which the prevalent consonant *ga* renders the pronunciation very rough; *ἡμὶ δὲ Τυδίδος Μιλήσιος πατριώτηος ἐς τὴν αὐτὴν αἰὶναι πάλιν*, &c. and contain in substance: that Timotheus of Miletus having come to their city, had expressed little regard for the ancient music and lyre; that he had multiplied the sounds of the former, and the strings of the latter; that to the ancient, simple, and uniform manner of singing, he had substituted one more complex, wherein he had introduced the chromatic kind: that in his poem upon the delivery of Semele, he had not observed a suitable decency that to obviate the effects of such innovations, which could not but be attended with consequences pernicious to good manners, the kings and the Ephori had publicly reprimanded Timotheus, and had decreed, that his lyre should be reduced to seven strings as of old, and that all those of a modern invention should be retrenched, &c. This fact is related by Athenæus, with this circumstance, that when the executioner was upon the point of cutting away the new strings conformable to the decree, Timotheus, having perceived in the same place a small statue of Apollo, with as many strings upon the lyre as there were upon his, he showed it to the judges, and was dismissed acquitted.

His reputation drew after him a great number of disciples. It is said, that he took twice the sum of those who came to learn to play upon the flute, for

the cithara) if they had been taught before by another master. His reason was, that when an excellent musician succeeded such as were indifferent, he had double the pains with the scholar: that of making him forget what he had learnt before, the far greater difficulty; and to instruct him anew.

ARCHILOCUS.

ARCHILOCUS rendered himself equally famous for poetry and music. I shall speak of him in the sequel under the title of a poet. In this place I consider him only as a musician; and of all that Plutarch says of him upon that head, I shall only repeat the passage, wherein he ascribes to him the musical execution of iambic verses, of which some are only spoke whilst the instruments play, and others are sung. This passage, says Mr. Burette, shows us, that in iambic poetry there were verses merely *declamatory*, which were only repeated or spoke; and that there were others which were sung. But what this same passage perhaps includes, that is not so well known, is, that these *declamatory* iambics were accompanied with the sound of the cithara, and other instruments of the string kind. It remains to be known in what manner this accompanying of verses spoke was performed. According to all appearance, the player upon the cithara did not only give the poet or actor the general tone of his utterance, and support him in it by the monotony of his playing; but, as the tone of the speaker or declaimer varied according to the different accents, which modified the pronunciation of each word, in order to make this kind of declamation the more distinct, it was necessary that the instrument of music should make all these modifications more sensible, and exactly mark the number or cadence of the poetry, which served it as a guide, and which, in effect of being so accompanied, though not sung, became the more expressive and affecting. In regard to the poetry *sung*, the instrument that accompanied it, conformed its notes servilely to it, and expressed no other sounds, but those of the poet-musician's voice.

ARISTOXENUS

ARISTOXENUS was born at Tarentum, a city of Italy. He was the son of the musician Mnesias. He applied himself equally to music and philosophy. He was first the disciple of his father, then of Xenophilus the Pythagorean, and lastly of Aristotle, under whom he had Theophrastus for the companion of his studies. Aristoxenus lived therefore in the time of Alexander the Great, and his first successors. Of four hundred and fifty-two volumes, which Suidas tells us he composed, only his three books of the *Elements of Harmony* now remain, which is the most ancient treatise of music come down to us.

He warmly attacked Pythagoras' system of music. That philosopher, with the view of establishing an unalterable certitude and constancy in the arts and sciences in general, and in music in particular, endeavoured to withdraw its precepts from the fallacious evidence and report of the senses, to subject them solely to the determination of reason. Conformably to this design, he was for having the harmonic powers, or musical consonance, instead of being subjected to the judgment of the ear, which he looked upon as an arbitrary measure of little certainty, to be regulated solely by the proportions of numbers that are always the same. Aristoxenus maintains, that to mathematical rules and the ratio of proportions, it was necessary to add the judgment of the ear, to which it principally belonged to determine in what concerned music. He attacked the system of Pythagoras in many other points.

Sotericus, one of the speakers, introduced by Plutarch in his treatise upon music, is convinced, that sensation and reason ought to concur in the judgment passed upon the different parts of music; so that the former do not prejudice the latter by too much vivacity, nor be wanting to it upon occasion, through too much weakness. Now the sense in the present question, that is the hearing, necessarily receives three impressions at once: that of the *sound*, that of the

time or measure, and that of the *letter*; the progression of which conveys the *modulation*, the *rhyme*, and the *words*. And as there can be no adequate perception of these three things separately, and each cannot be followed alone, it seems that only the soul or reason had a right to judge of what this progression or continuity of *sound*, *rhyme*, and *words*, may have of good or bad.

SECTION III.—THE ANCIENT MUSIC WAS SIMPLE, GRAVE, AND MANLY. WHEN AND HOW CORRUPTED.

AS amongst the ancients, music, by its origin and natural destination, was consecrated to the service of the gods, and the regulation of the manners, they gave the preference to that which was most distinguished by its gravity and simplicity. Each of these prevailed long, both in regard to vocal and instrumental music. Olympus, Terpander, and their disciples, at first used few strings on the lyre, and little variety in singing. Notwithstanding which, says Plutarch, all simple as the airs of those two musicians were, which were confined to three or four strings, they were the admiration of all good judges.

The cithara, very simple at first under Terpander, retained this advantage some time. It was not permitted to compose airs for this instrument, nor to change the manner of playing upon it, either as to the harmony or the cadence; and great care was taken to preserve in the ancient airs their peculiar tone or character; hence they were called *Nomes*, as being intended for laws and models.

The introduction of rhymes in the dithyrambic way; the multiplication of the sounds of the flute, by Lasus, as well as of the strings of the lyre by Timotheus; and some other novelties introduced by Phrynis, Menalippides, and Philoxenus, occasioned a great revolution in the ancient music. The comic poets, especially Pherecrates and Aristophanes, very often complained of it in the strongest terms. We see, in their pieces, Music represented accusing with great warmth and severity those musicians of having entirely depraved and corrupted the art.

Plutarch, in several places of his works, complains also, that to the manly, noble, and divine music of the ancients, in which every thing was sublime and majestic, the moderns had substituted that of the theatre, which inspires nothing but vice and licentiousness. Sometimes he alleges Plato's authority to prove, that music, the mother of harmony, decency and delight, was not given to man by the gods only to please and tickle the ear, but to reinstate order and harmony in the soul, too often discomposed by error and pleasure. Sometimes he admonishes us, that we cannot be too much upon our guard against the dangerous charms of a depraved and licentious music and points out the means of avoiding such a corruption. He declares here, that wanton music, dissolute and debauched songs, corrupt the manners; and that the musicians and poets ought to borrow from wise and virtuous persons the subjects of their compositions. In another place, he cites the authority of Pindar, who asserts that God made Cadmus hear a sublime and regular music, very different from those soft, light, effeminate strains, which had taken possession of human ears. And lastly, he explains himself more expressly upon it, in the ninth book of his *Symposiaca*. "The depraved music, which prevails in these days," says he, "in injuring all the arts dependent upon it, has hurt none so much as dancing. For this being associated with I know not what trivial and vulgar poetry, after having divorced itself from that of the ancients, which was entirely divine, has usurped our theatres, where it triumphs amidst a ridiculous admiration: and exercising a kind of tyranny, has subjected to itself a species of music of little or no value: but at the same time, it has actually lost the esteem of all those, who, for their

1 Rhyme, *future*. The time or measure. It may also signify a bar in music.

2 De Superstit. p. 167.

3 Symp. l. i. p. 704.

4 De Audit. Poet. p. 22.

5 De Pyth. Orae. p. 397.

genius and wisdom, are considered as divine persons." I leave it to the reader to apply to our times, what Plutarch says of his, in regard to music and the theatre.

It is no wonder that Plutarch complains thus of the depravation, which had universally infected the music of his times, and made it of so little value. Plato, Aristotle, and their disciples, had made the same complaint before him; and that in an age so favourable as theirs to the improvement of polite arts, and so productive of great men in every kind. How could it happen, that at a time, when eloquence, poetry, painting, and sculpture, were cultivated with such success, music, for which they had no less attention, declined so much? Its great union with poetry was the principal cause of this, and these two sisters may be said to have had almost the same destiny. At first, each confined to the exact imitation of what was most beautiful in nature, had no other view than to instruct, whilst they delighted, and to excite emotions in the soul of equal utility, in the worship of the gods, and the good of society. For this end they employed the most suitable expressions, turns of thought, numbers and cadences. Music particularly, always simple, decent, and sublime, continued within the bounds prescribed her by the great masters, especially the philosophers and legislators, who were most of them poets and musicians. But the theatrical shows, and the worship of certain divinities, of Bacchus amongst the rest, in process of time, very much set aside these wise regulations. They gave birth to dithyrambic poetry, the most licentious of all in its expressions, measure, and sentiments. It required a music of the same kind, and in consequence very remote from the noble simplicity of the ancient. The multiplicity of strings, and all that vicious redundancy of sound and levity of ornament, were introduced to an excess, and gave room for the just complaints of all such as excelled, and had the best taste, in this way.

SECTION IV.—DIFFERENT KINDS AND MEASURES OF THE ANCIENT MUSIC. MANNER OF WRITING THE NOTES TO SONGS.

To speak of the ancient music in general, and to give a slight idea of it, it is proper to observe, that there are three kinds of symphonies; the vocal, the instrumental, and that composed of both. The ancients knew these three kinds of symphonies or concert.

We must further remark, that music had at first only three measures, which were a tone higher than one another. The gravest of the three was called the *Doric*; the highest the *Lydian*; and the middle the *Phrygian*: so that the *Doric* and *Lydian* included between them the space of two tones, or of a tercet or third major. By dividing this space into demi-tones, room was made for two other measures, the *Ionic* and *Eolian*; the first of which was inserted between the *Doric* and *Phrygian*; the second between the *Phrygian* and *Lydian*. Other measures were superadded, which took their denominations from the five first, prefixing the preposition *over* above, for those above; and the preposition *under* below, for those below. The *Hyperdoric*, the *Hypodoric*, &c. The *Hypodoric*, the *Hypionic*, &c.

In some books of modern singing in churches, and at the end of some breviaries, to these different measures are referred the different tones now used in chanting divine service. The first and second tone, belong to the *Doric* measure; the third and fourth to the *Phrygian*; and the rest to the *Lydian* and *Mixolydian*. The manner of chanting in the church is in the *Diatonic* kind, which is the deepest, and agrees best with divine worship.

I return to the first division. The vocal symphony necessarily supposes several voices, because one person cannot sing several parts at the same time. When several persons sing in concert together, it is either in unison, which is called *Homophony*; or in the octave, and even the double octave; and this is termed *Antiphony*. It is believed that the ancients used also a third manner, which consisted in

singing to a tercet or third. The instrumental symphony, amongst the ancients, had the same differences as the vocal, that is to say, several instruments might play together in the unison, the octave, and the third.

To have two strings of an instrument, of the same substance equally thick, and equally strained, denotes that these accord with each other; all that is necessary is to regulate their lengths by certain proportions of number. For instance, if the two strings be equal in length, they are unisons; if as 1 to 2 they are octaves; if as 2 to 3 they are fifths; as 3 to 4 they are fourths; as four to five they are third majors, &c.

The ancients, as well as we, had some instruments, upon which a single performer could execute a kind of concert. Such were the double flute and the lyre. The first of these instruments was composed of two flutes, joined in such a manner, that the two pipes had usually but one mouth in common to both. These flutes were either equal or unequal in length or in the diameter of the bore. The equal flutes had the same, the unequal different, sounds, of which one was deep, the other high. The symphony, which the two equal flutes made, was in the unison, when the two hands of the performer stooped the same holes of each flute, at the same time; or thirds, when he stopped different holes of both flutes. The diversity of sounds, resulting from the unequal flutes, could be only of two kinds, according to the flutes being either octaves or thirds: and in both cases the performer stopped the same holes of each flute at the same time, and in consequence formed a concert either in the octave or third.

By the lyre is meant here every musical instrument in general with strings strained over a cavity for sound. The ancients had several instruments of this kind, which differed only in their form, their size, or the number of their strings; and to which they gave different names, though they often used one for the other. The chief of them were, 1. the *Cithara*, *Κιθάρα*, from which the word Guitar is derived, though applied to a quite different instrument. 2. The *Lyre*, *Λύρα*, otherwise called *χίταξ*; and in Latin *Testudo*, because the bottom resembled the scale of a tortoise, the figure of which animal (as is said) gave the first idea of this instrument. 3. The *Telyra*, or triangular instrument, the only one that has come down to us under the name of the harp.

The lyre, as I have said before, varied very much in the number of its strings. That of Olympius and Terpander had at first but three, which those musicians knew how to diversify with so much art, that if we may believe Plutarch, they very much exceeded those who played upon lyres of a greater number. By adding a fourth string to the other three, they made the *Tetrachord* complete; and it was the different manner in which harmony was produced by these four strings, that constituted the three kinds of it, called the *Diatonic*, *Chromatic*, and *Enharmonic*. The *Diatonic* kind appertains to the common and ordinary music. In the *Chromatic*, the music was softened by lowering the sounds half a tone, which was directed by a coloured mark, from whence the *Chromatic* took its name *χρῶμα*, signifying colour. What is now called B flat, belongs to the *Chromatic* music. In the *Enharmonic* music, on the contrary, the sounds were raised a demi-tone, which was marked as at present, by a diesis. In the *Diatonic* music, the air or tune could not make its progressions by less intervals than the semi-tones major. The modulation of the *Chromatic* music made use of the semi-tones minor. In the *Enharmonic* music, the progression of the air might be made by quarter-tones. Macrobius, speaking of these three kinds, says, the *Enharmonic* is no longer in use upon account of its difficulty: that the *Chromatic* is no longer esteemed, because that sort of music is too soft and effeminate.

¹ Plat. de mus. p. 1137.

² A passage in Horace, differently explained by M. Dacier and father Sanadon, has given room for learned dissertations upon the instrument called the *Tetrachord*.

³ Lib. ii. in Somn. Scipion. c. 4.

and that the Diatonic holds the mean between them both. The addition of a fifth string produced the *Pentachord*. The lyre with seven strings, or the *Heptachord*, was more used, and in greater esteem than all others. However, though it included the seven notes of music, the octave was still wanting. Simonides at length added it, according to Pliny,¹ with an eighth string. Long after him, Timotheus the Milesian, who lived in the reign of Philip king of Macedon, about the 108 Olympiad, multiplied, as we have observed, the strings of the lyre to the number of eleven.² This number was still increased.

The lyre, with three or four strings, was not susceptible of any symphony. Upon the *Pentachord*, two parts might be played by thirds to each other. The more the number of strings increased upon the lyre, the easier it was to compose airs with different parts upon that instrument. The question is to know whether the ancients improved that advantage. This question, which has been a matter of inquiry for about two ages in regard to the ancient music, and consists in knowing whether the Greeks and Romans were acquainted with that kind of it called *Counterpoint*, or concert in different parts, has occasioned different writings on both sides. The plan of my work dispenses with my entering into an examination of this difficulty, which I confess besides exceeds my capacity.

It is not unnecessary to know in what manner the ancients noted their airs.³ With them the general system of music was divided into eighteen sounds, of which each had its particular name. They invented characters to signify each tone: *gamma, sigma*. All these figures were composed of a monogram, formed from the first letter of the particular name of each of the eighteen sounds of the general system. These signs, which served both for vocal and instrumental music, were wrote above the words upon two lines, of which the upper was for the voice, and the lower for the instruments. These lines were not larger than lines of common writing. We have some Greek manuscripts, in which these two species of notes are wrote in the manner I have related. From them the hymns to Calliope, Nemesis, and Apollo,⁴ as well as the strophe of one of Pindar's odes, were taken. Mr. Burette has given us all these fragments, with the ancient and modern notes, in the fifth volume of the *Memoirs of the Academy of Belles Lettres*.

The characters invented by the ancients for writing musical airs, were used till the eleventh century, when Guy d'Arezzo invented the modern manner of writing them with notes placed on different lines, so as to mark the sound by the position of the note. These notes were at first no more than points, in which there was nothing to express the time or duration. But John de Meurs, born at Paris, and who lived in the reign of king John, found out the means of giving these points an unequal value, by the different figures of crotchets, minims, semibreves quavers, semiquavers, &c. which he invented, and have since been adopted by all the musicians of Europe.

SECTION V.—WHETHER THE MODERN SHOULD BE PREFERRED TO THE ANCIENT MUSIC.

THE famous dispute on this subject, between many learned men, has been very hotly contested; because it has been held that, if the ancient music was destitute of the *Counterpoint*, or concert in different parts, that defect gives an indisputable right of preference to the modern. Admitting the superiority of the moderns in this particular to be real, which may with great reason always remain doubtful, I am not sure that the consequence is so certain. Might not the ancients, in all other respects, have carried music to a degree of perfection the moderns have not attained, as well as all the other arts? (I do not say

it is so, I speak only of its possibility;) and if so, ought the discovery of the *Counterpoint* to give the latter an absolute preference to the former? The most excellent painters of antiquity, as Apelles, used only four colours in their pieces. This has so far from being a reason with Pliny for diminishing any thing of their merit and reputation, that he admired them the more for it, and that they had excelled all succeeding painters so much, though the latter had employed a great variety of new tints. But to trace this question to the bottom; let us examine, whether the music of later times does actually and indisputably excel that of the ancients; and we shall soon find that this is a question which it is impossible for us to decide. It is not with music as with sculpture. In the latter, the cause may be tried by the evidence of the performances to be produced on both sides. We have statues and reliefs of the ancients, which we can compare with our own; and we have seen Michael Angelo pass sentence in this point, and actually acknowledge the superiority of the ancients. None of their music has come down to us, to make us sensible of its value, and to enable us to judge by our own experience, whether it be as excellent as our own. The wonderful effects, it is said to have produced, do not seem proofs sufficiently decisive. There are still extant treatises on Didacticks, as well Greek as Latin, which may lead us to their theory of this art: but can we conclude any thing very certain from these in regard to their practice of it? Theory may give us some light, some opening; but precepts are exceedingly remote from execution. Would treatises upon poetry alone suffice to inform us, whether the modern ought to be preferred to the ancient poets?

In the uncertainty there will always be with regard to the matter in question, there is a prejudice very much in favour of the ancients, which ought, in my opinion, to make us suspend our judgment. It is allowed that the Greeks had wonderful talents for all arts; that they cultivated them with extraordinary success, and carried most of them to a surprising degree of perfection. In architecture, sculpture, and painting, nobody disputes their supreme excellency. Now of all these arts, none were so anciently or generally cultivated as music. This was not practised only by a few private persons, who made it their profession, as in the other arts; but by all in general who had any care taken of their education, of which the study of music was an essential part. It was of general use in solemn festivals, sacrifices, and especially at meals, that were almost always attended with concerts, in which their principal joy and refinement consisted. There were public disputes and prizes for such as distinguished themselves most by it. It had a very peculiar share in choruses and tragedies. The magnificence and perfection, to which Athens rose in every thing else that related to the public shows, is known: can we imagine that city to have neglected only music? Can we believe, that those Attic ears,⁵ so refined and exquisite in respect to the sound of words in common discourse, were less so in regard to the concerts of vocal and instrumental music, so much used in their choruses, and in which the most sensible and usual pleasure of Athens consisted? For my part, I cannot help being of opinion, that the Greeks, inclined as they were to diversions, and educated from their earliest youth in a taste for concerts, with all the aids I have mentioned, with that inventive and industrious genius they were known to have for all the arts, must have excelled in music as well as in all other arts. This is the sole conclusion I make from all the reasons I have advanced, without pretending to determine the preference in favour of either the ancients or moderns.

I have not spoken of the perfection to which the Hebrew singers might have attained, in what regards vocal and instrumental music, in order to avoid mingling a species entirely sacred and devoted to religion, with one wholly profane and abandoned to

⁴ These hymns were wrote by a poet named Dionysius, little known in other respects.

⁵ Atticorum aures teretes et religiose. Cic.

idolatri, and all the excesses consequential of it. We may presume that these singers, to whom the holy scripture seems to ascribe a kind of inspiration and the gift of prophecy,¹ not to compose prophetic psalms, but to sing them in an ardent and lively manner, full of zeal and rapture, had carried the science of singing to as great a perfection as was possible. It was, no doubt, a grand, noble, and sublime kind of music, wherein every thing was proportioned to the majesty of its object, the Godhead, who, we may add, was its author: for he had vouchsafed to form his ministers and singers himself, and to instruct them in the manner it pleased him to have his praises celebrated.

Nothing is so admirable as the order itself which God had instituted amongst the Levites for the exercise of this august function. They were four thousand in number, divided into different bodies, of which each had its chief, and the kind, as well as times, stated for the discharge of their respective duties. Two hundred fourscore and eight,² were appointed to teach the rest to sing and play upon instruments. We see an example of this wonderful order in David's distribution of the parts of the sacred music, when he solemnized the carrying of the ark from the house of Obed-Edom into the citadel of Zion. The whole troop of musicians were divided into three choruses. The first had hollow instruments of brass, that resounded exceedingly, unlike our kettle-drum, only in not being covered with skins, and having their hollow part laid over with double bars, which they struck on different parts of them. These sounds suited very well the sacerdotal trumpets, that preceded them, and were very proper by their lively, strong and broken iterations, to awake the attention of the spectators. The second troop of sacred singers played in the treble, or higher key, on a different instrument. The third chorus consisted of basses, that served to exalt and sustain these trebles, with which they always played in concert, (*perhaps in unisons*) because directed by the same master of the singers. It is easy to conceive, that the Levites, so numerous as they were, destined from father to son to this noble exercise, taught by the most skilful masters, and formed by long and continual habit, must have attained great excellency, and at length become consummate in all the beauties and delicacies of an art, in which they passed their whole lives. This was the true intent of music. The most noble use that men can make of it, is to employ it in rendering the continual homage of praise and adoration to the supreme majesty of God, who has created, and governs the universe, and reserves so sacred an office for his faithful children. *Hymnus omnibus sanctis ejus.*

ARTICLE II.

OF THE PARTS OF MUSIC PECULIAR TO THE ANCIENTS.

I SHALL treat in this second article the other parts of music in use amongst the ancients, but unknown amongst us, and shall confound them often together, because they have a natural connexion, and it would be difficult to separate them without falling into tedious repetitions. I shall make great use of what is said upon these heads in the critical reflections of the Abbé du Bos, upon poetry and painting.

SECTION I.—SPEECH UPON THE STAGE, OR MANNER OF THEATRICAL DECLAMATION COMPOSED AND SET TO NOTES.

THE ancients composed and wrote with notes the mode of declamation or manner of speaking upon the stage, which however was not singing to music:

¹ And Chenaniah, chief of the Levites, was for song (or PROPHECY;) he instructed about the song, because he was skilful. 1 Chron. xv. 22.

David and the captains of the host separated to the service of the sons of Asaph, and of Heman, and of Jeduthun, who should PROPHET with harps, with psalteries, and with cymbals. 1 Chron. xxv. 1.

² — With their brethren that were instructed in the songs of the Lord even all that were cunning two hundred fourscore and eight. 1 Chron. xxv. 7.

and it is in this sense we should often understand in the Latin poets the words *canere, cantus*, and *even carmen*, which do not always signify singing properly so called, but a certain manner of speaking or reading. According to Bryennius, this declaiming or speaking was composed with accents, and in consequence it was necessary, in writing it, to make use of the characters, which expressed those accents. At first they were only three, the acute, the grave, and the circumflex. They afterwards amounted to ten, each marked with a different character. We find their names and figures in the ancient Grammarians. The accent is the certain rule, by which the voice should be raised or depressed in the pronunciation of every syllable. As the manner of sounding these accents was learnt at the same time with reading, there was scarce any body, who did not understand this kind of notes.

Besides the help of accents, the syllables in the Greek and Latin languages had a determinate quantity, that is to say, they were either long or short. The short syllable had only one, and the long, two seconds of time.³ This proportion between long and short syllables was absolute, as that in these days between notes of different length. As two black notes in our music ought to have as much time, as one white one in the music of the ancients, two short syllables had neither more nor less than one long one. Hence, when the Greek or Roman musicians were to compose any thing whatsoever, they had no more to do, in setting the time to it, than to conform to the quantity of the syllables upon which they placed each note. I cannot avoid observing here by the way, that it is a pity, the musicians amongst us, who compose hymns and motets, do not understand Latin, and are ignorant of the quantity of words; from whence it often happens, that upon short syllables, over which they ought to run lightly, they insist and dwell a great while, as if they were long ones. This is a considerable fault, and contrary to the most common rules of music.

I have observed, that the modulation of the voice and measure of time in speaking, of the actors upon the stage, was composed and wrote in notes, which determined the tone it was proper to take. Amongst many passages, that demonstrate this, I shall content myself with choosing one from Cicero; where he speaks of Roscius, his cotemporary, and intimate friend. Every body knows, that Roscius became a person of very great consideration, by his singular excellency in his art, and his reputation for probity. The people were so much prejudiced in his favour, that when he did not act so well as usual, they said it was either out of negligence or indisposition. *Natuit, inquit, agere Roscius, aut cruidior fuit.*⁴ In fine, the highest degree of praise that they gave to a man, who excelled in his profession, was to say, he was a Roscius in his way.⁵

Cicero, after having said, that an orator, when he grows old, might soften his manner of speaking, quotes, as a proof and example of it, what Roscius declared; that when he perceived himself grow old, he obliged the instruments to play in a slower time. *Quoniam, quoniam multa ad oratoris similitudinem ab uno Artifice sumimus, solet inde Roscius dicere, se, quo plus sibi ætatis accederet, eo tibicinis cantus & modos remissiores esse facturum.*⁶ Cicero accordingly, in a later work than that I have now cited, makes Atticus say, that actor had abated his declamation, or manner of speaking, by obliging the player on the flute, that accompanied him, to keep a slower time with the sounds of his instrument. *Roscius familiaris tuus, in senectute numeros & cantus remiserat, ipsaque tardiores fecerat tibias.*⁷ It is evident, that the singing (for it was often called so) of the dramatic pieces on the stages of the an-

ents, had neither divisions, recitative, continued quaverings, nor any of the characters of our musical singing: in a word, that this singing was only declaiming, or speaking as with us. This manner of utterance was, however, composed, as it was sustained, by a continued base, of which the sound was proportioned, in all appearance, to that made by a man, who declaims or pronounces a speech. This may seem to us an absurd and almost incredible practice, but is not therefore the less certain; and in matter of fact, it is useless to object any arguments. We can only speak by conjecture upon the composition which the continued base might play, that accompanied the actor's pronunciation. Perhaps it only played from time to time some long notes, which were heard at the passages, in which it was necessary for the actor to assume such tones, as it was not easy to hit with justness, and thereby did the speaker the same service, as Gracchus received from the player upon the flute, he always had near him, when he harangued, to give him at proper times the tones concerted between them.

SECTION II.—GESTURE OF THE STAGE COMPOSED AND SET TO MUSIC.

MUSIC did not only regulate the tone of voice in speaking, but also the gesture of the speaker. This art was called *Choreia* by the Greeks, and *Saltatio* by the Romans. Plato¹ tells us, that this art consisted in the imitation of all the gestures and motions men can make. Hence we must not confine the sense of *Saltatio*, to what our language means by the word *dancing*. This art, as the same author observes, was of great extent. It was designed not only to form the attitudes and motions, which add grace to action, or are necessary in certain artificial dances, attended with variety of steps, but to direct the gesture, as well of the actors upon the stage, as the orators; and even to teach that manner of gesticulation we shall soon treat of, which conveyed meaning without the help of speech.

Quintilian advises the sending of children, only for some time, to the schools where this art of *Saltatio* was taught; but solely to acquire an easy air and graceful action; and not to form themselves upon the gesture of dancing-masters, to which that of orators should be extremely different.² He observes, that this custom was very ancient, and subsisted to his times without any objection. Macrobius, however, has preserved a fragment of a speech of the younger Scipio Africanus, wherein that destroyer of Carthage speaks warmly against this custom. "Our youth," says he, "go to the schools of the comedians to learn singing,³ an exercise, which our ancestors considered as unworthy of persons of condition. Young persons of both sexes go thither without blushing, where they mingle with a crowd of the most loose and abandoned minstrels."⁴ The authority of so wise a man as Scipio is of great weight on this head, and well deserves serious attention.

Be this as it may, we find, that the ancients took extraordinary pains to cultivate gesture, and both comedians and orators were very careful in this point. We have seen how industriously Demosthenes applied himself to it. Roscius sometimes disputed with Cicero, who best expressed the same thought in several different manners, each in his own art; Roscius by gesture, and Cicero by speech.⁵ Roscius

seems to have repeated that only by gesture, which Cicero first composed and uttered; after which judgment was given upon the success of both. Cicero afterwards changed the words or turn of phrase, without enervating the sense of the discourse; and Roscius, in his turn, was to give the sense by other gestures, without injuring his first mute expression by the change of manner.

SECTION III.—PRONUNCIATION AND GESTURE DIVIDED UPON THE STAGE BETWEEN ACTORS.

WE shall be less surprised at what I have said concerning Roscius, when we know, that the Romans often divided the theatrical representation between two actors, of whom the one pronounced, whilst the other made gestures. This again is one of the things not easily conceived, so remote is it from our practice, and so extravagant therefore does it appear.

Livy tells us the occasion for this custom. Livius Andronicus,⁶ a celebrated poet, who first gave Rome a regular dramatic piece, in the five hundred and fourteenth year of that city, about an hundred and twenty years after shows of that kind had been introduced there, acted himself in one of his own pieces. It was usual at that time for the dramatic poets to mount the stage, and represent some character. The people who took the liberty to cause the passage they liked to be repeated, by calling out *bis*, that is to say *encore*, made Andronicus repeat so long, that he grew hoarse. Not being capable of pronouncing any longer, he prevailed upon the audience to let a slave, placed behind the performer upon the instruments, repeat the verses, whilst Andronicus made the same gestures, as he had done in repeating them: himself. It was observed that his action was at that time much more animated than before, because his whole faculties and attention were employed in the gesticulation, whilst another had the care and trouble of pronouncing the words. From that time, continues Livy, arose the custom of dividing the parts between two actors, and to pronounce, in a manner corresponding to the comedian's gesture. And this custom has prevailed so much, that the comedians themselves pronounce no longer any thing besides the dialogue part. Valerius Maximus relates the same thing, which passages in many other authors confirm. It is therefore certain, that the pronunciation and gesture were often divided between two actors; and that it was by established rules of music they regulated both the sound of their voices, and the motion of their hands and whole bodies.

We should be struck with the ridicule there would be in two persons upon our stage, of whom one should make gestures without speaking, whilst the other repeated in a pathetic tone without motion. But we should remember, in the first place, that the theatres of the ancients were much more vast than ours; and in the second place, that the actors played in masks, and that in consequence one could not distinguish sensibly at a great distance, whether they spoke or were silent by the moving of the mouth, or the features of the face. They undoubtedly chose a *singer*, (I mean him who pronounced,) whose voice came as near as possible to that of the comedian. This singer was placed in a kind of alcove, towards the bottom of the scene.

But in what manner could the rhythmic music adapt itself to the same measure and cadence with the

¹ Plat. de Leg. l. vii. p. 814.

² Cujus etiam discipline usus in nostram usque statem ine reprehensione descendit. A me autem non ultra pueriles et minus retinebunt, nec in his ipsis diu. Neque enim gestum oratorie composui ad similitudinem saltatoris volo ad subesse aliquid ex hac exercitatione. Quintil. l. i. c. 11.

³ As comedians are spoken of here, by the word *cantare*, we must understand to speak or declaim after the manner of the theatre.

⁴ Eunt in ludum histionum, discunt cantare quod majores nostri ingenio probro duci voleverunt. Eunt, inquam, in ludum saltatorium inter Cimeros, virgines puerique ingenui. Macrobi. Saturnal. l. ii. c. 8.

⁵ Et certe scis constat contendere eum (Ciceronem) cum histione solitum, utrum ille sapius eandem sententiam va-

riis gestibus efficeret, an ipse per eloquentiam copiam sermone diverso pronunciaret. Macrobi. Saturnal. l. ii. c. 10.

⁶ Livius—idem scilicet, quod omnes tunc erant suorum carminum actor, dictur, cum sapius revoctus vocem obtudisset, venia petita puerum ad canendum ante tibicinem cum attulisset, canticum egisse aliquanto magis vigenti mota quia nihil vocis usus impediabat. Inde ad manum cantari histionibus ceptum, diversibique tantum ipsorum voce relicta. Liv. l. vii. n. 2.

comedian that repeated, and him who made gestures? This was one of those things, that St. Augustin says, were known to all who mounted the stage, and for that reason he believed improper for him to explain. It is not easy to conceive what method the ancients used to make both these players act in so perfect a concert, as scarce to be distinguished from one: but the fact is certain. We know that the measure was beat upon the stage, which the actor who spoke, he who made gestures, the chorus, and even the instruments, were to observe as their common rule. Quintilian, after having said, that gesture is as much subservient to measure, as utterance itself, adds, that the actors, who gesticulate, ought to follow the signs given with the foot; that is to say, the time beat, with as much exactitude, as those who execute the modulations; by which he means the actors who pronounce, and the instruments that accompany them.¹ Near the actor who represented, a man was placed with iron shoes, who stamped upon the stage.² It is natural to suppose, that this man's business was to beat the time with his foot, the sound of which would be heard by all whose business it was to observe it.

The extreme delicacy of the Romans, (and as much may be said of the Greeks) in whatever concerned the theatre, and the enormous expenses they were at in representations of this kind, gives us reason to believe, that they carried all parts of them to a very great perfection; and in consequence, that the distribution of single parts between two actors, of which one spoke, and the other made gestures, had nothing in it, that was not highly agreeable to the spectators. A comedian at Rome, who made a gesture out of time, was no less hissed, than one who was faulty in the pronunciation of verse.³ The habit of being present at the public shows, had made even the common people so nice in their ear, that they knew how to object to inflections, and the most minute faults in tone, when repeated too often; even though they were of a nature to please, when introduced sparingly, and managed with art.⁴

The immense sums devoted by the ancients to the celebration of shows are hardly credible. The representation of three of Sophocles' tragedies cost the Athenians more than the Peloponnesian war. What expenses were the Romans at in building theatres and amphitheatres, and even in paying their actors! Æsopus, a celebrated actor of tragedy, Cicero's contemporary, left at his death to the son, mentioned by Horace and Pliny⁵ as a famous spendthrift, an inheritance of two millions, five hundred thousand livres, (about an hundred and twenty thousand pounds) which he had amassed by acting.⁶ Roscius, Cicero's friend, had a salary of above seventy-five thousand livres (about three thousand five hundred pounds) a year, and must have had more, as he had five hundred livres (about twenty-three pounds) a day out of the public treasury, of which he paid no part to his company.⁷ Julius Cæsar gave about sixty thousand livres (about two thousand seven hundred and fifty pounds) to Laberius, to induce that poet to play a part in a piece of his own composing. I have repeated these facts, and there are an infinity of a like nature, to show the exceeding passion of the Romans for public shows. Now is it probable, that a people who spared nothing for these shows,

who made them their principal employment, or at least their most sensible pleasure, who piqued themselves upon the elevation and refinement of their taste in every thing beside; that this people, I say, whose delicacy could not suffer the least word ill pronounced, the least accent ill laid, or the least improper gesture, should admit this distribution of speech and gesture between two actors, so long upon the stage, if it had offended ever so little the eye or ear. We may believe, without prejudice, that a theatre so much esteemed and frequented, had carried all things to a very high degree of perfection.

It was the music, that engrossed almost all honour in dramatic representations. It presided in the composition of plays: for of old its empire extended so far, and was confounded with poetry. It regulated the speech and gesture of the actors. It was applied to form the voice, to unite it with the sound of the instruments, and to compose a grateful harmony out of that union.

In ancient Greece the poets themselves composed the pronunciation for their pieces. *Musici, qui erant quondam idem poetae*, says Cicero,⁸ in speaking of the ancient Greek poets who invented the music and form of verses. The art of composing declamation, or the pronunciation for dramatic performances, was a particular profession at Rome. In the titles at the head of Terence's comedies, we find, with the name of the author of the poem, and that of the master of the company of comedians who acted it, his name also that had adapted the music to the words; in Latin, *Qui fecerat modos*. Cicero uses the same expression, *facere modos*, to express those who compose the pronunciation of theatrical pieces. After having said, that Roscius purposely repeated some passages of his parts with a more negligent tone than the sense of the verses seemed to require, and threw shadowings into his gesture, to make what he intended to set off the stronger, he adds: "That the success of this conduct is so certain, that the poets, and those who composed the pronunciation, were sensible of it as well as the comedians, and knew all of them how to employ it with advantage."⁹ These composers of pronunciation raised or depressed the tone with design, and artfully varied the manner of speaking. A passage was sometimes directed by the note, to be pronounced lower than the sense seemed to require, but this was done in order that the elevation to which the actor's voice was to rise at the distance of a verse or two, might have the stronger effect.

SECTION IV.—ART OF THE PANTOMIMES.

To conclude what relates to the music of the ancients, it remains for me to speak of the most singular and wonderful of all its operations, though neither the most useful nor the most laudable: this was the performance of the Pantomimes. The ancients, not contented with having reduced, by the precepts of music, the art of gesture into method, had improved it to such a degree, that there were comedians who ventured to undertake to act all sorts of dramatic pieces, without speaking a syllable. They called themselves *Pantomimes*, because they imitated and expressed whatever they had to say by gestures, taught by the art of *Saltation* or dancing, without using the aid of speech.

Suidas and Zoëynus¹⁰ inform us, that the art of the Pantomimes made its first appearance at Rome, in the reign of Augustus: which made Lucian¹¹ say, that Socrates had seen the art of dancing only in its cradle. Zoëynus even reckons the invention of this art amongst the causes of the corruption of the manners of the Roman people, and of the misfortunes of the empire. The two first introducers of this new art were Pylades and Bathyllus, whose names became afterwards very famous amongst the Romans; the

that succeeded best in tragic subjects, and the other in comic.

What appears surprising is that these comedians, who undertook to perform pieces without speaking, could not assist their expression with the motion of their faces; for they played in masks as well as the other actors. They began, no doubt, at first by executing some well known scenes of tragedies and comedies, in order to be the more easily understood by the spectators, and by little and little became capable of representing whole plays. As they were not to repeat any thing, and had only gestures to make, it is easily conceived, that all their expression was more lively, and their action much more animated, than those of the common comedians. Hence Cassiodorus calls the Pantomimes, men whose learned hands, to use that expression, had tongues at the end of each finger: who poke in keeping silence, and who knew how to make an ample narration without opening their mouths: ¹ in fine, men whom Polhymnia, the muse that presided over music, had formed, in order to show that she could express her sense without the help of speech.

These representations, though mute, must have given a sensible pleasure, and transported the spectators. Seneca ² the father, whose profession was one of the gravest and most honourable of his times, confesses, that his taste for these Pantomimical representations, was a real passion. Lucian ³ says, that people wept at them, as at the pieces of the speaking comedians. He relates also, ⁴ that some king in the neighbourhood of the Euxine sea, who was at Rome in Nero's reign, demanded of that prince, with great earnestness, a Pantomime he had seen play, in order to make him his interpreter in all languages. "This man," said he, "will make all the world understand him, whereas I am obliged to pay a great number of interpreters for corresponding with my neighbours, who speak several languages entirely unknown to me." Certain it is, that the Romans were so charmed with the art of the Pantomimes from its birth, that it soon passed into the remotest provinces, and subsisted as long as the empire

itself. The history of the Roman emperors more frequently mentions famous Pantomimes than celebrated orators.

This art, as we have observed, began in the reign of Augustus. That prince was exceedingly delighted with it, and Mæcenus was in a manner enchanted with Bathyllus. In the first years of Tiberius, the senate was obliged to make a regulation to prohibit the senators from entering the houses of the Pantomimes, and the Roman knights from making up their train in the streets. ⁵ Some years after, there was a necessity for banishing the Pantomimes out of Rome. ⁶ The extreme passion of the people for their representations, occasioned the forming cabals for applauding one in preference to another, and these cabals became factions. They even took different liveries, in imitation of those who drove the chariots in the races of the Circus. ⁷ Some called themselves the *Blues*, and others the *Greens*. The people were divided also on their side, and all the factions of the Circus, so frequently mentioned in the Roman history, espoused different companies of Pantomimes, which often occasioned dangerous tumults in Rome. The Pantomimes were again expelled Rome under Nero and some other emperors. But their banishment was of no great duration; because the people could no longer be without them, and conjectures happened, in which the sovereign, who believed the favour of the multitude necessary to him, endeavoured to please them by such means as were in his power. Domitian had expelled them, and Nerva his successor recalled them, though one of the wisest emperors Rome ever had. Sometimes the people themselves, tired with the unhappy effects of the cabals of the Pantomimes, demanded their expulsion with as much warmth as they had done their being recalled upon other occasions. *Neque a te minoris contentu ut tolleres Pantomimos, quam a patre tuo ut restitueret, exactum est*, says Pliny the younger, in speaking to Trajan. There are evils and disorders, which can only be prevented in their birth, and which if time be allowed them to take root and gain credit, assume the upperhand, and become too strong for all remedies.

OF THE ART MILITARY.

HITHERTO we have seen man established by the means of the arts in the enjoyment of all the conveniences of life. The earth, cultivated by his care and labour, has supplied him, in return, with abundant riches of every kind. Commerce has brought him from the most remote countries, whatever their inhabitants could spare; it has carried him down into the bowels of the earth, and to the bottom of the sea, not only to enrich and adorn him, but to supply himself with an infinity of helps and instruments necessary in his daily occasions. After having built himself houses, sculpture and painting have done their utmost in emulation of each other to adorn his abode; and that nothing might be wanting to his satisfaction and delight, music has come in, to fill up his moments of leisure with grateful concerts, which rest and refresh him after his labours, and make him forget all his pains, and all his afflictions, if he has any. What more can he desire? Happy, if he could not be, disturbed in the possession of advantages, that have cost him so much. But the rapacious appetites, the avarice and ambition of mankind, interrupt this general felicity, and render man the enemy of man. Injustice arms herself with force, to enrich herself with the spoils of her brethren. He, who, moderate in his desires and confining

himself within the bounds of what he possesses, should not oppose aggression with force, would soon become the prey of others. He would have cause to fear, that jealous neighbours and hostile states, would come to disturb his tranquillity, to ravage his lands, burn his houses, carry away his riches, and lead himself into captivity. He has therefore occasion for arms and troops, to defend him against violence, and secure his safety. At first we behold him employed in whatever the sciences have of most exalted and sublime; but, at the first noise of arms, those sciences, born and nurtured in repose, and enemies of tumult, are seized with terror, and reduced to silence, unless the art of war takes them under her protection, and places her safeguards over them, which can alone secure the public tranquillity. ¹ Thus war becomes necessary to man, as the protectress of peace and repose, and solely employed to repel violence and defend justice; ² and it is in this light, I believe it allowable for me to treat

¹ *Omnia hæc nostra preclara studia—latent in tutela æ præsidio bellicæ virtutis. Simul atque increpuit auspicio tumultu, artes libere nostræ contulerunt. Cic. pro Mur. n. 23.*

² *Suscipienda bella sunt ob eam causam ut sine injuria in pace vivatur. Cic. l. i. de Offic. n. 35.*

of it. I shall run over, as briefly as possible, all the parts of military knowledge, which, properly speaking, is the science of princes and kings, and requires, for succeeding in it, almost innumerable talents, which are very rarely to be found united in the same person.

As I have elsewhere treated what relates to the military affairs of the Egyptians, Carthaginians, Assyrians, and Persians, I shall speak the more sparingly of them in this place. I shall be more extensive upon the Greeks, and principally the Lacedæmonians and Athenians, which, of all the Grecian states, indisputably distinguished themselves most by their valour and military knowledge. I was long in doubt, whether I should speak also of the Romans, who seem foreign to my subject. But upon mature consideration, I thought it necessary to join them with other nations, that the reader at one view, might know, at least in some measure, the manner in which the ancients made war. This is the sole end I propose to myself in this treatise, without intending any thing further. I have not forgot what happened to a philosopher of Ephesus, who passed for the finest speaker of his times. In a harangue, which he pronounced before Hannibal, he took upon him to treat at large the duties of a good general. The orator was applauded by the whole audience. Hannibal being pressed to give his opinion of him, replied, with the freedom of a soldier, that he had never heard a more contemptible discourse. I should apprehend incurring a like censure, if, after having passed my whole life in the study of polite learning, I should pretend to give lessons upon the art military to those who make it their profession.

CHAPTER I.

THIS first chapter contains what relates to the undertaking and declaring of war, the choice of the general and officers, the raising of troops, their provisions, pay, arms, march, encampments, and all that relates to battles.

ARTICLE I.

UNDERTAKING AND DECLARATION OF WAR.

SECTION I.—UNDERTAKING OF WAR.

THERE is no principle more generally received, than that which lays down, that war ought never to be undertaken except for just and lawful reasons; nor hardly any one more generally violated. It is agreed, that wars, undertaken solely from views of interest or ambition, are real robberies.¹ The pirate's answer to Alexander the Great, so well known in history, was exceedingly just and sensible. And had not the Scythians good reason to ask that ravager of provinces, wherefore he came so far to disturb the tranquillity of nations, who had never done him wrong; and whether it was a crime in them to be ignorant in their woods and deserts, remote from the rest of mankind, who, and of what country Alexander was?² When Philip, chosen arbiter between two kings of Thrace that were brothers, expelled them both from their dominions, did he deserve a better name than that of thief and robber?³ His other conquests, though less flagrant crimes, were still but robberies, because founded upon injustice, and no means of conquering seemed infamous to him: *nulla apud eum turpis ratio vincendi*.⁴ The justice and necessity of wars ought therefore to be considered as fundamental principles in point of policy and government.

In monarchical states, generally, the prince only has power to undertake a war: which is one of the rea-

sons, that renders his office so much to be feared. For if he has the misfortune to enter into it without a just and necessary cause, he is answerable for all the crimes committed in it, for all the fatal effects attending it, for all the ravages inseparable from it, and all the human blood shed in it. Who can view without trembling, such an object, and an accountability of so dreadful a nature?

Princes have councils, which may be of great assistance to them, if they take care to fill them up with wise, able, and experienced persons; such as are distinguished by their love and zeal for the good of their country, void of ambition and views of interest, and above all, infinitely remote from all disguise and flattery. When Darius proposed to his council the carrying of the war into Scythia, Artabanus his brother endeavoured at first in vain to dissuade him from so unjust and unreasonable a design: his reasons, solid as they were, were forced to give way to the enormous praises and excessive flattery of the courtiers.⁵ He succeeded no better in the counsel he gave his nephew Xerxes, not to attack the Greeks.⁶ As the latter had strongly expressed his own inclination, an essential fault in such conjunctures, he was far from being opposed, and the deliberation was no more than mere form. On both occasions, the wise prince, who had spoke his sentiments freely, was grieved to see, that neither of the two kings comprehended, "how great a misfortune it is to be accustomed to set no bounds to one's desires, never to be contented with what we possess, and always to be solicitous for enlarging it?"⁷ which is the cause of almost all wars.

In the Grecian republics, the assembly of the people decided finally with regard to war, which method was subject to great inconveniences. At Sparta indeed, the authority of the senate, and especially of the Ephori, as well as at Athens that of the Areopagus and council of four hundred, to whom the preparing of the public affairs belonged, served as a kind of balance to the levity and imprudence of the people: but this remedy had not always its effect. The Athenians are reproached with two very opposite faults the being either too precipitate or too slow. Against the former a law had been made, by which it was ordained, that war should not be resolved till after a mature deliberation of three days. And in the wars against Philip we have seen, how much Demosthenes complained of the indolence of the Athenians, of which their enemy well knew how to make his advantage. This slowness in republics, arises from this cause; unless the danger be evident, private persons are too much divided about their different views and interests, to unite speedily in the same resolution. Thus when Philip had taken Elatea, the Athenian orator, terrified with the urgent danger of the republic, caused the law I have mentioned to be repealed, and the war to be resolved on that instant.

The public affairs were examined and determined with much more maturity and wisdom amongst the Romans, though the people with them also had the decision. But the senate's authority was great, and almost always prevailed in important cases. That wise body were very attentive, especially in the earliest times of the republic, to have justice on their side in their wars. This reputation for faith in treaties, equity, justice, moderation, and disinterestedness, was of no less service than the force of arms, in aggrandizing the Roman republic; the power of which was attributed to the protection of the gods, who rewarded justice and public faith in that manner.⁸ It is observed with admiration, that the Romans in all times constantly made religion the basis of their enterprises, and referred the motive and end of them to the gods.⁹ The most powerful reasons the generals could use to animate the troops to fight well, was to

represent to them, that the war they made was just; and that as only necessity had put their arms into their hands, they might assuredly rely upon the protection of the gods: whereas those gods, the enemies and avengers of injustice, never failed to declare against such as undertook unjust wars in violation of the faith of treaties.

SECTION II.—DECLARATION OF WAR.

ONE effect of the principles of equity and justice, which I have now laid down, was never actually to commence hostilities, before the public heralds had signified to the enemies the grievances they had to allege against them, and they had been exhorted to redress the wrongs declared to have been received. It is agreeable to the law of nature to try methods of amity and accommodation, before proceeding to open rupture. War is the last of remedies, and all others should be endeavoured before that is undertaken. Humanity requires, that room be given for reflection and repentance; and time left to clear up such doubts, and remove such suspicions, as measures of an ambiguous nature may give birth to, and which are often found to be groundless upon a nearer examination. This custom was generally observed from the earliest ages amongst the Greeks. Polynices, before he besieged Thebes, sent Tydens to his brother Eteocles to propose an accommodation.¹ And it appears from Homer,² that the Greeks deputed Ulysses and Menelaus to the Trojans, to summon them to restore Helen before they had committed any act of hostility; and Herodotus³ tells us the same thing. We find a multitude of the like examples throughout the history of the Greeks.

It is true that an almost certain means of gaining great advantages over enemies is to fall on them at unawares, and to attack them suddenly, without having suffered them to discover our designs, or give them time to put themselves into a state of defence. But these unforeseen incursions, without any previous denunciation, were justly deemed unjust enterprises, and vicious in their principle. It was this, as Polybius remarks,⁴ that had so much discredited the Ætolians, and had rendered them as odious as thieves and robbers; because having no rule but their interest, they knew no laws either of war or peace, and every means of enriching and aggrandizing themselves appeared legitimate to them, without troubling themselves, whether it were contrary to the law of nations to attack neighbours by surprise, who had done them no wrong, and who believed themselves safe in virtue, and under the protection of treaties.

The Romans were not so exact as the Greeks in observing this ceremony of declaring war, which was established by Ancus Marcius, the fourth of their kings.⁵ The public officer, (called *Fecialis*.) having his head covered with linen, went to the frontiers of the people against whom preparations of war were making; and as soon as he arrived there he declared aloud the grievances of the Roman people and the satisfaction he demanded for the wrongs that had been done them; calling Jupiter to witness in these terms, which include a horrible imprecation against himself, and a still greater against the people, of whom he was no more than the voice. "Great God, if I come hither to demand satisfaction in the name of the Roman people, contrary to equity and justice, never suffer me to behold my native country again." He repeated the same thing, changing only some of the terms, to the first person he met; and afterwards at the entrance of the city, and in the public marketplace. If at the expiration of thirty days satisfaction were not made, the same officer returning to the same people, pronounced publicly these words:—"Attend, oh Jupiter, Juno, and Quirinus; ⁶ and you celestial, terrestrial, and infernal gods, attend. I call you to

witness, that such a people, (naming them,) is unjust, and refuses to make us satisfaction. We shall consult at Rome, in the senate, upon the means of enjoining them to do us that justice which is our due." Upon the return of the *Fecialis* to Rome, the affair was brought into deliberation, and if the majority of voices were for the war, the same officer went back to the frontier of the same people, and in the presence of at least three persons, pronounced a certain form of declaration of war; after which he threw a spear upon the enemy's lands, which implied that the war was declared. This ceremony was long retained by the Romans. When war was to be declared against Philip and Antiochus, they consulted the *Fecialis*, to know, whether it was to be denounced to themselves in person, or sufficed to declare it in the first place subject to those princes. In the glorious times of the republic, they would have thought it a disgrace to them to have acted by stealth, and to have committed breach of faith, or even used artifice.⁷ They proceeded openly, and left those little frauds and unworthy stratagems to the Carthaginians, and people like them, with whom it was more glorious to deceive, than conquer an enemy with open force.

The heralds at arms, and *Fecialis*, were in great veneration amongst the ancients, and were considered as sacred and inviolable persons. This declaration was a part of the law of nations, and was held necessary and indispensable. It was not preceded by certain public writings, now called *Manifestos*, which contain the pretensions, well or ill founded, of the one or the other party; and the reasons by which they support them. These have been substituted in the room of that august and solemn ceremony, by which the ancients introduced the divine majesty in declarations of war, as witness and avenger of the injustice of those, who undertook wars without reason and necessity. Motives of policy have besides rendered these manifestos necessary, in the situation of the princes of Europe with regard to each other; united by blood, alliances and leagues offensive or defensive. Prudence requires the prince, who declares war against his enemy, to avoid drawing upon him the arms of all the allies of the power he attacks. It is to prevent this inconvenience manifestos are made in these days, which supply the place of the ancient ceremonies I have mentioned, and which sometimes contain the reasons for beginning the war, without declaring it. I have spoke of pretensions well or ill founded. For states and princes, who war upon each other do not fail to justify their proceedings with specious pretexts on both sides; and they might express themselves, as a pretor of the Latines did in an assembly, wherein it was deliberated how to answer the Romans, who, upon the suspicion of a revolt, had cited the magistrates of Latium before them. "In my opinion, gentlemen," says he, "in the present conjuncture, we ought to be less concerned about what we have to say, than what we have to do: for when we have acted with vigour, and duly concerted our measures, there will be no difficulty in adapting words to them."⁸

ARTICLE II.

CHOICE OF THE GENERALS AND OFFICERS. RAISING OF TROOPS.

SECTION I.—CHOICE OF THE GENERALS AND OFFICERS.

IT is a great advantage for kings to be absolute masters in the choice of the generals and officers of their armies; and the highest praise which can be given

Liv. l. xiii. n. 47.*

⁸ *Ad summum rerum nostrarum magis pertinere arbitror, quid agendum nobis, quam quid loquendum sit. Facile erit, explicatis consiliis, accommodare rebus verba. Liv. l. viii. n. 4.*

them, is to say, that known reputation and solid merit are the sole motives that determine them in it. And indeed how can they use too much attention in making a choice, which in some measure raises a private person to equality with his sovereign, by investing him with the whole power, glory, and fortune of his dominions? It is principally by this characteristic, princes capable of governing are known; and it is to the same they have been always indebted for the success of their arms. We do not find, that the great Cyrus, Philip, or his son Alexander, ever confided their troops to generals without merit and experience. The case was not the same under the successors of Cyrus and Alexander, with whom intrigue, cabal, and the credit of a favourite usually presided in this choice, and almost always excluded the best subjects. Hence the success of their wars was answerable to such a manner of commencing them. I have no occasion to cite examples to prove this: history abounds with them.

I proceed to republics. At Sparta the two kings, in virtue of their rank only, had the right and possession of the command, and in the earlier times marched together at the head of the army:¹ but a division, that happened between Cleomenes and Demaratus, occasioned the making of a law, which ordained that only one of the kings should command the troops; and this was afterwards observed, except in extraordinary cases. The Lacedæmonians were not ignorant that authority is weak when divided; that two generals seldom agree long; that great enterprises can hardly succeed, unless under the conduct of a single man; and that nothing is more fatal to an army than a divided command. This inconvenience must have been much greater at Athens, where by the constitution of the state itself, ten persons were always to command; because Athens being composed of ten tribes, each furnished their own chief, who commanded their day successively. Besides which, they were chosen by the people, and that every year. This occasioned a smart saying of Philip's; that he admired the good fortune of the Athenians, who could find in a set time, every year, ten captains; whereas, during his whole reign, it had scarce been in his power to find one.²

The Athenians, however, especially at critical conjunctures, must have been attentive in appointing citizens of real merit for their generals. From Miltiades to Demetrius Phalærus, that is to say, during almost two hundred years, a considerable number of great men were placed by Athens at the head of her armies, who raised their country's glory to the most exalted height. In those times all jealousy was banished, and the public good was the sole motive of power. There is a fine example of this in the war of Darius against the Greeks.³ The danger was exceeding great. The Athenians were alone against an innumerable army. Of the ten generals, five were for fighting, and five for retreating. Miltiades, who was at the head of the former, having gained the Polemarch on his side, (which officer had a decisive voice in the council of war in case of division,) it was resolved to fight. All the generals acknowledging the superiority of Miltiades to themselves, when the day came, resigned the command to him. It was at this time the celebrated battle of Marathon was fought. It sometimes happened that the people suffering themselves to be swayed by their orators, and following their caprice in every thing, conferred the command upon persons unworthy of it. We may remember the absolute credit of the famous Cleon with the multitude, who was appointed to command in the first years of the Peloponnesian war, though a turbulent, hotheaded, violent man, without ability or merit. But these examples are rare, and were not frequently repeated at Athens till the later times, when they proved one of the principal causes of its ruin.

The philosopher Antisthenes made the Athenians sensible one day, in a pleasant and facetious manner,⁴

of the abuses committed amongst them in the promotions to the public offices. He proposed to them with a serious air, in a full assembly, that it should be ordained by a decree, that for the future the asses should be employed in tillage as well as the horses and oxen. When he was answered, that the asses were not intended by nature for that labour: "You are deceived," said he, "that signifies nothing: don't you see that our citizens, though ever so much asses and sots before, become immediately able generals solely from your election of them."

At Rome, the people also elected the generals, that is to say, the consuls. They held their office only one year. They were sometimes continued in the command under the names of proconsuls or propretors. This annual change of the generals was a great obstacle to the advancement of affairs, the success of which required an uninterrupted continuation.⁵ And this is the advantage of monarchical states, in which the princes are absolutely free, and dispose all things at discretion, without being subject to any necessity. Whereas amongst the Romans a consul sometimes arrived too late, or was recalled before the time for holding the assemblies. Whatever diligence he might use to arrive early, before his predecessor had transferred to him the command, and he was sufficiently informed in the condition of the army, a knowledge indispensable previous to all undertakings, a considerable space of time must have elapsed, which made him lose the occasion of acting, and of attacking the enemy to advantage. Besides which, he often found affairs upon his arrival in a bad condition through his predecessor's ill conduct, and an army, either composed in part of new raised and inexperienced troops, or corrupted by licence or want of discipline. Fabius intimated part of these reflections to the Roman people, when he exhorted them to choose a consul capable of opposing Hannibal.⁶ The short term of one year, and the uncertainty of the command's being further prolonged, did indeed induce the generals to make the best use of their time: but it was often a reason for their putting a speedier end to their enterprises, than they would otherwise have done, and upon less advantageous conditions, from the apprehension that a successor might reap the fruit of their labours, and deprive them of the honour of having terminated the war gloriously. A true zeal for the public good, and a perfectly disinterested greatness of soul, would have disdained such considerations. I am afraid, there are very few examples of this kind. The great Scipio himself,⁷ I mean the first, is reproached with this weakness, and with not having been insensible to this fear. A virtue of so pure and exalted a nature as to neglect so sensible and so affecting an interest, seems above humanity, at least it is very uncommon.

The authority of the consuls confined, in point of time within such narrow bounds, was, it must be confessed, a great inconvenience. But the danger of infringing the public liberty, by continuing the same man longer in the command of all the forces of the state, obliged them to overlook this inconvenience, from the apprehension of incurring a much greater.

* Interrumpi tenorem rerum, in quibus peragendis continua ipsa efficacissima esset, minimè convenire. Ita traditionem imperii, novitatemque successoris, que noscendis prius quam agendis rebus imbuenda sit, sæpe bene gerendæ rei occasiones interdicere. *Liv. l. xli. n. 15.*

⁴ Diog. Laert. in Antisth. p. 360.

The necessity of affairs, the distance of places, and other reasons at length obliged the Romans to continue their generals in the command of their armies for many years. But the inconvenience really ensued from it, which they had apprehended; for the generals, by that duration of their power, became their country's tyrants. Amongst other examples I might cite Sylla, Marius, Pompey, and Cæsar.

The choice of the generals usually turned upon their personal merit; and the citizens of Rome had at the same time a great advantage, and a powerful motive for acting in that manner. What facilitated this choice, was the perfect knowledge they had of those who aspired at command, with whom they had served many campaigns, whom they had seen in action, and whose genius, talents, successes, and capacity for the highest employments, they had time to examine and compare by themselves and with their comrades. This knowledge, which the Roman citizens had of those who demanded the consulship, generally determined their suffrages in favour of the officers whose ability, valour, generosity, and humanity, they had experienced in former campaigns.¹ "He took care of me," said they, "when I was wounded; he gave me part of the spoils; under his conduct we made ourselves masters of the enemy's camp, and gained such a victory; he always shared in the pains and fatigues with his soldiers: it is hard to say whether he is most fortunate or most valiant." Of what weight was such discourse! The motive, which induced the Roman citizens to weigh and examine carefully the merit of the competitors, was the personal interest of the electors, the major part of whom, being to serve under them, were very attentive not to confide their lives, honour, and the safety of their country, to generals they did not esteem, and from whom they did not expect good success. It was the soldiers themselves, who in the *comitia* made choice of these generals. We see they knew them well; and find by experience, that they were seldom mistaken. We observe even in our times, that when they go upon parties to plunder, (*marauding*) they always choose, without partiality or favour, those amongst them, that are most capable of commanding them. It was in this spirit, Marius was chosen against the will of his general Metellus; and Scipio Æmilianus preferred, through a like prejudice of the soldiers in his favour.

It must be owned, however, that the nomination of commanders was not always directed by public and superior views; and that cabal, and address in gaining the affections of the people by flattering and soothing their passions, had sometimes a great share in it. This was seen at Rome in regard to Terentius Varro, and at Athens in the instance of Cleon. The multitude is always the multitude, that is to say, fickle, inconstant, capricious, and violent: but the people of Rome were less so than any. They gave upon many occasions, examples of a moderation and wisdom not to be sufficiently admired; submitting themselves in the most laudable manner to the opinion of the senate; forgetting nobly their prejudices, and even resentments, in favour of the public good, and voluntarily renouncing the choice they had made of persons incapable of sustaining the weight of affairs, as it happened, when the consulship was continued to Fabius, after the remonstrance himself had made upon the incapacity of those who had been elected: an odious proceeding in every other conjuncture, but which at that time did Fabius great honour, because the effect of his zeal for the republic, to the safety of which he was not afraid, in some measure, to sacrifice his own reputation.²

The armies of the Roman people consisted generally of four legions, of which each consul commanded two. They were called the first, second, third, and so on according to the order in which they had been raised. Besides the two legions commanded by each consul, there was the same number of infantry, supplied by the allies. After all the people of Italy were associated into the freedom of the city, that disposition underwent many alterations. The four legions under the consuls were not the whole force of Rome. There were other bodies of troops commanded by prætors, proconsuls, &c. When the consuls were in the field together, their authority being equal, they commanded alternately, and had each their day, as it happened at the battle of Cannæ. One of them often, knowing his colleague's superior ability, voluntarily resigned his rights to him. Agrippa Furius acted in this manner,³ in regard to the famous T. Quintius Capitolinus, who in gratitude to his colleague's generosity and noble behaviour, communicated all his designs to him, shared with him the honour of all his successes, and made him his equal in every thing. On another occasion, the military tribunes, who had been substituted to the consuls, and were at that time six in number, declared, that in the present critical conjuncture, only one of them was worthy of the command, this was the great Camillus, and that they were resolved to repose their whole authority in his hands; convinced that the justice they rendered his merit, could not but reflect the greatest glory upon themselves.⁴ So generous a conduct was attended with universal applause. Every body cried out that they should never have occasion to have recourse to the unlimited power of dictators, if the republic always had such magistrates, so perfectly united amongst themselves, so equally ready either to obey or command, and who, so far from desiring to engross all glory to themselves, were contented to share it in common with each other.

It was a great advantage to an army to have such a general, as Livy describes in the person of Cato, who was capable of descending to the least particular, who was alike attentive to little and great things; who foresaw at distance, and prepared every thing necessary to an army; who did not content himself with giving orders, but took care to see them executed in person; who was the first in setting the whole army the example of an exact and severe discipline; who disputed sobriety, watching, and fatigue, with the meanest soldier; and in a word, who was distinguished by nothing in the army, but the command, and the honours annexed to it.⁵

After the nominations of consuls and prætors, the tribunes were elected to the number of twenty-four, six to each legion. Their duty was to see that the army observed discipline, obeyed orders and did their duty.⁶ During the campaign, which was six months,

faciebant ne quis aut in exemplum exquireret, aut suspectum cupiditatis imperii consulem haberet. Quin laudabant potius magnitudinem animi, quod, cum summo imperatore esse opus reip. sciret, seque eum haud dubiè esse; minoris invidiam, si qua ex re oriretur, quam utilitatem reip. facisset. Liv. l. xxiv. n. 9.

In exercitu Romano cum duo consules essent potestate pari; quod saluberrimum in administratione magnarum rerum est, summa imperii, concedente Agrippa, penes collegam erit: ite prælatu ille facilitati summittentis se comiter respondebat, communicando consilia laudesque, et æquandio imparem sibi. Liv. l. iii. n. 70.

Collegæ futuri regimen omnium rerum, ubi quid bellii terroris ingrat, in viro uno esse: sibi que destinatum in animo esse Camillo summittere imperium; nec quicquam de majestate sua detractum credere, quod majestati ejus viri concessissent—Erecti gaudio fremunt, nec dictatores unquam opus fore reip. si tales viros in magistratu habebat, tam concordibus junctos animos, parere atque imperare justis paratos, laudemque conferentes potius in medium quam ex comitibus ad se trahentes. Liv. l. vi. n. 6.

In consule ea vis animi atque ingenii fuit, ut omnia maxima minimeque per se adiret; quæ ageret; nec cogitaret modò imperare; quæ in rem essent, sed pleræque per se ipse transigeret; nec in quemquam omnium gravitatem severitatem, quam in semetipsum imperium exercebat; parsimonia, et vigiliis, et labore cum ultimis militum certaret; nec quicquam in exercitu suo præcipui præter honorem acie imperium haberet. Liv. l. xxiv. n. 18.

³ Tempus ac necessitas belli, ac discrimen summæ rerum

they commanded successively, two and two together, in the legion for two months: they drew lots for the order in which they were to command.¹ At first the consuls nominated these tribunes; and it was of great advantage to the service, that the generals themselves had the choice of their officers. In process of time, of the four and twenty tribunes the people elected six;² about the 393d year of Rome, and fifty years after, that is to say, in the 444th year of Rome, they chose to the number of sixteen.³ But in important wars, they had sometimes the moderation and wisdom to renounce that right, and to abandon the choice entirely to the prudence of the consuls and prætors, as happened in the war against Perseus king of Macedonia;⁴ of the effects of which Rome was in very great apprehension. Of these twenty-four tribunes, fourteen must have served at least five years, and the rest ten: a very wise regulation and well calculated to inspire the troops with valour, from the esteem and confidence it gave them for their officers. Care was also taken to distribute these tribunes in such a manner, that in each legion the most experienced were united with those who were younger, in order to instruct and form them for commanding.

The Præfects of the allies, *præfecti socium*, were in the allied troops what the tribunes were in the legions. They were chosen out of the Romans, as we may infer from these words of Livy, *Præfectus socium, civisque Romanos alios*.⁵ Which is confirmed by the names of those we find appointed in the same author.⁶ This practice, which left the Romans the honour of commanding in chief amongst the allies, and gave the latter only the quality of chief subaltern officers, was the effect of a wise policy, to hold the allies in dependence, and might contribute very much to the success of enterprises, in making the same spirit and conduct actuate the whole army.

I have not spoken of the officers called *Legati*, lieutenants. They commanded in chief under the consul, and received his orders, as the lieutenant generals serve under a marshal of France, or under the eldest lieutenant general, who commands the army in chief. It appears that the consuls chose these lieutenants. Mention is made of this in the earliest times of the republic. In the battle of the lake of Regillus, that is to say, in the 255th year of Rome, T. Herminius the lieutenant distinguished himself in a particular manner.⁷ Fabius Maximus, so well known from his wise conduct against Hannibal, did not disdain to be his son's lieutenant, who had been elected consul.⁸ The latter in that quality was preceded by twelve lictors, who walked one after the other; part of their function was to cause due honour to be paid the consul. Fabius the father, upon his son's going to meet him, having passed the first eleven lictors, continuing on horseback, the consul ordered the twelfth to do his duty. That lictor immediately called out to Fabius with a loud voice to dismount. The venerable old man obeyed directly, and addressing himself to his son, told him: "I had a mind to see whether you knew that you were consul."⁹ It is well known that Scipio Africanus offered to serve as lieutenant under the consul his brother, and thereby determined the senate to give the latter Greece for his province. The reader has no doubt observed, in all that I have hitherto related concerning the Romans, a spirit of

understanding and conduct which evidently shows that the great success of their arms was not the effect of chance, but of the wisdom and ability, which prevailed over every part of their government.

SECTION II.—RAISING OF TROOPS.

THE Lacedæmonians properly speaking, were a people of soldiers. They cultivated neither arts, nor sciences. They applied themselves to neither commerce nor agriculture; leaving the care of their lands entirely to slaves, who were called *Helots*. All their laws, institutions, education, in a word, the whole scheme of their government, tended to making them warriors. This had been the sole view of their legislator, and it may be said, that he succeeded perfectly well in it. Never were there better soldiers, more formed for the fatigues of war, more inured to military exercises, more accustomed to obedience and discipline, more full of courage and intrepidity, more sensible to honour, nor more devoted to glory and the good of their country. They were distinguished into two sorts: the one who were properly called *Spartans*, inhabited the city of Sparta; the others, who were named only *Lacedæmonians*, resided in the country. The former were the flower of the state, and filled all offices. They were almost all of them capable of commanding in chief. The wonderful change occasioned only by one of them (Xanthippus) in the army of the Carthaginians, to whose aid he was sent, has been related; and also in what manner Gylippus, another Spartan, saved Syracuse. Such were the three hundred, who, with Leonidas at their head, arrested for a great while the innumerable army of the Persians, at the straits of Thermopylæ. The number of the Spartans at that time amounted to eight thousand men, or something more.¹⁰ The age (with them) for carrying arms was from thirty to sixty. The elder and younger were left at home to guard the city. They never armed their slaves but upon extreme necessity. At the battle of Platea, the troops furnished by Sparta, amounted to ten thousand men, that is to say, five thousand Lacedæmonians, and as many Spartans. Each of the latter had seven *Helots* to attend him, the number of which in consequence amounted to thirty-five thousand. These were equipped as light armed troops. The Lacedæmonians had very little cavalry, and naval affairs were then entirely unknown to them. It was not till very late, and contrary to the plan of Lycurgus, that they commenced a maritime power, nor were their fleets at any time very numerous.

Athens was much larger and better peopled than Sparta. In the time of Demetrius Phalereus it was computed to have twenty thousand citizens, ten thousand strangers settled in the city, and forty thousand slaves. All the young Athenians were enrolled in a public register at the age of eighteen, and at the same time took a solemn oath, by which they engaged to serve the republic, and to defend it to the utmost of their power upon all occasions. They were bound by this oath to the age of sixty. Each of the ten tribes, that formed the body of the state, furnished a certain number of troops, according to the occasion, either for the sea or land service: for the naval power of Athens became very considerable in process of time. In Thucydides¹¹ we see that the troops of the Athenians, in the beginning of the Peloponnesian war, were thirteen thousand heavy armed foot, sixteen hundred archers, and very near as many horse, which in all might amount to sixteen thousand men: without including sixteen thousand more, who remained to guard the city, citadel, and ports, either citizens under or over the military age, or strangers settled amongst them. The fleet at that time consisted of three hundred galleys. I shall relate in the following article the order observed in them.

The troops both of Sparta and Athens, were not numerous, but full of valour, well disciplined, intrepid, and one might also say, invincible. They were not soldiers raised by chance, often without spirit or home insensible to glory, indifferent to a success little affect

ing them; who had nothing to lose, who made war a mercenary traffic, and sold their lives for a scanty means of subsistence, their pay. They were the chosen troops of the two most warlike states in the world; soldiers determined to conquer or die; who breathed nothing but war and battle; who had nothing in view but glory and the liberty of their country; who in action believed they saw their wives and children, whose safety depended on their arms and valour. Such were the troops raised in Greece, amongst whom desertion, and the punishment of deserters, was never so much as mentioned; for could a soldier be tempted to renounce his family and country for ever!

As much may be said of the Romans, of whom it remains for us to speak. Amongst them, the consuls generally levied the troops: and as new ones were nominated every year, so new levies were also made annually. The age for entering into the army was seventeen years. Only citizens were admitted to serve in it; and none were received under that age but in extraordinary cases and pressing occasions.¹ Once they were obliged to arm slaves: but first, which is very remarkable, they were severally asked, whether they entered themselves freely and of their own accord; because they did not think it proper to place any confidence in soldiers listed by fraud or force. Sometimes they went so far as to arm those, who were confined in the prisons either for debt, or crimes: but this was very seldom practised. The Roman troops therefore were composed only of citizens. Those amongst them who were poor (*proletarii, capite censi*) were not listed. They wanted soldiers, whose fortunes might be answerable to the republic for their zeal in its defence. Most of these soldiers lived in the country, to take care of their estates themselves, and to improve them with their own hands. Those who dwelt at Rome, had each of them their portion of land, which they cultivated in the same manner. So that the whole youth of Rome were accustomed to support the rudest fatigues; to endure sun, rain, and hail; to lie hard and often in the midst of the fields, and in the open air; to live soberly and wisely, and to be contented with a little. They never knew pleasures or luxury, had their members inured to all sorts of labour, and by their residence in the country, had contracted the habit of handling heavy instruments, digging of trenches, and carrying heavy burdens. Equally soldiers, and labourers, these Romans in entering the service only changed their arms and tools. The young people who lived in the city, were not much more tenderly bred than the others. Their continual exercises in the field of Mars, their races on horseback and on foot, always followed by the custom of swimming the Tiber to wash off their sweat, was an excellent apprenticeship for the trade of war. Such soldiers must have been very intrepid. For the less

men are acquainted with pleasures the less they fear death.

Before they proceeded to levy troops, the consuls gave the people notice of the day, upon which all the Romans capable of bearing arms, were to assemble. The day being come, and the people assembled in the capitol, or the field of Mars, the military tribunes drew the tribes by lot, and called them out as they came up. They afterwards made their choice of these citizens, taking them each in his rank, four by four, as near as possible of equal stature, age and strength; and continued to do the same till the four legions were complete. After the troops were levied, every soldier took an oath to the consul or tribunes. By this oath they engaged to assemble at the consul's order, and not to quit the service without his permission to obey the orders of the officers, and to do their utmost to execute them; not to retire either through fear, or to fly from the enemy; and not to quit their rank. This was not a mere formality, nor a ceremony purely external, of no effect with regard to the conduct. It was a very serious act of religion, sometimes attended with terrible imprecations, which made a strong impression upon the mind, was judged absolutely and indispensably necessary, and without which the soldiers could not fight against the enemy. The Greeks as well as Romans made their troops take this oath, or one to the same effect; and they founded their reason for it upon a great principle. They knew, that a private person of himself has no right over the lives of other men: that the prince or state, who have received that power from God, put arms into his hands: that it is only in virtue of this power, with which he is invested by his oath, that he can draw his sword against the enemy; and that, without this power, he makes himself guilty of all the blood he sheds, and commits homicide as often as he kills an enemy. The consul,² who commanded in Macedonia against Perseus, having dismissed a legion, in which the son of Cato the censor served, that young officer, who had nothing in view but to distinguish himself by some action, did not withdraw with the legion, but remained in the camp. His father thereupon wrote immediately to the consul, to desire, if he thought fit to suffer his son to continue in the army, that he would make him take a new oath, because being discharged from the former, he had no right any longer to join in battle against the enemy.³ And he wrote to his son to the same effect, advising him not to fight till he had sworn again. It was in consequence of the same maxim, that Cyrus the Great, exceedingly applauded the action of an officer, who, having raised his arm to strike an enemy, upon hearing the retreat sounded, stooped short, regarding that signal as an order to proceed no farther.⁴ What might not be expected from officers and soldiers so accustomed to obedience, and so full of respect for their general's orders, and the rules of discipline?

The tribunes of the soldiers at Rome, after the oath, told the legions the day and place for the general rendezvous. When they were assembled at the time fixed, the youngest and poorest were made light armed troops; the next in age *Hastati*; the strongest and most vigorous *Principes*; and the oldest soldiers, *Triarii*. Two legions were usually given to each consul. The number of soldiers to a legion were not always the same. At first they were not above three thousand, but were afterwards augmented to four, five, six thousand and something more. The most usual number was four thousand two hundred foot, and three hundred horse. Such it was in the time of Polybius, where I shall fix it.

The legion was divided into three bodies, the *Hastati*, the *Principes*, and the *Triarii*. The reader will be so good as to excuse me the use of these three words, having no others to express their meaning. The two first bodies consisted each of twelve hundred men, and the third of six hundred only. The *Hastati* formed the first line, the *Principes* the second; and

the *Triarii* the third. This last body was composed of the oldest and most experienced soldiers, and at the same time the bravest in the army. The danger must have been very great and urgent before it reached this third line. From whence came the proverbial expression, *Res ad Triarios rediit*. Each of these three bodies were divided into ten parts or *Maniples*, consisting of sixscore in the *Hastati* and *Principes*, and only of sixty in the *Triarii*. Each *Maniple* had two centuries or companies. Anciently, and at its first institution by *Romulus*, the century had an hundred men, from which it took its name. But afterwards it consisted only of sixty in the *Hastati* and *Principes*, and thirty in the *Triarii*. The commanders of these centuries or companies were called *Centurions*. I shall soon explain the distinction of their ranks. Besides these three bodies, there were in each legion light armed troops of different denominations, *Rorarii*, *Accensi*; and in later times the *Velites*. They were also twelve hundred in number. They were not properly a distinct body, but disposed into the three others, according to occasion. Their arms were a sword, a javelin, (*hasta*) a penna, that is a light shield. The youngest and most active soldiers were chosen for this body.

From the time of *Julius Cæsar* no mention is made of the distinct ranks of the *Hastati*, *Principes*, and *Triarii*, though the army was almost always drawn up in three lines. The legion at that time was divided into ten parts, which were called *Cohortes*. Each cohort was a kind of legion abridged. It had sixscore *Hastati*, sixscore *Principes*, sixty *Triarii*, and sixscore light armed men, which made in all four hundred and twenty. That is precisely the tenth part of a legion, consisting of four thousand two hundred foot.

The Roman cavalry was not very numerous: three hundred horse to above four thousand foot. It was divided also into ten companies, (*Alas*) each consisting of thirty men. The horsemen were chosen out of the richest of the citizens; and in the distribution of the Roman people by centuries, of which *Servius Tullius* was the author, they composed the eighteen first centuries. They are the same who are afterwards mentioned in history under the name of Roman knights, and formed a third and middle order between the senate and people. The republic supplied them with horses and subsistence. Till the siege of *Veii*, there were no other cavalry in the Roman armies. At that time those who were qualified by their estates to be admitted into the cavalry, but had not a horse allowed them at the public expense, nor in consequence the rank of knights, offered to serve in the cavalry, supplying themselves with horses. Their offer was accepted. From thenceforth there were two sorts of cavalry in the Roman armies: the one whom the public supplied with horses, *equum publicum*, and these were the true Roman knights; the others who furnished themselves, and served *equo suo*, had not the title or prerogative of the knights. But the horse kept at the public expense was always the constitutive title of the Roman knight; and when the censors degraded a Roman knight, it was by taking his horse from him.

Besides the citizens who formed the legions, there were troops of the allies in the Roman army. These were states of Italy, which the Romans had subjected, and had allowed the use of their laws and government, upon condition of supplying them a certain number of troops. They furnished an equal number of infantry with the Romans, and generally twice as many horse. Amongst the allies, the best made and bravest both of the horse and foot were chosen to be posted about the consul's person: these were called *Æstrordinarii*. The third part of the horse, and the fifth of the foot, were disposed of in this manner; the rest were placed half on the right and half on the left wings,

the Romans generally reserving the centre to themselves.

The Roman army, as we see from what has hitherto been said, consisted solely of citizens and allies. It was not till the sixth year of the second Punic war, that the Romans admitted mercenaries into their troops, which was seldom or ever done in the times of the republic.⁴ These were Celtiberians, who as we find, composed the greatest part of *Cn. Scipio's* army in Spain: an essential fault, which cost him his life, and Rome almost the loss of Spain, and perhaps the ruin of her empire. That example, as *Livy* wisely observes,⁵ ought to have taught Roman generals never to suffer a greater number of strangers than of their own troops in their armies. It is well known, that the revolt of foreign troops more than once brought Carthage to the very brink of ruin. That republic had almost no other soldiers; which was the great defect of its military economy. Such a mixture of foreign and barbarous troops, and their superiority in number, in the Roman armies, were one of the principal causes of the entire ruin of the Roman empire in the West.

I return to the centurions, whose different ranks I am to explain. I have said that in each *Maniple* there were two centuries, and in consequence two centurions. He who commanded the first century of the first *Maniple* of the *Triarii*, called also *Pilani*, was the most considerable of all the centurions, and had a place in the council of war with the consul and principal officers: *Principilus*, or *Primpili Centurio*. He was called *Principilus prior*, to distinguish him from the centurion who commanded the second century of the same *Maniple*, who was called *Principilus posterior*. And the same was done in the other centuries. The centurion who commanded the second century of the same *Maniple* of the *Triarii*, was called *secundipili Centurio*; and so on to the tenth, who was called *decimipili Centurio*. The same order was observed amongst the *Hastati* and *Principes*. The first centurion of the *Principes* was called *primus Princeps*, or *primi principia Centurio*; the second, *secundus Princeps*, and so on to the tenth. In this manner the *Hastati* were called, *primus Hastatus*, *secundus Hastatus*, &c. The centurions were raised from an inferior to a superior degree, not only by seniority, but merit. This distinction of degrees and posts of honour, which were only granted to bravery and real service, excited an incredible emulation amongst the troops, that kept them always in spirit and order. A private soldier became a centurion, and afterwards rising through all the different degrees, might at length arrive at the principal posts. This view, this hope supported them in the midst of the most severe fatigues, animated them, prevented them from committing faults, or taking distaste to the service, and prompted them on to the most arduous and valiant actions. It is in this manner an invincible army is formed.

The officers were very warm in preserving these distinctions and pre-eminences. I shall relate an instance of this very proper to the present subject, that is, the raising of troops, which does great honour to the Roman soldiery, and shows with what moderation and wisdom their sensibility for glory was attended. When the Roman people had resolved upon the war against *Perseus*, the last king of Macedonia, amongst the other measures taken for the success of it, the senate decreed, that the consul, charged with that expedition, should raise as many centurions and veteran soldiers, as he pleased, out of those who did not exceed fifty years of age. Twenty-three centurions who had been *Primpili*,⁶ refused to take arms, unless the same rank were granted them, which they had in the preceding campaigns. The affair was brought before the people. After *Popilius*, who had been

⁶ Qui primos pilos duxerant

consul two years before, had pleaded the cause of the centurions, and the consul his own, one of the centurions, who had appealed to the people, having obtained permission to speak, expressed himself to this effect,—"I am called Sp. Ligustinus, of the Crustumine tribe, descended from the Sabines. My father left me a small field and a cottage, where I was born, brought up, and now live. As soon as I was at age to marry, he gave me his brother's daughter for my wife: she brought me no portion but liberty, chastity, and a fruitfulness sufficient for the richest houses. We have six sons and two daughters, both married. Of my sons, four have taken the robe of manhood, (*toga virilis*), the other two are still infants. I began to bear arms in the consulship of P. Sulpicius and C. Aurelius. I served two years as a private soldier in the army, in Macedonia, against king Philip. The third year T. Quintius Flamininus, to reward me for my services, made me captain of a century in the first Maniple of the Hastati.¹ I served afterwards as a volunteer in Spain, under Cato; and that general, who is so excellent a judge of merit, made me first Maniple of the Hastati.² In the war against the Ætoliæ and king Antiochus, I rose to the same rank amongst the Principes.³ I afterwards made several campaigns, and in a very few years have been four times Primi-pilus;⁴ I have been four and thirty times rewarded by the generals, have received six civic crowns,⁵ have served two and twenty campaigns, and am above fifty years old. Though I had not completed the number of years required by the law, and my age did not discharge me, substituting four of my children in my place, I should deserve to be exempt from the necessity of serving. But by all I have said, I only intend to show the justice of my cause. For the rest, as long as those who levy troops shall judge me capable of bearing arms, I shall not refuse the service. The tribunes shall rank me as they please, that is their business: mine is so to act, that none be ranked above me for valour; as all the generals, under whom I have had the honour to serve, and all my comrades can witness for me, I have hitherto never failed to do. For you, centurions, notwithstanding your appeal, as even during your youth, you have never done any thing contrary to the authority of the magistrates and senate, in my opinion, it would become your age to show yourselves submissive to the senate and consuls, and to think every station honourable, that gives you opportunity to serve the republic."⁶ When he had done speaking, the consul, after having given him the highest praises before the people, left the assembly, and carried the centurion with him into the senate. There he was publicly thanked in the name of that august body, and the military tribunes, as a mark and reward of his valour and zeal, declared him Primi-pilus, that is first officer of the first legion. The other centurions, renouncing their appeal, made no farther difficulty to enter into the service.

Nothing gives us a juster idea of the Roman character than facts of this kind. What a fund of good sense, equity, nobleness, and even greatness of soul does this soldier express! He speaks of his ancient poverty without shame, and of his glorious services without vanity. He is not improperly tenacious of a false point of honour. He modestly defends his rights, and renounces them. He teaches all ages not to contend with their country nor to make the public good give place to their private interest; and is so happy, as to bring over all those in the same case, and associated with himself, into his opinion. How powerful is example! The good disposition of a single person

is sometimes all that is necessary for reducing a multitude to reason.

ARTICLE III.

PREPARATIONS OF WAR.

I shall include in this article what relates to provisions, the pay of soldiers, their arms, and some other cares necessary to be taken by generals before they begin to march.

SECTION I.—OF PROVISIONS.

THE order observed by the Romans in regard to provisions, is better known to us than that of the Greeks: the questor was charged with this care. The ration of corn for each soldier's daily subsistence was very near the same with both people, that is to say a *chenix*, or the eighth part of a Roman bushel; six of which went to the Medimnus. The *chenix* was also the usual daily allowance of a slave. A Roman soldier therefore in the foot had four bushels of wheat a month; which was called *menstruum*: that is to say, thirty-two *chenix*, which was something more than a *chenix* per day. The foot soldier of the allies had as much.

The Roman cavalry soldier received two medimni of wheat, or twelve bushels, a month, because he had two domestics, which amounted to fourscore and sixteen *chenix*, at the rate of something more than a *chenix* per man daily. This horseman had two horses, one for himself, and the other to carry his baggage, &c. For these two horses he received also monthly, seven medimni of barley, which make forty-two bushels, at the rate of one bushel, and a little more than three *chenix* a day for two horses. It was necessary for one of these horsemen to have a certain income, to support the unavoidable expenses he was at during the campaign; hence it sometimes happened that a citizen, though of a patrician family, was obliged by his poverty to serve in the foot.⁷ The horseman of the allies had a medimnus and one-third per month, that is to say, eight bushels of corn, because he had only one horse, and consequently but one servant; and five medimni of barley for that horse, which make thirty bushels, at the rate of one bushel a day. The quantity of wheat for the officers augmented in proportion to their pay, of which we shall speak in the sequel. The portion of corn was sometimes doubled to the soldiers by way of honour and reward, as appears from several passages in Livy.⁸

The public stores of corn, of which the questors, as I have said, had the care, were carried either in ships, in waggons, or by beasts of burthen: but the foot soldiers carried upon their shoulders the quantity of corn distributed to them for a certain time, which very much lessened the number of carriages.

Four bushels of wheat, which was the quantity of each soldier for a month, was a heavy load, without reckoning all that he had to carry besides. It is certain that they were sometimes loaded with four bushels;⁹ but this undoubtedly was on extraordinary occasions, as upon a forced march, or a sudden expedition in the enemy's country. It is highly probable that they generally carried corn only for twelve, fifteen, or twenty days at most; and this weight diminished every day by the daily consumption.

It may be asked why corn, rather than bread was given to the troops. Perhaps this custom had been transferred from the city into the camp; for in the city the public distributions were made in corn, not in bread. Besides which, the weight of corn was lighter

than that of bread. Pliny observes, that the weight of a bushel of wheat in grain augments exactly one third when made into ammunition bread.¹ This is a considerable difference. But it may be conceived to have been a very great trouble for the soldiers to make their own bread, to grind the corn, and afterwards to bake it; though they were divided into messes or chambers, called *Contubernia*, this seems to us a considerable difficulty. To judge rightly of it, however, we must imagine ourselves to live in the same times and countries with them, and consider the customs which then prevailed. The Roman soldier, employed in grinding the corn, and baking the bread, did no more in the camp, than he had done every day in the city in times of peace. His meal supplied him with I know not what variety of dishes. Besides the common bread, he made a kind of soft boiled food of it, very agreeable to the troops: he mingled it with milk, roots, and herbs; and made pancakes of it upon a small plate laid over the fire, or upon the hot ashes, as was anciently the manner of regaling guests, and is still practised throughout the East, where these kind of thin cakes are much preferred to our best bread.

Upon certain occasions bread was distributed amongst the troops.² When L. Quintius Cincinnatus was created dictator against the *Æqui*; he ordered all the youth capable of bearing arms to repair to the Campus Martius before sunset, with bread for five days, each of them with twelve palisades. He commanded such of the citizens as were of a more advanced age to bake bread for the young ones, whilst they were employed in preparing their arms, and providing themselves with stakes. This was chiefly done when they were to embark,³ because there was not so much convenience on board the vessels for baking bread, as on shore. But generally the soldier ground his corn himself, either in little mills, which he carried along with him, or upon stones; after which he baked his bread, not in ovens, but upon a fire, or under the ashes.

To the corn given the troops were added salt, herbs and roots, cheese, and sometimes bacon and pork. Their drink was answerable to this diet. The army very seldom used wine. Cato the elder drank nothing but water, except in great heats, when he only mixed it with vinegar.⁴ The use of this drink was common in the armies; it was called *posca*. Every soldier was obliged to have a bottle of it in his equipage. The emperor Pescennius forbade the use of any other drink in his army: *jussit vinum in expeditione neminem bibere, sed aceto universos esse contentos*.⁵ The expression, *universos*, seems to imply that this prohibition was universal, and extended to the officers as well as soldiers. This drink (*posca*) was very good to quench the thirst immediately, and to correct the badness of the water which they might meet with upon their march. Hippocrates says, that vinegar is refreshing: *ἀναισθητικόν*; for which reason it was given to reapers, and those who worked in the field.⁶ Aristotle tells us; that the Carthaginians, in time of war, abstained from wine.

I have heard say that nothing gives persons in the army, who read the ancient history, so much difficulty, as the article of provisions; which difficulty is not without its foundation. We do not find, that either the Greeks or Romans had the precaution to provide magazines of forage, to lay up provisions; to have a commissary general of stores, or to be followed by a great number of carriages. We are amazed at what is said of the army of Xerxes king of Persia, which amounted, including the train and baggage, to more than five millions of souls; and for the subsistence of which, according to the computation of Herodotus, more than six hundred thousand bushels of wheat a

day were requisite. How was it possible to supply such an army with so enormous a quantity of corn, and other necessaries in proportion? We must remember, that the same Herodotus had taken care to apprise us, that Xerxes had employed himself, during four years, in making preparations for this war. A considerable number of ships laden with corn and other provisions, always coasted near the land army, and were perpetually relieved by others, by the means of which it wanted nothing; the passage from the Hellespont to the Grecian sea, and the island of Salamis being very short, and this expedition not of a year's continuance. But no consequence should be drawn from it, this being an extraordinary case, and one may say the only example of the kind. In the wars of the Greeks against each other, their armies were small, and accustomed to a sober life; they did not remove far from their own country, and almost always returned regularly every winter. So that it is plain, it was not difficult for them to have provisions in abundance, especially the Athenians, who were masters at sea.

As much may be said of the Romans, with whom the care of provisions was infinitely less weighty, than it is at present with most of the nations of Europe. Their armies were much less numerous, and they had a much smaller number of cavalry. A legion of four thousand foot made a body (after our manner) of six or seven battalions; and having only three hundred horse, they formed but two squadrons: so that a consular army of about sixteen thousand foot, including the Romans and their allies, was composed of very near twenty-five of our battalions, and had but eight or nine of our squadrons. In these days, to twenty-five battalions, we have often more than forty squadrons. What a vast difference must this make in the consumption of forage and provisions! They did not want four or five thousand horses for the train of artillery; with bakers and ovens, and a great number of covered wagons, each of four horses. Besides this, the sober manner of life in the army, confined to the mere necessities of life, spared them an infinite multitude of servants, horses, and baggage, which now exhaust our magazines, starve our armies, retard the execution of enterprises, and often render them impracticable. This was not the manner of living only of the soldiers, it was common to them with the officers and generals. Emperors themselves, that is to say, the lords of the universe, Trajan, Adrian,⁷ Pescennius,⁸ Alexander Severus,⁹ Probus, Julian,¹⁰ and many others, not only lived without luxury, but contented themselves with boiled flour or beans, a piece of cheese or bacon, and made it their glory to level themselves, in this respect, with the meanest of the soldiers. It is easy to perceive of what weight such examples were, and how much they contribute to diminish the train of an army, to support the taste of frugality and simplicity amongst the troops, and banish all luxury and idle show from the camp.

It is not without reason, that all the authors I have cited at bottom observe, that those emperors affected to eat in public, and in the sight of the whole army. *In propatulo—Ante pabulum—Apertis pabulinibus—Sub columellis tabernaculi*. This sight attracted, instructed, and consoled the soldier, and ennobled his poor diet to him, in its resemblance to that of his masters: *cunctis videntibus atque gaudentibus*. Let us compare an army of thirty thousand men, composed of such officers and soldiers as the Greeks and Romans had, robust, sober, seasoned, and inured to all sort of fatigues, with our armies of an hundred thousand men, and the pompous train that follows them;

is there a general of the least sense or understanding, that would not prefer the former? It is with such troops the Greeks often checked the whole forces of the East; and the Romans conquered and subjected all other nations. When shall we return to so laudable a custom? Will there not some general of an army arise of superior rank and merit, and at the same time of a genius solid and sensible to true glory, who shall comprehend how much it is for his honour to show himself liberal, generous, and magnificent in sentiments and actions; to bestow his money freely for animating the soldiers, or to assist the officers, whose income does not always suit their birth and merit; and to reduce himself in all other things, I do not say to that simplicity and poverty of the ancient masters of the world, (so sublime a virtue is above our age's force of mind) but to an elegant and noble plainness, which, by the force of example, of great effect in those that govern, may perhaps suggest the same to all our generals, and reform the bad and pernicious taste of the nations?

The care of provisions always has been, and ever will be, highly incumbent upon a good general. Cato's maxim, that the war feeds the war,¹ holds good in plentiful countries; and with regard to small armies: that of the Greeks is more generally true, that the war does not furnish provisions upon command, or at a fixed time. They must be provided, both for the present and the future. One of the principal instructions Cambyzes king of Persia gave his son Cyrus, who afterwards became so glorious, was, not to embark in any expedition, till he had first informed himself whether subsistence were provided for the troops. Paulus Æmilius would not set out for Macedonia, till he had taken care of the transportation of provisions. If Cambyzes and Darius had been as attentive in this point, they had not occasioned the loss of their armies, the first in Ethiopia, and the other in Scythia. That of Alexander had been furnished, if the counsel of Memnon, the most able general of his times, had been followed, which was to lay waste a certain extent of country in Asia Minor, through which that prince was under the necessity of marching. Before the battle of Cannæ, Hannibal had not ten days' provisions: a delay of some weeks had reduced him to the last extremity. Cæsar, before that of Pharsalia, must have perished for want of provisions, if Pompey would, or rather could, have waited ten or twelve days longer. Famine is an enemy, against whom the ability and valour of generals and soldiers can effect nothing, and whom the number of troops serves only to re-enforce.

SECTION II.—PAY OF THE SOLDIERS.

AMONGST the Greeks, the soldiers at first subsisted themselves in the field at their own expense. This was natural; because they were the citizens themselves, united to defend their lands, lives and families, and had a personal interest in the war.

The poverty which Sparta long professed, gives reason to believe, that they did not pay their troops. As long as the Spartans remained in Greece, the republic supplied them with provisions for their public meals, and one habit yearly. Amongst these provisions there was some meat, and a particular officer had the distribution of it. We have seen Agesilaus, to mortify Lysander, who had filled the highest offices of the republic, give him this office, which was of no consideration.² The Spartans, during the war, contented themselves with this allowance, adding to it some little plunder of the country for their better subsistence. After Lysander had opened the way for gold and silver to re-enter Sparta, and had formed a public treasury there, as the Lacedæmonians were often transported into Asia Minor out of their own country, the republic was no doubt obliged to supply them at such times with subsistence by particular aids. We have seen the younger Cyrus, at the request of Lysander, augment the pay of those who served on board the galleys of the Lacedæmonians, from three oboli;³ usually paid them by the Persians, to four, which very

much seduced the seamen from the Athenians. Sparta's strength was not maritime. Though it was washed by the sea upon the east and south, its coasts were not advantageous for navigation, and it had only the port of Gytheum, which was neither very large nor commodious; and indeed its fleets were not very numerous, and had scarce any seamen but strangers. It is not certainly known what pay Sparta gave her land troops, nor whether she supplied either the one or the other with provisions.

Pericles was the first that established a pay for the Athenian soldiers, who till then had served the republic without any. Besides its being very easy to conciliate the people's favour by this method, a more urgent motive obliged him to introduce that change. He made war at a distance in Thrace, in the Chersonesus, in the isles, and in Ionia, during several months together, without molesting or squeezing the allies. It was impossible for citizens, so long absent from their lands, trades, and other means of getting their bread, (for most of them were artisans, as the Lacedæmonians reproached them) to serve without some support. That was a justice the republic owed them, and Pericles acted less the part of a popular magistrate than that of an equitable judge. He only prevented, like a wise politician, the desires of the people in regard to a conduct, which was become necessary.

The usual pay of the mariners was three oboli, which made half a drachma, that is to say, fivepence French; that of the infantry four oboli, or sixpence halfpenny; and that of the cavalry, a drachma, tenpence. Good order had been established for supporting the expenses of the war. The four oldest and primitive tribes of Athens had increased to ten. At that time, for the payment of imposts, six-score citizens were drawn out of each tribe, which made twelve hundred in all; these were divided into four companies of three hundred, and into twenty classes; of which each were again divided into two parts, the one of the richer citizens, the other of such as were less so. The public expenses fell upon the rich and opulent, but upon some more than others. When any urgent and sudden necessity happened, that made it necessary to raise troops, or fit out a fleet, the expenses were divided amongst these citizens in proportion to their states: the rich advanced the money, for the immediate service of the republic, and the others had time allowed to reimburse them, and pay their quota. It appears from the example of Lamachus, who was sent with Athenians to command at the siege of Syracuse, that the Athenian generals served at their own expense.⁴ Plutarch observes, that this Lamachus, who was very poor, not being in a condition to pay any thing towards the expenses of the war, sent an account to the people of what he had laid out upon his own person, in which his daily subsistence, clothes, and even shoes and stockings were included.

The Roman soldiers, in the earlier times of the republic, served without pay or recompense. The wars in those days were not very distant from Rome, and of no long duration. As soon as they were terminated, the soldiers returned home, and took care of their affairs, lands, and families. It was not till four hundred and forty years after the building of Rome, that the senate, upon occasion of the siege of Veii, which was very long, and continued without interruption during the winter, contrary to custom, decreed, without being requested, that the republic should pay the soldiers a fixed sum for the services they should render it.⁵ This decree, the more agreeable to the people as it appeared the pure effect of the senate's liberality occasioned universal joy: and the whole city cried out that they were ready to shed their blood, and sacrifice

² Plut. in Agesil. et Lysand.

³ From fivepence to sixpence halfpenny.

their lives, for so munificent a country. The Roman senate showed the same wisdom upon this occasion, as Pericles had done at Athens. The soldiers at first whispered, and at length openly vented their complaints and murmurs against the length of the siege, which laid them under the necessity of continuing remote from their families during even the winter, and by that long absence occasioned the ruin of their lands, which remained uncultivated, and became incapable of affording them subsistence. These were the real motives of the senate's conduct, who artfully granted that as a favour, which necessity was upon the point of extorting from them by the invectives of some tribune of the people, who would have made it an honour to himself. To answer this pay, a tax was laid upon the citizens in proportion to their estates.¹ The senators set the example, which was followed by all others, notwithstanding the opposition of the tribunes of the people. It appears that none were exempt from it, not even the augurs nor pontiffs.² They evaded paying it during some years, by violent means, and their private authority. The quaestors cited them to appear and see themselves sentenced to pay the whole arrears due for that time. They appealed to the people, who condemned them. When wars were terminated, and considerable spoils had been taken from the enemy, part of them was applied in reimbursing the people the sums that had been raised for carrying them on;³ which is a very admirable, and very uncommon example of public faith. The tax, of which I speak, subsisted till the triumph of Paulus Æmilius over the Macedonians, who brought so great a quantity of riches into the public treasury, that it was thought proper to abolish it for ever.⁴

Though the soldiers usually served only six months, they received pay for the whole year, as appears from several passages in Livy: this was paid them at the end of the campaign; and sometimes from six months to six months. What I have hitherto said of pay, regards only the foot. It was also granted three years after to the horsemen during the same siege of Veii.⁵ The republic used to supply them with horses: they had been so generous, in a pressing necessity of the state, as to declare that they would mount themselves at their own expenses.

The pay of the soldiers was not always the same; it varied according to the times. It was at first only three *asses* a day for the foot: (something more than threepence French;) at that time there were ten *asses* to a *denarius*, which was of the same weight and value as the Grecian drachma. The *denarius* was afterwards raised to sixteen *asses*, in the 536th year of Rome, when Fabius was dictator, at which time the pay rose from three to fivepence.⁶ We ought not to be surprised at the smallness of this pay, when we consider the price of provisions. Polybius informs us, that in his time the bushel of wheat was usually sold for four oboli, or sixpence halfpenny French, and the bushel of barley for half that price.⁷ A bushel of wheat was sufficient for a soldier for eight days. Julius Cæsar, to confirm the soldiers the more strongly in his interest, doubled their pay, and made it amount to tenpence: *Legionibus stipendium in perpetuum duplicavit*.⁸ There were other alterations in it under the emperors: but I do not think it necessary to enter into the detail of them.

Polybius, after having said that the daily pay of the foot was (at first) something more than two oboli, or threepence, adds, that the centurions had four oboli, or sixpence halfpenny, and the horse six oboli, or tenpence. Taking the daily pay at fivepence, which was the usual pay in Polybius's time, the sum total yearly amounted to almost an hundred livres, without including the ration of corn and other provisions, with which they were daily supplied. I take the year as twelve months, each of thirty days, which amounts to three

hundred and sixty days; and it appears that it was sometimes taken in this manner, in regard to the pay of troops. Out of this annual sum, a part was reserved for their clothes, arms, and tents. This Tacitus tells us: *Enimvero militum ipsam gravem, infructuosam; denis in diem assibus animam et corpus estimari. Hinc vestem, arma, tentoria*.⁹ And Polybius adds corn to it: *Non frumentum, non vestem, nec arma gratuita militi fuisse; sed certa horum pretia de stipendio quaestore deducta*.

As to what regards the great officers, consuls, præconsuls, lieutenants, prætors, proprætors, and quaestors, it does not appear, that the republic paid them for their services in any other manner, than by the honour annexed to these offices. She supplied them with the necessary and indispensable disbursements of their commission: robes, tents, horses, mules, and all their military equipage. They had a certain fixed number of slaves, which was not very great, and which they were not at liberty to augment, the law admitting them to take new ones only in the room of such as died. In the provinces through which they passed, they exacted nothing but forage for their horses, and wood for themselves from the allies. And those who piqued themselves upon imitating the entire disinterestedness of the ancients, took nothing from them. Cicero acted in this manner, as he himself tells Atticus in a letter. "The people are at no expense," says he, "either for me, my lieutenants, the quaestor, or any other officer. I accept neither of forage nor wood, though permitted by the Julian law. I only consent that they supply my people with a house and four beds; though they often lodge in tents."¹⁰ It was of the spirit of the Roman government not to suffer their generals or magistrates to be a charge to their allies. It was this conduct, so full of wisdom and humanity, that rendered the authority of the Romans so venerable and amiable; and it may be said with truth, that it contributed more than their arms, to render them masters of the universe.

Livy tells us¹¹ the name of him who first infringed on the Julian law, which regulated the expenses, that might be exacted from the allies; and his example had but too many followers, who in a short time exceeded him. This was L. Posthumius. He was angry with the inhabitants of Præneste, because during some stay he had made there when a private person, they had not treated him with the respect he believed his due. When he was elected consul, he thought of revenge. Being to pass through that city to his province, he let them know, that they must send their principal magistrates to meet him, to provide him lodging in the name, and at the expense of the public, and to have the beasts of burthen that were necessary, in readiness against his departure. Before him, says Livy, no magistrate had ever put the allies to any expense, nor exacted any thing from them. The republic supplied them with mules, tents, and all the carriages necessary to a commander, in order to prevent their taking any thing from the allies. As hospitality was very much honoured and practised in those times, they lodged with their particular friends, and took great pleasure in receiving them at Rome in their turn when they came thither. When they sent lieutenants upon any sudden expedition, the cities through which they passed received orders to supply them with a horse, and nothing more. Though the consul might have had a just cause of complaint against the people of Præneste, he ought not to have used or rather abused the authority of his office, to make them sensible of it.¹² Their silence, whether the effect

If moderation or excessive timidity, prevented them from laying their complaints before the Roman people, which imboldened the magistrates from thenceforth to make that new yoke heavier every day; as if impunity in the first instance had implied the approbation of Rome, and had given them a kind of right to act the same thing. The ancient Romans, far from behaving in this manner, or endeavouring to enrich themselves at the expense of the allies, had no thoughts but of protecting and defending them. They believed themselves sufficiently paid by the glory of their exploits: and often after great victories and illustrious triumphs, died in the arms of poverty, as they had lived. The Grecian and Roman histories abound with examples of this kind.

SECTION III.—ANCIENT ARMS.

It is not my design in this place to describe all the various kinds of arms used by the soldiery of all nations. I shall confine myself principally, according to my custom, to those of the Greeks and Romans, who, in this respect, had many things common to both. The Romans had borrowed the use of most of them from the Tuscans and Greeks, who inhabited Italy. Florus observes, that Tarquinius Priscus, who was descended from the Corinthians, introduced abundance of the Grecian customs at Rome.¹

Armour was anciently of brass, and afterwards of iron. The poets often take the one for the other. The armour of the Greeks, as well as that of most other nations, was, in the earliest ages, the helmet, the cuirass, the shield, the lance, and the sword. They used also the bow and the sling.

The helmet was a defensive armour for the head and neck. It was either of iron or brass, often in the form of the head, open before, and leaving the face uncovered. There were head-pieces that might be let down to cover the face. Upon the top of them they placed figures of animals, lions, leopards, griffins, and others. They adorned them with plumes of feathers, which floated in the wind, and exalted their beauty.

The cuirass was called in Greek *cuassē*, a name which has been adopted into the Latin; that language, however, more frequently uses the word *lorica*. At first cuirasses were made either of iron or brass, in two pieces, as they are in these days: these two pieces were fastened upon the sides by buckles. Alexander left the cuirass only the two pieces which covered the breast, that the fear of being wounded in the back, which had no defence, might prevent the soldiers from flying.² There were cuirasses of so hard a metal, that they were absolutely proof against weapons. Zoilus, an excellent artist in this way, offered two of them to Demetrius, surnamed Poliorcetes.³ To show the excellency of them, he caused a dart to be discharged at them out of the machine, called a catapult, at the distance of only twenty-six paces. How violently soever the dart was shot, it made no impression, and scarce left the least mark upon the cuirass.

Many nations made their cuirasses of flax or wool: these were coats of arms made with many folds, which resisted, or very much broke, the force of blows. That with which Amasis presented the Lacedæmonians, was of wonderful workmanship, adorned with figures of various animals, and embroidered with gold.⁴ What was most surprising in this cuirass, was, that every thread in it, though very small, was composed of three hundred and sixty smaller, which it was not difficult to distinguish.

I have said that the cuirass was called *lorica* in Latin. This word comes from *lorum*, a thong or strap of leather, because made of the skin of beasts. And from the French word *cuir* also *cuirass* is derived. The cuirass of the Roman legions consisted of thongs, with which they were girt from the armpits to the waist. They were also made of leather, covered with plates of iron, in the form of scales, or

of iron rings twisted within one another in the form of chains. These are what we call coats of mail, in Latin, *lorica hamis conserta*, or *hamata*. With the *thorax* of the Greeks the soldier was much less capable of motion, agility, and force: whereas the girts of leather, successively covering each other, left the Roman soldier entire liberty of action, and fitting him like a vest, defended him against darts.

The buckler was a defensive piece of armour, proper to cover the body. There were different sorts of them. The *scutum*, *tegmen*, or *raucis*. The shield was a long buckler, and sometimes of so immoderate a size, that it would cover a man almost from head to foot. Such were those of the Egyptians mentioned by Xenophon. It must have been very large amongst the Lacedæmonians, as they could carry the body of one who had been killed upon it.⁵ From whence came the celebrated injunction of a Spartan mother to her son, when he set out for the war: *ἦ ῥαυ, ἦ ῥαυ ῥαυ*, that is to say, Either bring back this buckler, or return upon it. It was the greatest disgrace to return from battle with the loss of the buckler; undoubtedly, because it seemed to argue, that the soldier had quitted it to fly the more easily, without regard to any thing but saving his life. The reader may remember, that Epaninondas, mortally wounded in the celebrated battle of Mantinea, when he was carried off into his tent, asked immediately with concern and emotion, whether his buckler were safe.

The *clypeus*, *brevis*, is often confounded with the *scutum*. It is, however, certain, that they were different; because in the *cenus*, or muster, made by Servius Tullius, the *clypeus*, is given to those of the first class, and the *scutum* to those of the second. And in fact the *scutum* was long and square: the *clypeus* round and shorter. Both had been used by the Romans in the time of the kings. After the siege of Veii,⁶ the *scutum* became more common. The Macedonians always made use of the *clypeus*, except perhaps in later times.⁷

The buckler of the Roman legions was convex, and in the form of a gutter-tile. According to Polybius it was four feet long, and two and a half broad. These bucklers were anciently made of wood, says Plutarch,⁸ in the Life of Camillus: but this Roman general caused them to be covered with plates of iron, to make them a better defence against blows.

The *parma* was a small round buckler, lighter and shorter than the *scutum*, used by the heavy armed infantry. The light armed foot and the cavalry had this shield. The *pelta* was almost the same thing with that called *cetra*. This buckler was light, in the form of a half moon or semicircle on the top.

THE SWORD. The forms of it were very different and in great number: I shall not amuse the reader with describing them; but content myself with remarking, that there were long swords without points, which served to strike with the edge, as were those of the Gauls, of which we shall soon speak.⁹ There were others shorter and stronger, which had both point and edge, *punctum et cæsim*, such as the Spanish sabres were, which the Romans borrowed from them, and used ever after with advantage. With these sabres they cut off arms, and heads, and made most horrible wounds, at one blow.¹⁰ The manner in which the sword was worn by the ancients, was not always alike. The Romans generally wore it on the right thigh, to leave room, without doubt, for

the moving of the buckler with more freedom, which was on the left side: but, in certain remains of antiquity, we see that their soldiers wore them on the left. It is remarkable, that neither the Greeks nor Romans, the two most warlike nations of the world, wore swords in times of peace; nor was duelling known amongst them.

PIKES or LANCES were used by almost all nations. Those which we see upon the monuments made in the times of the Roman emperors, are about six feet and a half long, including the iron point.

The *Sarissa* of the Macedonians was of so prodigious a length, that one could scarce believe such a weapon could be used, if all the ancients did not agree in this point. They give it a length of sixteen cubits, which makes eight yards.

BOWS and ARROWS are of the most remote antiquity. There were few nations, who did not use them. The Cretans were esteemed excellent archers. We do not find that the Romans used the bow in the earliest times of the republic. They introduced it afterwards; but it appears, that they had scarce any archers, except those of the auxiliary troops.

The SLING was also an instrument of war much used by many nations. The Balearians, or the people of the islands now called Majorca and Minorca, excelled at the sling. They were so attentive in exercising their youth in the use of it, that they did not give them their food in the morning till they had hit a mark.¹ The Balearians were very much employed in the armies of the Carthaginians and Romans, and greatly contributed to the gaining of victories. Livy mentions some cities of Achaia, Egium, Patrae, and Dyme, whose inhabitants were still more dexterous at the sling than the Balearians.² They threw stones farther, and with greater force and certainty, never failing to hit what part of the face they pleased. Their slings discharged the stone with so much force, that neither buckler nor head-piece could resist their impetuosity; and the address of those who managed them was such, according to the scripture, that they could hit a hair, without the stones going either on one side or the other.³ Instead of stones they sometimes charged the sling with balls of lead, which it carried much farther.

JAVELINS. There were two sorts of them, which are: 1. *Velites; hasta*. I call it javelin. It was a kind of dart not unlike an arrow, the wood of which was generally three feet long, and one inch thick. The point was four inches long, and tapered to so fine an end, that it bent at the first stroke in such a manner, as to be useless to the enemy. The light armed troops used it. They carried several javelins in their left hands, with which they held their buckler, in order to have the right free, either to dart javelins at a distance, or to use the sword.⁴ Livy gives each of them seven javelins *⁵ Tereti; Pilum*. I call this the *great javelin*,⁶ because thicker and stronger than the other. The legions darted it at the enemy, before they came to close fight. When they had neither time nor room they threw it upon the ground, and charged the enemy sword in hand. The CAVALRY had almost the same arms as the foot: the helmet, the cuirass, the sword, the lance, and a smaller or lighter buckler.

We see in Homer, that in the Trojan war the most distinguished persons rode on chariots drawn by

good horses, with an esquire or charioteer, in order to charge through battalions with the greater vigour, and to fight with more advantage from them. But people were soon undeceived in these points, by the double inconvenience of being stoppt short by hedges, trenches and ditches; or remaining useless in the midst of the enemy, when the horses were wounded. The use of chariots armed with scythes was afterwards introduced. These were placed in the front of the battle, to begin it by breaking the enemy. This manner of fighting was at first in great use amongst all the people of the East, and was believed decisive with regard to victory. The people who excelled most in the art of war, as the Greeks and Romans, did not adopt it; finding by experience, that the cries of the troops attacked in this manner, the discharges of the light armed soldiers, and still more than either, the unevenness of the ground, rendered all the equipage of these chariots ineffectual, and often even pernicious to those who employed them.

The nations who had elephants amongst them, as those of the East and Africa, believed that those animals, no less docile than terrible from their force and enormous size, might be of great use to them in battles. Accordingly, when instructed and guided with art, they did them great service. They carried their guides upon their backs, and were usually placed in the front of their armies. Advancing from thence, they broke the closest ranks with an impetuosity that nothing could resist, crushed whole battalions with their vast weight, and diffused universal terror and disorder. To improve their effect, towers were placed on their backs, which were like portable bastions from the tops of which chosen troops discharged darts and javelins upon the enemy, and completed their defeat. This custom subsisted long amongst the nations I speak of, from whom it passed to other people, who had learned by fatal experience, how capable those animals were of contributing to victories. Alexander having conquered the nations subject to the Persian empire, and afterwards India, began to make use of elephants in his expeditions; and his successors, in their wars with each other, rendered the use of them very common. Pyrrhus transported some into Italy; and the Romans learnt of that general, and afterwards of Hannibal, the advantage to be made of them in a day of battle. It was in the war against Philip, that they used them for the first time.⁷ But this advantage, great as it appeared, was balanced by inconveniences that at length made them disapprove of the use of elephants. The generals, instructed by experience, rendered the attack of those beasts ineffectual, by ordering their troops to open and give them free passage. Besides this, the frightful cries of the enemy's army, joined with a hail of darts and stones, discharged on all sides by the archers and slingers, put them into confusion, made them mad and furious, and often obliged them to turn upon their own troops, and commit the havoc amongst them intended against the enemy. At such times he who guided the elephant, was obliged, for avoiding that misfortune, to plunge an iron spike into their heads, upon which they fell dead immediately.⁸

Camels, besides being employed to carry, were also of service in battles. They had this convenience in them, that in dry and sandy countries they could support thirst with ease.⁹ Cyrus made great use of them in the battle against Croesus, and they contributed very much to the victory he gained over him, because the horses of the latter, not being able to support the smell of them, were immediately put into disorder. We find in Livy,¹⁰ the Arabian archers mounted on camels with swords of six feet long, to reach the enemy from the high backs of those animals. Sometimes, two Arabian archers sat back to

back upon the same camel, in order to be able, even in flying, to discharge their darts and arrows against their pursuers.

Neither the elephants nor camels were of any service in armies, in comparison with that of the horse. That animal seems designed by nature for battles. There is something martial in his air, his chest, his pace, as Job so well observes in his admirable description of him.¹ In many countries, the horse as well as horsenien were entirely covered with armour of iron; these were called *calaphracti equites*. But what is hard for us to comprehend, amongst all the ancient nations, the horse had neither stirrups nor saddle; and the riders never used boots. Education, exercise, and habit, had accustomed them not to need those aids; and even not to perceive that there was any occasion for them. There were some horsenien, such as the Numidians, who did not know so much as the use of bridles to guide their horses, and who, notwithstanding, by their voice only, or the use of the heel or spur, made them advance, fall back, stop, turn to the right or left; in a word, perform all the evolutions of the best disciplined cavalry. Sometimes, having two horses, they leaped from one to the other even in the heat of battle, to ease the first when fatigued. These Numidians, as well as the Parthians, were never more terrible, than when they seemed to fly through fear and cowardice. For then, facing suddenly and unexpectedly about, they discharged their darts or arrows upon the enemy, and fell upon them with more impetuosity than ever.

I have related hitherto what I found most important concerning the arms of the ancients. In all times the great captains had a particular attention to the armour of their troops. They did not care whether they glittered or not with gold and silver; they left such idle ornaments to soft and effeminate nations, like the Persians. They preferred a more lively and martial brightness, one that might inspire terror, such as was that of steel and brass.² Nor was it only the brightness, but the quality of the arms in particular, to which great generals were attentive. The ability of Cyrus the Great, was justly admired,³ who, upon his arrival at the camp of his uncle Cyaxares, changed the arms of his troops. Most of them used almost only the bow and javelin, and consequently fought only at a distance; a kind of fight, wherein the greater number had easily the superiority. He armed them with bucklers, cuirasses, and swords or axes, in order to their being in a condition to come to close fight immediately with the enemy, whose multitude thereby became useless. Iphicrates, the celebrated general of the Athenians, made several useful alterations in the armour of the soldiers, in regard to their shields, pikes, swords, and cuirasses. Philopœnen also, as I have observed in its place, changed the armour of the Achæans, which before him was very defective;⁴ and that alteration did not a little contribute to render them superior to all their enemies. There are many examples of this kind, which it would be too long to repeat here, that show, of what advantage to an army is the ability of a general, when applied to reforming whatever may be defective, and how dangerous it is tenaciously to retain customs established by length of time, without daring to make any alterations in them, however judicious and necessary. No people were ever more remote from this scrupulous attachment than the Romans. Having attentively studied what their neighbours and enemies practised, they well knew how to apply it to their own advantage; and by the different alterations they introduced in their armies, as well with regard to their armour, as whatever else related to military affairs, they rendered them invincible.

ARTICLE IV.

SEC. I.—PRELIMINARY CARES OF THE GENERAL.

ALL that we have seen hitherto, the raising of

troops, their pay, their arms, their provisions, is in a manner only the mechanism of war. There are still more important cares that depend upon the general's ability and experience.

Those who have distinguished themselves most in the knowledge of military affairs, have always believed it particularly incumbent on the general to settle the plan of the war; to examine whether it is most necessary to act upon the offensive or defensive; to concert his measures for the one or the other of these purposes; to have an exact knowledge of the country into which he marches his army; to know the number and quality of the enemy's troops; to penetrate, if possible, his designs; to take proper measures at distance for disconcerting them; to foresee all the events that may happen, in order to be prepared for them; and to keep all his resolutions so well disguised and so secret, that no part of them escapes him and takes air. In this last point, perhaps, nothing was ever better observed than amongst us, in the war lately terminated, (1736,) which is not a little for the honour of the ministry and officers.

We have seen in the war against Perseus, the wise precautions taken by Paulus Æmilius,⁵ before opening the campaign, that nothing might be wanting to the success of it; which precautions were the principal cause of his conquering that prince. It is upon these preliminary provisions the success of enterprises depends. And it was by adopting them that Cyrus commenced his career, as soon as he arrived in the camp of his uncle Cyaxares, who had not thought of taking any such measure.

It is amazing to consider the orders given by the same Cyrus, before he marched against the enemy, and the immense detail into which he entered with respect to 'the necessities of the army.' He was to march fifteen days through countries that had been destroyed, and in which there were neither provisions nor forage: he ordered enough of both for twenty days to be carried, and that the soldiers, instead of loading themselves with baggage, should exchange that burden for an equal one of provisions; without troubling themselves about beds or coverlets for sleeping, the want of which their fatigue would supply. They were accustomed to drink wine; and to prevent the sudden change of their drink from making them sick, he ordered them to carry a certain quantity with them, and to use themselves by degrees to do without it, and to content themselves with water. He advised them also to carry salt provisions along with them, handmills for grinding corn, and medicines for the sick; to put into every carriage a sickle and a mattock, and upon every beast of burden an axe and a scythe, and to take care to supply themselves with a thousand other necessities. He carried also along with him smiths, shoemakers, and other workmen, with all manner of tools used in their trades. For the rest, he declared publicly, that whoever would charge himself with the care of sending provisions to the camp, should be honoured and rewarded by himself and his friends; and even if they wanted money for that service, provided they would give security, and engage to follow the army he would assist them with it. A detail of this kind, part of which I have omitted, is not unworthy of a general, nor a great prince, as Cyrus was.

We see in Pericles's harangue to the Athenians,⁶ in regard to the Peloponnesian war, how much that great man, who administered the affairs of his republic with so much wisdom, excelled in the science of war, and how vast and profound his foresight was. He regulated the plan of the war, not only for one campaign, but for its whole duration, and settled it upon the perfect knowledge he had himself, and imparted to the Athenians, of the Lacedæmonian forces. He determined them to shut themselves up within their walls, and to suffer their lands to be ruined, rather than hazard a battle against an army much more numerous than their own; whilst, on his side, he went with a fleet to ravage the whole coast of Peloponnesus. He recommended to them espe-

cially not to form any enterprises abroad, and not to think of any new conquests, upon which conditions he assured them of victory. It was from despising this advice, and carrying their arms into Sicily, that the Athenians were ruined.

Was there ever any thing more wise or better concerted than Hannibal's plan of attacking the Romans in their own country? He proposed the same design to Antiochus, which would have distressed the Romans exceedingly, had he followed it: but that prince had neither sufficient extent of mind, nor discernment enough to comprehend its whole advantage and wisdom. Alexander had perhaps been stopped short, reduced by famine, and obliged to retreat into his own kingdom, if Darius, as we have observed above, had destroyed the country through which his army was to pass, and had made a powerful diversion in Macedonia, as Memnon, one of his generals, and one of the greatest captains of antiquity, advised him. To form such plans is not to make war from day to day, and in a manner by chance, and to wait till events determine us; but to act like a great man, and with a thorough knowledge of the matter we have in hand. Enterprises concerted with so much wisdom, seldom fail of success.¹

SECTION II.—DEPARTURE AND MARCH OF THE TROOPS.

THE beginning and end of the war, the departure and return of the troops, were always solemnized by public acts of religion and sacrifices.² The reader undoubtedly remembers, that in the advice Cambyse, king of the Persians, gave his son Cyrus, when he set out for his first campaign, he insisted principally upon the necessity of not undertaking any action great or small, either for himself or others, without having first consulted the gods, and offered sacrifices to them. He observed this counsel with surprising exactness.³ When he arrived upon the frontiers of Persia, he sacrificed victims to the gods of the country, and to those of Media, as soon as he entered it, to implore their aid, and that they would be propitious to him. His historian is not ashamed to repeat in many places, that this prince took great care, upon all occasions, to discharge this duty upon which he made the whole success of his enterprises depend. Xenophon himself, a warrior and philosopher, never engaged in any important affair, without having first consulted the gods. All Homer's heroes appear very religious, and have recourse to the divinity on all occasions and dangers. Alexander the Great did not quit Europe and enter Asia, without having first invoked the divinities of both. Hannibal, before he engaged in the war against the Romans, went expressly to Cadiz, to acquit himself of the vows he had made to Hercules, and to implore his protection by new ones, for the success of the expedition he had undertaken.⁴

The Greeks were very religious observers of this duty. Their armies never took the field without being attended by aruspices, sacrificers, and other interpreters of the will of the gods, of which they believed it their duty to be assured before they hazarded a battle.

But of all the nations of the world, the Romans were the most exact in their recourse to the divinity, either in the beginning of their wars, in the great dangers to which they found themselves sometimes exposed, or after their victories; and ascribed the success of their arms solely to the care they had taken to render this homage to their gods.⁵

They were mistaken in the object, not the principle; and this universal custom of all nations shows, that they always acknowledged a supreme and Al-

mighty Being, who governed the world, and disposed at his will of all events, and in particular of those of war, attentive to the prayers and vows addressed to him.

MARCH OF THE ARMY.

When every thing was ready, and the army assembled at the time and place fixed, it began to march. To avoid prolixity, I shall speak only of the Romans in this place: from whence the reader may form a judgment of other nations.

It is amazing to consider the loads under which the soldiers marched. Besides their arms, says Cicero,⁶ the buckler, the sword, the helmet, (the javelins, or half-pikes, might be added,) besides these arms which they considered no more as a burden than their limbs for they said their arms were in a manner a soldier's members; they carried provisions for several days, and sometimes for three weeks or a month, with all the implements for dressing their food, and each a stake or palisade of considerable weight. Vegetius⁷ recommends the exercising young soldiers, in carrying a weight of above five and forty pounds, a day's march in the usual pace of the army, in order to their being accustomed to it against times of occasion and necessity. And this was the practice of the ancient Roman soldiers.⁸

The usual march of the Roman army, according to Vegetius,⁹ was twenty thousand paces a-day;¹⁰ that is to say, at least six leagues, allowing three thousand paces to each league. Three times a month, to accustom the soldiers to it, the foot as well as horse were obliged to take this march. By an exact calculation of what Cæsar relates of a sudden march, which he made at the time he besieged Gergovia, we find that in four and twenty hours he marched fifty thousand paces.¹¹ This he did with the utmost expedition. In reducing it to less than half, it makes the usual day's march of six leagues. Xenophon¹² regularly sets down the days' marches of the troops, who returned into Greece after the death of the younger Cyrus, and made the fine retreat, so much celebrated in history. All these marches, one with the other, were six parasangas,¹³ that is to say, more than six of our leagues. The usual marches of our armies are far from being so long; and it is not easy to comprehend how the ancients made them so. Their measures have varied very much, which perhaps is the reason of this difference between their day's march and ours.

The consul and even the dictator, marched at the head of the legions on foot, because the greatest force of the Romans consisting in the infantry, they believed it necessary for the general to remain always at the head of the battalions. But as age or infirmity might disable the dictator to support that fatigue, before he set out for the army, he applied to the people to demand a dispensation from observing that

• *Nostri exercitus primum unde nomen habeant, vides Deinde qui labor, quantus agminis! ferro plus dimidiatis mensis cibaria, ferre si quid ad usum velint, ferro vallum: nam scutum, gladium, galeam in onere nostri milites non plus numerant quam humeros, lacertos, manus. Arma enim, membra militis esse ducunt: que quidem ita portant aptè, ut, si usus foret, abjectis oneribus, expeditis armis, ut membris, pugnare possint. Cic. *Tuscul.* l. ii. n. 37.*

was established by ancient custom, and permission to ride on horseback.¹ Suetonius represents Julius Cæsar as indefatigable, marching at the head of his armies, sometimes on horseback, but generally on foot, and bareheaded, however the sun shined, or how hard soever it rained.² Pliny praises Trajan, for having accustomed himself early to march on foot at the head of the legions under his command; without ever using either chariot or horse, though he had immense countries to traverse; and he always did the same after he became emperor.³ Cæsar, of whom I spoke just before, either swam or forded rivers. It was in order to be able to do the same, and so support all the fatigues of war, that the young Romans exercised themselves in horse and foot races, and all covered with sweat after such violent exercises, threw themselves into the Tiber, and swam over it. Care was taken to form those for several years that were to recruit the legions, and had not served before. For this purpose they made choice of the most healthy, the most active, and the most robust. They were exercised by fatigues, marches, and toils, which were gradually increased; and such as experience showed to be unequal to this discipline were dismissed, and only tried soldiers retained, who formed a body of chosen troops. It was this manly, hard, and robust education, which at Rome, and long before at Sparta, and in Persia, in the time of Cyrus, made the soldiery indefatigable and invincible.

SECTION III.—CONSTRUCTION AND FORTIFICATION OF THE CAMP.

I suppose the army upon a march. Though it were still in the territory of Rome, and had only one night to pass in a place, it encamped in all the forms, with no other difference, than that the camp was less fortified there perhaps than in the enemy's country. From thence comes this manner of speaking so usual in Latin authors, *primis castris, secundis castris*, &c. at the first camp, at the second camp: to signify the first or second day's march; because, however short their stay was to be in a place, they never failed to form a camp in it. They called it *stativa*, when they were to stay several days in it: *ibi plures dies stativa habuit*.⁴

This exactness of the Romans in their own country, sufficiently intimates their strictness when in sight of, or near, the enemy. It was a law amongst them, established by long custom, never to hazard a battle, till they had finished their camp. We have seen Paulus Æmilius suspend and arrest the ardour of his whole army to attack Perseus, for no other reason, but because they had not formed their camp. In the war with the Gauls, the commanders of the Roman army were reproached with having omitted this wise precaution, and the loss of the battle of Allia was partly attributed to it.⁵ The success of arms being uncertain, the Romans wisely took care to secure themselves a retreat in case of the worst. The fortified camp put a stop to the enemy's victory, received the troops that retired in safety, enabled them to renew the battle with more success, and prevented their being entirely routed; whereas without the refuge of a camp, an army, though composed of good troops, was exposed to a final defeat, and to being inevitably cut to pieces.

The camp was of a square form, contrary to the custom of the Greeks, who made theirs round. The citizens and allies divided the work equally between them.⁶ If the enemy were near, part of the troops

continued under arms, whilst the rest were employed in throwing up the intrenchments. They began by digging trenches of greater or less depth, according to the occasion. They were at least eight feet broad by six deep: but they were often twelve feet in breadth, and sometimes more, to fifteen or twenty. Of the earth dug out of the fosse, and thrown up on the side of the camp, they formed the parapet or breastwork, and to make it the firmer, they mingled it with turf cut in a certain size and form. Upon the brow of this parapet the palisades were planted. I shall repeat all that Polybius remarks upon these stakes, with which the intrenchment of the camp was strengthened, though I have already done it elsewhere, because this is the proper place for it. He speaks of them, upon the occasion of the order given by Q. Flaminius to his troops, to cut stakes against they should have occasion to use them.

This custom, says Polybius,⁷ which is easy to put in practice amongst the Romans, passes for impossible with the Greeks. They can hardly support their own weight upon their marches: whilst the Romans, notwithstanding the buckler, which hangs at their shoulders, and the javelins which they carry in their hands, load themselves also with stakes or palisades, which are very different from those of the Greeks. With the latter, those are best which have many strong branches at the trunk. The Romans, on the contrary, leave only three or four at most upon it, and that only on one side. In this manner a man can carry two or three bound together, and much more use may be made of them. Those of the Greeks are more easily pulled up. If the stake be fixed by itself, when its branches are strong, and in great number, two or three soldiers will easily pull it away; and thereby an opening is made for the enemy, without reckoning that the neighbouring stakes will be loosened, because their branches are too short to be interwoven with each other. But this is not the case with the Romans. The branches of their palisades are so strongly inserted into each other, that it is hard to distinguish the stake they belong to. And it is as little practicable to thrust the hand through these branches to pull up the palisades; because being well fastened and twisted together, they leave no opening, and are carefully sharpened at their ends. Even though they could be taken hold of, it would not be easy to pull them out of the ground, and that for two reasons. The first is, because they are driven in so deep, that they cannot be moved; and the second, because their branches are interwoven with each other in such a manner, that one cannot be stirred without several more. Two or three men might unite their strength in vain to draw one of them out, which, however, if they effected, by drawing it a great while to and fro till it was loose, the opening would be almost imperceptible. These stakes therefore have three advantages. They are every where to be had; they are easy to carry; and are a secure barrier to a camp, because very difficult to break through. In my opinion (says Polybius, in the conclusion he deduces from all he says) there is nothing practised by the Romans in war, more worthy of being imitated.

The form, dimension, and distribution of the different parts of the camp were always the same; so that the Romans knew immediately where their tents were to be pitched. The Greeks differed from them in this. When they were to encamp, they always chose the place that was strongest by its situation, as well to spare themselves the trouble of running a trench round their camp, as because they were convinced, that the fortifications of nature were far more secure than those of art. From thence arose the necessity of giving their camps all sorts of forms, according to the nature of places, and to vary the different parts of them; which occasioned such a confusion, as made it difficult for the soldier to know exactly either his own quarters, or that of his corps.

Cæsar—ægula latera castrorum singulis attribuit legio-

The form and distribution of the Roman camp admits of great difficulties, and has occasioned great disputes amongst the learned. I shall repeat in this place what Polybius has said upon this head, and shall endeavour to explain him in some places, and to supply what he has omitted in others. He speaks of a consular army,¹ which, in his time, consisted in the first place of two Roman legions, each containing four thousand two hundred foot, and three hundred horse; and in the second, of the troops of the allies, a like number of infantry, and generally double the number of cavalry, which made in all, Romans and allies, eighteen thousand six hundred men. For the better conceiving the disposition of this camp, we should remember what has been said above upon the different parts into which the Roman legion was divided.

SECTION IV.—DISPOSITION OF THE ROMAN CAMP ACCORDING TO POLYBIUS.

AFTER the place for the camp is marked out, says Polybius, which is always chosen for its convenience in respect to water and forage, a part of it is allotted for the general's tent, which I shall otherwise call the Prætorium, upon an higher ground than the rest, from whence he can see with the greater ease all that passes, and despatch the necessary orders. A flag was generally planted on the ground where this tent was to be pitched, round which a square space was marked out in such manner, that the four sides were an hundred feet distant from the flag, so that the ground occupied by the consul was about four acres. Near his tent were erected the altar, on which sacrifices were offered, and the tribunal for dispensing justice.

The consul commands two legions, of which each has six tribunes, which make twelve in all. Their tents are placed in a right line parallel to the front of the Prætorium, at the distance of fifty feet. In this space of fifty feet are the horses, beasts of burden, and the whole equipage of the tribunes. Their tents are pitched in such a manner, that they have the Prætorium in the rear, and in the front all the rest of the camp. The tents of the tribunes, at equal distances from each other, take up the whole breadth of the ground, upon which the legions are encamped. Between the tents of the legions and tribunes, a space of an hundred feet in breadth parallel to those of the tribunes is left, which forms a street, called *Principia*, equal in length to the breadth of the camp, which divides the whole camp into the upper and lower parts. Beyond this street were placed the tents of the legions. The space which they occupy is divided in the midst into two equal parts, by a street of fifty feet broad, which extended the whole length of the camp. On each side on the same line were the quarters of the horse, the *Triarii*, the *Principes*, and *Hastarii*. Between the *Triarii* and the *Principes*, there is on both sides a street, of the same breadth with that in the middle, which, as well as the latter, runs the whole length of this space. It is also cut by a cross street called the fifth, *Quintana*, because it opened beyond the fifth manipule.

As each of the four bodies I have just named, was divided into ten parts; the cavalry into ten companies, *Turmas*, each of thirty men; the three bodies into ten maniples, of an hundred and twenty each, except those of the *Triarii*, which consisted of only half that number; the quarters of the horse, *Triarii*, *Principes*, and *Hastarii*, were severally divided, each into ten squares, along the space assigned the legions as above described. Each of these squares were an hundred feet every way, except those of the *Triarii*, which were only fifty feet broad, upon account of their smaller number, which we have already mentioned.

The tents, whether of the cavalry or infantry, are disposed in the same manner, with their fronts towards the streets. The cavalry of the two legions are first quartered facing each other, and separated by a space of fifty feet, which is the breadth of the street in the middle. This cavalry making only six hundred men, each square contained thirty horse, on

each side, which are the tenth part of three hundred. On the side of the cavalry, the *Triarii* are quartered, a manipule behind a troop of horse, both in the same form. They join as to the ground, but the *Triarii* turn their backs upon the horse, and here each manipule is only half as broad as long, because the *Triarii* are less in number than the other kind of troops.

At fifty feet distance, and fronting the *Triarii*, a space which forms a street on each side in length, the *Principes* are placed along the side of the interval. Behind the *Principes* the *Hastarii* were quartered, joining as to the ground, but fronting a different way.

Thus far we have described the quarters of the two Roman legions, that formed the consul's army, and consisted of eight thousand four hundred foot, and six hundred horse. It remains for us to dispose of the allies. Their infantry were equal to that of the Romans, and their cavalry twice their number. In removing, for the extraordinaries or *Evocati*, the fifth part of the infantry, that is to say, sixteen hundred foot, and a third of the cavalry, or four hundred men, there remained in the whole seven thousand five hundred and twenty men, horse and foot, to quarter.

At fifty feet distance, and facing the Roman *Hastarii*, a space which formed a new street on each side, the cavalry of the allies encamp upon a breadth of an hundred and thirty-three feet, and something more. Behind that cavalry, and on the same line, encamp their infantry upon a breadth of two hundred feet. At the head of every manipule on each side are the tents of the centurions. The same, no doubt, should be said of the tents of the captains of the horse, though Polybius does not mention them. Part of the remaining space behind the tents of the tribunes, and on the two sides of the Prætorium or consul's tent, was employed for a market, and the rest for the quæstor, the treasury, and the ammunition.

Upon the right and left, on the sides and beyond the last tent of the tribunes, facing the Prætorium on a right line, were the quarters of the extraordinary cavalry, *Evocatorum*; and of the other volunteer horse, *Selectorum*.² All this cavalry faced on one side towards the place of the quæstor, and on the other towards the market. It did not only encamp near the consul's person, but often attended him upon marches; in a word, it was generally at hand to execute the orders of the consul and the quæstor. The Roman infantry, extraordinary and volunteers, are in the rear of the horse last spoken of, and upon the same line, and do the same service for the consul and quæstor.

Above this horse and foot is a street an hundred feet broad, which runs the whole breadth of the camp. On the other side of this space are the quarters of the extraordinary horse of the allies facing the market, the Prætorium, and the treasury, or place of the quæstor. The extraordinary foot of the allies were encamped behind their horse, and faced the intrenchment and the extremity of the camp. The void spaces that remained on both sides were allotted to strangers and allies, who came after the rest.

All things thus disposed, we see the camp forms a square, and that as well by the distribution of the streets as the whole disposition, it very much resembles a city. And this was the soldiers' idea of it, who considered the camp as their country, and the tents as their houses. These tents were generally made of skins; from whence came the expression much used by authors, *sub pellibus habitare*. The soldiers joined together in messes, which they called *Contubernia*. These generally consisted of eight or ten men.

From the intrenchment to the tents is a space of two hundred feet; and that interval is of very great use, either for the entrance or departure of the legions. For each body of troops advances into that

² These two corps were horse, either chosen by the consul themselves, or such as voluntarily attended them. This gave birth to the Prætorian cohorts or bands under the emperors. The *Selecti* or *Ablecti*, whether horse or foot, were drawn out of the allies. The *Evocati* were volunteers, old soldiers, either citizens or allies.

space by the street before it, so that the troops not marching in the same way, were not in danger of crowding and breaking each other's ranks. Besides which, the cattle, and whatever is taken from the enemy, is placed there, where a guard is kept during the night. Another considerable advantage of it is, that in attacks by night, neither fire nor dart can be thrown to them; or if that happens, it is very seldom, and can do no great execution; the soldiers being at so great a distance, and under the cover of their tents. If the camp of Syphax and Asdrubal in Africa had been enclosed within so great a space, Scipio had never been able to have burnt it in one night.

By the exact calculation of the camp, as Polybius describes it, each front contained 1666 feet, which make 672 yards; so that the whole superficies of the camp was 4,064,256 feet, or 225,792 square yards. When the number of the troops was greater, the measure and extent of the camp was augmented without changing its form. When the consul Livius Salinator received his colleague Nero into his camp, the extent of the camp was not enlarged; the troops were only made to take up less ground, because those of Nero were not to stay long; which was what deceived Asdrubal. *Castra nihil aucta errorem faciebant.*

Polybius does not tell us, where the lieutenants, *Legati*, who held the first rank after the consul, or the pretors and other officers, encamped. It is very likely that they were not far from the consul, with whom they had a continual intercourse as well as the tribunes. Nor is he more express upon the gates of the camp, which were four, according to Livy. *Ad quatuor portas ex ercitu instruit, ut, signo dato, ex omnibus eruptionem facerent.*¹ He afterwards calls them, the *Extraordinary*, the *Right principle*, the *Left principle*, and the *Quæstorian*. They have also other names, about which it is not a little difficult to reconcile authors. It is believed that the *Extraordinary* gate was called so, because near the place where the extraordinary troops encamped; and that it was the same as the *Pretorian*, which took its name from its nearness to the *Pretorium*. The gate opposite to this, at the other extremity of the camp, was called *porta Decumana*, because near the ten maniples of each legion: and very probably is the same with the *Quæstorian*, mentioned by Livy in the place above cited. I shall not expatiate any farther upon these gates, which would require long dissertations. But we cannot sufficiently admire the order, disposition, and symmetry of all the parts of the Roman camp, which resembles rather a city than a camp: the tent of the general placed on an eminence, in the midst of the altars and statues of the gods, which seemed to render the Divinity present amongst them, and surrounded on all sides with the principal officers, always ready to receive and execute his orders. Four great streets, which lead to the four gates of the camp, with abundance of other streets on each side of them, all parallel to each other. An infinity of tents, placed in a line at equal distances, and with perfect symmetry. And this camp so vast and extensive, and so diversified in its parts, which seemed to have cost infinite time and pains, was often the work of an hour or two, as if it had rose of itself out of the earth. All this, however, is nothing in comparison with what, in a manner, constitutes the soul of the camp; I mean the wisdom of command, the attention and vigilance of the general, the perfect submission of the subaltern officers, the entire obedience of the soldiers to the orders of their chiefs, and the military discipline, observed with unexampled strictness and severity: qualities which ranked the Roman people above all nations, and at length made them their masters. The Roman manner of encamping must have been very excellent and perfect, as they observed it inviolably for so many ages, and with so great success, and there is almost no example of their camp's being forced by their enemies.

This custom of fortifying camps regularly, which

the Romans considered as one of the most essential parts of military knowledge and discipline, has been disused by the moderns. The number of troops of which armies are now composed, and that occupies a considerable extent of ground, seems to render this work impracticable, which would become infinite. The people of Asia, whose armies were far more numerous than ours, never failed to enclose their camp, at least with very deep trenches, though they stayed only a day or a night; and often fortified it with good palisades.² Xenophon observes, that it was the great number of their troops itself, that rendered this practice easy.

It is agreed, that no people ever carried the knowledge and practice of the art of war to an higher degree of perfection than the Romans; but it must be confessed, that their principal excellency lay in the art of encamping, and in drawing up armies in battle array. And this is what Polybius admires most in it, who was a good judge of military affairs, and had been long a witness of the excellent discipline observed amongst the Roman troops. When Philip, the father of Perseus, and before him Pyrrhus, prejudiced by their esteem for the Greeks, and full of contempt for all other nations, whom they treated as Barbarians, saw for the first time the distribution and order of the Roman camp, they cried out with surprise and admiration: *Sure that cannot be the disposition of Barbarians!*

But what ought to surprise us most, and what it is even difficult to conceive, so remote are our manners from it, is the character of this people, inured to the rudest toils, and invincible to the severest fatigues. We see here the effects of a good education, and wholesome habits contracted from the most early youth. Most of these soldiers, though Roman citizens, had estates, and cultivated their inheritances with their own hands. In times of peace they exercised themselves in the most painful labours. Their hands, accustomed daily to wield the spade, turn up the land, and guide an heavy plough, only changed exercises, and even found rest in those imposed upon them by the military discipline; as the Spartans are said never to have been more at their ease than in the army and camp, so hard and austere was their manner of living at all other times. Who could believe, that there was nothing, even to cleanliness, of which particular care was not taken in the Roman camp. As the great street situated in the front of the *Pretorium*, was much frequented by the officers and soldiers, who passed through it to receive and carry orders, and upon their other occasions, and thereby exposed to much dirt; a number of soldiers were appointed to sweep and clean it every day in winter, and to water it in summer, to prevent the dust.

SECTION V.—EMPLOYMENTS AND EXERCISES OF THE ROMAN SOLDIERS AND OFFICERS IN THEIR CAMP.

THE camp being prepared in the manner we have described, the tribunes assembled to take the oath of all the men in the legions, as well free as slaves. All swear in their turn; and their oath consists in a promise not to steal any thing in the camp, and to bring whatever they should find in it to the tribunes. The soldiers had before taken a like oath, at the time they were listed: I deferred repeating it till now, that being joined with the other, its force might be better conceived. By this first oath "the soldier engages to steal nothing alone or in concert with others, either in the army or within ten thousand paces of it; and to carry to the consul, or to restore to its lawful owner, whatever he may find exceeding the value of one sestertius, that is to say, about five farthings, excepting certain things mentioned in the oath."³ What is said here of ten thousand paces from the army, does not mean, that the soldiers were allowed to steal beyond that distance: but whatever they found without those bounds, they were not obliged to carry to the consul. Amongst things excepted, were the fruit of a tree, *pomum*. Marcus Scaurus tells us,⁴ however, as a

¹ Liv. l. xxvii. c. 46.

² Liv. l. xl. c. 27.

⁴ Aul. Gell. l. xvi. c. 4.

⁵ Frontin. Strateg. l. iv. c. 3.

memorable example of the Roman abstinence, that a fruit-tree happening to grow within the enclosure of the camp, when the army quitted it the next day, nobody had touched it. Scaurus commanded the army at that time. This oath shows, how far the Romans carried their attention, and exactness in preventing all rapine and violence in the army, because theft is not only prohibited the soldiery, upon pain of the most indispensable severities, but they are not even permitted to appropriate what they find on their way, and chance presents to them. Hence the laws actually treat as theft, the retaining any thing of another's after having found it, whether the owner were known or not. *Qui abienum jacens lucri faciendi causa sustulit, furti obstringitur, cive scilicet cuius sit sive nascit.*¹

I have said, that theft was prohibited with inexorable severity. There is a very terrible example of this under the emperors.² A soldier had stolen a fowl from a peasant, and had eat it, with the nine other men in his mess. The emperor Pescennius Niger condemned them all to die, and only spared their lives at the earnest request of the whole army, obliging each of them to give the countryman ten fowls, and affixing a mark of public infamy upon them during the rest of the war. How many crimes is so wholesome a rigour capable of preventing! But what a sight is a camp under such regulations! But what a vast difference is there between soldiers obedient to such a discipline in the midst of paganism, and our maulers, who call themselves Christians, and fear neither God nor man! The enclosure of the camp was a good barrier against disorders and license; and we shall soon see, that even upon marches, severity of discipline had no less effect than lines and intrenchments.

A wonderful order was observed night and day throughout the whole camp, in respect to the watchword, centinels and guards; and it was in this its security and quiet consisted. To render the guard more regular and less fatiguing, the night was divided into four parts or watches, and the day into four stations. Every one had his duty fixed, both in regard to time and place; and in the camp, all things were regulated and disposed, as in a well ordered family.

I have already spoken elsewhere of the simplicity of the ancients in regard to their provisions and equipage. The second Scipio Africanus would not suffer a soldier to have any more than a kettle, a spit, and a wooden bowl. Epaminondas,³ the glorious Theban general, had only this furniture both for the field and city. The ancient generals of Rome were not more magnificent. They did not know what silver plate was in the army; and had only a bowl and a saltseller of that metal for sacrifices.⁴ The horses glittered also with silver ornaments. The hours of dining and supping were made known by a certain signal. We have observed, that most of the Roman emperors ate in public, and often in the open air. It has been remarked, that Pescennius made no use of coverings against the rain.⁵ The meals of these emperors, as well as of the ancient generals, of whom Valerius Maximus speaks, were such as might be eaten in public without any reserve! the meats of which they consisted had nothing in them, that it was necessary to conceal from the eyes of the soldiers, who saw with joy and admiration, that their masters were no better fed than themselves.⁶

What was most admirable in the Roman discipline, was the continual exercise in which the troops were

kept, either within or without the camp; so that they were never idle, and had scarce any respite from duty.⁷ The new raised soldiers performed their exercise regularly twice a day, and the old ones once. They were formed to all evolutions, and other parts of the art military.⁸ They were obliged to keep their arms always clean and bright.⁹ They were made to take hasty marches of a considerable length, laden with their arms and several palisades; and that often in steep and craggy countries. They were habituated always to keep their ranks, even in the midst of disorder and confusion; and never to lose sight of their standards. They were made to charge each other in mock battles, of which the officers, generals, and even the consul himself were witnesses, and in which they thought it for their glory to share in person. When they had no enemy in the field, the troops were employed in considerable works, as well to keep them in exercise, as for the public utility. Such in particular are the highways, called for that reason *viæ militares*, which are the fruits of this wise and salutary custom. *Stratum militari labore iter.*¹⁰ We may judge whether, amidst these exercises, which were almost continual, the troops could find time for those unworthy diversions, equally pernicious in the loss of time and money. This itch, this frenzy for gaming, which to the shame of our times has forced the intrenchments of the camp, and abolished the laws of military discipline, had been regarded by the ancients as the most sinister of omens and the most terrible of prodigies.

ARTICLE V.

OF BATTLES.

SECTION I.—THE SUCCESS OF BATTLES PRINCIPALLY DEPENDS UPON THE GENERALS OR COMMANDERS IN CHIEF.

In this view, the value of military merit appears in all its force. To know whether a general were worthy of that name, the ancients examined his conduct in battle. They did not expect success from the number of troops, which is often a disadvantage, but from his prudence and valour, the cause and assurance of victory. They considered him as the soul of his army, who directs all its motions, to whose dictates every thing obeys, and upon whose conduct the event of the engagement generally depends. The affairs of the Carthaginians were absolutely desperate, when Xanthippus the Lacedæmonian arrived. Upon the account they gave him of what had passed in the battle, he attributed the ill success of it solely to the incapacity of their generals; and fully proved the truth of his opinion. He had brought with him neither infantry nor cavalry, but knew how to use both. Every thing had soon a new aspect, and demonstrated that one good head is of more value than a hundred thousand arms. The three defeats of the Romans by Hannibal taught them the effects of a bad choice. The war with Perseus had continued three years, through the ill conduct of three consuls, who had been charged with it: Paulus Æmilius terminated it gloriously in less than one. It is on these occasions the difference between man and man is most evident.

The first care of a general, and that which demands great judgment and prudence, is to examine whether it be proper or not to come to an engagement: for both may be equally dangerous. Mardonius perished miserably with his army of three hundred thousand men, for not having followed the advice of Artabazus, which was to decline battle, and to use rather gold and silver against the Greeks than iron. It was contrary to

¹¹ Quint. l. ii. c. 14.

the opinion of the wise Memnon, that Darius's generals fought the battle of the Granicus, which gave the first blow to the empire of the Persians. The blind temerity of Varro, notwithstanding his colleague's remonstrances and the advice of Fabius, drew upon the republic the unfortunate battle of Cannæ; whereas a delay of a few weeks would probably have ruined Hannibal for ever. Perseus, on the contrary, let slip the occasion of fighting the Romans, in not having taken advantage of the ardour of his army, and attacked them instantly after the defeat of their horse, which had thrown their troops into disorder and consternation. Cæsar had been lost after the battle of Dyrrachium, if Pompey had known how to improve his advantage. Great enterprises have their decisive moments. The important point lies in wisely resolving what to choose, and in seizing the present occasion that never returns when once neglected: and in this the whole depends upon the general's prudence.¹ There is a distribution of cares and duties in an army.² The head decrees; the arms execute. "Think only," says Otho to his soldiers, "of your arms, and of fighting with bravery, and leave the care of taking good measures, and directing your valour aright, to me."³

SECTION II.—CARE TO CONSULT THE GODS AND HARANGUE THE TROOPS BEFORE A BATTLE.

THE moment before a battle, the ancients believed themselves called upon to consult the gods, that they might incline them in their favour. They consulted them by the flight or singing of birds, by the inspection of the entrails of victims, by the manner in which the sacred chickens pecked their corn, and by things of the like nature. They laboured to render them propitious by sacrifices, vows and prayers. Many of the generals, especially in the earlier times, discharged these duties with great solemnity and sentiments of religion, which they carried sometimes to a puerile and ridiculous superstition: others either despised them in their hearts, or openly made a jest of them; and people did not fail to ascribe the misfortunes, which their ignorance or temerity drew upon them, to that irreligious contempt. Never did prince express more reverence for the gods than Cyrus the Great. When he was marching to charge Cressus, he sung the hymn of battle aloud, to which the whole army replied with great cries, invoking the god of war. Paulus Æmilius, before he gave Perseus battle, sacrificed twenty oxen successively to Hercules, without finding any favourable sign in all these victims: it was not till the twenty-first that he believed he saw something which promised him the victory. There are also examples of a different kind. Epaminondas, no less brave, though not so superstitious as Paulus Æmilius, finding himself opposed in giving battle at Leuctra upon account of bad omens, replied by a verse of Homer's, of which the sense is: "The only good omen is, to fight for one's country." A Roman consul, who was fully determined to fight the enemy as soon as he came up with them, kept himself close shut up within his litter, during his march, to prevent any bad omen from frustrating his design. Another did more: seeing that the chickens would not eat, he threw them into the sea, saying, "If they won't eat let them drink." Such examples of irreligion were uncommon, and the contrary opinion prevailed. There was without doubt superstition in many of these ceremonies: but the sacrifices, vows, and prayers, which always preceded battles, were proofs that they expected success from the divinity, who alone disposed of it.

After having paid these duties to the gods, they applied themselves to men, and the general exhorted his soldiers. It was an established custom with all nations to harangue their troops before battle; which

custom was very reasonable, and might contribute very much to the victory. It is certainly right, when an army is upon the point of engaging with the enemy, to oppose the fear of a seemingly approaching death with the most powerful reasons, and such as, if not capable of totally extinguishing that fear so deeply implanted in our nature, may at least combat and overcome it: such reasons, as the love of our country, the obligation to defend it at the price of our blood, the remembrance of past victories, the necessity of supporting the glory of our nation, the injustice of a violent and cruel enemy, the dangers to which the fathers, mothers, wives, and children, of the soldiers are exposed:—these motives, and many of the like nature, represented from the mouth of a general, beloved and respected by his troops, may make a very strong impression upon their minds. Military eloquence consists less in words, than in a certain easy and engaging air of authority, that at once advises and commands; and still more in the inestimable advantage of being beloved by the troops, which might supply its place if wanted.⁴ It is not, as Cyrus observes,⁵ that such discourses can in an instant change the disposition of soldiers, and from timorous and abject, as they might be, make them immediately bold and intrepid: but they awaken, they rouse the courage nature has before given them, and add a new force and vivacity to it.

To judge rightly of the custom of haranguing the troops, as generally and constantly practised by the ancients, we must go back to the ages wherein they lived, and consider their manners and customs with particular attention.

The armies of the Greeks and Romans were composed of the same citizens, to whom, in the city and in time of peace, it was customary to communicate all the affairs of the state. The general did no more in the camp, or in the field of battle, than he would have been obliged to do in the *Rostrum* or tribunal of harangues. He did his troops honour, and attracted their confidence and affection, in imparting to them his designs, motives, and measures. By that means he interested the soldier in the success. The sight only of the generals, officers, and soldiers assembled, communicated a reciprocal courage and ardour to them all. Every one piqued himself at that time upon the goodness of his aspect and appearance, and obliged his neighbour to do the same. The fear of some was abated or entirely banished by the valour of others. The disposition of particular persons became that of the whole body, and gave their aspect to affairs in general. There were occasions when it was most necessary to excite the good will and zeal of the soldier: for instance, when a difficult and hasty march was to be made, to extricate the army out of a dangerous situation, or to obtain one more commodious: when courage, patience, and constancy, were necessary for supporting famine and other violent distresses, conditions painful to nature: when some difficult, dangerous, but very important enterprise was to be undertaken: when it was necessary to console, encourage, and re-animate the troops after a defeat: when a hazardous retreat was to be made in view of the enemy, in a country he was master of: and lastly, when only a generous effort was wanting to terminate a war, or some important enterprise. Upon these and the like occasions the generals never failed to speak in public to the army, in order to sound their disposition by their acclamations, more or less strong; to inform them of their reasons for such and such conduct, and to conciliate them to it; to dispel the false reports which exaggerated difficulties, and discouraged them; to let them see the remedies preparing for the distresses they were under, and the success to be expected from them; to explain the precautions it was necessary to take, and the motives for taking them. It was the general's interest to flatter the soldier in making him the confidant of his designs, fears, and expedients, in order to engage him to share in them, and act in

concert and from the same motives with himself. The general in the midst of soldiers, who, as well as himself, were all, not only members of the state, but had a share in the authority of the government, was considered as a father in the midst of his family.

It may not be easy to conceive how he could make himself heard by the troops, but that difficulty will vanish if we remember, that the armies of the Greeks and Romans were not very numerous—those of the former seldom exceeding ten or twelve thousand men, and, of the latter, very rarely twice that number; I do not speak of the later times. The generals were heard, as the orators were in the public assemblies, or from the tribunal for harangues. Every individual did not hear: but the whole people were informed at Rome and Athens; the whole people deliberated and decided, and none of them complained of not having heard. It sufficed, that the most ancient, the most considerable, the principals of companies and quarters were present at the harangue, of which they afterwards gave the account to the rest. On the column of Trajan, the emperor is seen haranguing the troops from a tribunal of turf raised higher than the soldiers' heads, with the principal officers around him upon the platform, and the multitude forming a circle at a distance. One would not believe in how little room a great number of unarmed men will stand upright, when they press close to each other; and these harangues were usually made in the camp to the soldiers quiet and unarmed. Besides which, they accustomed themselves from their youth to speak upon occasion with a strong and distinct voice. When the armies were more numerous, and upon the point of giving battle, they had a very simple and natural manner of haranguing the troops. The general on horseback rode through the ranks, and spoke something to the several bodies of troops in order to animate them. Alexander¹ did so at the battle of Issus, and Darius almost the same at that of Arbela,² though in a different manner. He harangued his troops from his chariot, directing his looks and gesture to the officers and soldiers that surrounded him. Without doubt, neither the one nor the other could be heard by any but those who were nearest them: but these soon transferred the substances of their discourses to the rest of the army.

Justin, who abridged Trogus Pompeius, an excellent historian that lived in the time of Augustus, repeats an entire harangue, which his author had put into the mouth of Mithridates.³ It is very long, which ought not to seem surprising, because Mithridates does not make it just before a battle, but only to animate his troops against the Romans, whom he had before overthrown in several battles, and intended to attack again. His army consisted of almost three hundred thousand men of twenty-two different nations, who had each their peculiar language, all which Mithridates could speak, and therefore had no occasion for interpreters to explain his discourse to them. Justin, where he repeats the speech in question, barely says, that Mithridates called an assembly of his soldiers: *Ad consensionem milites vocat*. But what did he do to make twenty-two nations understand him? Did he repeat to each of them the whole discourse quoted by Justin? That is improbable. It were to be wished, that the historian had explained himself more clearly, and given us some light upon this head. Perhaps he contented himself with speaking to his own nation, and making known his views and designs by interpreters. Hannibal acted in this manner.⁴ When he was going to give Scipio battle in Africa, he thought it incumbent on him to exhort his troops: and as every thing was different amongst them, language, customs, laws, arms, habits, and interests, so he made use of different motives to animate them. "To the auxiliary troops,

he proposed an immediate reward, and an augmentation of their pay out of the booty that should be taken. He inflamed the peculiar and natural hatred of the Gauls against the Romans. As for the Ligurians, who inhabited a mountainous and barren country, he set before them the fertile valleys of Italy, as the fruit of their victory. He represented to the Moors and Numidians the cruel and violent government of Massinissa, to which they would be subjected, if overcome. In this manner he animated these different nations, by the different views of hope and fear. As to the Carthaginians, he omitted nothing that might excite their valour, and addressed himself to them in the warmest and most pathetic terms: the danger of their country, their household gods, the tombs of their ancestors, the terror and contumacious of their fathers and mothers, their wives and children; in fine, the fate of Carthage, which the event of that battle would either ruin and reduce into perpetual slavery, or render mistress of the universe; every thing being extreme which she had either to hope or fear."⁵ This is a very fine discourse. But how did he make these different nations understand it? Livy informs us: he spoke to the Carthaginians himself, and ordered the commanders of each nation to repeat to them what he had said. In this manner, the general sometimes assembled the officers of his army, and after having explained what he desired the troops might be told, he sent them back to their several brigades or companies, in order to report what they had heard, and animate them for the battle. Arrian observes⁶ this in particular of Alexander the Great before the famous battle of Arbela.

SECTION III.—MANNER OF EMBAITTLING ARMIES, AND OF ENGAGING.

THE manner of drawing up armies in battle, was not always alike with the ancients, and could not be so, because it depends on circumstances that vary perpetually, and consequently require different dispositions. The infantry were generally posted in the centre, in one or more lines, and the horse upon the wings.

At the battle of Thymbraea, all the troops of Croesus, as well horse as foot, were drawn up in one line thirty men deep, except the Egyptians, who amounted to a hundred and twenty thousand men.⁷ They were divided into twelve large bodies or square battalions, of ten thousand men each, a hundred in front, and as many in depth. Croesus with all his endeavours could not make them change this order, to which they were accustomed: this rendered the greatest part of those troops useless, who were the best in the army, and did not a little contribute to the loss of the battle. The Persians generally fought fourscore deep. Cyrus, to whom it was of great importance to extend his front as far as possible, in order to prevent being surrounded by the enemy reduced his files to twelve deep only. The reader knows the event of this battle. In the battle of Leuctra, the Lacedæmonians who had of their own troops and their allies, four and twenty thousand foot and sixteen hundred horse, were drawn up twelve deep; and the Thebans fifty, though not above six thousand foot, and four hundred horse.⁸ This seems contrary to rule. The design of Epaminondas was to fall directly with the whole weight of his heavy battalion upon the Lacedæmonian phalanx, well assured, that if he could break that, the rest of the army would be soon put to the rout: and the effect answered the design.

I have described elsewhere the Macedonian phalanx, so famous among the ancients. It was generally divided, according to Polybius, into ten battalions, each consisting of sixteen hundred men, a

⁸ Xenoph. Hist. l. vi. p. 596, &c.

hundred in front, and sixteen deep.¹ Sometimes the latter number were doubled, or reduced to eight, according to the exigency of the occasion.² The same Polybius makes a squadron consist of eight hundred horse, generally drawn up a hundred in front and eight in depth: he speaks of the Persian cavalry.

As to the Romans, their custom of drawing up their infantry in three lines continued long, and with uniformity enough. Among other examples, that of the battle of Zama between Scipio and Hannibal may suffice to give us a just idea of the manner in which the Romans and Carthaginians embattled their troops. Scipio placed the *Hastati* (or pikes) in the front line, leaving spaces between the cohorts. In the second he posted the *Principes*, with their cohorts not fronting the spaces of the first line, as was usual with the Romans, but behind the cohorts of the *Hastati*, leaving spaces directly opposite to those of the front line; and this because of the great number of elephants in the enemy's army, to which Scipio thought proper to leave free passage. The *Triarii* composed the third line, and were a kind of corps de reserve. The cavalry were distributed upon the two wings; that of Italy upon the left commanded by Lælius, and the Numidians upon the right under Massinissa. Into the spaces of the first line he threw the light armed troops, with orders to begin the battle; in such a manner, however, that in case they were repulsed, or not able to support the charge of the elephants, they should retire, those who ran best, behind the whole army through the direct intervals, and those who should find themselves surrounded, through such openings as might be on the right or left. As to the other army, more than four or five elephants covered it in front. Behind them Hannibal posted the foreign mercenaries, to the number of about twelve thousand Ligurians, Gauls, Bælearians, and Moors: behind this first line, were the Africans and Carthaginians. These were the flower of his army, with which he intended to fall upon the enemy, when fatigued and weakened by the battle: and in the third line, which he removed to the distance of more than a hundred paces from the second (more than a stadium,) were the troops he had brought with him from Italy, on whom he could not rely, because they had been forced from their country, and he did not know whether he ought to consider them as allies or enemies. On the left wing he placed the cavalry of the Numidian allies, and on the right, that of the Carthaginians. I could wish that Polybius or Livy had informed us what number of troops there were on each side, and what depth the generals had given them in drawing them up. In the battle of Cannæ, some years before this, there is no mention of the *Hastati*, *Principes*, *Triarii*, that generally composed the three lines of the Roman armies. Livy, without doubt, supposes it a custom known to all the world.

It was usual enough, especially with some nations, to raise great cries, and to strike their swords against their bucklers, as they advanced to charge an enemy. This noise, joined to that of the trumpets, was very proper to suppress in them, by a kind of stupefaction, all fear of danger, and to inspire them with a courage and boldness, that had no view but victory, and defied death. The troops sometimes marched softly and coolly to the charge: and sometimes when they approached the enemy, they sprung forward with impetuosity as fast as they could move. Great men have been divided in opinion upon these different methods of attack. On the day of the battle of Thermopylæ, Xerxes's spy found the Spartans preparing to engage only by combing their hair.³ Never was danger, however, more great. This bravado suited only soldiers determined like them to conquer or die; besides, it was their usual custom.

The light armed troops generally began the action by a flight of darts, arrows, and stones, either against the elephants, if there were any, or against the horse

or infantry, to put them into disorder; after which they retired through the spaces behind the first line, whence they continued their discharges over the soldiers' heads. The Romans began a battle by throwing their javelins against the enemy, after which they came to blows with them; and it was then their valour was shown, and great slaughter ensued.

When they had broke the enemy and put them to flight, the great danger was, as it still is, to pursue them with too much ardour, without regard to what passed in the rest of the army. We have seen that the loss of most battles proceeded from this fault, the more to be feared, as it seems the effect of valour and bravery. Lælius and Massinissa, in the battle of Zama, after having broke the enemy and put them to flight, did not abandon themselves to so imprudent an ardour; but returning immediately from the pursuit, rejoined the main body, and falling upon Hannibal's rear, put the greatest part of his phalanx to the sword. Lycurgus had decreed, that after having pursued the enemy enough to secure the victory, the pursuit should cease; and that for two reasons: the first, because as the war was made between Greeks and Greeks, humanity required that they should not act with the greatest extremity against neighbouring people, in some sort their countrymen, who professed themselves vanquished by their flight. And the second, because the enemy, relying upon this custom, would be inclined to preserve their lives by retreating, rather than persist obstinately in a battle, during which they knew they had no quarter to expect.

The attack of an army by the flanks and rear must be very advantageous, as in most battles it is generally attended with victory. Hence we see in all battles that the principal care of the most able generals is to provide against this danger.

It is surprising that the Romans had so few cavalry in their armies; three hundred horse to four or five thousand foot. It is true, they made an excellent use of those they had. Sometimes they dismounted and fought on foot, their horses being trained to stand still in the mean while.⁴ Sometimes they carried light armed soldiers behind them, who got off and remounted with wonderful agility.⁵ Sometimes the horse charged the enemy on the full gallop, who could not support so violent an attack.⁶ But, however, all this amounted to no great service; and we have seen Hannibal indebted for his superiority in his four first battles chiefly to his cavalry. The Romans had made war at first upon their neighbours, whose country was woody, full of vineyards and olive trees, and situated near the Apennine mountains, where the horse had little room to act or draw up. The neighbouring people had the same reason for not keeping much cavalry; and hence it became customary on both sides to have few. The Roman legion was established upon the foot of three hundred horse, the allies furnishing twice that number; which custom in succeeding times had the force of a law.

The army of the Persians had no cavalry, when Cyrus first had the command of it. He soon perceived the want of it, and in a very short time raised a great body of horse, to which he was principally indebted for his conquests. The Romans were obliged to do the same, when they turned their arms against the East, and had to deal with nations, whose principal force consisted in cavalry. Hannibal had taught them what use they were to make of it.

I do not find any mention made of provisions for the sick and wounded in the armies of the ancients. No doubt they took care of them. Homer speaks of several illustrious physicians in the army of the Greeks at the siege of Troy; and we know that they acted as surgeons. Cyrus the younger, in the army with which he marched to the aid of his uncle Cyaxares, did not omit to carry with him a considerable number of able physicians.⁷ Caesar tells us in more than one passage of his Commentaries, that after a battle, the wounded were carried into the nearest neighbouring city. There are many instances of generals going to visit the

wounded in their tents: which is a proof, that in quarters, where seven or eight comrades, citizens of the same district of the same city, lay, the soldiers took care of one another, when wounded.

Livy often mentions the *Cartel*, or agreement between nations at war for the ransom of prisoners.¹ After the battle of Cannæ, Hannibal, having made himself master of the small camp of the Romans, agreed to restore each Roman citizen for three hundred pieces of money called *quadrigati*, which were *denari*: that is, for about seven pounds, or an hundred and fifty livres; the allies for two hundred; and the slaves for one. The Romans, when they took Eretria, a city of Eubœa, where the Macedonians had a garrison, fixed the price of their ransom at three hundred pieces of money also, that is, at seven pounds, or an hundred and fifty livres.² Hannibal seeing the Romans were determined not to ransom their prisoners who had surrendered themselves to him, sold them to different nations.³ The Achæans bought a considerable number of them. When the Romans had re-established the liberty of Greece, the Achæans, out of gratitude, sent home all these prisoners, and paid their masters a certain sum of money per head; the total of which, according to Polybius, amounted to a hundred talents, or an hundred thousand crowns: for in Achæa, there were twelve hundred of these prisoners.

I do not believe that the use of writing in ciphers was known to the ancients. It is however very necessary, for conveying secret advices to officers, either remote from the army, or shut up in a city, or in other important occasions. Whilst Q. Cicero was besieged in his camp by the Gauls, Cæsar wrote him advice that he was marching to his relief with several legions, and should soon arrive.⁴ The letter was written in Greek, that if it fell into the enemy's hands they might not know that Cæsar advanced.⁵ That precaution does not seem sufficiently certain; nor are signals, of which I have treated elsewhere, much more so: besides which, the use of them was very difficult, and at the same time perplexing and full of obscurity.

I shall relate a common and very remarkable custom amongst the Romans. When they were drawn up in line of battle, and ready to take their shields, and gird their robes close to their bodies, they made their wills without writing, by only appointing their heir before three or four witnesses. This was termed *testamenta in procinctu facere*.⁶

After the little I have said upon battles, not daring to engage myself farther in a subject so much out of my sphere, I proceed to the reward and punishments which followed good or bad success in battle.

SECTION IV.—PUNISHMENTS—REWARDS—TROPHIES—TRIUMPHS.

SOLON had reason to say, that the two great springs of human actions, and what principally set mankind in motion, are hope and fear; and that a good government cannot subsist without rewards and punishments; because impunity emboldens guilt; and virtue, when neglected and undistinguished, frequently becomes languid and declines. The truth of this maxim is more evident when applied to a military government, which, as it gives greater scope to license, requires also, that order and discipline should be annexed to it by ties of a stronger and more vigorous nature.

It is true, this rule may be abused and carried too far, particularly in regard to punishment. With the Carthaginians, the generals, who had been unfortunate in war, were generally punished with death; as if want of success were a crime, and the most excellent captain might not lose a battle without any fault on his side. They carried their rigour much farther. For they condemned him to death, who had taken bad measures, though successful.⁷ Amongst the Gauls,

when troops were to be raised, all the young men capable of bearing arms were obliged to be present in the assembly on a certain day.⁸ He who came late was condemned to die, and executed with the most cruel torments. What a horrid barbarity was this! The Greeks, though very severe in supporting military discipline, were more humane.⁹ At Athens, the refusal to bear arms, which is far more criminal than a delay of a few hours or moments, was only punished by a public interdiction and a kind of excommunication, which excluded the person from entering the assemblies of the people, and the temples of the gods. But to throw away his shield in order to fly, to quit his post or be a deserter, were capital crimes, and punished with death. At Sparta it was an inviolable law never to fly, however superior the enemy's army might be in number, never to abandon a post, nor surrender their arms.¹⁰ Those who had failed in these points, were declared infamous forever. They were not only excluded from all offices, employments, assemblies, and public shows; but it was scandalous to ally with them in marriage, and a thousand insults were offered them in public with impunity. On the contrary, great honours were paid to such as had behaved themselves valiantly in battle, or had died sword in hand in the defence of their country.

Greece abounded with statues of the great men who had distinguished themselves in battles. Their tombs were adorned with magnificent inscriptions, which perpetuated their names and memories. The custom of the Athenians in this point was of wonderful efficacy to animate the courage of their citizens, and inspire them with sentiments of honour and glory.¹¹ After a battle, the last duties were publicly rendered to those who had been slain. The bones of the dead were exposed for three days successively to the veneration of the people, who thronged to throw flowers upon them, and to burn incense and perfumes before them. After which, those bones were carried in pomp in as many coffins as there were tribes in Athens, to the place particularly allotted for their interment. The whole people attended this religious ceremony. The procession had something very august and majestic in it, and rather resembled a glorious triumph, than a funeral solemnity. Some days after, which far exceeds what I have just said, one of the best qualified Athenians pronounced the funeral oration of those illustrious dead before the whole people. The great Pericles was charged with this commission after the first campaign of the Peloponnesian war. Thucydides has preserved his discourse, and there is another upon the same subject in Plato. The intent of this funeral oration was to extol the courage of those generous soldiers who had shed their blood for their country; to inculcate the imitation of their example to the citizens, and especially to console their families. These were exhorted to moderate their grief by reflecting on the glory their relations had acquired for ever. "You have never," says the orator to the fathers and mothers, "prayed to the gods, that your children should be exempt from the common law, which dooms all mankind to die; but only that they should prove persons of virtue and honour. Your vows are heard, and the glory with which you see them crowned, ought to dry your eyes, and change your laments into thanksgiving." The orators often, by a figure common enough with them, especially upon great occasions, put these lively exhortations into the mouths of the dead themselves, who seemed to quit their tombs to cheer and console their fathers and mothers. They did not confine themselves to bare discourse, and barren praises. The republic, as a tender and compassionate mother, took upon herself the charge of maintaining and subsisting the old men, widows, and orphans, who stood in need of her sup-

port. The latter were brought up suitably to their condition till they were of age to carry arms: and then publicly, in the theatre, and in the presence of the whole people, they were dressed in a complete suit of armour, which was given them, and declared soldiers of the republic.¹ Was there any thing wanting to the funeral pomp I now speak of, and did it not seem in some measure to transform the poor soldiers and common burghers of Athens into heroes and conquerors? Have the honours rendered amongst us to the most illustrious generals, any thing more animated and affecting? It was by these means that courage, greatness of soul, ardour for glory, and that zeal and devotion for their country, which rendered the Greeks insensible to the greatest dangers and death itself, were perpetuated amongst them. For, as Thucydides observes upon occasion of these funeral honours, "Great men are formed, where merit is best rewarded."²

The Romans were neither less exact in punishing offences against military discipline, nor less attentive in rewarding merit. The punishment was proportioned to the crime, and did not always extend to death. Sometimes a word of contempt sufficed for the punishment of the troops: at others, the general punished them by refusing them their share in the spoils. Sometimes they were dismissed, and not permitted to serve against the enemy. It was common enough to make them work in the intrenchments of the camp in a single tunic and without a belt. Ignominy was often more affecting than death itself.³ Cæsar's mutinous troops demanded with seditious complaints to be dismissed. Cæsar said only one word to them, which was, *Quirites*, as much as to say, citizens, whereas he used to call them, *Fellow-soldiers* or *comrades*, and immediately discharged them.⁴ That word was like a stroke of thunder to them. They believed themselves degraded and entirely dishonoured; and never ceased importuning him in the most humble and pathetic terms, till he consented, as the greatest of favours, that they should continue to carry arms for him. This punishment, whereby the soldiers were broke, was called *exactoratio*.

The Roman army, through the fault of the consul Minucius, who commanded it, was besieged in their camp by the Æqui, and very near being taken.⁵ Cincinnatus, appointed dictator for this expedition, marched to his aid, delivered him, and made himself master of the enemy's camp, which abounded with riches. He punished the consul's troops by giving them no share of the booty, and obliged Minucius to quit the consulship, and to serve in the army as his lieutenant, which he did without complaint or murmur: "In those times," observes the historian, "people submitted with so much complacency to the persons in whom they saw a superiority of merit joined with authority, that this army, more sensible of the benefit, than the ignominy they had received, decreed the dictator a crown of gold of a pound weight, and on his departure saluted him their patron and preserver."⁶

After the battle of Cannæ, wherein more than forty thousand Romans were left dead upon the spot, about seven thousand soldiers, who were in the two camps, seeing themselves without resource or hope, surrendered themselves and their arms to the enemy, and were made prisoners.⁷ Ten thousand, who had fled as well as Varro, escaped by different ways, and at length rejoined each other at Canusium under the consul. Whatever endeavours these prisoners, and their relations could make afterwards to obtain their

ransom, and how great soever the want of soldiers then was at Rome, the senate could never resolve to redeem soldiers, who had been so base as to surrender themselves to the enemy, and whom more than forty thousand men killed before their eyes, could not inspire with the courage to die in the field for their country. The other ten thousand, who had escaped by flight, were banished into Sicily, and their return prohibited so long as the war with the Carthaginians should continue.⁸ They demanded with earnest entreaties to be led on against the enemy, and that they might have an opportunity to expiate with their blood the ignominy of their flight. The senate remained inflexible, not believing that they could confide the defence of the republic to soldiers, who had abandoned their companions in battle. At length, upon the remonstrances and warm solicitations of the proconsul Marcellus, their demand was granted; but upon condition, that they should not set foot in Italy so long as the enemy should remain in it. All the knights of the army of Cannæ, banished into Sicily, were also severely punished.⁹ In the first review made by the censors after that battle, all the horses with which the republic furnished them, were taken away; which implied their being degraded from the rank of Roman knights; their former years of service were declared void, and they were obliged to serve ten more, supplying themselves with horses; that is to say, as many years as if they had never served at all; for the usual service of the knights was ten campaigns.

The senate, rather than ransom the prisoners, which would have cost less, chose rather to arm eight thousand slaves; to whom they promised liberty, if they behaved themselves valiantly.¹⁰ They had served almost two years with great bravery: their liberty, however, was not yet arrived, and with whatever ardour they desired it, they chose rather to deserve than demand it.¹¹ An important occasion arose, in which it was pointed out to them as the reward of their valour. They did wonders in the battle, except four thousand of them, who discovered some timidity. After the battle, they were all declared free. Their joy was incredible. Gracchus, under whose command they were, told them: "Before I make you all equal by the title of liberty, I would not willingly have made a difference between the valiant and the timorous. It is however but just that I should do so." He then made all those, who had not done their duty as well as the rest, promise upon oath, that, as long as they served, as a punishment for their fault, they should always stand at their meals, except when hindered by sickness: which was accepted and executed with entire submission. This of all the military punishments was the lightest and most gentle.

The punishments I have hitherto related scarce affected any thing besides the soldier's honour: there were others which extended to his life. One of the latter was called *Fustuarium*, the bastinado.¹² It was executed thus. The tribune taking a stick, only touched the criminal with it, and immediately after, all the soldiers of the legion fell on him with sticks and stones, so that he generally lost his life in this punishment.¹³ If any one escaped, he was not thereby entirely discharged. His return into his own country was entirely prohibited, and not one of his relations dared open his door to him. They punished a sentinel in this manner, who had quitted his post; whence may be judged the exact discipline they observed in respect to the guard by night, on which the safety and preservation of the whole army depended: all those who abandoned their posts, whether officers or soldiers, were treated in the same manner. Velleius Paterculus cites an example of this punishment, executed upon one of the principal

officers of a legion, for having shamefully taken to flight in battle: this was in the time of Anthony and young Octavius.¹ But what appears more astonishing, those were condemned to the same punishment, who stole in the camp. The reader may remember the oath taken by the soldiers upon their entering it.

When a whole legion or cohort were guilty, as it was not possible to put all that were criminal to death, they were decimated by lot, and he whose name was drawn the tenth, was executed. In this manner, fear seized all, though few were punished. Others were sentenced to receive barley instead of wheat, and to encamp without the intrenchments at the hazard of being attacked by the enemy. Livy has an example of a decimation as early as the infancy of the republic.² Crassus, when he put himself at the head of the legions who had suffered themselves to be defeated by Spartacus, revived the ancient custom of the Romans, which had been disused for several ages, of decimating the soldiers when they had failed in their duty; and that punishment had a very happy effect. This kind of death, says Plutarch, is attended with great ignominy; and as it was executed before the whole army, it diffused terror and horror throughout the camp. Decimation became very common under the emperors, especially in regard to the Christians, whose refusal to adore idols, or persecute believers, was considered and punished as a sacrilegious revolt. The Theban legion was treated in this manner under Maximian. That emperor caused it to be decimated three times successively, without being able to overcome the pious resistance of those generous soldiers.³ Mauritius, their commander, in concert with all the other officers, wrote a very short, but admirable letter to the emperor. "We are your soldiers, emperor, but the servants of God. We owe you our service, but him our innocence. We cannot renounce God to obey you; that God, who is our Creator and Master, and yours also, whether you will or no."⁴ All the rest of the legion were put to death without making the least resistance, and went to join the legions of angels, and to praise the God of armies with them for evermore.

These capital punishments were not frequent in the time of the republic. It was a capital crime, as we have said, to quit a post or fight without orders: and the example of fathers, who had not spared their own sons, inspired a just terror, which prevented faults, and occasioned the rules of military discipline to be respected.⁵ There is in these bloody executions a severity shocking to nature, and which however we could not venture absolutely to condemn: because if every great public example has something of injustice in it, on the other hand, whatever of that kind is contrary to the interest of particulars, is compensated by the utility which redounds to the public from it.⁶ A general is sometimes obliged to treat his soldiers with great rigour, to put a stop by timely severities either to a revolt just forming, or to an open violation of discipline. He would at such times be cruel if he acted with gentleness, and would resemble the surgeon, who out of a false compassion should choose rather to let the whole body perish, than cut off a mortified member. What is to be avoided on these occasions, is to seem to act from passion or hatred: for then the remedies improperly

applied would only aggravate the disease.⁷ This happened in the first example of decimation I cited, by which Appius had made himself so extremely odious to the soldiers, that they chose rather to suffer themselves to be beaten by the enemy, than to conquer with him and for him.⁸ He was of an obstinate disposition, and inflexibly rigid.⁹ Papirius, long after, acted much more wisely in a case not unlike this. His soldiers, expressly to mortify him, retreated in battle, and deprived him of a victory.¹⁰ He perceived like an able captain the cause of that behaviour, and found it necessary to moderate his severity, and soften his too imperious humour. He did so, and succeeded so well, that he entirely regained the affection of his troops. A complete victory was the consequence. Much art and prudence are requisite in punishing with success.

It was rather by the views of reward and sense of honour that the Romans engaged their troops to do their duty. After the taking of a town, or gaining a battle, the general usually gave the booty to the soldiers, but with admirable order, as Polybius informs us in his relation of the taking of Carthage. It is, says he, an established custom among the Romans, upon the signal given by the generals, to disperse themselves in order to plunder the city that has been taken: after which every one carries the booty he has got to his own legion. When the whole has been sold by auction, the tribunes divide the money into equal shares, which are given not only to those who are in other posts, but to those who have been left to guard the camp, the sick, and such as have been detached upon any occasion. And to prevent any injustice from being committed in this part of the war, the soldiers are made to swear before they take the field, and the first day they assemble, that they will not secrete any part of the booty, but faithfully bring in whatever they shall make. What a love of order, observance of discipline, and regard for justice does this argue, amidst the tumult of arms, and the very ardour of victory! Upon the day of triumph, the general made another distribution of money in greater or less proportions, according to the different times of the republic; but always moderate enough before the civil wars.

Honour was sometimes annexed to advantage, and the soldier was much more sensible to the one than the other: and how much more the officers!¹¹ P. Decius, the tribune, with a detachment which he conducted at the hazard of his life upon the brink of an eminence, had saved the whole army by one of the noblest actions mentioned in history. Upon his return, the consul, in the presence of all the troops, bestowed the highest praises upon him, and besides many other military presents, gave him a crown of gold, and an hundred oxen, to which he added another ox of extraordinary size and beauty with gilt horns. He decreed the soldiers, who had accompanied the tribune, a double portion of corn during the whole time they should serve: and for the present, two oxen and two complete dresses a man. The legions also, to express their gratitude, presented Decius with a crown of turf, which was the sign of a siege raised; and his own soldiers did the same. He sacrificed the ox with the gilt horns to Mars, and gave the other hundred to his soldiers: the legions also rewarded each of them with a pound of flour, and a gallon of wine.

Calpurnius Piso, surnamed *Frugi*, out of veneration for his virtues and great frugality, having variously rewarded most of those, who had assisted him in terminating the Sicilian war, thought himself obliged to reward also, but at his own expense, the services of one of his sons, who had signalized himself the most upon that occasion.¹² He declared publicly, that he had deserved a crown of gold, and assured

Nim, that he would leave him one by his will, of the weight of three pounds: decreeing him that honour as general, and paying the price of the crown as father: *Ut honorem publice a duce, pretium privatim a patre acciperet.*

The crown of gold was a present scarce ever granted but to principal officers. There were several others for different occasions. The crown *Obsidionalis*, of which I have spoken before, for having delivered the citizens or troops from a siege, was composed of turf, and was the most glorious of all. The *Corona Civica*, for having saved the life of a citizen, was of oaken leaves, in remembrance, as is said, that men of old fed upon acorns. The *Mural crown*, *Pinnis*, for having been the first in scaling the walls of a place besieged, was adorned with a kind of battlements, like those to be seen upon the ancient walls of towns. The *Corona Navalis*, *Rostrea*, which was composed of ornaments like beaks of ships, was given to the admiral of a fleet, who had gained a victory. Instances of this honour are very rare. Agrippa, who obtained one, thought it very much for his honour:—

—Cui belli insignis superbum,
Tempora navali fulgent rostrata corona.
Virg. Æn. l. viii.

—Who bears war's glorious sign,
Beset'd with the naval crown whose temples shine.

Besides these crowns (for there were some others) the generals presented the soldiers or officers, who signalized themselves in a particular manner, with a sword, a shield, and other arms; and sometimes also with distinguishing military habits. We have seen an officer rewarded thirty-four times by the generals, and gain six civic crowns.¹ These presents and crowns were titles of nobility to them, and upon competitions with rivals for ranks and dignities, often determined the preference in their favour; and they did not fail to adorn themselves with them upon public solemnities. They also affixed to the doors of their houses the spoils they had taken from the enemy; nor was any future possessor permitted to take them down.² Upon this Pliny makes a fine reflection, which it is impossible to render in terms of equal spirit with his. "The houses," says he, "still triumphed, though they had changed their masters. What could more excite to glory, or be more offensive to an unworthy possessor, than walls, which reproached him as often as he entered, that they were honoured solely by the trophies of another."³

The praises given in the presence of the whole army made no less impression upon their minds; and are what a good general never spares on proper occasions. Agricola, says Tacitus, neither envied nor lessened any man's glory: centurion or præfect, in him they found a faithful witness of their exploits, to which he never failed doing the utmost justice.⁴ Cæsar, upon being informed of the valour with which Q. Cicero, the famous orator's brother, had defended his camp against the great army of the Gauls, extolled publicly the greatness of the action, praised the legion in general, and apostrophized particularly to those of the centurions and tribunes, who, as Cicero has observed to him, distinguished themselves most.⁵ Upon another occasion, Scæva, a centurion, had contributed very much to the defence of a breach of great importance. When his buckler was brought to Cæsar with two hundred and thirty arrow shots through it; surprised and charmed with his bravery, he immediately made him a present of two hundred thousand sesterces (about twelve hundred pounds,) and raised him directly from the eighth to the first

rank of the centurions, appointing him *Principilus*, a very honourable post, as I have observed elsewhere and which had no superior but the tribunes, lieutenant generals, and commanders in chief. Nothing was equal to this latter method of rewarding, for inspiring the troops with valour. By a wise establishment, there were many degrees of honour and distinction in a legion, of which none were granted upon account of birth, or bought for money. Merit was the only means of attaining them, at least it was the most ordinary method. Whatever distance there was between the private sentinel and the consular dignity, the door lay open to it: it was a beaten path, and there were many examples of citizens, who from one degree to another, at length attained that supreme dignity. With what ardour must such a sight inspire the troops! Men are capable of every thing, when properly excited by the motives of honour and glory.

It remains for me to say something upon trophies and triumphs.

Trophies amongst the ancients, were originally a heap of arms and spoils taken from enemies, and erected by the victor in the field of battle, of which in after-times representations were made in stone and brass. They never failed, immediately after a victory, to raise a trophy, which was looked upon as a sacred thing, because always an offering to some divinity: for which reason none presumed to throw it down. Neither when it fell through age, was it permitted to be erected again; for which Plutarch gives a fine reason, that argues great humanity in the sentiments of the ancients. "To reinstate," says he, "and set up again the monuments of ancient differences with enemies, which time has conveniently demolished, has something odious in it, and seems to argue a desire to perpetuate enmity."⁷ We do not observe the same humanity in the Roman triumphs, of which I am still to speak. The generals, as well as the officers and soldiers, had also rewards in view. The title of *Imperator* granted after a victory, and the supplications that is to say, the public processions, sacrifices, and prayers, decreed at Rome for a certain number of days, to thank the gods for the success of their arms, agreeably flattered their ambition. But the triumph exceeded every thing. There were two sorts of it, the lesser and the greater. The lesser triumph was called *Ovatione*. In that the general was neither seated on a chariot, dressed in triumphal robes, nor crowned with laurel. He entered the city on foot, or, according to some, on horseback, crowned with myrtle, and followed by his army. This kind of triumph was granted only, either when the war had not been declared, had been with a people little considerable, or not attended with any great defeat of the enemy. A triumph could properly be granted only to a dictator, a consul, or a prætor, who had commanded in chief. The senate decreed this honour, after which the affair was deliberated upon in the assembly of the people, where it often met with great difficulties. Several, however, triumphed without the senate's concurrence; provided the people had decreed them that honour. But if they could not obtain it from either the one or the other order, they went and triumphed upon the Alban mountain in the neighbourhood of the city. It is said, that to obtain this honour, it was necessary to have killed five thousand enemies in battle.⁸

After the general had distributed part of the spoils to the soldiers, and performed some other ceremonies, the procession began, and entered the city through the triumphal port to ascend to the capitol. At the head of it were the players upon musical instruments, who made the air resound with their harmony. They were followed by the beasts that were to be sacrificed, adorned with fillets and flowers, many of them having their horns gilt. After them came the whole booty, and all the spoils, either displayed upon carriages, or borne upon the shoulders of young men in magnificent habits. The names of the nations conquered were written in great characters, and the cities, that had

been taken, represented. Sometimes they added to the pomp extraordinary animals, brought from the countries subjected, as bears, panthers, lions, and elephants. But what most attracted the attention and curiosity of the spectators, were the illustrious captives, who walked in chains before the victor's chariot; great officers of state, generals of armies, princes, and kings, with their wives and children. The consul followed (supposing the general to be so) mounted upon a superb chariot, drawn by four horses, and robed with the august and magnificent habit of triumph, his head encircled with a crown of laurel, holding also a branch of the same tree in his hand; and sometimes accompanied by his young children sitting near him. Behind the chariot marched the whole army; the cavalry first, then the infantry. All the soldiers were crowned with laurel, and those who had received particular crowns, and other marks of honour, did not fail to show them on so great a solemnity. They emulated each other in celebrating the praises of their general, and sometimes threw in expressions, sufficiently offensive, of railery and satire against him, which savoured of the military freedom; but the joy of the ceremony entirely blunted their edge, and abated their bitterness. As soon as the consul turned from the forum towards the capitol, the prisoners were carried to prison; where they were either immediately put to death, or kept in confinement often for the rest of their lives. Upon his entrance into the capitol, the victor made this very remarkable prayer to the gods. "Filled with gratitude and joy, I return you thanks, O most good and most great Jupiter, and you queen Juno, and all the other gods, the guardians and inhabitants of this citadel, that to this day and hour you have vouchsafed by my hands to preserve and guide the Roman republic happily. Continue always, I implore you, to preserve, guide, protect, and favour it in all things."¹ This prayer was followed by sacrificing the victims, and a magnificent feast, given in the capitol, sometimes by the public, and sometimes by the person himself who triumphed. The reader may see in Plutarch the long and fine description he gives of the triumph of Paulus Æmilius.

It must be allowed that this was a glorious day for a general of an army; and it is not surprising that all possible endeavours should be used to deserve so grateful a distinction, and so splendid an honour. Nor had Rome any thing more magnificent and majestic than this pompous ceremony. But the sight of captives, the mournful objects of compassion, if those victors had been capable of any, obscured and effaced all its lustre. What inhuman pleasure—what barbarous joy—to see princes, kings, princesses, queens, tender infants, and feeble old men, dragged before them! We may remember the dissembled marks of friendship, the false promises, the treacherous caresses of young Caesar, called afterwards Augustus, in regard to Cleopatra, solely with the view of inducing that princess to suffer herself to be carried to Rome, to adorn his triumph, and gratify him in the cruel satisfaction of seeing the most potent queen of the world prostrate at his feet in the most depressed and forlorn condition possible to imagine. But she well knew the snare. Such conduct and such sentiments, in my opinion, dishonour human nature.

In relating the rewards granted by the Romans to the soldiery, I have omitted a very important circumstance—the establishment of colonies. When the Romans first carried their arms, and extended their conquests out of Italy, they punished the people who resisted them with too much obstinacy, by depriving them of part of their lands, which they granted to such of the Roman citizens as were poor, and especially to the veteran soldiers, who had served their full proportion of time in the army. By this means the latter saw themselves settled in tranquillity with a comfortable income, sufficient for the support of their families.

¹ Gratias tibi, Jupiter optime, maxime; tibi que Junoni regine, et ceteris hujus custodibus habitantibusque arcis diis lubens letisque ago, re Romana in hanc diem et horam, per manus quod voluisti, servata, bene gestaque. Eundem et servate, ut facitis, forete, protegit, propitiati, supplex ero. *Ex. Rosini. Antig. Rom.*

They became by degrees the most considerable persons in the cities to which they were sent, and obtained the first posts, and principal dignities in them. Rome by these settlements, which were the result of a wise and profound policy, besides rewarding her soldiers advantageously, kept the conquered nation in subjection by their means, formed them to the Roman manners and customs, and by degrees made them forget their own customs and habits, to embrace those of their victors. France has established a new kind of military reward, which merits a place here.

SECTION V.—ESTABLISHMENT OF THE ROYAL HOSPITAL OF INVALIDS AT PARIS.

WE do not find either among the Greeks or Romans, or any other people, any public foundations for the relief of the soldiery, whom long fatigues or wounds have made incapable of service. It was reserved for Louis XIV. to set other princes that example, which England soon began to imitate; and we may say, that among an infinite number of great actions which have rendered his name illustrious, nothing equals the glorious foundation of the *Hôtel royal des invalides*.

There has been lately published a book upon the royal hospital of invalids, which answers in some measure the magnificence of that foundation, in the beauty and number of its plates and ornaments. In this book, all that regards the revenues, expenses, buildings, discipline, and government temporal and spiritual of that house, are circumstantially explained. We are obliged to persons who take pains to preserve and transmit in this manner to posterity an exact knowledge of facts so worthy of remembrance. For my part, my intent is only to give a brief idea of them.

Every thing in this structure denotes the grandeur and magnificence of its august founder. We are struck with astonishment at the sight of a vast and superb edifice, capable of containing almost four thousand persons, in which art has known how to unite whatever could strike the eye on the outside by pomp and splendour, with all that can conduce to the uses and conveniences of life within. There, in tranquillity and repose, the officers and soldiers, whom their wounds or age have made unable to serve, and the narrowness of their fortunes incapable to support themselves; there, those brave warriors, freed from all care and disquiet, are lodged, fed, clothed, and maintained, as well in sickness as in health, in a decent manner, and find a safe retreat, and an honourable asylum provided for them, by the piety and paternal goodness of Louis XIV.

It is natural to conceive, that the expense for the support of such a house must be immense. Two thousand five hundred quarters of wheat, and about eleven thousand five hundred hogsheads of wine are annually consumed in it. Physicians, surgeons, apothecaries, and servants, abound in this house. The infirmaries are served by thirty-five sisters, *Filles de la charité*, with surprising industry and cleanliness. But whence arise the funds necessary for such a multitude of wants and occasions? Who could believe it, or can sufficiently admire the wisdom that instituted such order and economy? It is the officer and soldier, who contribute with joy, and almost insensibly, to an establishment in which they hope one day to find tranquillity and repose, and a period of all their labours. The fund for all these expenses arise from three deniers (a twelfth part of a French penny) deducted from every livre of the ordinary and extraordinary expenses of war. This seems a small matter in itself, but the total amounts to a very considerable sum. During the war which ended 1714, in which an hundred millions of livres were yearly expended, these three deniers per livre, produced twelve hundred and fifty thousand livres a year.²

I have said nothing yet of what is most admirable in this foundation, is in a manner its soul, and does most honour to the memory of Louis XIV. I do not mean that magnificent temple, wherein the most famous masters in architecture, painting, and sculpture,

² About sixty thousand pounds sterling.

the standards, Decottes, Coppelles, Girardons, Cousin, have exhausted their whole art to adorn that august city. I mean that charitable care and Christian attention of that prince, after having provided, with a magnificence truly royal, for the temporal wants of the officers and soldiers, in providing also in this retreat for their spiritual necessities. It happens sometimes, that these warriors take upon them the profession of arms solely from the views of interest and ambition; they though most accomplished in military knowledge, they are utterly ignorant of religion; and that full of zeal and fidelity for their prince, they never give themselves any trouble about knowing their duty to God. How great an advantage and consolation is it to them to find, towards the close of their days, in the zeal and charity of wise and religious ministers of Jesus Christ, those instructions, which perhaps they have wanted in the former part of their lives; to recall in the bitterness of their hearts, whole years entirely past in vice and libertinism; and to retrieve by sincere repentance and sorrow the reward of all their actions; even of the most laudable, which were otherwise unfortunately lost to them from the badness of their motives. The pomp and magnificence of this temple are justly admired. But another object presents itself to our view at whatever hour of the day we enter it, a sight far more worthy of admiration, and which cannot be looked upon without tears in our eyes: ancient warriors maimed, crippled, without legs, arms, eyes, humbly prostrating themselves before the God of armies, whose majesty they adore with the most profound resignation; to whom they pay continual thanksgivings for having delivered them out of so many dangers, and especially for having taken them from the gates of hell; to whom, filled with the most lively sense of gratitude, they incessantly lift up their hands and voices to say: Be mindful, O Lord, of the prince who has opened this thy sacred asylum for us, and be merciful to him for the mercy which he hath shown to us thy servants!

CHAPTER II. OF SIEGES.

THE ancients distinguished themselves no less by the art of forming and sustaining sieges, than by that of making war in the field. It is agreed by all, that they carried these two parts of military knowledge to a very high degree of perfection, which it is difficult for the moderns to exceed. The use of muskets, bombs, cannons, and other fire-arms since the invention of powder, has occasioned the alteration of many things in the manner of making war, especially in sieges, the duration of which has been very much abridged by their means. But these changes have not been so considerable as is generally imagined, and have added nothing either to the merit or capacity of generals.

To treat of what relates to sieges with some order, I shall premise something upon the manner in which the fortifications of the ancients were formed; and shall then give some general idea of the principal machines of war used by them in sieges; and conclude with the manner of attacking and defending places. The Chevalier Follard has treated these several articles very extensively in the second and third volumes of his remarks upon Polybius, and has been my guide in a subject that required the direction of an able and experienced soldier.

ARTICLE I.

OF ANCIENT FORTIFICATIONS.

How far soever we look back into antiquity, we find among the Greeks and Romans, cities fortified almost in the same manner with their fosses, curtains, and towers. Vitruvius, in treating of the construction of places of war in his time, says, that the towers ought to project beyond the wall, in order that when the enemy approaches, the defenders upon the right and left may take them in flank; and that they ought to be round, and faced with many stones, because such as

are square, are soon beat down by the machines of war and battering rams, which easily break their angles. He adds after some remarks, that near the towers the wall should be cut within-side the breadth of the tower, and that the ways broke in this manner should only be joined and continued by beams laid upon the two extremities, without being made fast with iron, that in case the enemy should make himself master of any part of the wall, the besieged might remove this wooden bridge, and thereby prevent his passage to the other parts of the wall and into the towers.

The best towns of the ancients were situated upon eminences. They enclosed them sometimes within two or three walls and fosses. Berosus, cited by Josephus, informs us, that Nebuchadonosor fortified Babylon with a triple enclosure of brick walls of a surprising strength and height. Polybius, speaking of Syringa, the capital of Hyrcania, which Antiochus besieged, says, that city was surrounded with three fosses, each forty-five feet broad, and twenty-two deep; upon each side of these was a double intrenchment, and behind all, a strong wall. The city of Jerusalem, says Josephus, was surrounded by a triple wall, except on the side of the valleys, where there was but one, because they were inaccessible. To these they had added many other works, one of which, says Josephus, had it been completed, would have rendered the city impregnable. The stones, of which it was built, were thirty feet long by fifteen broad, which made it so strong, that it was in a manner impossible to sap or shake it with machines. The whole was flanked with towers from space to space of extraordinary solidity, and built with wonderful art.

The ancients did not generally support their walls on the inside with earth, in the manner of the Talus or slope, which made the attacks more dangerous. For though the enemy had gained some footing upon them, he could not assure himself of taking the city. It was necessary to get down, and to make use of part of the ladders by which he had mounted; and that descent exposed the soldier to very great danger. Vitruvius, however, observes, that there is nothing renders a rampart so strong as when the walls both of the curtain and towers are supported by earth. For then neither rams, mines, nor any other machines, can shake them.

The places of war of the ancients were not always fortified with stone walls. They were sometimes enclosed within good ramparts of earth of great firmness and solidity. The manner of coating them with turf was not unknown to them; nor the art of supporting the earth with strong fascines made fast by stakes, and of arming the top of the rampart with a ruff or fraise of palisades, and the foot of the parapet or *pas de souris* with another; they often planted palisades also in the fosse to defend themselves against sudden attacks. They made walls also with beams crossed over one another, with spaces between them in manner of a chequer, the void parts of which they filled up with earth and stones. Such almost were the walls of the city of Bourges, described by Cæsar in his seventh book of the war with the Gauls.

What I shall say in the sequel, when I come to explain the manner of attacking and defending places, will show more distinctly what kind of fortifications those of the ancients were. It is pretended that the moderns excel them very much in this point. The thing is not so indisputable but it may be called in question; though no comparison can be made between them; because their manner of attacking and defending is entirely different. The moderns have retained all they could after the ancients. Fire-arms have obliged them to use other precautions. The same genius is evident in both. The moderns have imagined nothing, that the ancients could use, and have not used. We have borrowed from them the breadth and depth of fosses, the thickness of walls, the towers to flank the curtains, the palisades, the intrenchments within the ramparts and towers, the advantage of many flanks, in multiplying of which only modern fortification consists; this fire-arms makes the more easy to execute. I have heard these remarks make by very able and experienced persons,

¹ Vitruv. l. i. cap. 5

who with a profound knowledge of the manner in which the ancients made war, unite a perfect experience of the modern practice of it.

ARTICLE II.

OF THE MACHINES OF WAR.

THE machines most used and best known amongst the ancients for besieging places, were the tortoise, the catapultæ, the balistæ, the corvus or crane, the ram, and moving towers.

SECTION I.—THE TORTOISE.

THE tortoise was a machine composed of very strong and solid timber-work. The height of it to its highest beam, which sustained the roof, was twelve feet. The base was square, and each of its fronts twenty-five feet. It was covered with a kind of quilted mattress made of raw hides, and prepared with different drugs to prevent its being set on fire by combustibles. This heavy machine was supported upon four wheels, or perhaps upon eight. It was called tortoise, from its serving as a very strong covering and defence, against the enormous weight thrown down on it; those under it being safe in the same manner as a tortoise under his shell. It was used both to fill up the fosse, and for sapping.

For the filling up of the fosse, it was necessary to join several of them together in a line and very near one another. Diodorus Siculus, speaking of the siege of Halicarnassus by Alexander the Great, says, that he first caused three tortoises to approach, in order to fill up the ditch, and that afterwards he planted his rams upon the space filled up, to batter the wall. This machine is often mentioned by authors. There were, without doubt, tortoises of different forms and sizes.

The machine called *Musculus*, used by Cæsar in the siege of Marseilles, was believed to be also a tortoise, but very low, and of a great length: it would be called in these days a wooden gallery. It is likely that its length was equal to the breadth of the fosses. Cæsar caused it to be pushed on to the foot of the walls, in order to demolish them by sap. Cæsar, however, often distinguishes the tortoise from the *Musculus*.

There were also several other machines intended to cover the soldiers, called *crates*, *plutei*, *vinæ*, &c. that were used in sieges, which I shall not undertake to describe here, to avoid prolixity. They may be comprised in general under the name of mantles, or *aheda*.

Besides the tortoise, the wooden machine I have been speaking of, there was another composed of soldiers, which may be ranked in the number of machines of war. A body of soldiers, drawn up together, put their great shields, in the form of gutter-tiles, close to each other over their heads. Well practised in this exercise, they formed so firm a roof, that whatever efforts the besieged might make, they could neither break nor move them. Upon this first tortoise of soldiers, a second was made to mount: and by this means they sometimes rose to an equal height with the walls of the place besieged.

SECTION II.—CATAPULTA. BALISTÆ.

I join these two machines together, because though authors sometimes distinguish them, they also often confound them, and it would be difficult to settle exactly the difference between them. They were both intended for discharging darts, arrows, and stones. They were of different sizes, and consequently produced more or less effect. Some were used in battles, and might be called field-pieces, others were employed in sieges, which was the use most commonly made of them. The balistæ must have been the heaviest and most difficult to carry; because there was always a greater number of the catapultæ in the armies. Livy, in his description of the siege of Carthage, says, that there were an hundred and twenty great, and more than two hundred small catapultæ taken, with thirty-three great balistæ, and fifty-two small ones. Josephus mentions the same difference amongst the Romans, who had three hundred ca-

tapultæ, and forty balistæ, at the siege of Jerusalem.

These machines had a force, which it is not easy to comprehend, but which all good authors attest. Vegetius says, that the balista discharged darts with such rapidity and violence, that nothing could resist their force. Athenæus tells us, that Agesistratus made one of little more than two feet in length, which shot darts to the distance of almost five hundred paces. These machines were not unlike our crossbows. There were others of much greater force, which threw stones of three hundred weight, upwards of an hundred and twenty-five paces.

We find surprising effects of these machines in Josephus. "The darts and force of the catapultæ destroyed abundance of people. The stones from the machines beat down the battlements, and broke the angles of the towers. There was no phalanx so deep but one of these stones would sweep a whole file of it from one end to the other. Things passed this night that showed the prodigious force of these machines. A man who stood by Josephus, had his head taken off by a stone discharged from a distance of three hundred and seventy-five paces."

SECTION III.—THE RAM.

THE use of the ram is very ancient, and the invention of it ascribed to different people. It seems difficult, and hardly worth the trouble to discover the author of it. The ram was either slung or not slung. The swinging ram was composed of a large beam of oak, resembling a ship's mast, of prodigious length and thickness, with the end armed with a head of iron proportioned to the body, and in the shape of a ram's head, whence it had its name, because it strikes against the walls, as a ram doth with his head against all he encounters. The thickness of the ram should be conformable to its length. Vitruvius mentions one of four thousand talents in weight, that is, four hundred and fourscore thousand pounds, which is not very extravagant. This terrible machine was suspended and balanced equally, like the beam of a pair of scales, with a chain or large cables, which supported it in the air in a kind of building of timber, which was pushed forwards upon the filling up of the fosse to a certain distance from the wall, by the means of rollers or wheels. The building was secured from being set on fire by the besieged by several coverings, with which it was cased over. This manner of working the ram seems the most easy, and requires no great strength. The heaviest body suspended in the air may be moved with inconsiderable force.

But it is not so easy to comprehend how these rams were carried from place to place. For it is not to be imagined, that beams of such immense thickness and extraordinary length could be found wherever there was occasion for them, and it is certain that armies never marched without these machines. The Chevalier Follard, for want of information in this point from the writers of antiquity, conjectures, that they carried this ram-beam upon a four-wheel carriage of a particular form, composed of very strong timbers; the beam suspended short to a strong stay or cross-beam in form of a gibbet powerfully sustained by all the wood work capable of resisting the most violent shocks, and the whole joined and strengthened well with bindings and plates of iron.

There was another kind of ram which was not suspended or slung. We see upon the column of Trajan the Dacians besieging some Romans in a fortress, which they batter with a ram worked only by strength of arms. They are not covered with any thing, so that both the ram and those who work it, are exposed to the darts of the besieged. It could not be this method of using it produce any great effect.

It has been questioned whether the rams, fixed in the moving towers, or in a kind of tortoise, were slung or not, and there are strong reasons on both sides. My plan does not admit my entering into this dispute.

† The Roman pound weighed less than the French by almost a quarter.

I shall presently relate the prodigious effects of the ram. As it was one of the machines that hurt the besieged most, many methods were contrived to render it useless. Fire was darted upon the roof that covered, and the timbers that supported it, in order to burn them with the ram. To deaden its blows, sacks of wool were let down against the place at which it was levelled. Other machines were opposed against it to break its force, or to turn aside its head, when battering the works. Abundance of means were employed to prevent its effects. Some of them may be seen in the sieges I have cited in the beginning of this paragraph. Josephus relates a surprising action of a Jew, who, at the siege of Jotaphat, threw a stone of an enormous size upon the head of the ram with such violence, that he loosened it from the beam, and made it fall down. He leaped afterwards from the top of the wall to the bottom, took the head from the midst of the enemies, and carried it back with him. He received five arrows in his body, and notwithstanding those wounds, boldly kept in his post, till, through loss of blood and strength, he fell from the wall, and the ram's head with him, with which he would never part.¹

SECTION IV.—MOVING TOWERS.

VEGETIUS describes these towers in a manner, that gives a sufficiently clear idea of them.² The moving towers, says that author, are made of an assemblage of beams and strong planks, not unlike a house. To secure them against the fires thrown by the besieged, they are covered with raw hides, or with pieces of cloth made of hair. Their height is in proportion to that of their base. They are sometimes thirty feet square, and sometimes forty or fifty. They are higher than the walls or even towers of the city. They are supported upon several wheels according to mechanic principles, by the means of which the machine is easily made to move, how great soever it may be. The town is in great danger, if this tower can approach the walls. For it has stairs from one story to another, and includes different methods of attack. At bottom it has a ram to batter the wall, and on the middle story a draw-bridge, made of two beams with rails of basket-work, which lets down easily upon the wall of a city, when within reach of it. The besiegers pass upon this bridge, to make themselves masters of the wall. Upon the higher stories are soldiers armed with partisans, and missive weapons, who keep a perpetual discharge upon the works. When affairs are in this posture, a place seldom holds out long. For what can they hope who have nothing to confide in but the height of their ramparts, when they see others suddenly appear which command them?

ARTICLE III.

ATTACK AND DEFENCE OF PLACES.

I join the attack and defence of places together, in order to abridge this subject, which of itself is very extensive: I shall even treat only of the most essential parts of it, and in as brief a manner as possible.

SECTION I.—LINES OF CIRCUMVALLATION AND COUNTERVALLATION.

WHEN the cities were extremely strong and populous, they were surrounded with a fosse and intrenchment against the besieged, and by another fosse on the side next the country, against the troops which might come to the aid of the place; and these were called lines of circumvallation and countervallation. The besiegers pitched their camp between these two lines. Those of countervallation were against the besieged city, the others against attempts from without.

When it was foreseen, that the siege would be of long duration, it was often changed into a blockade, and then the two lines in question were solid walls of strong masonry, flanked with towers at proper distances. There is a very good example of this at the

siege of Platæa by the Lacedæmonians and Thebans of which Thucydides has left us a long description "The two surrounding lines were composed of two walls sixteen feet distant, and the soldiers lay in that space, which was divided into quarters: so that it might have been taken for only one wall with high towers from distance to distance, which occupied the whole interval, in order to enable the besiegers to defend at the same time against those within and those without. The quarters of the soldiers could not be gone round without crossing the towers of the wall, and the top of the wall was skirted with a parapet of osier. There was a fosse, on each side of which, the earth had been used to make bricks for the wall."³ In this manner Thucydides describes these two surrounding walls, which were of no very great circumference, the city being very small. I have elsewhere related with sufficient extent the history of this siege, or rather blockade, very famous among the ancients, and have observed in what manner, notwithstanding these fortifications, part of the garrison escaped.

The camp of the Roman army before Numantia took up a much greater extent of ground.⁴ That city was twenty-four stadia or a league in circumference. Scipio, when he invested it, caused a line of circumvallation to be drawn, which enclosed more than twice the ground the city stood upon. When this work was finished, another line was thrown up against the besieged, at a reasonable distance from the first, composed of a rampart of eight feet thick by ten high, which was strengthened with strong palisades. The whole was flanked with towers of an hundred feet from each other. It is not easy to comprehend in what manner the Romans completed these immense works; a line of circumvallation of more than two leagues in compass: but nothing is more certain than these facts.

SECTION II.—APPROACHES OF THE CAMP TO THE BODY OF THE PLACE.

THOUGH trenches, oblique lines, mines, and the like inventions, seem neither often nor clearly expressed in authors, we can hardly doubt with reason, that they were in use among the Greeks and Romans. Is it probable, that with the ancients, whose generals, among their other excellent qualities, had that of taking great care to spare the blood and lives of their soldiers, approaches were made in besieging without any precautions against the machines of the besieged, whose ramparts were so well provided, and whose defence was so desperate? Though there is no mention of this in any of the historians, who might possibly in the description of sieges, omit it as being well known to all the world; we should not conclude, that such able generals either did not know, or neglected, things, on the one side so important, and on the other so easy; and which must naturally have struck every man however little versed in attacking places. But several historians speak of them; and among the rest Polybius, who, describing the siege of the city of Echinna by Philip, concludes with these words: "To cover from the arrows of the besieged, as well as those who went from the camp to the works, as those who returned from the works to the camp, trenches were drawn from the camp to the tortoisés; and these trenches covered at top."⁵

Long before Philip, Demetrius Poliorcetes had used the same method at the siege of Rhodes. Diodorus Siculus tells us, "that famous warrior caused tortoisés, and galleries, cut in the earth, or covered mines, to be made, for communication with the batteries of rams, and ordered a trench with blinds over head, to cover and secure the troops in going and coming from the towers and tortoisés. The seamen and marines were appointed for this service; the work was four stadia in length, or five hundred paces."

It is certain therefore that the use of trenches was

⁴ Συγγράμμα ἱστοριῶν: Suidas understands by σπηλιεῖς, a long trench: ἰσχυρὸς δὲ οὐκ ἔστιν. Longus cuniculus, et meatus subterraneus. • Polyb. l. ix. p. 571

well known to the ancients, without which they could have formed no siege. There were different sorts of them. They were either fosses parallel to the front of the attacks, or communications cut in the earth and covered over head, or open, and drawn obliquely to prevent being scoured by the enemy. These trenches are often expressed in authors by the Latin word *aggeres*, which does not always signify *cavaliers* or *platforms*.

The cavaliers were mounds of earth, on which machines were planted, and were thrown up in the following manner. The work was begun at a small distance from that side of the fosse next the country. It was carried on under the cover of mantles, or moving sheds, of considerable height, behind which the soldiers worked in security from the machines of the besieged. This sort of mantles or galleries were not always composed of hurdles and fascines, but of raw hides, mattresses, or of a curtain made of strong cables, the whole suspended between very high masts fixed in the ground, which broke the force of whatever was discharged against it.¹ The work was continued to the height of these suspended curtains, which were raised in proportion with it. At the same time the void places of the platform were filled up with stones, earth, and any thing; whilst some were employed in levelling and beating down the earth, to make it firm and capable of sustaining the weight of the towers and machines to be planted upon it. From these towers and batteries of balistas and catapultas a hail of stones, arrows, and large darts, were discharged upon the ramparts and works of the besieged.

The terrace which Alexander the Great caused to be raised against the rock of Coriense, was very surprising.² That rock, which was supposed impregnable, was two thousand five hundred paces high, and seven or eight hundred round. It was excessively steep on all sides, having only one path, hewn out of the rock, by which no more than one man could ascend without difficulty. It was besides surrounded with a deep abyss, which served it instead of a fosse, and which it was necessary to fill up, in order to approach it. All these difficulties were not capable of discouraging Alexander, to whose valour and fortune nothing was impossible. He began therefore by ordering the high fir trees, that surrounded the place in great numbers, to be cut down, in order to use them as stairs to descend by into the fosse. His troops worked night and day in filling it up. Though the whole army were employed in their turn upon this work, so difficult was it, that they could do no more than thirty feet a day, and something less a night. When it was more advanced, and began to come nearer the due height, they drove piles into both sides of the fosse, at proper distances from each other, (with beams laid cross) in order to support the weight to be laid on it. They then formed a kind of floor or bridge of wicker and fascines, which they covered with earth to equal the height of the side of the fosse, so that the army could advance on a way even with the rock. Till then the barbarians had derided the undertaking, believing it utterly impracticable. But when they saw themselves exposed to the darts of the enemy, who worked upon their terrace behind mantles, they began to lose courage, demanded to capitulate, and soon after surrendered the rock to Alexander.

The filling up of the fosses was not always so difficult as in this instance, but always required great precautions and labour. The soldier worked under cover in the tortoises, and the like machines. To fill up the fosses, they made use of stones, the trunks of trees, and fascines, the whole mingled with earth. It was necessary that these works should be of great solidity, to bear the prodigious weight of the machines planted upon them, which would have made them fall in, if this kind of causeway had been composed only of fascines. If the fosses were full of water, they began by drawing it off either entirely or in part by different drains, which they cut for that purpose. Whilst these works were carrying on, the besieged were not

idle. They ran many mines under the fosse to the part of it filled up, in order to carry off the earth, which they banded from man to man into the city: this prevented the work from advancing, the besieged carrying off as much as the besiegers laid on it. They used also another more effectual stratagem, which was to cut large cavities underneath the works of the latter. After having removed some of the earth without this being discovered, they supported the rest with props or large beams, which they smeared over with grease and other combustibles. They then filled up the void space between the props with dry wood, and such things as would soonest burn, and set them on fire: hence when the props gave way, the whole fell into a kind of gulf, with the tortoises, battering rams, and men employed in working them.

The besiegers used the same artifice to make the walls of places fall down. When Darius besieged Chalcedon, the walls were so strong, and the place so well provided with all necessities, that the inhabitants were in no pain about the siege.³ The king did not make any approaches to the walls, nor lay waste the country. He lay still as if he expected a considerable re-enforcement. But whilst the people of Chalcedon had no other thoughts than of guarding their walls, he opened at the distance of three-quarters of a league from the city a mine, which the Persians carried on as far as the market-place. They judged themselves directly under it from the roots of the olive-trees, which they knew grew there. They then opened their mine, and entering by that passage, took the place whilst the besieged were still employed in keeping guard upon the walls.

In the same manner, A. Servilius the dictator took the city of Fidene, having caused several false attacks to be made on different sides, whilst a mine carried on as far as the citadel, opened him a passage there for his troops.⁴ Another dictator (the celebrated Camillus) could not terminate the long siege of Veii, but by this stratagem.⁵ He undertook to run a mine as far as the citadel of that place. And that the work might not be discontinued, or the troops discouraged by the length of it, he divided them into six brigades, who relieved each other every six hours. The work being carried on night and day, it extended at length to the citadel, and the city was taken.

At the siege of Athens by Sylla, it is astonishing to consider the mines and countermines used on both sides.⁶ The miners were not long before they met and fought furiously under ground. The Romans having cut their way as far as the wall, sapped a great part of it, and supported it in a manner in the air on props of wood, to which they set fire without loss of time. The wall fell suddenly into the fosse with an incredible noise and ruins, and all that was upon it perished. This was one of the methods of attacking places.

SECTION III.—MEANS USED IN REPAIRING BREACHES.

THE ancients used several methods to defend themselves against the enemy after the breach was made. Sometimes, but not so frequently, they made use of trees cut down, which they extended along the whole front of the breach very near each other, in order that the branches might mingle together; they tied the trunks very firmly to one another, so that it was impossible to separate these trees, which formed an impenetrable fence, behind which a multitude of soldiers were posted, armed with pikes and long partizans. The breaches were sometimes made so suddenly, either by saps above, or under ground, or by the violent blows of the rams, that the besieged often found their works laid open, when they least thought of it. They had recourse on such occasions to a very simple refuge in order to gain time, and to intrench behind the breach. They threw down upon the ruins of the wall a prodigious quantity of dry wood, and other combustible matter, to which they set fire: this occasioned so violent a flame, that it was impossible for the besiegers to pass through it or approach the breach

¹ Cesar made use of such a curtain at the siege of Mar-sailles. De bell. civ. l. iii.

⁴ Liv. l. iv. n. 92.

⁵ Ibid. l. v. n. 19.

⁶ Appian de bell. Mithrid. p. 193.

The garrison of Haliartus in Bœotia thought of this remedy against the Romans.¹ But the most usual method was to erect new walls behind the breaches, which are now called in French, *retirades*, retrenchments. These works generally were not parallel with the ruined walls. They described a kind of semicircle towards the place, of which the two ends joined the two sides of the wall that remained whole. They did not omit to cut a very large and deep fosse before this work, in order to oblige the assailants to attack it with the whole train of machines, which would be used against walls of the greatest strength.

Sylla, having beat down great part of the walls of the Piræum with his battering rams, caused the breach to be immediately attacked, where so furious a battle ensued, that he was obliged to sound a retreat.² The besieged, improving the opportunity this gave them, immediately ran a second wall behind the breach. Sylla, perceiving it, made his machines advance to batter it, rightly judging, that being newly built, it could not long resist their violence. The effect answered with no great difficulty, and he immediately ordered the assault to be given. The action was warm and vigorous; but he was at last repulsed with loss, and obliged to abandon his design. History abounds with examples of this kind.

SECTION IV.—ATTACK AND DEFENCE OF PLACES BY MACHINES.

THE machines most used in sieges were, as I have observed before, the catapultæ, balista, tortoises, battering rams, and moving towers. To know the force of them, the reader need only turn back to the relations of the most important sieges treated in this history, such as those of Lilybæum in Sicily by the Romans; of Carthage by Scipio; of Syracuse, first by the Athenians, and afterwards by Marcellus; of Tyre by Alexander; of Rhodes by Demetrius Poliorcetes; and of Athens by Sylla.

I shall cite here no more than one, of which I shall repeat only some detached, but very proper, circumstances, in my opinion, to show the manner in which the ancients attacked and defended places, and the use they made of machines of war. This is the famous siege of Jerusalem by Titus, related at large by the historian Josephus, who was an eye-witness of the whole.

The city of Jerusalem was fortified with a triple wall, except on the side of the valleys, where there was but one, because they were inaccessible.³ Titus began by causing all the trees in the neighbourhood to be cut down, and made use of that wood in erecting several platforms or terraces. The whole army were employed in this work; the workmen were covered by hurdles and gabions. The Jews omitted nothing on their side, that might contribute to their defence: the ramparts were soon covered with a great number of machines.

The first wall was first attacked. When the platforms were erected, Titus caused the rams to be planted upon them, with the other machines to annoy the enemy, and battered the wall in three different places. The Jews perpetually poured an incredible number of fires and darts upon these machines, and the soldiers that worked the rams. They made also several sallies to set them on fire, and were repulsed with great difficulty. Titus had caused three towers to be erected on these platforms, each of seventy-five feet in height, to command the ramparts and works of the place. In the night, one of these towers fell of itself, and occasioned a great consternation throughout the whole army. They galled the besieged exceedingly, for they were full of portable machines, slingers, and archers, who poured a continual shower of darts, arrows, and stones, upon them, which they did not know how to remedy, because they could neither raise platforms of an equal height with those towers, nor throw them down, they were so strong; nor burn them, because they were covered all over with plates of iron. Nothing, therefore, being able

to retard the effect of the rams, and those dreadful machines perpetually advancing, the Jews abandoned the first wall, after a defence of fifteen days. The Romans entered the breach without difficulty, and opened the gates to the rest of the army.

The second wall gave them no great trouble: Titus soon made himself master of that with the new city. The Jews then made very extraordinary efforts, and drove him out of them, and it was not till after a continued and very rude battle of four days, that he regained them.

But the third wall cost him much labour and blood, the Jews refusing to hearken to any proposals of peace, and defending themselves with an obstinacy, that resembled rather the madness and fury of men in despair, than valour and fortitude.

Titus divided his army into two bodies, in order to form two attacks on the side of the fort Antonia, and made his troops work in erecting four terraces, upon each of which a legion was employed. Though the work was carried on night and day, it took up above fifteen days to complete it; at the end of which the machines were planted upon it. John and Simon were at the head of the seditious, who ruled all things in the city. The first caused a mine to be run as far as the terrace in the front of the fort Antonia, the ground under it to be supported by props, a great quantity of wood prepared with rosin and pitch to be carried into it, and then ordered it to be set on fire. The props being soon consumed, the terrace fell in with a dreadful noise. Two days after, Simon attacked the other terraces, on which the besiegers had placed their rams, and begun to batter the wall. Three young officers, followed by soldiers as determinate as themselves, opened their way, with torches in their hands, through the midst of their enemies, as if they had nothing to fear from the multitude of darts and swords, and did not retire till they had set fire to the machines. When the flames began to rise, the Romans ran from their camp to save their machines. The Jews repulsed them by the shower of darts from the top of their walls, where they had three hundred catapultæ and forty balistæ. They also sallied in large bodies, and despising danger, came to blows with those who advanced to extinguish the fire. The Romans used their utmost endeavours to draw off their rams, of which the covers were burnt; and the Jews, to prevent them, continued amidst the flames without giving way. The fire from the machines caught the terraces, the Romans not being able to hinder it. So that, seeing themselves surrounded on all sides with the flames, and despairing of all means to preserve their works, they retreated to their camp. They were inconsolable for having lost in one hour, by the ruin of their works, what had cost them so much time and pains, and many, seeing all their machines destroyed, despaired of ever being able to take the place.

But Titus did not lose courage. Having called a great council of war, he proposed the building of a wall round the city, to deprive the besieged of all hopes of receiving aid or provisions, of which they began to be in want. This advice was generally approved of, and the troops recovered spirit. But what seems incredible, and was truly worthy of the Romans, is, that this great work, which appeared to require three months for the execution of it, the city being two leagues in circumference, was begun and finished in three days. The city being enclosed in this manner, the troops were posted in the towers with which the new wall was flanked at proper distances. Titus at the same time caused four more terraces to be raised against the fort Antonia, larger than the former. They were completed in twenty-one days, notwithstanding the difficulty of finding the wood necessary for so great a work.

John, who commanded in fort Antonia, in order to prevent the danger consequent upon a breach being made by the besiegers, lost no time in fortifying himself; and to try all things before the rams began to batter, he made a sally with torches in hand, in order to set fire to the enemy's works, but was obliged to return without being able to approach them.

¹ Liv. .xlii. n. 63. ² Appian de bell. Mithrid. p. 194.

³ Joseph. bell. Jud. l. i.

The Romans then advanced their rams to batter the tower Antonia: but seeing, notwithstanding reiterated efforts, that they could not make a breach, they resolved to sap it, and covering themselves with their bucklers in form of a tortoise, against the quantity of stones and flints, which the Jews poured down upon them, they persevered to work in such a manner with their levers and hands, that they loosened four of the stones in the foundation of the tower. Night obliged both sides to some respite: and in that time, the part of the wall, under which John had caused the mine to be run, by the means of which he had ruined the first terraces of the Romans, being weakened by the strokes they had given it, fell down on a sudden. The Jews the same moment raised another wall behind it. As it was so newly built, it was expected that it would be the more easily thrown down: but nobody dared be the first to assault it, so much the determined courage of the Jews had dismayed the troops. Several attempts were however made, but without success. Providence opened them another way. Some soldiers, who guarded the terraces, got up without noise towards the close of the night by the ruins of the wall into the fort Antonia. They found the sentinels upon the advanced posts asleep, and slew them. Having made themselves masters of the wall in this manner, they caused their trumpets to sound, which they had taken care to bring with them. Upon that alarm, the guard at the other posts, imagining the number of the Romans much greater than it was, were seized with such fear that they fled. Titus came up soon after with part of his troops, and entering by the same ruins, pursued the Jews to the gates of the temple, which they defended with incredible valour. The action was very hot, and continued at least ten hours. But at length the fury and despair of the Jews, who saw their safety depended upon the success of this battle, prevailed over the valour and experience of the Romans. The latter thought proper to content themselves with having taken fort Antonia, though only a part of their army was present in the battle.

Several other assaults passed which I omit. The greatest of the rams that Titus had caused to be made, and planted upon the platform, battered the walls of the temple continually for six days, without being able to make any more progress than the rest; of such proof was that superb edifice against their efforts. The Romans having lost all hopes of succeeding by attacks of this kind, resolved to proceed by scaling the walls. The Jews, who had not foreseen it, could not prevent them from planting their ladders. But never was resistance greater than theirs. They threw down such as had got on the wall, killed those upon the upper steps of the ladders before they could cover themselves with their shields, and even threw down the ladders quite covered with soldiers, which cost the Romans many men. The rest were obliged to retire without being able to succeed in the attempt.

The Jews made many sallies, in which they fought with the utmost fury and desperation, and killed many of the Romans. But Titus at last made himself master of the temple, to which, notwithstanding the most severe orders to the contrary, a soldier set fire, and it was consumed entirely. And thus the prediction of Jesus Christ concerning it was accomplished.

CHAPTER III.

OF THE NAVIES OF THE ANCIENTS.

I HAVE spoken elsewhere of the maritime affairs of the ancients, their vessels, and naval troops. I must beg the reader to have recourse to what I have said there, to supply what may be wanting in this place.

Nothing certain can be said concerning the origin of navigation. We may, however, be assured, that the oldest vessel mentioned in history, is Noah's ark, of which God himself gave the design, and directed the form and all the measures, but solely with the view which he had of its containing the

family of Noah, and all the animals of the earth and air. This ark, without doubt, was in its beginnings gross and imperfect: planks, rafts, small boats, and little barks. The manner in which fish move in the water, and birds in the air, might suggest to mankind the thought of imitating the aids nature has given those animals by oars and sails. At all events, they have attained by degrees the art of building vessels in the perfection we now see them.

The ships of the ancients may be divided into two kinds:—those for transporting merchandise, *onerariæ naves*; and ships of war, often called long ships *longæ naves*.¹

The first were small vessels, which were commonly called *open barks*, because they had no deck. These little barks had no beaks, called *rostra*, used in sea fights, to run against and sink the enemy's ships.

The long ships used in war were of two sorts. The one had only one bench of oars on each side, the other more. Of those which had only one bench, some had twenty oars, *disiæres*; others thirty, *triasiæres*; some fifty, *pentasiæres*; or even an hundred, *hectasiæres*. Nothing is more common than names of these ships in Greek authors. The rowers were placed half on one side of the vessel, and half on the other, on the same line. Among the vessels of several benches of oars, some had two only, *biremes*; others three, *triremes*; some four, *quadriremes*; others five, *quinqueremes*; and others a greater number, as we shall see in the sequel. Those most spoken of by authors, and of which the ancients made most use in battles, were the *triremes* and *quinqueremes*: by which names the reader will permit me to express the vessels with three and five benches of oars.

We find in all the ancient authors a clear and evident distinction between these two sorts of vessels. Some were called *triasiæres*, ships of thirty oars; *pentasiæres*, ships of fifty oars, &c. and these were ranked in the number of small ships. We shall see presently the difference there was in the number of the crews on board each of them. The latter were distinguished by their several benches of oars, as well as magnitude. And Livy says expressly: *Quinqueremis Romana—pluribus remorum ordinibus scindentibus vortices*; as well as Virgil, *Terno consurgunt ordine remi*?² It is therefore not to be doubted, that the ancients had vessels with several benches of oars, from two, three, four, five, six, to thirty or forty: but those only of a small number of benches were of use; the rest being chiefly for show.

To know how these several benches of oars could be put in motion, is a difficulty, and has always been a matter of dispute among the learned moderns, which in all probability may continue for ever undecided. The most able and experienced persons on naval affairs among us, believe the thing utterly impossible. And indeed it would be so, if we suppose, that these different ranks of oars were placed perpendicularly over one another. But we see the contrary upon Trajan's column, on which the biremes and triremes have their benches placed obliquely, and as it were by steps one above the other. The arguments opposed to the opinion of those who admit several ranks of oars in vessels, are, it must be owned, very strong and conclusive: but what force can the best reasons in the world have against real facts, and an experience confirmed by the testimony of all the ancient writers.

It appears, that the rowers were distinguished from the place or step where they sat.⁴ The lowest were called *Thalamites*, those in the middle *Zugites*, and those above, *Thranites*.⁵ The latter had larger pay than the others, without doubt, because they handled longer and heavier oars than those of the lower benches. It is still a question, whether in large vessels each oar had only one man to it, or more, as now in the galleys of France. In the biremes and triremes

⁵ Thucyd. l. vi. p. 431

on the column of Trajan, there is only one rower to a bench on each side. It is very probable, that there were more in larger vessels: but I avoid entering into discussions, which would carry me a great way beyond the extent of my plan.

There are descriptions in Athenæus of ships of astonishing and incredible magnitude. The two first were Ptolemy Philopator's, king of Egypt.¹ One of them carried forty benches of oars, and was four hundred feet long, and fifty-seven broad. Four thousand rowers hardly sufficed to put this enormous bulk in motion. It was launched by a machine, composed of as much wood as would have made fifty vessels of five benches of oars. How shall we conceive the practical use of the fifty benches of oars in this vessel? But indeed they were chiefly for show.

The other ship, called *Talamaga*, because it had beds and apartments in it, was three hundred twelve and a half feet in length, and forty-five in its greatest breadth. Its height, including the tent or pavilion upon its deck, was almost sixty feet. All around it, (except the head,) there was a double gallery of immense extent. It was really a floating palace. Ptolemy caused it to be built to carry himself and his whole court upon the Nile. Athenæus does not mention the number of its ranks or benches of oars.

The third vessel is that which Hiero II. king of Syracuse, caused to be built under the directions of the famous Archimedes.² It had twenty benches of oars, and was of incredible magnificence. No part of Sicily being capable of containing it, Hiero made a present of it to Ptolemy Philopator, and sent it to Alexandria. Though the hold or sink was very deep, one man emptied it by the means of a machine invented by Archimedes.

These vessels, which were chiefly for show, have, properly speaking, no relation to the subject I treat. As much may be said of that of Philip, the father of Perseus mentioned by Livy. It had sixteen benches of oars, but could scarce be made to move, on account of its magnitude.

What Plutarch says of the galleys of Demetrius Poliorcetes is very surprising, and he takes care to apprise the reader that he speaks with the strictest truth, and without any exaggeration.³ That prince, who it is known, was well versed in the arts, and very inventive in regard to machines of war, had also caused several galleys of fifteen and sixteen benches of oars to be built; not merely for ostentation, as he made a wonderful use of them in battles and sieges. Lysimachus not being able to believe what was said of them, sent to desire him, though his enemy, to let his galleys row before him: and when he had seen their swift and easy motion, he was inexpressibly surprised, and could scarce venture to believe his own eyes. These vessels were of astonishing beauty and magnificence; but their lightness and agility seemed still more worthy of admiration, than their size and splendour. But we will confine ourselves to those which were more known and common, I mean principally the galleys of three, four, and five benches of oars; and make some observations upon their use in battle.

There is no mention in Homer of vessels with several benches of oars: it was not till after the Trojan war that the use of them was introduced: the particular era is unknown. The Corinthians were the first who changed the ancient form of the galleys, and built those of three benches of oars, and perhaps also of five. Syracuse, a Corinthian colony, piqued herself, especially in the time of Dionysius the elder, upon imitating the industry of the city, from which she derived her origin; and even at length surpassed it, by carrying that to perfection, which the former had only designed. The wars, which she had to support against Carthage, obliged her to devote all her care and application to naval affairs. These two cities were at that time the greatest maritime powers in the world. Greece, in general, had not yet distinguished herself in this respect. It had been the plan and design of Lycurgus absolutely to prohibit the use of

navigation to his citizens; and that from two motives equally worthy the wise and profound policy of that legislator. His first view was to remove from his republic all commerce with strangers, lest such intercourse should alter the purity of its manners, and weaken the severity of the maxims he had established. In the second place, he was for banishing from the Lacedæmonians all desire of aggrandizing themselves, and all hope of making conquests; considering that dire ambition as the ruin of states. Sparta therefore at first had only a very small number of ships. Athens was originally no better provided with them. It was Themistocles, who, penetrating into the future, and foreseeing at a distance what they had to apprehend from the Persians, converted the whole power of Athens into a maritime force, equipped upon a different pretext a numerous fleet, and by that wise provision, preserved Greece, obtained immortal glory for his country, and put it into a condition to become in a short time superior to all the neighbouring states.

During almost five ages, Rome, if Polybius may be believed, was entirely ignorant of what a vessel, galley, or fleet was. As she was solely employed in subverting the surrounding states, she had no occasion for them. When she began to send her troops into Sicily, she had not a single bark of her own, and borrowed vessels of her neighbours to transport her armies.⁴ But she soon perceived that she could not oppose the Carthaginians, whilst they were masters of the sea. She therefore conceived the design of disputing the empire of it with them, and of equipping a fleet. A quinquereinis, which the Romans had taken from the enemy, gave birth to the thought, and served them for a model. In less than two months they built an hundred galleys of five, and twenty of three benches of oars. They formed mariners and rowers by an exercise before unknown to them; and in the first battle they gave the Carthaginians, they overcame them, though the most powerful nation of the world by sea, and the most expert in naval affairs.

The fleet of Xerxes, when he set out from Asia to attack Greece, consisted of more than twelve hundred galleys with three benches of oars, of which each carried two hundred and thirty men; and three thousand galleys of thirty or fifty oars, besides transports, which on an average carried fourscore men.⁵ The other galleys, supplied by the province of Europe, had each two hundred men on board. Those which set out from Athens, during the Peloponnesian war, to attack the Syracusans, carried as many. Hence we may suppose the usual complement of those vessels was two hundred men. I could have wished, that historians had distinguished clearly in regard to these two hundred men, who were the complement of the ships; how many of them were merely seamen, and how many soldiers. Plutarch, in speaking of those of the Athenians, that were in the battle of Salamis, observes that each of the hundred and fourscore galleys, of which their fleet consisted, had only eighteen fighting men on board, of whom four were archers, and the rest heavy armed troops: which is a very small number.⁶

The battle of Salamis is one of the most famous of antiquity: but we have no very particular account of it.⁷ The Athenians distinguished themselves in it by invincible valour, and their commander still more by his ability and prudence. He persuaded the Greeks, not without much difficulty, to stop in a strait, which rendered the superiority in number of the Persian vessels useless: and he delayed engaging, till a certain wind very contrary to the enemy began to blow.

The last battle of the Athenians, in the port of Syracuse, occasioned their ruin. Apprehending the beaks of the enemy's galleys, of which they had a sad experience in the former actions, Nicias provided grappling irons in order to prevent their effect, and to come immediately to blows as upon shore. But the enemy, who perceived it, covered the heads and upper parts of their galleys with leather, in order to give less hold to the grapples, and avoid being board-

ed. Their discharges did much greater execution. The Athenians were overwhelmed by a hail of stones, which never missed their aim, whilst their darts and arrows were almost always ineffectual, from the motion and agitation of the vessels. Their ancient glory and power suffered shipwreck in this last battle.

Polybius has a short but very fine description of a sea-fight, which was to the Romans a happy omen of the future, and made way for the conquests, which were to assure them of the empire of the sea. It is that of Mylia in Sicily against the Carthaginians, in which the consul Duillius commanded. I have related it in the history of the Carthaginians. What is particular in this battle, is a machine of a new invention, made fast to the top of the heads of the Roman ships, and called *Corvus*. It was a kind of crane, drawn up on high and suspended by cords, which had a heavy cone of iron, called *Corvus*, at its extremity, that was let down with impetuosity upon the ships of the enemy, to break through the planks of the decks, and grapple them. This machine was the principal cause of the victory, the first the Romans ever gained at sea.

The same Polybius describes more extensively a famous naval battle near Economa, a city of Sicily. The Romans, commanded by the consuls Atilius Regulus, and L. Manlius, had three hundred and thirty deck-ships, and a hundred and forty thousand men, each vessel carrying three hundred rowers, and one hundred and twenty soldiers. The Carthaginian fleet commanded by Hanno and Amilcar had three hundred and fifty vessels, and above one hundred and fifty thousand men. The design of the former was to carry the war into Africa, which the others were extremely interested to prevent. Every thing therefore was disposed for a battle. The order of battle of the Romans at this time was quite unusual. They did not draw up in one or more lines, which was very common, lest the enemy should get between their lines with the advantage of their number, and they took care to face on all sides. Besides, as the enemy's strength consisted in the agility of their ships, they thought it necessary to row in an oblique line, and observe an order of battle not easy to be broken. For this purpose, the two ships of six benches, on board of which were the consuls Regulus and Manlius, were placed in front, side by side. They were each followed by a file of ships: called the first and second fleet. The vessels of each file stood off, and enlarged the file as they drew up, turning their heads outwards. The two first fleets being thus drawn up in the form of a beak or wedge, the third line of ships was formed, called the third fleet. This closed the space, and faced the enemy; so that this order of battle had the form of a triangle. These three lines composed a kind of divided whole, consisting of three fleets; for so they were called. This third line, or third fleet, towed the transports, on board of which were the cavalry, which formed a second body. And lastly, the fourth fleet, or the Triarii, (for so it was called) brought up the rear, in such a manner, that it extended beyond the two sides of the line in front of it: and this was the third body. In this disposition the order of battle represented a wedge or beak, of which the forepart was hollow, and the base solid; but the whole strong, fit for the action, and hard to break.

The Carthaginians, on their side, drew up almost their whole fleet in one line. The right wing commanded by Hanno, and consisting of the lightest and nimblest galleys, advanced very much ahead of the fleet, to surround those of the enemy, that were opposite to it, and had their heads all facing towards it. The left wing, consisting of the fourth part of the fleet, was drawn up in form of a hornwork, or gibbet, and inclined towards the coast. Amilcar, as admiral, commanded the centre, and this left wing. He made use of stratagem to separate the Roman fleet. The latter, who assured themselves of victory over a fleet drawn up with so great an extent, began by attacking the centre, which had orders to retire by little and little, as if giving way to the enemy, and preparing to fly. The Romans did not fail to pursue them. By

which movement the first and the second fleet (as have before observed which to distinguish by those names) parted from the third, that had the transports in tow, and the fourth, in which were the Triarii designed to support them. When they were at a certain distance, upon a signal given from Amilcar's galley, the Carthaginians fell all at once upon the vessels that pursued them. The Carthaginians had the advantage of the Romans in the nimbleness of their ships, and the address and facility with which they either advanced or retired: but the vigour of the Romans in the charge, their cranes for grappling the enemy's vessels, the presence of the two consuls, who fought at their head, and in whose sight they were ardent to signalize themselves, inspired them with no less confidence, than the Carthaginians had on their side. Such was the engagement here.

At the same time Hanno, who commanded the right wing, fell in with the ships of the Triarii, and put them into disorder and confusion. On the other side, the Carthaginians, who were in form of a fork or gibbet, and near shore, drew up in a line, and charged the ships that towed the transports. The latter immediately let go the cords and came to blows with them, so that the whole battle was divided into three parts, which made as many different fights at considerable distances from each other.

As the forces were very nearly equal on both sides, so was the advantage at first. At length the squadron commanded by Amilcar, not being able to resist any longer, was put to flight, and Manlius made fast the ships he had taken to his own. Regulus, at the same time, went to the aid of the Triarii and transports, with the vessels of the second fleet, which had not suffered at all. Whilst he engaged Hanno, the Triarii, who had before given way, resumed courage, and returned to the charge with vigour. The Carthaginians, attacked in front and rear, could not resist long, and fled. While this passed Manlius returned, and perceived the third fleet driven close to the shore by the left wing of the Carthaginians. The transports and Triarii being safe, they joined him and Regulus, to make haste and extricate it out of the danger in which they saw it; and it would have been entirely defeated, if the Carthaginians, through fear of being grappled, and thereby reduced to come to blows, had not contented themselves with shutting it in near the shore, without daring to attack it. The consuls coming up at very good time, surrounded the Carthaginians, and took fifty sail of them with their whole complements. Such was the event of this sea-fight, in which the Romans were entirely victorious. Twenty-four of their ships, and above thirty of the Carthaginians perished in it. None of the Roman ships of war fell into the enemy's hands, who lost more than sixty-four.

The Romans never, even in the time of their greatest power, as Polybius observes, fitted out in their own names, and alone, so great a fleet as this we now speak of. Four years before they were absolutely ignorant of what a fleet was; and now they set sail with three hundred and thirty deck-ships.

When we consider the rapidity with which these vessels were built, we are tempted to imagine, that they were of a very small size, and could not contain abundance of hands. We find here the contrary. Polybius tells us a circumstance, which is no where else so clearly explained, and which it is extremely important to know, namely, that each galley carried three hundred rowers, and one hundred and twenty soldiers. How much room must the rigging, provision, water, and other stores of such a galley require! We see in Livy, that they sometimes carried provisions and water for forty-five days, and without doubt sometimes for a longer term.

The *Corvus*, or crane, of which mention is often made in sea fights, a machine for grappling ships, shows us, that the ancients found no means so effectual to assure themselves of victory, as to join in close fight, or board the enemy. They often carried ballistas and catapultas on board to discharge darts and

mones. Though these machines, which served them instead of our cannon, had surprising effects, they only used them, when ships were at a certain distance, and boarded them as soon as possible. It is in this, indeed, and only in this, that the valour of troops really appears.

The galleys, of which these two fleets consisted,

were of three benches of oars, or at most of five, except those of the two consuls, which had six. At the battle of Myla, the admiral galley had seven benches of oars. It is easy to judge, that these admiral galleys were not merely for show, and that they must have been of more service in the battle than any of the rest.

OF GRAMMARIANS AND PHILOGERS.

INTRODUCTION.

WE are at length arrived at the arts and sciences, which relate merely to the mind, and are intended to enrich it with all the branches of knowledge, necessary to instruct man; to give his nobler part all the perfection of which it is capable; to form his understanding and heart, and in a word, to enable him to discharge the several functions, to which divine providence shall vouchsafe to call him. For we must not deceive ourselves in this respect: The end of the science is neither to become learned solely for ourselves, nor to satisfy a restless and barren curiosity, which draws us on by a seducing pleasure from object to object; but to contribute, each in his way, to the general advantage of society. To confine our labours and studies to our own satisfaction, and to centre every thing in our own self, is to be ignorant that man is the part of a whole, to which he ought to adhere, and of which the beauty consists essentially in the union and harmony of the parts that compose it; all which parts tend though by different means, to the same end,—public utility.

It is in this view God distributes to mankind their different talents and inclinations, which are sometimes so strongly implanted, that it is almost impossible to resist them. Every body knows what an inclination the famous Mr. Paschal had from his earliest infancy for geometry, and what a wonderful progress he made in it by the pure force of his genius, notwithstanding the care taken by his father to hide all the books and instruments from him, which could give him any idea of it. I could quote a great number of the like examples in every art and science. A sequel and effect of these natural inclinations, which always denote great talents, is the industrious application of the learned to certain studies, often abstract and difficult, and sometimes even disagreeable and tedious, to which, however, they find a secret pleasure attach them with an almost irresistible force. Who can doubt but this pleasure is a kind of attractive charm, which providence annexes to certain severe and painful labours, in order to soften the rigours to these pursuits, and to make them surmount with courage the obstacles which sooner or later might disgust them, if not passionate after their object, and actuated by a taste superior to all difficulty? But do we not also see, that the design of God, in dispensing the talents and inclinations of men with so astonishing a diversity, has been to enable the learned to be useful to society in general, and to obtain for it all the aids in their power? And what can be more glorious and more grateful to them, if they understand aright their true glory, than to perceive themselves selected from all mankind, to be ministers and co-operators in the cares of the divine providence with regard to man, in that very circumstance, wherein those cares are greatest and most divine; which is in being the guide of the understanding, and the light of the soul.

Should I be suffered, when I behold the infinite variety of the branches of knowledge intended for the instruction of man, from Grammar, which is their base, to those which are more exalted and sublime, if I compared them with the assemblage of the stars

dispersed throughout the vast extent of the firmament to dispel the darkness of night? I seem to see in those bodies a wonderful relation with learning and learned men. They have each their allotted sphere, in which they constantly remain. They all shine, but with different splendour, some more, some less, without envying each other. They keep always within the paths assigned them, without ever deviating to the right or left. In fine, and this, in my opinion, is most worthy of attention, they do not shine for themselves, but for him who made them. *Stellæ dederunt lumen in custodiis suis, et lætati sunt. Vocati sunt, et dixerunt Adsumus; et luxerunt ei cum jucunditate qui fecit illas.* "The stars shined in their watches, and rejoiced: when he calleth them they say, Here we are; and with cheerfulness they showed light unto him that made them." This is our duty and our model.

This book contains what relates to grammarians, philologers, (which term I shall explain in its place) rhetoricians, and sophists. I must premise to the reader, that he will find in his progress here some thorns and difficulties. I have removed many, and have left only such as could not from the nature of the subjects upon which I treat, be excluded.

CHAPTER I.

OF GRAMMARIANS.

GRAMMAR is the art of speaking and writing correctly.

There is nothing more admirable, or more worthy of our attention, than the double gift God has conferred upon us of speech and writing. We make continual use of them, almost without ever reflecting that we do so, and without considering the amazing wonders both the one and the other include.

Speech is one of man's greatest advantages over all other animals. It is one of the greatest proofs of his reason, of which it may be said to be the principal evidence. But by what rare art is it produced, and for how many different parts was it necessary to unite and concur with each other, to form the voice at the first motion of the soul!

I have a thought within me, that I desire to communicate to others, or some doubt, in which I would be satisfied. Nothing is more of the nature of spirit, and consequently more remote from sense, than thought. In what manner therefore shall I be able to transfer it from myself to the persons around me? If I cannot effect this, confined within myself, reduced to me alone, deprived of all commerce, discourse, and consolation, I suffer inexpressible torments: the most numerous assembly, the whole world itself, is to me no more than a hideous solitude. But the divine providence has spared me all these pains, in affixing sounds to my ideas, and in making those sounds subservient to my will, by a natural mechanism never to be sufficiently admired. At the very instant, the exact moment, I would communicate my thoughts to others, my lungs, throat, tongue, palate, teeth, lips, and an infinity of other organs, which depend on, and

are parts of them, put themselves in motion, and execute my orders with a rapidity, which almost prevents my desires. The air from my lungs, varied and modified an infinity of ways, according to the diversity of my sentiments, issue forth to carry the sound of them into the ears of my auditors, and to inform them of all that passes within me, and of all I desire they should know. To instruct me in producing such wonderful effects, have I had occasion for tutors, lessons, precepts? Nature, that is to say divine providence, has made every thing within me and for me. It has formed in my body all the organs necessary for producing such wonderful effects; and that with a delicacy the senses can hardly trace, and with a variety, multiplicity, distinction, art, and activity, which the naturalists confess above all expression and admiration. This is not all. It has imparted to us an absolute authority over all these organs, in regard to which our mere will is an indispensable command that they never disobey, and that immediately puts them in motion. Why are we not equally docile and submissive to the voice of the Creator?

The manner of forming the voice includes, as I have observed, innumerable wonders. I shall only repeat one circumstance in this place, from which we may judge of the rest. It is extracted from the Memoirs of the Academy of Sciences, An. 1700.

In our throat, at the top of the trachean artery, that is, the canal through which the air enters and is respired from the lungs, there is a small oval cleft, capable of being more or less extended, called the *Glotta*. As the opening of this little mouth is very small, in proportion to the largeness of the trachea, the air cannot pass through it from the trachea, without extremely augmenting its velocity, and precipitating its course. Hence, in passing, it violently agitates the small parts of the two lips of the glotta, sets them in motion, and causes them to make vibrations, which produce sound. This sound so formed, goes on to utter itself in the cavity of the mouth and nostrils. This mouth of the trachea forms the different tones or notes, as well as sounds; which it can only do by the different changes of its opening. It is oval, as I said before, and capable of extending or closing itself in certain degrees; and thereby the fibres of the membranes, of which it is composed, become longer in low, and shorter in high, tones. We find by Mr. Dodart's exact calculation of the tones or notes, and half notes of an ordinary voice, that for all the small parts of tone, with which it can raise an octave without straining itself, for the more or less force it can give sound without changing the tone or note, we must necessarily suppose that the little diameter of the *glotta*, which is at most a line, or the twelfth of an inch, and which changes its length with all these changes, must be, and actually is divided into 9,632 parts; that even these parts are not all equal, and that consequently some are much less than the 1.9632 part of a line. By what means could the art of man attain to so fine and exquisite divisions? And is it not amazing, that nature itself was capable of executing them? On the other hand, it is no less surprising that the ear, which has so just a sense of tones, perceives, when the voice changes its note ever so little, a difference, of which the origin is no more than the 1.9632 part of less than a line, or twelfth of an inch.

The ear itself;—can we ever be weary of considering its structure, framed in an admirable manner to collect on all sides, in its anfractuous cavities, the flying impressions and undulations of sound, and to determine them afterwards by a pleasing sensation to the internal organ of hearing? It is for the naturalists to explain these wonders: but it is ours to admire with gratitude their infinite advantages, which we almost every moment enjoy, without reflecting much upon them. What manner of people would a nation of mutes be, who should inhabit the same place, with no power to impart their thoughts to each other, but by signs and gestures, nor to communicate their wants, their doubts, their difficulties, their joy, their sorrow, in a word, all the sentiments of their souls, in which the life of a rational creature properly consists?

WRITING is another wonder, which comes very near

that of *Speech*, and which adds a new value to it from the extent it gives the use to be made of speech, and the permanence or kind of perpetuity speech derives from it. This invention is perfectly well described in the fine verses of Lucan:

Phœnice primi, famæ si creditur, usi
Mansuram rudibus vocem signare figuris.

If fame speaks true, and facts be liv'n of old,
Phœnicia's sons did first the art unfold,
Discourse in uncouth figures to confine,
And sound and sense to image and design.

It is still better expressed in Brebeuf's translation which improves considerably upon the original:

C'est de lui¹ que nous vient cet art ingénieux
De peindre la parole, et de parler aux yeux
Et par les traits divers de figures tracées,
Donner de la couleur et du corps aux pensées.

From him descended first the fine device
To paint the voice, and to discourse the eyes;
In forms and colours sense to clothe he taught,
And all the various features of a thought.

It is this invention which enables us to correspond and discourse with the absent, and to transfer our thoughts and opinions to them, notwithstanding the remotest distance of places. The tongue, which is the principal instrument and organ of speech, has no share in this equally useful and agreeable commerce.² The hand, instructed by its use to trace sensible characters upon paper, lends it its aid, makes itself its interpreter, mute as it is, and becomes in its place the vehicle of discourse.

It is to the same invention, as Theodoretus further observes, whose words I have just quoted, that we are indebted for the inestimable treasure of the writings come down to us, and which has imparted to us the knowledge not only of the arts, sciences, and all past facts; but, what is of infinitely greater value, of the truths and mysteries of religion.

It is not easy to comprehend how men have been able to compose, out of twenty-five or thirty letters at most, that infinite variety of words, which having no resemblance in themselves to what passes in our minds, do however disclose all the secrets of them to others, and make those, who could not otherwise penetrate our sense, understand all we conceive, and all the different affections of our souls? Let us imagine ourselves in the countries, where the invention of writing has not reached, or where it is not practised; what ignorance! what stupidity! what barbarism do we not see! Can such people be called men? The reader may consult the learned dissertation of Mr. Freret upon the *principles of the art of writing*; which contains a great deal of very curious knowledge.³

Let us not blush to own it, and let us render due homage of gratitude to him, to whom alone we are indebted for the double advantage of speech and writing. Only God could teach mankind to establish certain figures to signify all sounds or words. And these are the first objects of grammar, which, as I have already said, is the art of speaking and writing correctly. It was infinitely more esteemed, and cultivated with much greater attention, by the Greeks and Romans, than with us, among whom it is fallen into great contempt, and almost generally neglected. This difference of sentiments and conduct in this point, arises from these two nations having bestowed considerable time and particular application in the study of their own tongue; whereas we very seldom learn ours by rudiments, which is certainly a great defect in our usual method of instructing youth.

¹ Cadmus the Phœnician.

² Ejusdem beneficii absentibus conversamur; et qui multorum dierum itinere distamus, atque immensis mansionum spitiis et intervallis æjungimur, ingeniorum concepta, et animorum sententias nobis invicem per manus transmittimus. Et lingua quidem, quæ primarium orationis organum est, otiosa cessat. Sermōni autem dextra ancillatur, quæ calamo arrepto, quod nobis cum amico transigendum erat negotium, papyro aut chartæ inscribit; et sermonis vehiculum est, non oris, nec linguae, sed manus, quæ longi temporis usum artem edocuit, et elementorum compositionem seu structuram probè edocuit. *Theod. de Provid. orat. 4.*

³ Memoirs of the Academy of Inscriptions, vol. vi.

We are surprised to read in Quintilian an exalted praise of grammar, which he says is necessary to youth, agreeable to age, a delightful employment in retirement, and of all studies, that which is attended with more utility than it promises.¹ This is not the idea we form of it. And indeed it is of far greater extent among the ancients than we give it. It did not confine itself to the laying down of rules for speaking, reading, and writing correctly, which is certainly a very important part of it. The understanding and explication of the poets were one of its branches, and we are not ignorant how many things that study necessarily includes. It added another part, which supposes a great fund of erudition and knowledge: this was *Criticism*. I shall soon show in what this consisted.

That kind of grammarians, called also Philologists, *Philologi*, were not confounded with the Grammatists, *Grammatistæ sive litteratores*, whose sole employment was to teach children the first elements of the Greek or Latin tongues. For which reason the latter did not enjoy the immunities or other privileges granted by the emperors to the grammarians.

I shall relate here in a few words what history tells us concerning those who distinguished themselves most in this way, either amongst the Greeks or Romans. Mr. Capperonier, my brother as fellow of the royal college, who has perfectly studied all that relates to grammar, has been so good as to communicate some of his remarks upon that subject to me.

ARTICLE I.

GRECIAN GRAMMARIANS.

I SHALL not enter into an examination of the origin of the Greek letters. Those who desire to be informed upon that head, may consult the Memoirs of the Academy of Inscriptions and Belles Lettres, vol. ii. in which it is treated with great erudition by the late Abbe Renaudot. I adhere to the common opinion of almost all the Greek and Latin authors, who agree, that Cadmus brought the first letters from Phœnicia, and communicated them to the Greeks, that were afterwards called Ionic, of which the origin is sufficiently denoted by their resemblance to the Hebrew and Phœnician alphabets. I shall confine myself in this place to speaking of those, who distinguished themselves most with regard to the Greek grammar.

PLATO is believed to be the first author in whom any traces of the art of grammar is to be found. And accordingly in his *Philebus* he shows the method of teaching the knowledge of the letters. In his *Cratylus*, he treats the ancient and famous question, whether the signification of words be natural to them, or arbitrary, founded solely upon the will of mankind, who has thought fit to annex certain ideas to words? He divides words into two kinds: the primitive, which he ascribes to God; and the derivative, which are of human invention. He insinuates, that the Greek tongue is derived from the Hebrew, which he calls the language of the Barbarians. In the same dialogue, he examines the origin and etymology of several nouns; for which reason Phavorinus says, in Diogenes Laertius, that Plato was the first that observed the propriety and use of grammar.

It seems however that ARISTOTLE might be considered as the first author of this science. He has distributed words into certain classes; of which he has examined the different kinds, and particular properties. The twentieth chapter of his Poetics begins with this enumeration. "The poetical style or elocution contains these eight parts. The element, the syllable, the conjunction, the noun, the verb, the article, the case or inflexion, the proposition or phrase."

Hermippus,² cited by Diogenes Laertius, tells us, that EPICURUS taught grammar before reading the books of Democritus engaged him in the study of philosophy.

Quintilian³ says that the Stoic philosophers made a great many additions to what Aristotle and Theophrastus had introduced concerning grammar. Among these additions he reckons the propositions, the pronoun, the participle, the adverb, and the interjection. The great etymologists Suidas, Hesychius, Stephanus, Byzantinus, Athenæus, Horpocratron, and other polygraphical philologists, mentioned several ancient grammarians, of whom some lived after Aristotle, and Alexander the Great, and others in the Augustan age. We shall say something of the most celebrated of them.

PHILETES, of the Island of Cos, may be placed in the first class of these, whom Ptolemy, the first of that name, king of Egypt, made preceptor to his son Ptolemy Philadelphus.

HECATEUS of Abdera, who composed a treatise upon the poems of Homer and Hesiod.

LYNCEUS of Samos, the disciple of Theophrastus.

ZENODOTUS of Ephesus, who first corrected the faults which had crept into the works of Homer.

CALLIMACHUS, uncle on the mother's side to that Callimachus, some of whose poems are still extant. The celebrated ERATOSTHENE, of whom I shall soon speak under the title of Philologer, was one of his disciples.

ARISTOPHANES of Byzantium was the scholar of Eratosthenes, and lived in the time of Ptolemy Philopator. He was in great estimation,

ARISTARCHUS, the disciple of Aristophanes, obscured by his reputation all the grammarians who preceded him, or lived in his own times. He was born in Samothracia, and had for his country by adoption the city of Alexandria. He was highly esteemed by Ptolemy Philometor, who confided the education of his son to his care. He applied himself extremely to criticism, and revised Homer's poems with incredible, but perhaps too magisterial, an exactness. For when a verse did not please him, he treated it as supposititious and interpolated: *Homeri versus negat, quem non probat*.⁴ It is said he marked the verses he condemned as supposititious, with the figure of a spit on the side of them; whence came the word *σπίγνυς*. How great soever the reputation and authority of Aristarchus were, appeals were often made from his decrees, and liberty taken to condemn his great critic's taste, who upon some occasions determined, that such and such verses should be transposed from the Iliad to the Odyssey. Transpositions of this kind are seldom very happy, and generally argue more presumption than judgment. Zenodotus was appointed to revise and examine the criticisms of Aristarchus. In the opinion of some authors, it was this Aristarchus, who divided the two great poems of Homer each into as many books as there are letters in the alphabet, and gave each book the name of a letter. He worked also upon Pindar, Aratus, and other poets. He had many disputations in Pergamus with Crates the grammarian, of whom I shall soon speak.

Cicero calls Atticus his Aristarchus, because, as a good friend and an excellent critic, he used to revise and correct his harangues.⁵ Horace also makes use of the same name, to signify an exact and judicious critic,

Vir bonus et prudens versus reprehendit inertes, &c.

Piet Aristarchus, nec dicit: Cur ego amicum

Offendam in nugis?

In Art. Poet.

Quintilian⁶ informs us, that these grammarians critics, not only took upon them to note, with a kind of censorial authority, the verses they did not approve, and to strike out whole books from an author's works, as offspring unjustly ascribed to him, but carried their power so far, as to assign authors their ranks, distinguishing some with peculiar hon-

ours, leaving many in the common herd, and entirely degrading others.

What I have said of Aristarchus, shows that criticism, in which the principal merit of the ancient grammarians consisted, was principally intent in discovering the true author of a work, or distinguishing the writings falsely ascribed to him, from such as were really his; and even in those, which were admitted to be genuine, in rejecting the passages, which a different hand had designedly inserted; in fine, to explain what was most beautiful, most solid, and most remarkable in works of wit, and to assign the reasons for their judgment. Now all this required much reading, erudition, taste, and, above all, a just and refined discernment. To know the usefulness of this art, and have a right sense of its value, we need only call to mind certain nations and ages, in which a profound ignorance reigned universally, and for want of critical knowledge, the grossest absurdities, and the most palpable falsifications of all kinds, passed for incontestable truths. It is the glory of our age, and the effect of the best studies, to have entirely dispelled all those clouds of darkness, by the lights of solid and judicious criticism.

CRATES of Mallos, a city of Cilicia, was Aristarchus' contemporary.¹ He was sent to Rome in quality of ambassador, by Attalus II. king of Pergamus. He introduced in that great city the study of grammar, which he had always made his principal occupation. He left nine books of corrections upon Homer's poems. After his death there were several other Greek critics at Rome; among the rest the two Tyrannions.

TYRANNION, a famous grammarian in Pompey's time, was of Amisus in the kingdom of Pontus.² He called himself at first Theophrastus: but from his violent behaviour in respect to his companion in study, and perhaps his disciples, he was surnamed Tyrannion. He was the disciple of Dionysius of Thrace, at Rhodes, and fell into the hands of Lucullus, when that general of the Romans had put Mithridates to flight, and possessed himself of part of his dominions. This captivity was no disadvantage to Tyrannion, as it gave him the opportunity of rendering himself illustrious at Rome, and of acquiring considerable riches. He employed them, among other uses, in collecting a library, according to Suidas, of more than thirty thousand volumes. Charles Stephens, and other authors, say only three thousand; which is more probable. Tyrannion's care in collecting books contributed very usefully to preserving the works of Aristotle. The fate of those works was something singular; as I have related elsewhere. His understanding, and particular industry in this respect, enabled him to do Cicero a very agreeable service, of which he was highly sensible. Every body knows the fondness which persons of study and science have for their books. They are, in a manner, their friends of all hours, their faithful companions; that entertain them agreeably at all times; that sometimes supply them with serious employment, and sometimes with necessary recreation; that go with them into the country, and when they travel; and in times of adversity are almost their sole consolation. Cicero's banishment had torn him from his dear library. It seemed to have been sensible of its master's disgrace: and during his absence, many of his books had been dispersed. One of his first cares, after his return, was to retrieve what remained of them, which he found more abundant than he expected. He commissioned Tyrannion to put them in order, and to dispose them into their several classes, in which he succeeded perfectly well. Cicero, in a letter, wherein he invites his friend Atticus to his house, assures him, that he will be charmed with the fine manner in which Tyrannion had disposed his library. *Perbelle feceris, si ad nos veneris. Offendes designationem mirificam in librorum meorum bibliotheca, quorum reliquia multo meliores sunt quam putarum.*³ That dear friend, at his request,

had sent two of his slaves, very expert in what related to books, and in pasting them, called for that reason *glutinatores*. The books of the ancients, as every body knows, were not bound like ours, but were long rolls, consisting of many leaves of parchment or vellum, either tied or pasted together. Tyrannion had set these two slaves to work, who had done wonders: and my library disposed in so fine an order, says Cicero, seems to have given a new soul to my house. *Postea quam Tyrannio mihi libros disposuit, mens addita videtur meis edibus: qua quidem in re mirifica opera Dionysii et Menophili tui fuit.*⁴

The merit of Tyrannion was not confined to disposing books; he knew how to use them.⁵ When Cæsar was in Africa, making war against Juba, Cicero and Atticus had promised to fix a day for hearing Tyrannion read a book of his composing. Atticus having heard it read without his friend, was reproached by him for it: "What!" says Cicero to him, "did I several times refuse to hear that book read, because you were absent, and would not you stay to share that pleasure with me? But I forgive you for the admiration you express of it."⁶ What then must a book so agreeable, and at the same time so worthy of being praised, and even admired by such a man as Atticus, have been? It was only remarks upon grammar, upon the different accents, the quantity of syllables, and what is called prosody. Would one believe, that persons of such extraordinary merit could find any pleasure in works of such a kind? They went much farther, and composed tracts of the same nature themselves, as Quintilian⁷ relates of Cæsar and Messala, the first of whom wrote a treatise upon analogy, and the other upon words and letters. Cicero must have had a high value for Tyrannion, as he permitted him to open a grammar school in his house, where he taught this art to some young Romans, and among others, to his brother Quintus's, and no doubt to Cicero's own son.⁸

TYRANNION, so named from his having been the former's disciple, was otherwise called Diocles. He was a native of Phœnicia, and was taken prisoner in the war between Antony and Augustus, and bought by Dymas, one of the emperor's freedmen. He was afterwards given to Terentia, who made him free: she had been Cicero's wife, who repudiated her. Tyrannion opened a school in Rome, and composed sixty-eight books. He wrote one to prove that the Latin was derived from the Greek tongue; and another, which contained a correction of Homer's poems.

DIONYSIUS THE THRACIAN was the disciple of Aristarchus. He taught grammar at Rome in Pompey's time, and composed several books upon that subject, many treatises upon others, and a great number of commentaries upon various authors. Mr. Fabricius has caused one of his grammars to be printed, in the seventh volume of his *Bibliotheca Græca*.

This piece may give us some idea of the method of the ancient Greek grammarians. The author divides his work into six parts. 1. Reading according to the accents. 2. The explanation of the tropes and figures in poetry. 3. The interpretation of the dialects, extraordinary words, and certain historical passages. 4. The etymology of words. 5. The exact knowledge of analogy.⁹ 6. The manner of judging poems, which Dionysius considers as the most refined and most important part of his art. After having explained the three accents, the acute, the grave, and the circumflex; he goes on to treat the different methods of pointing. He even gives, in the course of his work, the definition of the term *Rhapsody*, in the sense of the ancient Homerists, who, holding a small stick of laurel wood in their hand, sung detached pieces of Homer's poems. Thence he proceeds to

⁷ Epist. 4. Libri. 4. ad Attic.

⁸ Suidas.

the explanation of the letters, which he divides into vowels and consonants, into *Hemiphonæ* or half-vowels, *aphonæ* or *cucophonæ*; that is to say, bad sounding, because he supposes that they have less sound than the other. And lastly, he subdivides the *aphonæ* into *tenues*, *mediæ*, and *aspiratæ*, without forgetting the double consonants, and the *liquids* or immutables. After which he treats the long, short, and common syllables. He next explains the *parts of speech*, which he reduces to eight;—the noun, the verb, the participle, the article, the pronoun, the preposition, the adverb, and the conjunction. This author considers the interjection as a kind of adverb. Having explained the six common conjugations called *Barytoni*, he observed, that some grammarians add a seventh, of which the terminations were in $\xi\omega$ and $\psi\omega$, as $\alpha\lambda\iota\gamma\omega$ and $\iota\psi\omega$. The circumflex verbs in $\iota\omega$, $\alpha\omega$, $\iota\alpha$; and the four verbs in $\mu\alpha$ are not forgot.

This detail of grammar appears tedious and useless to us; but the ancients had a different opinion of it. There was no part of it, even to the pointing and accents, of which they did not make very great use. They knew that stopping or pointing well gives perspicuity, grace, and harmony to discourse; and that it assists the eyes and minds of readers and hearers, by making the order, series, connexion and distinction of parts more evident; in rendering the pronunciation natural, and prescribing it just bounds and pauses of different kinds, as the sense requires. It is to the grammarians we have this obligation. The learned, who consult the ancient manuscripts, in which there are neither commas, points, a *lineæ*, nor any other distinction, experience the confusion and difficulty, that arise from so vicious a manner of writing. This part of grammar is almost generally neglected among us, and often even among the learned; which, however, is a study of no more than half an hour or an hour at the utmost.

I say as much of the accents. The accent is an elevation of the voice upon one of the syllables of a word, after which the voice necessarily falls. This elevation of the voice is called the acute accent, marked thus (´), and the grave accent, or lowering of the voice, thus (`). But because in the Greek and Latin tongues there were certain long syllables, upon which the voice was both raised and depressed, they invented a third accent, which they called the circumflex, at first marked thus (ˆ), and afterwards thus (˘), which comprehended both tones. The grammarians introduced accents in writing (for they are not of the earliest antiquity) to distinguish the signification of some words otherwise equivocal, to make the cadences more harmonious, to vary the tones, and to direct when to raise or depress the voice. We use them also in the French language, but in a different manner. The acute accent is always put over the *é* shut, as *témérité*, &c.: the grave accent is put over the *è* open, followed with the letter *s* at the end of words; *procès*, &c. The circumflex accent is put over certain long vowels; *dépôt*, *enfant*, *mâle*, &c.

There are a thousand observations of a like nature, to which we lend little or no attention. Among the Greeks and Romans, all children, from their earliest years, learned the rules of grammar exactly, which became natural to them by long use. Hence the meanest of the people at Athens and Rome, knew, to a title, the least defect of the orators or actors, in regard to accent or quantity, and were sensibly disgusted at it.

I omit a great number of celebrated grammarians, who afterwards distinguished themselves by their great learning.

JULIUS POLLUX of Naucratis, a city of Egypt, has left us his *Onomasticon*, a work highly esteemed by many of the learned. He lived in the second century, in the reign of the emperor Commodus.

In the interval of time, between the seventh century, and the taking of Constantinople by Mahomet the second, in 1453, we find several learned grammarians

who took abundance of pains to explain the Greek authors, and render them intelligible. Such are among others **HESYCHIUS**, the author of an excellent dictionary, of great use for understanding the poets: the great etymologist, **SUIDAS**, who composed a great historical and grammatical dictionary, in which there is abundance of erudition: **JOHN TZETZES**, author of an history in thirteen books, under the name of *Chilades*; and his brother **ISAAC**, commentator upon **Lycophron**; **EUSTATHIUS**, archbishop of Thessalonica, author of a large comment upon **Homer**, and many others.

ARTICLE II.

LATIN GRAMMARIANS.

SUETONIUS, in his book of *Illustrious Grammarians*, tells us, that grammar of old was so far from being in honour, that it was not so much as in use at Rome, because the ancient Romans valued themselves much more upon being warlike than learned: and that **Crates**, of Mallos, of whom we have spoken above, was the first that introduced the study of grammar at Rome. Those ancient grammarians, at the same time, taught rhetoric, or at least prepared their scholars for that study, by preliminary exercises. Among the twenty illustrious grammarians mentioned by **Suetonius**, we find:—

AURELIUS OPILIUS, who first taught philosophy, afterwards rhetoric, and at last grammar. I have already observed, that this art was of much greater extent than with us.

MARCUS ANTONIUS GNIPHO, who also taught rhetoric in the house of **Julius Cæsar**, when a child. **Cicero**, during his pretorship, heard his lectures.

ATTEJUS, surnamed the Philologer. **Sallust** and **Asinius Pollio** were his disciples.

VERRIUS FLACCUS, who composed a collection of words of difficult construction, abridged afterwards by **Festus Pompeius**. He was preceptor to **Augustus**' grandsons.

CAIUS JULIUS HYGINIUS, **Augustus**' freedman and library-keeper; to whom a treatise upon mythology, and another upon poetical astronomy, are ascribed.

MARCUS POMPONIUS MARCELLUS, who presumed to criticise upon a speech of **Tiberius**. And when **Attejus Capito** endeavoured to justify it, by maintaining that the word criticised by this grammarian, was Latin, or if it was not, yet being adopted, it would be so; **Pomponius** made that memorable answer, "You can make men free of the city, **Cæsar**, but not words."

RAMMIUS PALEMON of **Vicentia**, who, in the reigns of the emperors **Tiberius** and **Claudius**, having rendered himself famous by his great erudition, and facility in speaking and making verses extemporaneously, disgraced himself as much by his bad morals and arrogance.

Besides the ancient grammarians, whose lives **Suetonius** has abridged, there were others, whose names do honour to this art, though they did not teach it in any other manner than by their writings; as **Varro**, **Cicero**, **Messala**, and **Julius Cæsar**: for these great personages thought it no dishonour to themselves to treat such subjects.

To avoid prolixity, I omit many learned grammarians, of whom several will recur in the ensuing chapter, where I shall treat of *Philologers*. Those who may be curious to collect all the Latin authors upon this subject, will find them in the collection of the ancient grammarians, published by **Elias Putschius**, in 1605, two volumes in quarto. An excellent book, and very necessary to all those who teach the Latin tongue, is the *Minerva* of **Sanctius**, with the notes of **Scioppius** and **Perizonius**.

SHORT REFLECTIONS UPON THE PROGRESS AND ALTERATION OF LANGUAGES.

IT is surprising to consider the manner in which languages are formed, augmented, and attain their perfection; and how, after a certain course of years, they degenerate and become corrupted.

God, the sole author of the primitive tongues, (and how could man have invented them?) introduced the

¹ Or from being used at first to denote the elision of the letter *s*, when wrote as pronounced: all the old French books have *dépôt*, *mâle*.

use of them to punish and frustrate the foolish undertaking of men, who, before they dispersed themselves into different regions, were for rendering themselves immortal, by erecting the most superb structure, that had ever appeared upon the face of the earth. Till then mankind, who in a manner formed but one family, spoke also but one language. On a sudden, by the most surprising of prodigies, God obliterated from the human mind the ancient traces and remembrances of all the words it knew, and substituted new ones in their stead, which in an instant formed new languages. It is reasonable to suppose, that in dispersing themselves into different countries, each joined himself with those whose language he understood, as they did his.

I shall confine myself to the sons of Javan, (in the Hebrew *Javan* is the same as *Ion*), from whom descended the Ionians, or Greeks. Behold then, the Greek language established amongst them, entirely different from the Hebrew, (I say this in the supposition, that the Hebrew was the language of the first man), different, not only in respect of words, but the manner of declining nouns and conjugating verbs, inflexions, turns, phrases, number, and sound or cadence. For it is remarkable that God has given each language a peculiar genius and character, which distinguishes it from all others, and of which the effect is sensible, though the reason of it be almost infinite and inexhaustible. To the multitude of Greek words, with which their memory was furnished in these first times, use, necessity, invention, the exercise of arts, and perhaps even convenience and embellishment, occasioned the addition of new ones. The Greek radices (roots or radical words) are computed to be two thousand one hundred and fifty-six.¹ The derivative or compound words very much augment that number, and are multiplied to infinity: no language is so copious and abundant as the Greek.

Hitherto we have in a manner only seen the matter of the Greek language, or the words of which it is composed, that were almost solely the gift of the Creator and necessity. The use, connexion, and disposition of these words, had occasion for the aids of art. It is observed, that among those who used this language, some spoke better than others, and expressed their thoughts in a clearer, more compact, emphatical, and agreeable manner. These were taken for models, were studied with care, and had observations made upon their discourse, both in writing, and by word of mouth. And this gave birth to what we call grammar, which is no more than a collection of observations upon language: a very important, or rather absolutely necessary work, for fixing the rules of a tongue, reducing them to a method that facilitates the study of them, clearing up their doubts and difficulties, explaining and removing bad uses and modes of speech, and conducting by sensible and judicious reflections, to all the beauty of which it is susceptible.

We know nothing of the beginnings nor progress of the Greek tongue. The poems of Homer are the most ancient work we have in that language; and the elocution of them is so perfect, that no future age has been capable of adding any thing to it. This perfection of language subsisted and preserved itself longer among the Greeks than any other nation of the world. Theocritus lived about six hundred years after Homer. All the poets who flourished during that long interval, except a very small number, are esteemed excellent with regard to language, in their several ways. The same may be almost said of the orators, historians, and philosophers. The universal and prevailing taste of the Greeks for arts, the esteem they always had for eloquence, their care in cultivating their language, which was the only one they learned, disdaining generally the Roman, though spoke by their masters; all this conspired to support the Greek tongue in its purity during many ages, till the translation of the empire to Constantinople. The mixture of Latin, and the decline of the empire, which induced the decay of the arts, soon after occasioned a sensible alteration in the Greek language.

The Romans, solely intent upon establishing and securing their conquests by means of arms, had little regard at first to the embellishment and improvement of their tongue. The small remains, which we have of the annals of the pontiffs, the laws of the twelve tables, and some other monuments, few in number, show how gross and imperfect it was in these early times. It afterwards, by little and little, grew more copious, and enlarged itself insensibly. It borrowed a great number of words from the Greek, which it dressed after its own mode, and in a manner naturalized; an advantage the Greeks had not. We may perceive at this day the taste of the Greek language in the old Latin poets, such as Pacuvius, Ennius, and Plautus, especially in the compound words with which they abound. What we have of the discourses of Cato, the Gracchi, and the other orators of their times, shows a language already of great copiousness and energy, and that wanted nothing but beauty, disposition, and harmony.

The more frequent communication Rome had with Greece, after having conquered it, introduced an entire change in it with respect to language, as well as taste for eloquence and poetry, two things which seem inseparable. To compare Plautus with Terence, and Lucretius with Virgil, one would be apt to believe them many ages remote from each other, although they were divided only by some few years. The epocha of reviving, or rather establishing pure Latinity at Rome, may be fixed at Terence, and continued to the death of Augustus; something more than an hundred and fifty years. This was the happy age of Rome with regard to polite learning and arts, or as it is called the golden (and Augustan) age, in which a crowd of authors of the highest merit carried the purity and elegance of diction to their utmost height, by writings entirely different as to style and matter, but all equally distinguished by pure Latinity and elevation of taste. This rapid progress of the Latin tongue will be less surprising, if we remember that such persons as Scipio Africanus the younger, and Lælius on the one side, and Cicero and Cæsar on the other, did not disdain, in the midst of their important occupations, the former to lend their hands and pens to a comic poet, and the latter to compose treatises themselves upon grammar. This purity of language continually declined from the death of Augustus, as well as the taste for sound eloquence; for their fate is almost always the same. There needs no great discernment to perceive a sensible difference between the authors of the Augustan age and those who succeeded it. But two hundred years after, the difference is excessive, as we may easily observe in reading the authors, who have written the history of Augustus. The purity of language was preserved almost solely (and that too not without some alteration) among the civilians Ulpian, Papinian, Paulus, &c.

I do not know whether it were just to say, the fate of language and that of taste were always the same. We have old French authors, as Marot, Amyot, Montaigne, and others, the reading of whom still pleases infinitely, and, no doubt will for ever please. What is it we love and esteem in these authors? Not their language, because in these days we could not suffer any thing like it. It is something more easily conceived than expressed: a simple and genuine air, a fine turn of imagination, natural manners, a nobleness and majesty of style without affectation or bombast, and especially the sentiments of nature, which flow from and reach the heart: in a word, it is that taste of ancient Greece and Rome, which is of all ages and nations, and diffuses through writings a certain salt, the spirit and delicacy of which every reader of genius perceives, whilst it adds a new value to the force and solidity of the matter with which it is united. But why does not this old language please still? Our language is deficient in many words, and these old authors have excellent ones; some clear, simple and natural; and others full of force and energy. I always wished, that some able hand would make a small collection of such as we want, and might regain, to show us our error in neglecting the progress and improvement of our language as we

¹ *Ras Græcæ* apud Port Royal.

do, and to rebuke our stupid indolence in this point. For if the French tongue, otherwise rich and opulent, experiences on certain occasions a kind of barrenness and poverty, it is to our own false delicacy we should impute it. Why should we not enrich it with new and excellent terms, which our own ancient authors, or even the neighbouring nations might supply, as we see the English actually do with great success? I am sensible that we should be very discreet and reserved in this point: but we ought not to carry our discretion to a narrow pusillanimity.

We have reason to believe, that our language has attained the highest perfection of which it is capable; and of this, the honour of its being adopted into almost all the courts of Europe, seems a glorious proof. If it be defective in any thing, it is, in my opinion, only with regard to a richer abundance; notwithstanding good speakers scarce perceive that it wants any words for the expression of thoughts; but it would admit a greater number. France had in the last age, and still has, writers of distinguished merit, highly capable of acquiring her this new advantage. But they respect and fear the public. They make it, with reason, a duty to conform to, and not to clash with its taste. Hence, to avoid incurring its displeasure, they hardly dare venture any new expression, and leave the language in this point where they found it. It would therefore be incumbent on the public, for the honour of the language and nation, to be less delicate and severe; and also on authors, to become a little less timorous; but, I repeat it, great discretion and reserve are always necessary in using this liberty.

But I do not perceive, that while I venture my reflections upon our language in this manner, I myself perhaps may seem wanting in respect for the public; which would be very contrary to my intention. I conclude this article with taking the liberty to acquaint the reader again, that this study is of great importance, and should by no means be neglected. It is with joy I see the French grammar regularly taught in several classes of the university.

CHAPTER II. OF PHILOGERES.

THOSE who have applied their studies in examining, correcting, explaining, and publishing the ancient authors, are called *Philogeres*; they profess universal learning, including all sciences and authors, in which anciently the principal and most noble part of the grammarian's art consisted. By philology therefore is understood a species of science containing grammar, rhetoric, poetry antiquities, history, philosophy, and sometimes even mathematics, physic, and civil law; without treating any of these subjects either in whole or in part, but occasionally using all or any of them. I do not know for what reason this philology, which has done so much honour to the Scaligers, Salmassiuses, Casaubons, Vossiuses, Sirmonduses, Gronoviuses, &c. and which is still so much cultivated in England, Germany, and Italy, is almost despised in France, where we set no value upon any thing besides exact and perfect sciences, such as physics, geometry, &c. Our academy of Belles Lettres, which, under that name, includes all kinds of erudition ancient and modern, and publishes every year in its memoirs, treatises upon all manner of subjects, may contribute very much to revive and augment this taste for philology among us. I shall here give a brief account of some of those who distinguished themselves most in this kind of literature, mingling Greeks and Roman together.

ERATOSTHENES.

SUETONIUS says, that Eratosthenes was the first who was called *Philologer*. He was a native of Cyrene, and became library-keeper of Alexandria. He lived in the time of Ptolemæus Philadelphus, and had applied himself to all kinds of science, without thoroughly cultivating any one, as those do, who

make one their sole study in order to excel in it. This occasioned his being nicknamed *Beta*,³ because, though not capable of aspiring to the first rank in any science, he had at least attained the second in all in general. He lived fourscore years, and starved himself to death, not being able to survive the loss of sight with which he was afflicted. I shall have occasion to speak of him again elsewhere. Aristophanes of Byzantium, master of the famous critic Aristarchus, was his disciple.

VARRO.

VARRO (*Marc. Terentius*) was esteemed the most learned of all the Romans. He was born in the 636th year of Rome, and died in the 726th, at the age of ninety. He assures us himself, that he had composed almost five hundred volumes upon different subjects, of which he dedicated that upon the Latin tongue to Cicero.⁴ He wrote a treatise upon rural life, *De re rustica*, which is very much esteemed. Both these pieces are come down to us. St. Austin admires and extols in many places the vast erudition of this learned Roman. He has preserved the plan of Varro's great work upon the Roman antiquities, consisting of forty-one books. It is of this work Cicero speaks, addressing himself to Varro: "We were before," says he, "in a manner strangers, that did not know our way in our own city. Your books have as it were set us right, and informed us who, and where, we are."⁵ After the enumeration Cicero makes of them, St. Austin cries out with admiration: "Varro read so great a number of books, that it is wonderful he could find time to compose any himself, and yet he composed so many, that one can hardly conceive how one man could read them all."⁶ It was difficult to write so many works in an elegant and polite style. And the same St. Austin observes, that Cicero praises Varro as a man of penetrating wit and profound learning, not as one of great eloquence and refinement of diction.⁷

ASCONIUS PEDIANUS.

ASCONIUS PEDIANUS, cited by Pliny the naturalist, and by Quintilian, lived in the reigns of Nero

³ Suidas.

⁴ The second letter of the Greek alphabet.

⁵ [The importance attached to such dedications by the great men of Rome, and the value, in particular, placed by Cicero on a compliment of this nature from Varro, may be seen from a letter of the orator to Atticus. "You know," says he, "that till lately I composed nothing but orations, or some such works, into which I could not introduce Varro's name with propriety. Afterwards, when I engaged in a work of more general erudition, Varro informed me, that his intention was, to address to me a work of considerable extent and importance. Two years, however, have passed away without his making any progress. Meanwhile I have been making preparations for returning him the compliment."^{*} The Academia were dedicated to Varro before he fulfilled his promise of addressing a work to Cicero; and it appears, from Cicero's letter to Varro, sent along with the Academia, how impatiently he expected its performance, and how much he importuned him for its execution. "To exact the fulfilment of a promise," says he, "is a sort of ill manners, of which the populace themselves are seldom guilty. I cannot, however, forbear—I will not say, to demand, but to remind you, of a favour which you long since gave me reason to expect. To this end, I have sent you four admonitors (the four books of the Academia,) whom, perhaps, you will not consider as extremely modest."[†] It is curious, that when Varro did at length come forth with his dedication, although he had been highly praised in the Academia, he introduced not a single word of compliment to Cicero.]

⁶ Nos, inquit, in nostra urbe peregrinantes errantesque, tanquam hospites, tui libri quasi domum reduxerunt, ut possemus aliquanto qui et ubi essemus cognoscere. *Acad. Quæst.* l. i. c. 9.

⁷ Varro tam multa legit, ut aliquid ei scribere vacasse miremur; tam multa vix quemquam legere potuisse, credamus. *De Civit. Dei.* l. vi. c. 2.

⁸ Cum Marco Varrone, homine, inquit, omnium, facile, acutissimo, et scire ullâ dubitatione doctissimo. Non ait, eloquentissimo vel facundissimo; quoniam re vera in hac facultate multum impar est. *S. August. libid.*

^{*} Epist. ad Attic. lib. xiii. Ep. 12.

[†] Epist. Famil. lib. ix. Ep. 8.

and Vespasian. We have a fragment of his notes or comments upon several of Cicero's orations. He may be said to have been the model of most of the Latin critics and scholiasts who succeeded him, and of such as applied themselves after him to explaining authors.

PLINY THE ELDER.

PLINY, (*C. Plinius secundus*) called the elder, might be ranked amongst the historians, or rather amongst the philosophers, who have treated physics. But the multiplicity of the subjects he speaks of in his books of natural history, made me conceive I might rank him among the philologists.

Pliny was born at Verona, and lived in the first century, under Vespasian and Titus, who honoured him with their esteem, and employed him in different affairs. He served in the armies with distinction, was admitted into the college of augurs, was sent governor into Spain; and notwithstanding the time spent in his employments, he found enough for application to a great number of works, which unfortunately are lost, except his *natural history* in thirty-seven books: a work, says Pliny the younger, of infinite extent and erudition, and almost as various as nature itself: Stars, planets, hails, winds, rain; trees, plants, flowers; metals, minerals; animals of every kind, terrestrial, aquatic, volatile; geographical description of countries and cities; he takes in all, and leaves nothing in nature or art without an industrious examination.¹ To compose this work, he perused almost two thousand volumes. He takes care to inform the reader, that he took the time for this work not out of that, which the public affairs he was charged with required, but from his hours of rest, and such only as would otherwise have been lost.² Pliny the younger, his nephew, tells us, that he led a simple and frugal life, slept little, and made the most of his time, at his meals, making somebody read to him; and in travelling, having always his book, tablets, and copyist by his side: for he read nothing without making extracts from it.³ He conceived, that managing his time in this manner, was adding to the length of his life, the duration of which is much abridged by sleep. *Pluribus horis vivimus: profecto enim vita vigilia est.*⁴

Pliny was far from having the low vanity of some authors, who are not ashamed to copy others without quoting them. "Probity and honour, in my opinion," says he, "require, that we should pay a kind of homage to those, whose learning and knowledge are useful to us, by a sincere and ingenuous confession of it."⁵ He compares an author, who makes his advantage of another's labours without owning it, to a person who borrows money and pays usury for it: with this difference, however, that the debtor, by the interest he pays, does not discharge the principal sum lent him; whereas an author, by the frank confession of what he borrows, gains it in some measure, and makes it his own. From whence he concludes, that it is meanness of spirit and baseness, to be better pleased with being shamefully detected in theft, than ingenuously to confess a debt. I have made myself very rich in the latter way, and at no great expense. He perfectly understood all the difficulty and inconveniences of an undertaking like his, in which the subject he treats is of its own nature, barren and tedious, without leaving any room for a writer to display his genius. But he was convinced, that the public are not a little obliged to authors, who prefer being useful to being pleasing; and who, from that view, have the courage to surmount and undergo all the pains of a tedious and disagreeable

labour.⁶ He flatters himself, that he shall be pardoned for all the faults he may commit; which are indeed very numerous, as they were inevitable in a work of so vast an extent and so prodigious a variety.

Pliny dedicated his work to Titus, at that time almost associated in the empire by Vespasian his father, and who afterwards became the delight of mankind. He gives him a short, but very exalted praise, in telling him: "Your exaltation has made no other change in you, but that of enabling you to do all the good you desire, by making your power equal to the benevolence of your heart:" *Nec quicquam in te mutavit fortune amplitudo, nisi ut prodesse tantumdem posses et velles.*⁷

Pliny the younger tells us, in a letter, which he addresses to Tacitus the historian, the sad accident that occasioned his uncle's death. He was at Misenum, where he commanded the fleet. Being informed that a cloud appeared of extraordinary magnitude and form, he put to sea, and soon discovered that it came from mount Vesuvius. He made all the haste he could to get to a place from which every one else fled, and to that part of it where the danger seemed greatest, but with such a freedom of spirit and unconcern, that he made and dictated observations upon every extraordinary appearance that arose. His ships were already covered with ashes, which fell the thicker and hotter, the nearer they approached the mountain. Already calcined stones and flints all black, burned and pulverized by the violence of the fire, poured down around them. Pliny deliberated some time whether or not he should return back: but having re-assured himself, he went forward, landed at Stabiae, and went to the house of his friend Pomponianus, whom he found in the greatest terror, and endeavoured to encourage. After supper he went to bed, and slept soundly, till the approach of danger obliged them to wake him. The houses were shaken in such a manner by repeated earthquakes, that one would have thought they had been torn from their foundations. The family went into the fields. I omit a number of circumstances. The dark and frightful night, that hung over all, had no other light than what it received from the fire of the mountain. Flames that appeared of an unusual vastness, and the smell of sulphur, which foretold their approach, made every one betake himself to flight. Pliny rose, by the help of two servants, and that very moment fell down dead, apparently suffocated by the thickness of the smoke. This was the end of the learned Pliny. We cannot but be pleased with a nephew, for having drawn so well the death of his uncle, and for having seen nothing in it but fortitude, courage, intrepidity, and greatness of soul. But to judge of it rightly, can we acquit an enterprise of rashness, in which a man hazards his life, and what is more to be condemned, that of others, only to satisfy his curiosity?

It remains for me to conclude this article with a word or two upon Pliny's style, which is peculiar to him, and like that of no other writer. We must not expect to find in it either the purity, elegance, or admirable simplicity of the Augustan age, from which, however, it was not removed very many years. His proper character is force, energy, vivacity, and I might say, even boldness, as well in his expressions as thoughts, with a wonderful fertility of imagination, to paint and make the objects he describes sensible. But it must also be owned, that his style is stiff and confined, and thereby often obscure; and that his thoughts frequently swell beyond truth, and are strained, and even false. I shall endeavour to show this by some examples. Pliny⁸ explains the wonders contained in the matter of which sails for ships are made, namely, flax and hemp.⁹ Man sows only a small seed in the ground, which suffices to make him master of the winds, and to subject them to his occasions. Without mentioning an infinite number of

⁹ Pliny mentions only flax.

uses made of flax and hemp, what can be more wonderful than to see an herb make Egypt and Italy approach each other, notwithstanding the sea that separates them? And what herb is this? A small, slender, weak blade, that scarce raises itself above the ground, that of itself forms neither a firm body nor substance, and requires to be prepared for our uses, before being broken and reduced to the softness of wool. Yet little as this plant is, we are indebted to it for the facility of transporting ourselves from one end of the world to the other. *Scratur linum. Sed in qua non occurrit vite parte? quod. miraculum majus, herbam esse qua admoveat Egyptum Italia.*

—Denique tam parvo semine nasci, quod orbem terrarum ultro citroque portet, tam gracili avena, tam non alte a terre tolli; neque id viribus suis necti, sed factum, lusumque, et in molitium lanae coactum! He gives a magnificent idea of the grandeur and majesty of the Roman empire. Rome, says he, is the mother at the same time and nurse of the universe; chosen expressly by the gods to render heaven itself more illustrious, to unite all the empires dispersed over the whole earth, to refine and soften manners and customs, to reduce to one and the same language the barbarous and discordant tongues of so many nations, to establish among them by that means an easy and salutary commerce, to communicate to man the laws of humanity; in a word to make that city the common country of all the people of the universe. *Terre (Italia) omnium terrarum alumna, eadem et parens; numine deum electa, quæ cælum ipsum clarius faceret, sparsa congregaret imperia, rursusque mollioret, et tot populorum discordes ferasque linguas sermonis commercio contraheret ad colloquia, et humanitatem homini daret; breviterque una cunctarum gentium in toto orbe patria fieret.* I shall only add one more passage in this place, which seemed very remarkable to me, and relates to all of us. It is with reason, says Pliny,^a that we give man the first rank among all creatures, him for whom nature seems to have formed all others: but she makes him pay dear for all her presents; so that we do not know whether we have most room to consider her in regard to him as an indulgent parent, or a rigid stepmother. All other animals come into the world, each in a different dress, to cover it; man is the only one that stands in need of a foreign aid to clothe him. He is thrown at his birth stark naked upon the ground, as naked as himself. The first signs of life that he gives are cries, laments, and tears, which is not the case with any of the other animals.^b To this first use which he makes of the light, succeed the folds and bandages in which all his members are wrapt, and bound up, a thing no less particular to him. It is in this condition the king of animals, over whom he is destined to reign, finds himself, as soon as born, tied hand and foot, and venting sobs and shrieks. His life begins with torments and indignities for the sole crime of being born. How strange is the folly of mankind to imagine themselves, after such beginnings, born for pride and pomp! *Principium jure tribuatur homini, cujus causa videtur cuncta alia genuisse natura, magna sæva mercede contra tanta sua minera; non sit ut satis æstimare, parens melior homini, an tristior nocera fuerit. Ante omnia, unum animantium cunctorum alienis velat opibus: cæteris*

*varie tegumenta tribuit.——Hominem tantum nudum, et in nuda humo, natali die alijctum vagitus statim et ploratum, nullumque tot animalium aliquid ad lacrymas, et has protinus vite principio.——Ab hoc lucis rudimento, quæ ne feras quidem inter nos gentes, vincula excipiunt, et omnium membrorum nexu. Itaque feliciter natus jacet, manibus pedibusque devinctis, flens animal cæteris imperaturum; et a supplicitis vitam auspicatur unam tantum ob culpam, quia natum est. Heu! dementia ab his initiis existimatum ad superblam se gentes! The pagans had a right sense of man's misery from his birth, but did not know the cause of it, as St. Augustin observes, speaking of Cicero: *Rem vidit, causam non vidit.**

These few passages, which I have here quoted from Pliny, and have translated as well as I could, without being able to render the energy of the original, may suffice to give the reader some idea of his style and character. I should observe, before I conclude, upon the industrious art of the author I now speak of. His work, which takes in all natural history, and treats circumstantially an infinity of subjects absolutely necessary to his plan, but entirely disagreeable in themselves, abounds almost every where with thorns and brambles, which present nothing grateful to the reader, and are very capable of giving him disgust. Pliny, like an able writer, to prevent, or at least, to lessen, this distaste, has taken care to interperse here and there some flowers, to throw into some of his narratives grace and spirit, and to adorn almost all the prefaces which he places in the front of each of his books, with fine and solid reflections.

LUCIAN.

LUCIAN, a Greek author, was born at Samosata, the capital of Comagena, a province of Syria, of parents of very moderate condition. His father, not having any fortune to give him, resolved to make him learn a trade. But the beginnings not being very much in his favour, he applied himself to literature, upon a dream, true or fictitious, related in the beginning of his works. I shall give an extract of it in this place, which may contribute to give the reader an idea of his genius and style.

I was fifteen years old, says he, when I left off going to school, at which time my father consulted with his friends how to dispose of me. Several did not approve my being brought up to letters, because much time and expense were necessary for success in them. They considered that I was not rich, and that in learning a trade I should soon be able to supply myself with the means of life, without being a charge to my father or family. This advice was followed, and I was put into the hands of an uncle, who was an excellent sculptor. I did not dislike this art, because I had amused myself very early in making little works of wax, in which I succeeded tolerably well, besides, sculpture did not seem so much a trade to me, as an elegant diversion. I was therefore set to work, to try how I should take to it. But I began by laying on the chisel so clumsily upon the stone, which had been given me to work upon, and was very fine, that it broke under the weight of my fists. My uncle was so violently angry, that he could not help giving me several blows; so that my apprenticeship began with tears. I ran home crying bitterly, and related this unfortunate adventure, showing the marks of the blows I had received, which exceedingly afflicted my mother. In the evening I went to bed, and did nothing but ruminate upon what had happened all night. In my sleep I had a dream, which made a very lively impression upon me. I thought I saw two women. The one was rough and uncombed, with dirty hands, sleeves tucked up, and her face all covered with sweat and dust, in short, such as my uncle was when at work. The other had a graceful air, a sweet and smiling aspect, and was very neat, though modest, in her attire. After having eagerly pulled me to and fro to make me join one of them, they referred the decision of their difference to my own choice, and pleaded their cause alternately. The first began thus: "Son, I am Sculpture, whom you have lately espoused, and whom you

^a Lib. iii. c. 5.

^b Lib. vii. in Proöm.

The Latin tongue has a peculiar word to express the cries of infants, *vagitus*; as it also has for that of oxen, cows, and bulls, *mugitus*; and that of lions, *rugitus*. Our language has adopted the two last words, *mugissement*, *rugissement*. I know not why it should not do the same in regard to the first, and use *vagissement*, which is in the same mode of analogy. This word might offend at first through novelty; but we should insensibly accustom ourselves to it as well as to the others. For my part, not having sufficient authority with the public, I dared not venture it, and contented myself, with some regret, to say only to myself:—

—Ego cur acquiro pauca,
Si possum, invideo?—

Horat.

The Translator thought proper to retain this note, because it is an example of what the author has said above in the text, upon introducing new words into a language, and may serve for ours as well as the French.

have known from your infancy, your uncle having made himself very famous by me." If you will follow me, without hearkening to the soothing words of my rival, I will render you illustrious, not like her, by words, but deeds. For besides, that you will become strong and vigorous like me, you shall acquire an estimation not subject to envy, nor one day the cause of your ruin, like the charms of her who now endeavours to seduce you. For the rest, be not in pain upon account of my habit; it is that of Phidias and Polyclethus, and those other great sculptors, who, when alive, were adored for their works, and who are still adored with the gods that they made. Consider how much praise and glory you will acquire by treading in their steps, and what joy you will give your father and family." This is very near what this lady said to me in a rude gross tone, as artisans speak, but with force and vivacity. After which, the other addressed herself to me in these words: "I am Erudition, who preside over all the branches of polite knowledge. Sculpture has displayed the advantages you would have with her. But if you hearken to her, you will always continue a miserable artificer, exposed to the contempt and insults of the world, and compelled to make your court to the great for subsistence. Should you even become the most excellent in your art, you will only be admired, whilst none will envy your condition. But if you follow me, I will teach you whatever is most noble and most excellent in the universe, and whatever antiquity boasts of remarkable. I will adorn thy soul with the most exalted virtues, such as modesty, justice, piety, humanity, equity, prudence, patience, and the love of whatever is virtuous and laudable: for these are the real ornaments of the soul. Instead of that mean dress of yours, I will bestow upon thee a majestic one, like that thou seest me wear; and from poor and unknown, I will render thee illustrious and opulent, worthy of the highest employments, and capable of attaining them. If thou desirest to travel into foreign countries, I will cause thy renown to go before thee. People will come from all parts to consult thee as an oracle: the whole world will do homage to and adore thee. I will even give thee the so much boasted immortality, and make thee survive forever in the remembrance of men. Consider what *Æschines* and *Demosthenes*, the admiration of all ages, became by my means. *Socrates*, who at first followed Sculpture my rival, no sooner knew me, than he abandoned her for me. Has he had cause to repent his choice? Will you renounce such honours, riches, and authority, to follow a poor unknown, who has nothing to give thee, but the mallet and chisel, the low instruments she holds in her hands, who is reduced to get the means of life by the sweat of her brow, and to be more intent on polishing a piece of stone, than in polishing herself?" She had no sooner spoken these words, than, struck with her promises, and not having yet forgot the blows I had received, I ran to embrace her almost before she ceased to speak. The other, transported with rage and indignation, was immediately changed into a statue, as is related of *Niobe*. Erudition thereupon, to reward my choice, made me ascend with her into her chariot, and touching her winged horses, she carried me from east to west, making me scatter universally, something I know not what, of celestial and divine, that caused mankind to look up with astonishment, and to load me with blessings and praises. She afterwards brought me back into my own country, crowned with honour and glory; and restoring me to my father, who expected me with great impatience: "Behold," said she to him, pointing to the robe I had on, "of how exalted a fortune you would have deprived your son, had I not interposed." Here ended my dream.

Lucan concludes this short discourse with observing that his design, in relating this dream, which seems entirely a fiction of his own, was to inculcate the love of virtue in youth, and to encourage them by his example to surmount all the difficulties they may meet with in their course, and to consider poverty as no obstacle of real merit.

The effect this dream had, was to kindle in him an ardent desire to distinguish himself by the study of

polite learning, to which he entirely devoted himself. We may judge of the progress he made in it, by the erudition that appears in his writings upon all manner of subjects; which gave me reason to place him amongst the philologists. He says himself, that he embraced the profession of an advocate: but that abhorring the clamour and chicanery of the bar, he had recourse to philosophy as to an asylum. It appears also from his writings that he was a rhetorician, who professed eloquence, and composed declamations and harangues upon different subjects, and even pleadings, though none of his making have come down to us.

He settled first at Antioch; whence he went into Ionia and Greece, and afterwards into Gaul and Italy: but his longest residence was at Athens. In his extreme old age, he accepted the office of register to the prefect of Egypt. I shall not enter into a circumstantial account of the particulars of his life, which are of little importance to my subject. He lived to the reign of Commodus, to whom he inscribed the history of Alexander the Impostor, after the death of Marcus Aurelius.

He left a variety of writings upon different subjects. The purity of the Greek tongue, and the clear, agreeable, lively, and animated style, in which they are written, give the reader great pleasure. In his dialogues of the dead, he has hit that admirable simplicity, and natural pleasantry of humour, which are so well adapted to a manner of writing, which is extremely difficult, though it does not seem so, because a vast number of personages, very different in their age and condition, are introduced speaking in it, each according to their peculiar character. His writings have this advantage, as *Quintilian* has observed of *Cicero's*, that they may be useful to beginners, and no less so to the more advanced. He is wonderful in his narration, and has a fecundity in him, which may be of great service to geniuses naturally dry and barren. He treats fable in a manner at once agreeable and very proper to impress it upon the memory, which is of no small advantage for the understanding of the poets. He paints admirably in a thousand places the miseries of this life, the vanity of mankind, the pride of the philosophers, and the arrogance of the learned. It is however true, that choice and discernment are necessary in reading this author, who, in many of his works, shows little respect for modesty, and makes open profession of impiety, equally deriding the Christian religion, of which he speaks in many places with extreme contempt, and the pagan superstition, of which he shows the ridicule. This occasioned his being called blasphemous and atheist. And indeed he followed the Epicurean philosophy, which differs little from atheism; or rather he had neither religion, nor any fixed and constant principles, regarding every thing as uncertain and problematical, and making every thing matter of jest. *Suidas* says, it was generally believed that he was torn in pieces by dogs, as a judgment for his presumption in making Christ the subject of his raillery. It were to be wished that this fact was better attested.

AULUS GELLIUS.

AULUS GELLIUS (or by corruption *Agellius*) was a grammarian, who lived in the second century, in the reigns of Marcus Aurelius, and some other emperors, his successors. He studied grammar at Rome, and philosophy at Athens, under *Calvisius Taurus*, whence he afterwards returned to Rome.

He rendered himself famous by his *Noctes Atticæ*, which name he gave to a collection he made for his children of whatever he had learned, that was fine either in reading authors, or from the conversation of learned men. He called it so, because he had composed it at Athens during the winter, when the length of the nights afforded more time for application. *Macrobius* has copied several things from him with out quoting him. There does not seem to be any great discernment in the topics he has chosen as the most considerable and most useful, which are generally grammatical remarks of little importance. We are, however, indebted to him for many facts and monuments of antiquity, no where else to be found

Of the twenty books that compose this work, the eighth is entirely lost; nothing remaining of it but the title of the chapters.¹ That wherein he transiently treats of the laws of the twelve tribes is very much esteemed.

Aulus Gellius's style does not want force, but is often mixed with barbarous and improper words, which render it hard and obscure, and argues the age he lived in, from which little purity and elegance is to be expected.

Amongst the particulars, which he tells us of his life, he observes,² that while he was very young, being chosen by the prætors to adjudge some little affairs of private persons, one was brought before him, in which a man claimed a sum of money, that he pretended to have lent another. He proved this only by some circumstances of no great certainty, and had neither writing nor witness: but he was a man of unquestionable honour, irreproachable life, and known integrity. His opposite, on the contrary, who denied the debt, was notorious for his sordid avarice; and was proved to have been often convicted of fraud and perjury. Aulus Gellius, to adjudge this cause, had taken with him several of his friends versed in the business of the bar, but who desired nothing so much as despatch, having a great deal of other affairs to attend to. Hence they made no difficulty to conclude, that a man could not be obliged to pay a debt, when there was no proofs that he owed it. Aulus Gellius could not resolve to dismiss the cause in this manner, believing one of the parties very capable of denying what he owed, and the other incapable of demanding what was not his due. He therefore referred judgment to another day, and went to consult Favorinus, who was then alive and at Rome: he was a philosopher of great reputation. Favorinus, upon his proposing the case to him, repeated a passage of Cato, which says, that on these occasions, where proofs were wanting, the ancient custom of the Romans was to examine which of the two were the honestest man; and, when they were equally so, or equally otherwise, to adjudge the cause in favour of the person sued: whence Favorinus concluded, that with regard to two persons, so different in their characters as the parties in the cause, there was no difficulty to believe an honest man preferably to a knave. Whatever respect Aulus Gellius might have for this philosopher, he could not entirely give in to his opinion; and, determining to do nothing against his conscience, he declined passing judgment in an affair, into which he could not sufficiently penetrate. The case would have no difficulty with us, because the pretended debtor would be put to his oath, and be believed upon it.

ATHENÆUS.

ATHENÆUS was of Naucratis, anciently a famous city of Egypt, upon an arm of the Nile that took its name from it. He lived in the reign of the emperor Commodus. He composed a work in Greek, which he called *Dipsosophista*, that is to say, *the banquet of the learned*; which abounds with curious and learned inquiries, and gives abundance of light into the Grecian antiquities. We have only an abridgment or extracts of the first books of his *Dipsosophista*, made, as Casaubon believes, at Constantinople, five or six hundred years ago.³

JULIUS POLLUX.

JULIUS POLLUX was the countryman and cotemporary of Athenæus. He inscribed to Commodus, when only Cæsar, in the lifetime of Marcus Aurelius, the ten books which we have of his under the title of *Onomasticon*. It is a collection of the synonymous words by which the best Greek authors expressed the same thing. He was apparently one of the preceptors of Commodus. He pleased that prince with his fine voice, who gave him the chair of professor of eloquence, which had been founded at Athens. Philostratus, who placed him among the sophists, ascribes to him a great knowledge of the Greek language, a

taste for what was well or ill composed, and genius enough for eloquence, but little art.⁴

SOLINUS.

C. JULIUS SOLINUS has left us a description of the earth, under the name of *Polyhistor*. Vossius relates many opinions upon the time when the author lived, and concludes, that all which can be said of it is, that he preceded St. Jerome, who cites him, that is to say, after the first century, and before the end of the fourth.⁵ His work is only an extract from several authors, particularly Pliny the naturalist, and is done with no great genius and judgment.

PHILOSTRATUS.

THERE were many sophists of this name. We shall speak here only of him who wrote the life of Apollonius Tyanæus. He was one of the learned men, who frequented the court of the empress Julia, the wife of Severus.⁶ He professed eloquence at Athens, and afterwards at Rome, in the reign of Severus. The life of Apollonius, written by Darius, the most zealous of his disciples, which was properly no more than memoirs very meanly composed, having fallen into Julia's hands, she gave it to Philostratus, who form these memoirs, and what he could extract from the works of Apollonius himself, and other writings, compiled the history we have of him. Eusebius asserts,⁷ that it were easy to show, that a great part of his narrations contradict themselves, and breathe nothing but fable and romance. Nor is he afraid to add, that his whole work abounds with fictions and falsities. Photius, who briefly repeats part of the facts of this history, treats many of them as impertinent fables.⁸ Suidas speaks of them to the same effect. The latter, besides the life of Apollonius, ascribes many other writings to Philostratus, and among the rest, four books of allegories and descriptions, which are still extant, and have been judged of great beauty, well sustained, and composed with all the delicacy of the Attic tongue.

MACROBIUS.

THIS author, at the head of his works, is called *Aurelius Theodosius Ambrosius Macrobius*. To which the epithet *Illustris* is added, peculiar to those advanced to the highest dignities of the empire. He was of a country, where the Latin tongue was not commonly spoken, namely, of Greece or of the East, and lived in the reigns of Theodosius and his children. Though it is not certain that this author is the Macrobius mentioned in the laws of Honorius and Theodosius, it is, however, scarce to be doubted, but he lived about that time, as all the persons he introduces speaking in his *Saturnalia* lived very near it. He feigns this conversation, in order to collect all that he knew of antiquities, which he intended for the instruction of his son Eustathius, to whom he addresses it.⁹ And as he assembles in it all the greatest and most learned persons of Rome during the vacations of the *Saturnalia*, he gives that name to his work. He professes to relate things generally in the express words of the authors from whom he extracts them, because his view in it was not to display his eloquence, but to instruct his son: besides which, being a Greek, it was not quite easy for him to express himself in Latin. Accordingly his elocution is said to be neither pure nor elegant; and that in the passages where he speaks himself, a Greek seems talking broken Latin. As for the subjects of which he treats, they are agreeable and learned.

Besides the *Saturnalia*, there are two books of Macrobius' upon the dream, ascribed by Cicero to Scipio, done also for his son Eustathius, to whom he addresses them.

DONATUS.

DONATUS,¹⁰ (*Ælius Donatus*) whose scholar St. Jerome was, taught grammar with great reputation at Rome, in the reign of the emperor Constantinus. We

have the commentaries upon Virgil and Terence, which are pretended to be the same, ascribed by St. Jerome to his master Donatus. The best judges believe, that there may be something of his in the comment upon Virgil, but that much is added to it unworthy of so able a hand. As to the comment upon Terence, it is attributed to Evanthius, otherwise called Eugraphius, who lived at the same time. Neither is it believed, that the lives of these two poets were written by Donatus. We have some tracts upon grammar which bear his name, and are esteemed.

SERVIVS (*Maurus Honoratus*) lived about the reigns of the emperors Arcadius and Honorius. He

is known by the comment upon Virgil ascribed to him. It is the general opinion that this piece is only an abridgment extracted from the work of the true Servius, the loss of which these extracts have occasioned.

STOBÆUS.

JOHANNES STOBÆUS, a Greek author, lived in the fifth century. What remains of his collection has preserved some curious monuments of the ancient poets and philosophers. It is believed, that among these fragments many things have been added by those who came after him.

OF

POLITE LEARNING,

OR THE

BELLES LETTRES.

INTRODUCTION.

POESY, History, and Eloquence, include whatever is principally meant by polite learning, or the *Belles Lettres*. Of all departments of literature, this has the most charms, displays the most lustre, and is in some sense the most capable of doing a nation honour by works, which are the finest and most exquisite production of the mind. I would not hereby be thought to undervalue the other sciences, in the least, of which I shall speak in the sequel, and which cannot be too highly esteemed. I only observe, that those we are to treat of in this place, have something more animating, more shining, and consequently more apt to strike mankind, and to excite their admiration; that they are accessible to a great number of persons, and connect themselves more generally than the rest with the feelings and transactions of men of genius. Poesy seasons the solidity of her instructions with attractive graces, and the pleasing images, in which she industriously conveys them. History, in recounting the events of past ages in a lively and agreeable manner, excites and gratifies our curiosity, and at the same time gives useful lessons to kings, princes, and persons of all conditions, under borrowed names, to avoid offending their delicacy. And lastly, eloquence, now showing herself to us with a simple and modest grace, and now with all the pomp and majesty of a potent queen, charms the soul, while she engages the heart, with a sweetness and force, against which there is no resisting.

Athens and Rome, those two great theatres of human glory, have produced the greatest men of the ancient world, as well for valour and military knowledge, as ability in the arts of government. But would these great men have been known, or would not their names have been buried with them in oblivion, without the aid of the arts in question, that have given them a kind of immortality, of which mankind are so jealous? These two cities themselves, which are still universally considered as the primitive sources of good taste in general, and which, in the midst of the ruins of so many empires, preserved a taste for polite learning, that never will expire; are they not indebted for that glory to the excellent works of poesy, history, and eloquence, with which they have enriched the universe?

Rome seemed in some sort to confine herself to this taste for the *Belles Lettres*; at least she excelled

in an eminent degree only in this kind of knowledge, which she considered as more useful and more glorious than all others. Greece was more rich as to the number of sciences, and embraced them all without distinction. Her illustrious persons, her princes, and kings, extended their protection to science in general, of whatsoever kind and denomination. Not to mention the many others who have rendered their names famous on this account, to what was Ptolemy Philadelphus indebted for the reputation that distinguished him so much among the kings of Egypt, but to his particular care in drawing learned men of all kinds to his court, in loading them with honours and rewards, and by their means in causing all arts and sciences to flourish in his dominions. The famous library of Alexandria, enriched by his truly royal magnificence with so considerable a number of books, and the celebrated museum, where all the learned assembled, have made his name more illustrious, and acquired him a more solid and lasting glory, than the greatest of conquests could have done.

France does not give place to Egypt in this point. The king's famous library, infinitely augmented by the magnificence of Louis XIV. is not the least illustrious circumstance of his reign. His successor Louis XV. who signalized the beginning of his own reign by the glorious establishment of free instruction in the university of Paris, to tread in the steps of his illustrious great-grandfather, has also made it his care and pride to augment and decorate the royal library. In a few years he has enriched it with from fifteen to eighteen thousand printed volumes, and almost eight thousand manuscripts, part of the library of Mr. Colbert, the most scarce and ancient come down to us; without mentioning those brought very lately from Constantinople by the Abbe Sevin: so that the king's library at present amounts to about ninety thousand printed volumes, and from thirty to thirty-five thousand manuscripts. It only remained to deposit so precious a treasure in a manner that might evince all its value, and answer the reputation and glory of the kingdom. This Louis XV. has also done, and fulfilled the intentions of his great-grandfather, by causing a superb edifice to be prepared for his library, which is already the admiration of all strangers, and, when finished, will be the most magnificent receptacle for books in Europe.

The museum of Alexandria was much admired: but what was it in comparison with our academies of ar-

chitecture, sculpture, painting; the *Académie Française*, that of polite learning or the *Belles Lettres*, and that of Sciences? Add to these the two most ancient foundations of the kingdom; the college royal, where all the learned languages, and almost all the sciences are taught; and the university of Paris, the mother and model of all the academies in the world, whose reputation so many ages have not impaired, and who, with her venerable wrinkles, continually retains the air and bloom of youth. If the number of the learned, who fill all these places, are added to the account, and their pensions estimated, it must be owned that the rest of Europe has nothing comparable to France in these respects. For the honour of the present reign and ministry, I cannot forbear observing, that during the war lately terminated so happily and gloriously for us, the payment of all these pensions of the learned was neither suspended nor delayed.

The reader will, I hope, pardon this small digression, which however is not entirely foreign to my subject, for the sake of the warm love of my country, and the just sense of gratitude that occasioned it. Before I proceed to my subject, I think myself obliged to take notice, that I shall make great use of many of the dissertations in the *Memoirs of the Academy of Inscriptions and Belles Lettres*, especially in what relates to poetry. Those extracts will show how capable that academy is of preserving the good taste of the ancients.

CHAPTER I.

OF THE POETS.

If we consider poetry in the purity of its first institution, it is evident, that it was invented originally to render the public homage of adoration and gratitude to the Divine Majesty, and to teach men the most important truths of religion. This art, which seems so profane in our days, had its birth in the midst of festivals, instituted in honour of the Supreme Being. On those solemn days, when the Hebrews celebrated the remembrance of the wonders God had wrought in their favour, and when, at rest from their labours, they gave themselves up to an innocent and necessary joy, all places resounded with canticles and sacred song, the noble, sublime, and majestic style of which suited the greatness of the God they praised. In those divine canticles what throngs do we not see of the most lively and animated beauties! Rivers rolling back to their sources; seas opening and flying with dread; hills that skip, and mountains that melt like wax and disappear; heaven and earth trembling and listening with awe and silence; and all nature in motion, and shaken before the face of its author.

But as the human voice alone failed in the utterance of such amazing wonders, and seemed too weak to the people to express the lively sense of gratitude and adoration with which they were animated, to express them with greater force, they called into their aid the big voices of thundering drums, trumpets, and all other instruments of music. In a kind of transport and religious enthusiasm this did not suffice; and the body was also made to have a part in the holy joy of the soul by impetuous but concerted emotions, in order that every thing in man might render homage to the Divinity. Such were the beginnings of music, dancing, and poetry.

What man of good taste, who, though not full of respect for the sacred books, should read the songs of Moses with the same eyes he reads the odes of Pindar, but would be obliged to own that this Moses, whom we know as the first historian and legislator of the world, is at the same time the first and most sublime of poets? In his writings, poetry even at the first instant of its birth appears perfect, because God himself inspires it, and the necessity of arriving by degrees at perfection, is a condition annexed only to arts of human invention. The prophets and the psalms present us also with the like models. In

them shines out that true poetry in all her majesty of light, which excites none but happy passions, which moves the heart without depraving it, which pleases without soothing our frailties, which engages our attention without amusing us with trivial and ridiculous tales, which instructs us without disgust, which makes us know God without representing him under images unworthy of the divine nature, and which always surprises without leading us astray through fantastic regions and chimerical wonders. Always agreeable, always useful; noble by bold expressions, glowing figures, and still more by the truths she denounces, it is she alone that deserves the name of divine language.

When men had transferred to creatures the homage due only to the Creator, poetry followed the fortune of religion, always preserving however traces of her first origin. She was employed at first to thank the false divinities for their supposed favours, and to demand new ones. She was soon indeed applied to other uses: but in all times care was taken to bring her back to her original destination. Hesiod has wrote the genealogy of the gods in verse: a very ancient poet composed the hymns usually ascribed to Homer; of which kind of poem Callimachus afterwards wrote others. Even the works, that turned upon different subjects, conducted and decided the events they related by the intervention and ministrations of divinities. They taught mankind to consider the gods as the authors of whatever happens in nature. Homer, and the other poets, every where represent them as the sole arbiters of our destinies. It is by them our courage is either exalted or depressed; they give or deprive us of prudence; dispense success and victory; and occasion repulse and defeat. Nothing great or heroic is executed without the secret or visible assistance of some divinity. And of all the truths they inculcate, they present none more frequently to our view, and establish none with more care, than that valour and wisdom are of no avail without the aid of Providence.

One of the principal views of poetry, and which was a kind of natural consequence of the first, was also to form the manners. To be convinced of this, we have only to consider the particular end of the several species of poetry, and to observe the general practice of the most illustrious poets. The Epic poem proposed from the first to give us instructions disguised under the allegory of an important and heroic action; the Ode, to celebrate the exploits of great men, in order to excite the general imitation of others; Tragedy, to inspire us with horror for guilt, by the fatal effects that succeed it; and with veneration for virtue, by the just praises and rewards which attend it; Comedy and Satire, to correct whilst they divert us, and to make implacable war with vice and folly; Elegy, to shed tears upon the tombs of persons, who deserve to be lamented; and lastly, the Pastoral poem, to sing the innocence and pleasures of rural life. If any of these kinds of poetry have in succeeding times been employed to different purposes, it is certain, that they were made to deviate from their natural institution, and that in the beginning they all tended to the same end, which was to render man better.

I shall pursue this subject no farther, which would carry me beyond my bounds. I confine myself in speaking of the poets to those who have distinguished themselves most in each kind of poetry, and shall begin with the Greeks. I shall then proceed to the Latins, partly uniting them, however, sometimes, especially when it may seem necessary, to compare them with each other. As I have occasionally treated part of what relates to these illustrious writers elsewhere, to avoid useless and tedious repetitions, the reader will permit me to refer him thither, when the same matter recurs.

ARTICLE I.

OF THE GREEK POETS.

EVERY body knows, that poetry was brought into Italy from Greece, and that Rome is indebted to her

¹ Académie Française, established 1635, for the purity of the French tongue.

for the reputation and glory she acquired of this kind.

SECTION I.—OF THE GREEK POETS, WHO EXCELLED IN EPIC POETRY.

I do not rank either the Sibyls, or Orpheus, and Mæneus, in the number of the poets. All the learned agree, that the poems ascribed to them are supposititious.

HOMER.

THE period of time when Homer was born is not very certain. Herodotus¹ places it four hundred years before himself, and Usher fixes the birth of Herodotus in the year of the world 3520. According to which Homer must have been born in the year 3120, that is to say, 340 years after the taking of Troy. We have no better assurances concerning the place of his nativity, for which honour seven cities contended. Smyrna seems to have carried it against the rest.

I have spoken of epic poetry and Homer in the ancient history,² and with much greater extent in the first of my treatise upon the study of the Belles Lettres, where I have endeavoured to give the reader a taste of the beauties of this poet.

Virgil, if we may judge of his views by his work, seems to have proposed no less to himself than to dispute the superiority of epic poetry with Greece, and borrowed arms from his rival himself for that purpose. He justly discerned, that as he was to bring the hero of his poem from the banks of the Scamander, it would be necessary for him to imitate the Odyssey, which contains a great series of voyages and narratives; and as he was to make him fight for his settlement in Italy that it would be as necessary to have the Iliad perpetually before his eyes, which abounds with action, battles, and all that intervention of the gods, which heroic poetry requires. Æneas makes voyages like Ulysses, and fights like Achilles. Virgil has interwoven the forty-eight books of Homer in the twelve of the Æneid. In the six first we discover the Odyssey almost universally, as we do the Iliad in the six last.

The Greek poet has a great advantage, and no less title to superiority, from having been the original, which the other copied; and what Quintilian says of Demosthenes in regard to Cicero, may with equal justice be applied to him, that however great Virgil may be, Homer in a great measure made him what he is.³ This advantage does not, however, fully decide their merit, and to which of them the preference ought to be given, will always be a matter of dispute. We may in this point abide by the judgment of Quintilian, who, while he leaves the question undecided, in a few words perfectly specifies the characters that distinguish those two excellent poets. He tells us, there is more genius and force of nature in the one, and more art and application in the other; and that what is wanting in Virgil on the side of the sublime, in which the Greek poet is indisputably superior, is perhaps compensated by the justness and equality that prevail universally throughout the Æneid. *Et hercle, ut illi natura celestis atque immortalis cesserimus, ita cura et diligentia vel ideo in hoc plus est, quod ei fuit magis laborandum: et quantum eminentioribus vincimus, fortasse æqualitate pensamus.* It is very hard to characterise these two poets better. The Iliad and Odyssey are two great paintings, of which the Æneid is an abridgment or miniature. The latter requires a nearer view: every thing in it therefore must be perfectly finished. But great pictures are seen at a distance: it is not necessary, that they should be so exact and regular in all their strokes: too scrupulous a niceness is even a fault in such paintings.

HESIOD.

HESIOD is said to have been born at Comæ, a city of Æoli, but brought up from his infancy at Ascræ, a

small town of Bœotia, which on that account passed for his country: Virgil also calls him the old man of Ascræ.⁴ Authors differ much concerning the time in which he lived. The most general opinion is, that he was Homer's cotemporary. Of all his poems only three have come down to us: these are, *The Works and Days*; *The Theogonia*, or, the genealogy of the gods; and *The Shield of Hercules*; of which I have spoken elsewhere. Quintilian gives us his character in these words:—"Hesiod seldom rises upon himself, and the greatest part of his works consist almost entirely of proper names. He has however useful sentences for the conduct of life, with sweetness enough of words, and no unhappiness of style. He is allowed to have succeeded best in the middle way of writing."⁵

POETS LESS KNOWN.

TERPANDER, flourished A. M. 3356. He was very famous both for poetry and music.

TYRTÆUS, flourished A. M. 3364. He is believed to have been an Athenian.⁶ This poet made a great figure in the second war of Messene. He excelled in celebrating military exploits. The Spartans had been several times defeated to their great discouragement. The oracle of Delphos bade them ask a man of the Athenians capable of assisting them with his counsel and abilities. Tyrtæus was sent them. The consequence at first did not answer the expectations of the Spartans. They were again defeated three times successively, and were upon the point of returning to Sparta in despair. Tyrtæus re-animated them by his verses, which breathed nothing but love of one's country and contempt of death. Having resumed courage they attacked the Messenians with fury, and the victory they obtained upon this occasion, terminated a war they could support no longer to their advantage. They conferred the freedom of their city upon Tyrtæus, a privilege they were by no means too profuse of at Lacedæmon, which made it exceedingly honourable. The little that remains of his writings, shows that his style was very vigorous and noble. He seems transported himself with the ardour he endeavours to give his hearers.

*Tyrtæusque mares animos in Martia bella
Versibus exauit. Horat. in Art. Poet.*

*By verse the warrior's fire Tyrtæus feeds,
And urges many minds to glorious deeds.*

DRACO, a celebrated Athenian legislator, flourished A. M. 3368. He composed a poem of three thousand lines, entitled, *Τετραλογία*, in which he laid down excellent precepts for the conduct of life.

ABARIS, a Scythian by nation according to Suidas, surnamed by others the Hyperborean, flourished A. M. 3368.⁷ He composed several pieces of poetry. Stories of the last absurdity are told of him, which even Herodotus himself does not seem to believe. He contents himself with saying, that Barbarian had carried an arrow through the whole world, and that he ate nothing. Jamblicus⁸ goes farther, and pretends that Abaris was carried by his arrow through the air, and passed rivers, seas, and the most inaccessible places in that manner, without being stopped by any obstacle. It is said that upon account of a great plague that raged in the country of the Hyperboreans, he was deputed to Athens by those people.

CHÆRILUS, flourished A. M. 3676. There were several poets of this name. I speak of him in this place,⁹ who notwithstanding the badness of his verses in which there was neither taste nor beauty, was how-

⁹ Cædendum vero in hoc quidem, quod et ille (Demosthenes) prior fuit, et ex magna parte Ciceronem, quantus est, fecit. *Lib. x. cap. i.*

ever much esteemed and favoured by Alexander the Great, from whom he received as great a reward as if he had been an excellent poet. Horace observes, that liberality argued little taste in that prince, who had been so delicate in respect to painting and sculpture, as to prohibit by an edict all painters except Apelles to draw his picture, and all statuary, but Lyssippus, to make his statue in brass. Sylla, among the Romans, acted as liberally, but with more prudence than Alexander, in regard to a poet, who had presented him with some wretched verses. He ordered a reward to be given him upon condition that he would never write more: very hard terms to a bad poet, however reasonable in themselves.¹

ARATUS was of Soloe, a city of Cilicia, flourished A. M. 3732. He composed a poem upon astronomy, which was very much esteemed by the learned, according to Cicero. Quintilian speaks less favourably of it.² He says, that the subject of Aratus was very dry and uninteresting, from having neither variety, passions, character, nor harangue in it;³ but that however he had done as much with it as his matter would admit, and had made choice of it as suiting his capacity. Cicero, at seventeen years of age, had translated the poem of Aratus into Latin verse, of which many fragments are come down to us in his treatise *De Natura Deorum*.

APOLLONIUS of Rhodes, who flourished A. M. 3756, composed a poem upon the expedition of the Argonauts; *Argonautica*. He was a native of Alexandria, and had succeeded Eratosthenes as keeper of the famous library there in the reign of Ptolemæus Evergetes. Upon seeing himself ill treated by the other poets of that place, who loaded him with calumnies, he retired to Rhodes, where he passed the rest of his days. This occasioned his being surnamed the *Rhodian*.

EUPHORIION, of Chalcis, flourished A. M. 3756. Antiochus the Great intrusted him with the care of his library.⁴ Virgil mentions him in his *Bucolics*.⁵

NICANDER of Colophon in Ionia, or, according to others, of Etolia. He flourished in the time of Attalus, the last king of Pergamus, A. M. 3852. He composed some poems upon medicine; *Θηρίων καὶ Ἀνθρώπων ἰατρικὰ*, and others upon agriculture, which⁶ Virgil imitated in his *Georgics*.

ANTIPATER of Sidon, flourished A. M. 3856. Cicero⁷ informs us, that he had so great a talent for poetry, and such facility in making verses, that he could express himself extemporaneously in hexameters, or any other kind of verse, upon any subject. Valerius Maximus, and Pliny⁸ say, that he had a fever regularly once every year upon the same day; which was the day of his birth and death.

A. LICINIUS ARCHIAS, for whom Cicero's oration is extant, flourished A. M. 3318. He wrote a poem upon the war with the Cimbræ, and began another upon Cicero's consulship. We have still some of his epigrams in the *Anthologia*.

PARTHENIUS lived at the same time. He had been taken prisoner in the war with Mithridates, and was Virgil's master in Greek poetry.⁹

APOLLINARIUS, bishop of Laodicea in Syria, flourished A. D. 362. I do not consider him here as a

bishop, but as a poet, who distinguished himself very much by Christian poetry. Julian the apostate forbade all masters by a public edict, to teach the children of Christians the profane authors. The pretext for this edict was, that it was not consistent to explain them to youth as illustrious writers, and at the same time to condemn their religion. But the true motives for that prohibition were the great advantages the Christians found in the profane books against paganism. This edict induced the two Apollinarij to compose several works of use to religion.

The father of whom we speak, and who was a grammarian, wrote in heroic verse, and in imitation of Homer, the sacred history in twenty-four books down to the reign of Saul, denominating each book with a letter of the Greek alphabet. He imitated Menander in comedies, Euripides in tragedies, and Pindar in odes; taking his subjects from the holy scripture, and observing the character and style of the several kinds of poetry in which he wrote, in order that the Christians might dispense with the want of the profane authors in learning the Belles Lettres.

His son, who was a sophist, or rhetorician and philosopher, composed dialogues after the manner of Plato, to explain the gospels and the doctrine of the apostles.

Julian's persecution was of so short a continuance, that the works of the Apollinarij became useless; and the profane authors were again read. Hence, of all their poems, none are come down to us, except the *Psalm* paraphrased by Apollinarius the elder, who had the misfortune to give into heterodox opinions concerning Jesus Christ.

ST. GREGORY of Nazianzen, who flourished A. D. 350, cotemporary with Apollinarius, composed also a great number of verses of all kinds: Suidas makes them amount to thirty thousand, of which only a part have been preserved. Most of them were the employment and fruit of his retirement. Though he was very much advanced in years at the time he wrote them, we find in them all the fire and vigour that could be desired in the works of a young man.

In composing his poems, which served him for amusement in his solitude, and for consolation in his bodily infirmities, he had young persons, and those who love polite learning, in view. To withdraw them from dangerous songs and poems, he was for supplying them with an innocent and useful diversion, and at the same time for rendering the truth agreeable to them. There is also reason to believe, that one of his views was to oppose poems, in which every thing was strictly orthodox, to those of Apollinarius, that contained many opinions repugnant to the Christian faith. In making poetry subservient in this manner to religion, he recalled it to its primitive institution. He treated nothing in his verses but such subjects of piety as might animate, purify, instruct, or elevate the soul to God. In proposing sound doctrine to Christians in them, he banished from them all the filth and folly of fable; and would have thought it profaning his pen, to have employed it in reviving the heathen divinities, that Christ had come to abolish.

Such are the models we ought to follow. I speak here of a saint, who had all the beauty, vivacity, and solidity of wit, it is possible to imagine. He had been instructed in the Belles Lettres by the most able masters at that time of the pagan world. He had read with extreme application all the ancient poets, of which we often find traces even in his prose writings. He contented himself with having acquired a refined taste of poetry from them, and with having thoroughly studied and comprehended all their beauties and delicacy; but never introduced any of the profane divinities into his own pieces; which were not re-admitted by the poets till many ages after. Ought what these glorious ages of the church condemned and forbade to be allowed now? I have treated this¹⁰ subject elsewhere to some extent.

For the honour of poetry and poets, I ought not to omit mentioning EUDOCIA, the daughter of the sophist Leontius the Athenian, who, before she was a Christ-

ian, and had married the emperor Theodosius the younger, was called Athenais. Her father had given her an excellent education, and made her extremely learned and judicious. The surprising beauty of her aspect was, however, inferior to that of her wit. She wrote an heroic poem upon her husband's victory over the Persians, and composed many other pieces upon pious subjects, of which we ought very much to regret the loss. She lived about A. D. 420.

SYNESIUS, bishop of Ptolemais, lived at the same time. Only ten hymns of his are come down to us.

I pass over in silence many other poets mentioned by authors, but little known to us, and am afraid that I have already been only too long upon those of this kind.

I proceed now to the tragic and comic poets. But as I have treated both with sufficient extent in the Ancient History, I shall do little more in this place than mention their names and the times when they lived.

SECTION II.—OF THE TRAGIC POETS.

THESPIUS, who flourished A. M. 3480, is considered as the inventor of tragedy.¹ It is easy to judge how gross and imperfect it was in its beginning. He smeared the faces of his actors with lees of wine, and carried them from village to village in a cart, from which they represented their pieces. He lived in the time of Solon.² That wise legislator, being present one day at one of these representations, cried out, striking the ground with his stick, "I am very much afraid, that these poetical fictions, and ingenious fancies, will soon have a share in our public and private affairs."

ÆSCHYLUS, who flourished A. M. 3508, was the first that improved tragedy, and placed it in honour.³ He gave his actors masks, more decent dresses, the high heeled boot or buskin called *Cothurnus*, and built them a little theatre. His manner of writing is noble, and even sublime; his elocution lofty, and soaring often to bombast.⁴

In a public dispute of the tragic poets, instituted upon account of the bones of Theseus which Cimon had brought to Athens, the prize was adjudged to Sophocles.⁵ The grief of Æschylus was so great upon seeing himself deprived by a young poet of the glory he had so long possessed, of being the most excellent in the theatre, that he could not bear to stay in Athens any longer. He left it, and retired to Sicily, to the court of king Hiero, where he died in a very singular manner.—As he lay asleep in the country with his bald head uncovered, an eagle taking it for a stone, let fall a heavy tortoise upon it, which killed him. Of fourscore and ten tragedies which he composed, some say only twenty-eight, and others no more than thirteen, carried the prize.

SOPOCLES and EURIPIDES flourished A. M. 3532. These two poets appeared at the same time, and rendered the Athenian stage very illustrious by tragedies equally admirable, though very different in their style.⁷ The first was great, lofty, and sublime: the other tender, pathetic, and abounding with excellent maxims for the manners and conduct of human life. The judgment of the public was divided in respect to them; as we are at this day in regard to two poets,⁸ who have done so much honour to the French stage, and made it capable of disputing pre-eminence with that of Athens.

SECTION III.—OF THE COMIC POETS.

EUPOLIS, CRATINUS, and ARISTOPHANES, who flourished A. M. 3564, made the comedy, called Ancient Comedy, very famous. This served the Greeks instead of satire. The highest perfection of what is called Atticism, was peculiar to it, that is to say, whatever is finest, most elegant, and most delicate in style, to which no other poetry could come near. I have spoken of it elsewhere.

MENANDER, who flourished A. M. 3580, was the first and the best author of the New Comedy. Plutarch prefers him infinitely to Aristophanes.⁹ He admires an agreeable, refined, delicate, lively spirit of humour, a vein of pleasantry in him, that never departs in the least from the strictest rules of probity and good manners: whereas the bitter and merciless railery of Aristophanes is excessive abuse, is murder in jest, that without the least reserve, tears the reputation of the most worthy to pieces, and violates all the laws of modesty and decency with an impudence that knows no bounds. Quintilian is not afraid to declare, that the brightness of Menander's merit had entirely eclipsed and obliterated the reputation of all the writers in the same way.¹⁰ But the greatest praise which can be given this poet, is to say, that Terence, who scarce did any thing besides copying his plays, is allowed by good judges to have fallen very short of his original.

Aulus Gellius has preserved some passages of Menander, which had been imitated by Cæcilius, an ancient Latin comic poet. At the first reading he thought the verses of the latter very fine. But he affirms, that as soon as he compared them with those of the Greek poet, their beauty entirely disappeared, and they seemed wretched and contemptible.

Menander was not treated with all the justice he deserved during his life. Of more than an hundred comedies which he brought upon the stage, only eight carried the prize. Whether through intrigue or combination against him, or the bad taste of the judges, PHILEMON, who undoubtedly deserved only the second place, was always preferred before him.¹¹

In the Ancient History, (vol. i. p. 245,) we have explained all that relates to the Ancient, Middle and New Comedy.

SECTION IV.—OF THE IAMBIC POETS.

ARCHILOCHUS, a native of Paros, the inventor of iambic verses, lived in the reign of Candaneus, king of Lydia, A. M. 3280. See what we have said of him in the Ancient History, vol. i. p. 223.

HIPPONAX was a native of Ephesus, and flourished A. M. 3460. Upon being expelled thence by the tyrants that governed there, he went and settled at Clazomenæ.¹² He was ugly, short, and thin: but his ugliness occasioned his being immortalized: for he is hardly known by any thing except the satirical verses he composed against the brothers, Bupalus and Athenis, two sculptors who had made his figure in the most ridiculous manner in their power. He discharged such a number of keen and virulent verses against them, that, according to some authors, they hanged themselves through vexation. But Pliny observes, that statues of theirs were in being made after that time. The invention of the verse called Scazon, limping, is ascribed to Hipponax, in the last foot of which there is always a spondee instead of an iambus.

SECTION V.—OF THE LYRIC POETS.

The poetry, which was made to be sung to the lyre or the like instruments, was called lyric poetry. Compositions of this kind were named odes, or songs, and were divided into strophes or stanzas.

The end of poetry is to please the imagination. But if the different kinds of poetry, as the pastoral,

⁹ Plat. in Moral. p. 833.

¹³ Suidas.

elegiac, and epic, attain that end by different means, the ode attains it more certainly, because it includes them all; and as the famous painter of old united in one picture all that he had observed of most graceful and consummate in many of the fair sex, so the ode unites in itself all the different beauties, of which the different species of poetry are susceptible. But it has still something else peculiar to itself, which constitutes its true character. This is enthusiasm; in which view the poets believe, they may also compare her to that Juno of Homer, who borrows the girdle of Venus to exalt the graces of her form, but who is still the same queen of the gods, distinguished by the air of majesty peculiar to her, and even by the fury and violence of her character. This enthusiasm is more easy to conceive, than possible to define. When a writer is seized with it, his genius glows ardent, his imagination catches fire, and all the faculties of his soul awake, and concur to the perfection of his work. Now noble thoughts and the most shining strokes of wit, and now the most tender and beautiful images, crowd upon him. The warmth also of his enthusiasm often transports him in such a manner, that he can contain himself no longer; he then abandons himself to that living impetuosity, that beautiful disorder, which infinitely transcend the regularity of the most studious art.

These different impressions produce different effects: descriptions sometimes simple but exquisitely beautiful, and sometimes rich, noble, and sublime; comparisons just and lively; shining strokes of morality; allusions happily borrowed from history or fable; and digressions a thousand times more beautiful than the chain of the subject itself. Harmony, the soul of verse, at this moment costs the poet no trouble. Noble expressions and happy numbers spontaneously rise up, and dispose themselves in due order, like stones to the lyre of Amphion; and nothing seems the effect of study or pains. The poems of enthusiasm have such a peculiar beauty, that they can neither be read nor heard without imparting the same fire that produced themselves; and the effect of the most exquisite music is neither so certain nor so great, as that of verses born in this poetic fury,—this diviner flame of the mind.

This little passage, which I have extracted from the short but eloquent dissertation of the Abbé Fraguier upon Pindar, suffices to give the reader a just idea of lyric poetry, and at the same time of Pindar, who holds the first rank among the nine Greek poets that excelled in this way of writing, of whom it remains for me to say a few words.

Plutarch speaks of THALES,¹ whom Lycurgus persuaded to go and settle at Sparta,² A. M. 3155. He was a lyric poet, (not one of the nine mentioned above,) but under the appearance of composing only songs, he in effect did all that the gravest legislators could have been capable of doing. For all his poetical pieces were so many discourses to incline men to obedience and concord by the means of certain numbers so harmonious, so elegant, strong, and sweet, that they insensibly rendered the manners of those that heard them less rude and savage, and induced a love of order and probity, by banishing the animosities and divisions that prevailed among them. Thus by the charming impressions of a melodious kind of poetry, he prepared the way for Lycurgus to instruct and amend his citizens.

ALCMAN was a native of Sardis in Lydia, flourished A. M. 3324. The Lacedæmonians adopted him on account of his merit, and granted him the freedom of their city, upon which he congratulates himself in his poems as a singular honour to him.³ He flourished in the time of Ardyx, son of Gyges, king of Lydia.

STESICHORUS was of Himera, a city of Sicily, flourished A. M. 3398. Pausanias⁴ relates, that this poet having lost his sight as a punishment for verses which he had made in disparage of Helen, did not recover it till he had recanted his invectives by a new piece,

the reverse of the former, which was afterwards called *Palinodia*. Quintilian⁵ tells us, that he sung of great wars, and the most illustrious heroes, and that he sustained the pomp and sublimity of epic poetry on the lyre. Horace gives him the same character in a single epithet, *Stesichorique graves Camenæ*, *Stesichorus'* lofty muse.

ALCÆUS, flourished A. M. 3400. He was born at Mitylene, a city of Lesbos: it is from him the Alcaic verse took its name. He was a declared enemy to the tyrants of Lesbos, and in particular to Pittacus, whom he perpetually lashed in his poems. He is said⁶ to have been seized with such terror in a battle where he happened to be, that he threw down his arms, and fled. Horace relates a like adventure of himself.⁷ Poets pique themselves less upon their valour than their wit. Quintilian says, that the style of Alcæus is close, lofty, correct, and what crowns his praise, that he very much resembles Homer.⁸

SAPPHO. She was of the same place, and lived at the same time with Alcæus. The Sapphic verse is so called from her. She had three brothers,⁹ Larychus, Eurygius, and Charaxus. She celebrated the first extremely in her poems, and on the contrary is severe against Charaxus, for being desperately in love with the courtesan Rhodope, the same that built one of the pyramids of Egypt. Sappho composed a considerable number of poems, of which only two are come down to us, but these suffice to prove, that the praises given her by all ages for the beauty, passion, numbers, harmony, and delicacies of her verse, are not without foundation. Hence she was called the Tenth Muse, and the people of Mitylene caused her image to be stamped on their coin. It were to be wished that the purity of her manners had equalled the beauty of her genius, and that she had not dishonoured her sex and poetry by her vices and licentiousness. It is said, that frantic with despair through the obstinate resistance to her desires of Phaon, a young man of Lesbos, she threw herself into the sea from the top of the promontory of Leucadia in Acarnania; a remedy frequently used in Greece by those who were unfortunate in this passion.

ANACREON flourished A. M. 3512. This poet was of Teos, a city of Ionia. He passed much of his time at the court of Polycrates,¹⁰ tyrant of Samos, famous for the uninterrupted prosperity of his life, and tragical end; and was not only one of all his parties of pleasure, but one of his council. Plato informs us,¹¹ that Hipparchus, one of the sons of Pisistratus, sent a galley of fifty oars to Anacreon, and wrote to him in the most obliging terms, to prevail upon him to come to Athens, where his fine works would be esteemed and relished according to their merit. Joy and pleasure are said to have been his sole study, as indeed we may well believe from what remains of his poems. They every where show, that his hand wrote what his heart felt, and are of a delicacy more easy to conceive than express. Nothing would be more estimable than his compositions, had their object been better.

SIMONIDES flourished A. M. 3444. He was of the island of Cea, one of the Cyclades in the Ægean Sea. He wrote the famous naval battle of Salamis in the Doric dialect. His style was delicate, natural, and agreeable.¹² He was pathetic, and excelled in exciting compassion, which was his peculiar talent, and that by which the ancients have characterized him.

Paulum quidlibet allocutionis
Mœstius lacrymis Simonideis.

⁴ Pausan. in Lacon. p. 290.

Something sadder to my ears
Than Simonides in tears.

Horace says of him to the same effect:—

Sed ne, relictis, musa procax, jocis,
Cecè retractas munera neniae.

But whither, wanton muse, away,
Wherefore cease we to be gay,
Things of woe why thus prolong,
Things that fit the Cean's song?

IRYCUS flourished A. M. 3464. Nothing is known of him, besides his name, and a few fragments that have come down to us.

BACCHYLIDES flourished A. M. 3552. He was of the island of Cea and the son of a brother of Simonides. Hiero preferred his poems to those of Pindar in the Pythian games. Ammianus Marcellinus says, that Julian the apostate delighted much in reading this poet.

PINDAR flourished A. M. 3528. Quintilian places him at the head of the nine lyric poets. His peculiar merit and prevailing character are that majesty, that grandeur, and sublimity, which often exalt him above the rules of art, to which it were wrong to expect, that the productions of a great genius should be servilely confined. We find in his odes a sensible effect of the enthusiasm I have spoken of in the beginning of this section. It might appear a little too bold, if not softened with a mixture of less ardent and more agreeable beauties. The poet discerned this himself; which made him strew flowers abundantly from time to time. His celebrated rival Corinna reproached him with excess in this point.

Horace indeed praises him only for his sublimity. He calls it a swan, borne by the impetuosity of his flight, and the aid of the winds, above the clouds; a torrent that, swelled by rains, bears down all before it in the rapidity of its course. But to consider it in other lights; it is a smooth stream, rolling its clear pure waves over golden sands, through flowery banks and verdant plains; a bee, collecting whatever is most precious from the flowers, for the composition of its fragrant nectar. His style is always suited to his manner of thinking, close, concise, without too many express connexions, or transitional terms: these may be sufficiently inferred, and their absence exalts the vigour of his verses. Attention to transitions would have abated the poet's fire, in giving his enthusiasm time to cool.

In speaking thus of Pindar, I do not pretend to propose him as an author without faults. I own he has some, which it is not easy to excuse; but at the same time, the number and greatness of the beauties, with which they are attended, ought to cover them. Horace, who is a good judge of every thing, and especially of our present subject, must have had a very high idea of his merit, as he is not afraid to say, that to emulate him is manifest temerity: *Pindarum quisquis studet æmulari, &c.*

Pindar had a dangerous rival in the person of CORYNNÄ, who excelled in the same kind of poetry, and five times carried the prize against him in the public disputes. She was surnamed the *Lyric Muse*.

Alexander the Great, when he ruined the city of Thebes, the country of our illustrious poet, long after his death, paid a just and glorious homage to his merit in the persons of his descendants, whom he distinguished from the rest of the inhabitants of that unfortunate place, by ordering particular care to be taken of them.

I have spoken elsewhere of some of Pindar's works, in the history of Hiero: the reader may consult the passage.

SECTION VI.—OF THE ELEGIAC POETS.

ELEGY, according to Didymus, is derived from *ἐλεγεινόν*, to say, *ah! ah! or alas!* And according to others, from *ἐλεγεῖν*, to say moving things. The Greeks, and after them the Latins, composed their plaintive poems, their elegies, in hexameter and pentameter verses. Hence every thing wrote in those

verses has been called elegy, whether the subject be gay or sad.

Versibus impariter junctis querimonia primum,
Mox etiam inclusa est voti sententia compos.

Horat. in *Art. Poet.*

Grief did at first soft elegy employ,
That now oft dries her tears, to sing of joy.

No Greek elegy of the first sort is come down to us, except that inserted by Euripides in his *Andromache*, which consists only of fourteen lines. The inventor of this kind of poetry is not known.

Quis tamen exiguis elegos emiseric anteor,
Grammatici certant, ad huc sub judice lis est.

Ibid.

Yet who first sigh'd in elegiac strain,
The learn'd still doubt, and still contest in vain.

As it was intended at its institution for tears and laments, it was employed at first only in grief and misfortune. It expressed no other sentiments, it breathed no other accents but those of sorrow. With the negligence natural to affliction and distress, it sought less to please than to move; and aimed at exciting pity, not admiration. It was afterwards used on all sorts of subjects, and especially the passion of love. It however always retained the character peculiar to it, and did not lose sight of its original design. Its thoughts were always natural and far from the affectation of wit; its sentiments tender and delicate, its expression simple and easy, always retaining that alternate inequality of measure, which Ovid makes so great a merit in it (*In pedibus vitium causa decoris erat*) and which gives the elegiac poetry of the ancients so much the advantage over ours.

Periander, Pittacus, Solon, Chilo, and Hippia wrote their precepts of religion, morality and policy in elegiac verse, in which Theognis of Megara, and Phocylides, imitated them. Many of the poets also, of whom I have spoken before, composed elegies: but I shall say nothing here of any but those who applied themselves particularly to this kind of poetry, and shall make choice only of a small number of them.

CALLINUS. He was of Ephesus, and is one of the most ancient of the elegiac poets. It is believed that he flourished about the beginning of the Olympiads, A. M. 3230.

MINNERNUS, of Colophon, or Smyrna, was contemporary with Solon, A. M. 3408. Some make him the inventor of elegiac verse. He at first gave it its perfection, and was perhaps the first who transferred it from funerals to love. The fragments of his which are come down to us, breathe nothing but pleasure; whence Horace says of him,

Si Minnernus uti censet, sine amore jocisque
Nil est jucundum, vivas in amore jocisque.

Horat. l. i. Epist. 6.

As Minnernus thinks,
If without love and pleasure nought is joy,
In love and pleasure life's swift hours employ.

SIMONIDES, whose verses were so pathetic, might be ranked among the elegiac poets: but I have given him a place elsewhere.

PHILETAS of Cos, and CALLIMACHUS of Cyrene, lived both in the court of Ptolemy Philadelphus, A. M. 3724, whose preceptor Philetas certainly was and Callimachus is believed to have been his librarian. The latter is considered as the principal author of elegiac poetry, and as the person who succeeded best in it: *Cujus (elegæ) princeps Callimachus; and Philetas as the next to him: Secundus, confessione plurimorum Philetas occupavit.* This is Quintilian's opinion: but Horace seems to rank Minnernus above Callimachus.

—Si plus adposcere visus,
Fit Minnernus, et optivo cognomine crescit.

Epist. ii. l. 2

Call him Callimachus? If more his claim,
Minnernus he shall be, his wish'd surname.

Callimachus had applied himself to every kind of literature.

SECTION VII.—OF THE EPIGRAMMATIC POETS.

THE epigram is a short kind of poem, susceptible of all subjects, which ought to conclude with a happy, sprightly, just thought. The word in Greek signifies *Inscription*. Those which the ancients placed upon tombs, statues, temples, and triumphal arches, were sometimes in verse, but verse of the greatest simplicity of style. That name has since been confined to the species of poetry, of which I speak. The epigram generally consists of only a small number of lines: more extent, however, is sometimes given it.

I have said that this kind of poem is susceptible of all kinds of subjects. This is true, provided care be taken to exclude all calumny and obscenity from it.

The liberty, which the comic poets gave themselves at Athens, of attacking the most considerable and most worthy of the citizens without reserve, made way for a law to prohibit the mangling of any body's reputation in verse. At Rome, amongst the laws of the twelve tables, which very rarely condemned to death, there was one, that made it capital for any body to defame a citizen in verse.¹ Cicero's reason is no less just than remarkable. "This law," says he, "was wisely instituted. There are tribunals, to which we may be cited to answer for our conduct before the magistrates: our reputation, therefore, ought not to be abandoned to the malicious wit of the poets, nor scandalous accusations, suffered to be formed against us, without its being in our power to answer them, and defend ourselves before the judges." *Præclare. Judicii enim ac magistratum disceptationibus legitimis propositam vitam, non poetarum ingenii, habere debemus; nec probum audire, nisi ea conditione, ut respondere liceat, et iudicio defendere.*

The second exception, which regards purity of manners, is neither less important, nor less founded in reason. Our propensity to evil and vice is already but too natural and headstrong, and does not want any incentives from the charms and insinuations of delicate verses, the poison of which, concealed under the flowers of pleasing poetry, to borrow the terms which Martial applies to the Sirens,² gives us a cruel joy, and, by its enchanting sweetness, conveys disease and bane into the soul. The wisest legislators of antiquity always considered those, who abuse the art of poetry to such purposes, as the pests of society, as the enemies and corruptors of mankind, that ought to be abhorred, and kept under with the highest marks of infamy and disgrace. Such wise laws had not the good effect to be hoped from them, especially in respect to the epigram, which of all the species of poetry has abandoned itself most to obscenity.

In observing the two rules I have now laid down, epigrams would not have been dangerous, in respect to manners, and might have been useful as to style, by throwing into it occasionally and with discretion those agreeable, lively, quaint thoughts, which we find at the end of good epigrams. But, what in its origin was beauty, delicacy, and vivacity of wit, (which is properly what the Latins understand by the words, *acutus, acumen*,) soon degenerated into a vicious affectation, that extended even to prose, of which it became the fashion studiously to conclude almost all the phrases and periods with a glittering

thought, in the nature of a point. We shall have occasion to expatiate farther upon that head.

F. Vauvreur the Jesuit has treated the subject we are upon more at large, in the no less learned than elegant preface to the three books of epigrams, which he has given the public. There are also useful reflections upon the same subject in the book, called *Epigrammatum Delectus*.

We have a collection of Greek epigrams called *Anthologia*.

MELEAGER, a native of Gadara, a city of Syria, who lived in the reign of Seleucus the last king of that realm, made the first collection of Greek epigrams, which he called *Anthologia*, because as he had chosen the brightest and most florid epigrams of forty-six ancient poets, he considered his collection as a nosegay, and denominated each of these poets after some flower, Anytos the *lily*, Sappho the *rose*, &c. After him PHILIP of Thessalonica made a second collection, in the time of the emperor Augustus, out of only fourteen poets. AGATHIAS made a third, about five hundred years after, in the reign of the emperor Justinian. PLANUDES, a monk of Constantinople, who lived in the year 1380, made the fourth and last, which he divided into seven books, in each of which the epigrams are disposed in an alphabetical order according to their subjects. This is the *Anthologia* come down to us. He retrenched many obscene epigrams, for which some of the learned are not a little angry with him. There are a great many epigrams in this collection, that abound with wit and sense; but more of a different character.

ARTICLE II.

OF THE LATIN POETS.

POESY, as well as the other polite arts, did not find access till very late among the Romans, solely engrossed as they were during more than five hundred years by military views and expeditions, and void of taste for every thing called literature. By a new kind of victory, Greece, when conquered and reduced, subdued the victors in her turn, and exercised over them a power the more glorious, as it was the result of their will, and was founded upon a superiority of knowledge and science no sooner known than homaged. That learned and polite nation, which was under the necessity of a strict commerce with the Romans, by degrees made them lose that air of rudeness and rusticity they still retained from their ancient origin, and inspired them with a taste for the arts that civilize, improve and adorn society.

*Græcia capta ferum victorem cepit, et artes
Intulit agresti Latio.⁴ Sic horridus ille
Defluxit numerus Saturnius, et grave virus
Mundicie popule.* Horat. Epist. l. 1, 2.

Greece conquer'd, won her martial victors' hearts,
And polish'd rustic Latium with her arts:
The rude hoarse strain expir'd of Saturn's days,
And the muse soften'd and refin'd our lays.

This happy change began by poetry, whose principal view is to please, and whose charms, full of sweetness and delight, impart a taste for themselves soonest and with most ease. It was however very gross and unpolished in its beginning at Rome; and had its birth in the theatre, or at least began there to assume a more graceful and elegant air. It made its first essays in comedy, tragedy, and satire, which it carried slowly and by insensible acquisitions to a great degree of perfection.

When the Romans had been almost four hundred years without any dramatic games, chance and debauch introduced the Fescennine verses⁵ into one of their feasts, which served them instead of theatrical pieces near an hundred and twenty years. These verses were rude and almost void of numbers, as they

¹ In vitium libertas exedit, et vim

³ Sirenas, hilarem navigantium penam,
Blanda quoque mortes, gaudiumque oculede.

⁴ Horace here gives us the time when poetry began to improve among the Latins; for it was known in Italy very early, NUMERIUS SATURNIUS; and as Horace tells us again in the same epistle, at Rome in the time of Numa: *Sæclare Numa carmen*.

⁵ These verses were so called from Fescennia, a city of Etruria, whence they were brought to Rome.

were extemporaneous, and made by a rustic illiterate people, who knew no other masters but mirth and wine. They consisted of gross railery, attended with postures and dances.

*Pescennia per hunc inventa licentia morem
Versibus alterna opprobria rustica fudit.
Horat. Epist. l. i. li.*

Pescennia's license thus found out, the swains
Vented their taunts in rude alternate strains

To these loose and irregular verses soon succeeded a chaster kind of poetry, which, though it also abounded with pleasant ridicule, had nothing viciously indecent in it.¹ This poem appeared under the name of Satyr (*Satura*), from its variety, and had regular measures, that is to say, regular music and dances: but obscene postures were banished from it. These satyrs were innocent farces, in which the spectators and actors were indifferently made the objects of mirth.

Livius Andronicus found things in this state, when he conceived the design of making comedies and tragedies in imitation of the Greeks.² Other poets followed his example, copying after the same originals: of these were Nævius, Ennius, Cæcilius, Pacuvius, Accius, and Plautus. These seven poets, of whom I am going to speak, lived almost all of them at the same time in the space of sixty years.

In what I propose to say here of the Latin poets, I shall not follow the order of the subject, as I have done in speaking of the Greek poets, but the order of time, which seemed to me the most proper for showing the birth, progress, perfection, and decline of the Latin poetry.

I shall divide the whole time into three different ages. The first shall consist of about two hundred years, during which Latin poetry had its birth, was improved, and gradually acquired strength. Its second age will consist of about an hundred years, from Julius Cæsar to the middle of Tiberius's reign, in which it attained its highest degree of perfection. The third age will contain the subsequent years, wherein, by a sufficiently rapid decline, it fell from that flourishing state, and at length entirely degenerated from its ancient reputation.

SECTION I.—FIRST AGE OF LATIN POETRY.

LIVIVS ANDRONICUS.

THE poet Andronicus took the prænomen of Livius, because he had been set at liberty by M. Livius Salinator, whose daughters he had instructed.³ He represented his first tragedy, A. M. 3764, a year before the birth of Ennius, the first year after the first Punic war, and the 514th of Rome, in the consulship of C. Claudius Cento and M. Sempronius Tuditanus;⁴ about an hundred and sixty years after the death of Sophocles and Euripides, fifty after that of Menander, and two hundred and twenty before that of Virgil.

CN. NÆVIUS.

NÆVIUS, according to Varro, had served in the first Punic war, A. M. 3769. Encouraged by the example of Andronicus, he trod in his steps, and five years after him, began to give the public theatrical pieces: these were comedies.⁵ He drew upon himself the hatred of the nobility, and especially of one Metellus; which obliged him to quit Rome. He retired to Utica, where he died.⁶ He had composed the history of the first Punic war in verse.

Q. ENNIUS;

HE was born at Rudie, a city of Calabria, A. M. 3764, in the 514th or 515th year of Rome, and lived to the age of forty in Sardinia.⁷ It was there he became acquainted with Cato the Censor, who learned the Greek language of him at a very advanced age, and afterwards carried him to Rome, as M. Fulvius Nobilior afterwards did to Ætolia. The son of this

Nobilior caused the freedom of Rome to be granted him, which in those times was a very considerable honour. He had composed the annals of Rome in heroic verse, and was at the twelfth book of that work in his sixty-seventh year.⁸ He had also celebrated the victories of the first Scipio Africanus, with whom he had contracted a particular friendship, and who always treated him with the highest marks of esteem and consideration.⁹ Some even believe that he gave his image a place in the tomb of the Scipios. He died in the seventieth year of his age. Scipio was well assured, that the memory of his great actions would subsist as long as Rome, and as Africa continued in subjection to Italy: but he also believed, that the writings of Ennius were highly capable of augmenting their splendour, and perpetuating their remembrance:¹⁰ a person whose glorious victories merited rather a Homer to celebrate them, than a poet whose style did but ill suit the grandeur of his actions!

It is easy to conceive, that the Latin poetry, in its infancy, and weak at the time we are speaking of, could not have much beauty and ornament. It sometimes showed force and genius, but without elegance and grace, and with great inequality. This Quintilian, where he draws Ennius's character, expresses by an admirable comparison. *Ennium sicut sacros vetustate lucos adoremus, in quibus grandia et antiqua robora jam non tantam habent speciem, quantum religionem.* "Let us reverence Ennius," says he, "as we do those groves, which time hath consecrated and made venerable, and of which the great and ancient oaks do not strike us so much with their beauty, as with a kind of religious veneration."

Cicero, in his treatise upon old age, relates a fact which ought to do Ennius's memory abundance of honour. He says, "that poet at the age of seventy, carried the two loads which are commonly thought the hardest to bear, poverty and old age, not only with such constancy but gaiety, that it might almost be said he took delight in them."¹¹

CÆCILIVS. PACUVIVS.

THESE two poets lived in the time of Ennius, both, however, younger than him. The first, according to some, was a native of Milan, a comic poet, and at first lived with Ennius. Pacuvius, Ennius's nephew, was of Brundisium. He professed both poetry and painting, which have always been deemed sister arts; and distinguished himself particularly in tragic poetry.¹² Though they lived in the time of Lælius and Scipio, that is to say, at a time to which the purity of language as well as manners seem singularly attached, their diction carries no air of so happy an age.¹³

Lælius, however, one of the persons whom Cicero introduces in his dialogue upon friendship, in speaking of Pacuvius as of his particular friend says, that the people received one of his plays called *Orestes* with uncommon applause, especially the scene where Pylades declares himself to be Orestes to the king, in order to save his friend's life, and the latter affirms himself to be the true Orestes. It is not impossible but that the beauty and spirit of the sentiments might on this occasion make the audience forget the want of justness and delicacy of expressions.¹⁴

ATTIUS.

I. ATTIUS or ACCIUS, for his name is written both ways, was the son of a freedman: A. M. 3864. He exhibited some tragedies in the time of Pacuvius, though almost fifty years younger than him.¹ We are told that some of them were performed in the edileship of the celebrated P. Licinius Crassus Mucianus, in whose person five of the greatest advantages that could be possessed, are said to be united: great riches, illustrious birth, supreme eloquence, profound knowledge of the law, with the office of great pontiff: [*Pontifex maximus*.]²

This poet lived in great friendship with D. Junius Brutus, who first carried the Roman arms in Spain as far as the ocean.³ Accius composed verses in honour of him, with which that general adorned the porch of a temple that he built with the spoils taken from the enemy.

PLAUTUS.

PLAUTUS (*M. Accius*) was of Salina, a city of Umbria in Italy (in Romagnia).⁴ He acquired great reputation at Rome by his comedies, at the same time with the three last poets mentioned above. Aulus Gellius tells us, after Varro, that Plautus applied himself to merchandise, and that having lost all he had in it, he was obliged for the means of life to serve a baker, in whose house he turned a corn-mill.

Of all the poets who appeared till him, only some fragments remain. Plautus has been more fortunate, nineteen of whose comedies have escaped the injuries of time, and come down almost entire to us. It is very probable, that his works preserved themselves better than others, because as they were more agreeable to the public, the demand for them was greater and more permanent. They were not only acted in the time of Augustus, but from a passage in Arnobius⁵ it appears that they continued to be played in the reign of Diocletian, three hundred years after the birth of JESUS CHRIST.

Various judgments have been passed on this poet. His elocution seems to be generally approved, without doubt in regard to the purity, propriety, energy, abundance, and even elegance of his style. Varro says, that if the muses were to speak Latin, they would borrow the language of Plautus: *licet Varro dicat musas—Plautino sermone locuturas fuisse, si Latine loqui vellent*.⁶ Such a praise makes no exceptions, and leaves us nothing to desire. Aulus Gellius⁷ speaks of him no less to his advantage: *Plautus, homo lingua atque elegantia in verbis Latine princeps*. Horace, who was undoubtedly a good judge in this point, does not seem so favourable to Plautus. The whole passage is as follows:

At nostri proavi Plautinos et numeros, et
Laudavere sales; nimium patienter utrumque,
Ne dicam stultè, mirati; si modo ego et vos
Scimus inurbanum lepido seponere dicto,
Legitimumque sonum digito callentem, et aure.

Horat. in Art. Poet.

"Our ancestors," said he to the Pisos, "practised and admired the verses and raiillery of Plautus with too much indulgence, not to call it stupidity; if it be true, that either you or I know how to distinguish delicate, from gross, raiillery, and have ears to judge aright of the numbers and harmony of verse." This criticism seems the more against Plautus, as it argues that Horace was not alone in his opinion, and that the court of Augustus had no greater taste than him, either for the versification or pleasantness of that poet. Horace's censure falls upon two articles; the numbers and har-

mony of his verses, *numeros*; and his raiillery, *sales*. For my part I believe it indispensably right to adopt his judgment in a great measure. But it is not impossible that Horace, offended at the unjust preference given by his age to the ancient Latin poets against those of their own times, may have been a little too hypocritical upon some occasions, and on this in particular. It is certain that Plautus was not exact in his verses, which for that reason he calls *numeros innumeros*, numbers without number, in the epitaph he made for himself. He did not confine himself to observing the same measure, and has jumbled so many different kinds of verse together, that the most learned find it difficult to distinguish them. It is no less certain that he has flat, low, and often extravagant plessantries; but at the same time he has such as are fine and delicate. Cicero for this reason, who was no bad judge of what the ancients called *Urbanity*, proposes him as a model for raiillery.⁸

These faults of Plautus therefore do not hinder his being an excellent comic poet. They are very happily atoned for by many fine qualities, which may not only make him equal, but perhaps superior to Terence. This is Madam Dacier's judgment, (then Mademoiselle Le Fevre) in her comparison of these two poets.¹⁰ "Terence," says she, "has undoubtedly most art, but the other most wit: Terence makes more be said than done, Plautus more done than said; which latter is the true character of comedy, that consists much more in action than discourse. This busy vivacity seems to include a farther considerable advantage on the side of Plautus: that is, his intrigues are always adapted to the character of his actor, whilst his incidents are well varied, and are never without something that surprises agreeably; whereas the stage seems sometimes to stand still in Terence, in whom the vivacity of the action, and the incidents and intrigues that form the plot, are manifestly defective." This is Caesar's reproach of him in some verses, which I shall repeat when I come to speak of Terence.

To give the reader some idea of the style, Latinity, and antiquated language of Plautus, I shall transcribe in this place the beginning of the prologue of Amphitryon, one of his finest plays. It is spoken by Mercury.

Un vos in vestris vultis mercimoniis
Emundis vendundisque me lætum lucrâ
Afficere, atque adjuvare in rebus omnibus:
Et ut res rationesque vestrorum omnium
Bene expeditis vultis peregreque et domi,
Bonoque atque amplo auctore perpetuo lucro
Quasque incæpiatis res, quasque incæptabitis:
Et uti bonis vestrosque omnis nuntius
Me afficere vultis; ea afferam, eaque ut nuntiem,
Quæ maxime in rem vestram communem aient:
(Nam vos quidem id jam scitis concessum et datum
Mi esse ab diis aliis, nuntius præsim et lucro:)
Hæc ut me vultis approbare, annitier
Lucrum ut perenne vobis semper suppetat.
Ita huic facietis fabule silentium,
Itaque æqui et justi hic eritis omnes arbitri.

To understand these verses, we must remember that Mercury was the god of merchants, and the messenger of the gods. "As you desire me to be propitious to you in your bargains and sales; as you desire to prosper in your affairs at home and abroad, and to see a considerable profit continually augment your present and future fortunes and undertakings; as you desire that I should be the bearer of good news to yourselves and your families, and bring you such advices as are most for the benefit of your commonwealth, (for you know that by the consent of the other gods I preside over news and gain:) as you desire that I should grant you all these things, and that your gains may be as lasting as your occasions; so you will now afford this play your favourable attention, and show yourselves just and equitable in your judgment of it."

M. Pacuvii nova fabula, cum ignorante rege, uter esset Orestes, Pylades Orestem se esse diceret, ut pro illo neceretur; Orestes autem, ita ut erat, Orestem se esse perseveraret. Stantes plaudabant in re facta: quid arbitremur in vera facturus fuisse? De Amicis. n. 24.

• Duplex omnino esse jocandi genus: unum illiberale petulantibus, flagitiosum, obscenum; alterum elegans, urbanum, ingeniosum, facetum; quo genere non modò Plautus noster, et Atticorum antiqua comædia, sed etiam philosophorum socraticorum libri sunt repleti. Liv. l. de n. 104.

10. Preface to the translation of these two of Plautus

We often meet with fine maxims in Plautus for the conduct of life, and regulation of manners; of which I shall give one example from the play just cited. It is a speech of Alcmena's to her husband Amphitryon, which in a few lines includes all the duties of a wise and virtuous wife

Non ego illam mihi dotem duco esse, quæ dos dicitur
Sed pudicitiam, et pudorem, et sedatum cupidinem;
Deum metum, parentum amorem, et cognatum concordiam:
Tibi morigera, atque ut munifica sis bonis, prosum probis.

Act II. scene 2.

"I do not esteem that a dowry, which is commonly called so: but honour, modesty, desires subjected to reason, the fear of the gods, the love of our parents, unity with our relations; obedience to you, munificence to the deserving, and to be useful to the just."

But for some passages of this kind, how many has he that are contrary to decency and purity of manners! It is great pity that this reproach should extend almost generally to the best poets of the pagan world. What Quintilian says¹ of certain dangerous poems, may be well applied on this occasion; That youth should, if possible, be kept entirely ignorant of them, or at least that they should be reserved for riper years, and a time of life less liable to corruption: *Amoveantur, si fieri potest; si minus, certe ad firmius ætatis robur reserventur—cum mores in tuto fuerint.*

TERENCE.

TERENCE was born at Carthage after the second Punic war, in the 56th year of Rome,² A. M. 3818. He was a slave to Terentius Lucanus, a Roman senator, who upon account of his wit, not only caused him to be educated with great care, but gave him his liberty whilst very young. It was this senator from whom our poet took the name of Terence; such as were made free usually assuming the names of the masters that set them at liberty. He was much beloved and esteemed by the principal persons of Rome, and lived in particular intimacy with Lælius and Scipio Africanus, who took and demolished Numantia. The latter was eleven years younger than him.

Six of Terence's comedies have come down to us. When he sold the first to the ediles, it was thought proper that he should read it beforehand to Cæcilius, a comic poet as well as himself, and in great esteem at Rome, when Terence first appeared there. Accordingly he went to his house, and found him at table. He was brought in, and as he was very ill dressed, a stool was given him near Cæcilius' bed, where he sat down and began to read. He had no sooner read some few verses, than Cæcilius invited him to supper, and placed him at table near himself. Judgments are not always to be formed of men by their outsides. A bad dress may often cover the most excellent talents.

The Eunuch, one of the six comedies of Terence, was received with such applause, that it was acted twice the same day, morning and evening, which perhaps had never happened to any play before; and a much better price was given for it than had ever been paid for any comedy till then: for Terence got eight thousand sestercies, or about fifty pounds.

It was publicly enough reported, that Scipio and Lælius assisted him in the composition of his plays, which rumour he augmented himself by denying it but faintly, as he does in the prologue to the *Adelphi*, the last of his comedies. "As to what those envious persons say, that he is assisted in composing his works by some illustrious persons, he is so far from taking that as the offence they intended it, that he conceives it the highest praise which could be given him, as it is a proof, that he has the honour to please those, who please this audience and the whole Roman people; and who in peace, in war, and on all occasions, have rendered the commonwealth in general, and every one in particular, the highest and most important services, without being either more distant or more haughty upon that account."

We may believe, however, that he only denied this assistance so negligently, to make his court to Lælius and Scipio, to whom he knew such a conduct would not be disagreeable. That report notwithstanding, says Suetonius in the Life of Terence ascribed to him, augmented continually, and is come down to our times. The poet Vulgius, who was Horace's cotemporary, says positively in speaking of Terence's comedies:—

He qua vocatur fabulæ, cujus sunt?
Non has, qui jura populi, recensens a dabat
Honore summo affectus fecit fabulas?

"And pray, whose are these same comedies? Are they not his, who, after having acquired the highest glory, gave laws, and governed the people with power and authority?"

Whether Terence was for putting an end to the reproach of publishing the works of others as his own or had formed the design of going to learn the customs and manners of the Greeks perfectly, in order to represent them the better in his plays; after having composed the six comedies still extant, and before he was thirty-five years old, he quitted Rome, where he was never seen more. Some said that he died at sea in his return from Greece, whence he brought with him an hundred and eight plays, which he had translated from Menander. Others assure us, that he died at the city of Stymphalus in Arcadia, in the consulship of Cn. Cornelius Dolabella and M. Fulvius, of a disease occasioned by his grief for having lost the comedies he had translated, and those he had made himself.

Terence had only one daughter, who, after his death, was married to a Roman knight, and to whom he left a house and garden of twenty acres upon the Appian way.

Cicero, in a copy of verses entitled *Διάνθη*, which signifies a meadow, says of Terence:

Tu quoque, qui solus lecto sermone, Terenti,
Conversum expressumque Latina voce Menandrum
In medio populi sedatis vocibus effers,
Quidquid come loquens, atque omnia dulcia linquens.

That is, "And you, Terence, who alone translates Menander with so much eloquence, and makes him speak the language of the Romans so happily, in your judicious choice of whatever is sweetest and most delicate in it." This testimony is for the honour of Terence; but the verses that express it, not much for Cicero's.

I now proceed to those of Cæsar, which I mentioned before. That great man, who wrote with so much force and accuracy, and had himself composed a Greek tragedy, called *Œdipus*, says, addressing himself to Terence:

Tu quoque, tu in summis, ôdimidiaste Menander,
Poneris, et meritis, puri sermonis amator,
Lenibus atque utinam scriptis adjuncta foret vis
Comica, ut equato virtus polletet honore
Cum Græcis, neque in hac despectus parte jaceres:
Unum hoc materor, et doleu tibi deesse, Terenti.

"Thou also, Menander's half, art ranked in the number of the greatest poets, and deservedly, for the purity of thy style. And I wish thy sweet writings had in them the comic force and spirit, that thy merit might have ranked thee with the Greeks, and that thou wert not so much below them in that point? But this, Terence, is unhappily what you want, and I much regret."

Terence's great talent consists in the inimitable art of expressing the manners, and copying nature with so genuine and unstudied a simplicity, that every body believes himself capable of writing in the same manner; and at the same time with such elegance and ingenuity, as nobody has ever been able to come up to. Hence it is from this talent, this wonderful art diffused throughout the comedies of Terence, which charms and transports without notice, or any glitter of ornaments, that Horace characterizes him,

Vincere Cæcilius gravitate, Terentius arte [dicitur].
Ep. I. l. 2.

Terence, with an extreme purity of speech and a

¹ L. i. c. 8.

² Suet. in vit. Terent.

simple and natural style, unites all the graces and delicacy, of which his language was susceptible; and of all the Latin authors has come the nearest to Atticism, or to whatever is considered the finest, most exquisite, and most perfect among the Greeks.¹ Quintilian, in speaking of Terence, of whom he only says, that his writings were highly elegant, observes, that the Roman language rendered but very imperfectly that refinement of taste, that inimitable grace, peculiar to the Greeks, and even to be found only in the Attic dialect. *Vix lenem consequimur umbram, adeo ut mihi sermo ipse Romanus non recipere videatur illam solis concessam Atticis venerem, quando eam ne Græci quidem in alio genere linguæ obtinuerint.* It is a pity that the subject of his comedies makes them dangerous to youth; upon which I have treated at large in my books upon studying polite learning.

LUCILIUS.

LUCILIUS, (*Caius Lucilius*) a Roman knight, was born at Suessa, a town of Campania, in the 158th Olympiad, A. M. 3856, and the 605th year of Rome, when Pacuvius the tragic poet flourished.² He is said to have carried arms under the second Scipio Africanus at the siege of Numantia; but as he was then but fifteen years old, this circumstance is dubious. He had a great share in that famous general's friendship, as well as in that of Lælius. He was their companion in the innocent sports and amusements, to which they did not disdain to descend, and in which those great men, at their hours of leisure, endeavoured to unbend themselves after their serious and important occupations: an admirable simplicity in persons of their rank and gravity!

Quin ubi se à vulgo et scena in secreta remorant
Virtus Scipiadæ, et mitis sapientia Læli,
Nugari cum illo, et discincti ludere, donec
Decoqueretur olus, soliti. *Hor. Sat. l. i. l. 2.*

With him, retir'd from crowds and state at home,
Wise gentle Lælius, and the pride of Rome,
Scipio, 'twixt play and trifles, liv'd in jest,
Till herbs, the frugal meal, and roots were drest.

Lucilius passes for the inventor of satire, because he gave it its last form, the same in which Horace, Persius, and Juvenal, have followed him. Ennius, however, had set him the example before, as Horace himself confesses by these verses, in which he compares Lucilius to Ennius.

—Fuerit Lucilius, inquam,
Comis et urbanis; fuerit limator idem,
Quam rudis et Græcis intacti carminis auctor.

But the satires of Ennius,³ though like those of Lucilius and Horace in other respects, differed from them in form, as they consisted of several different kinds of verse.

The new form which Lucilius gave satire, as I have said before, made Horace and Quintilian consider him as the inventor of that species of poetry; to which title he has a just claim.⁴

There was another kind of satire, which derived itself also from the ancient.⁵ It is called the Varroian or Menippean satire; because Varro, the most learned of the Romans, was its author, imitating in that work the Cynic philosopher Menippus of Gadara. This species of satire was not only composed of several kinds of verses, but Varro introduced prose into it, in which there was, besides, a mixture of Greek and Latin. The work of Petronius, that of Seneca, upon the death of Claudius, and of Boetius upon the

consolation of philosophy, are all satires of the same kind with this of Varro. But to return to my subject.

Lucilius composed thirty books of satires, in which he censured many persons of bad lives by name and in a very offensive manner, as Horace informs us, regarding only virtue, and the lovers of virtue.

Primos populi arripuit, populumque tributum,
Scilicet uni equus virtuti, atque ejus amicis.

Sat. l. i. l. 2.

His pen made the conscious bad tremble, as if he had pursued them sword in hand:—

Ense velut stricto, quoties Lucilius ardens
Infremuit, rubet auditor col frigida mens est
Criminibus, tacita sudant præcordia culpe.

Juven. Sat. i.

Lucilius⁶ used to say that he desired his readers might neither be very ignorant nor very learned. The one saw too little, and the other too much. The one did not know what was good, and consequently no justice was to be expected from them; and what was imperfect could not be concealed from the penetration of the others.

It is not probable that he died at forty-six years of age, as some assure us. Horace calls him old man, where he says Lucilius confided all his secrets, and whatever had happened to him in life, to his books, as to faithful friends.

Ille velut fides arcana sodalibus olim
Credebat libris: neque, si malè gesserat æquam,
Decurres aliò, neque si bene. Quo fit ut omnis
Votiva pateat veluti descripta tabella
Vita senis. *Sat. l. i. l. 2.*

Pompey was grandson, or rather grand-nephew, to Lucilius, by the mother's side.

Of all his works, only some fragments of his satires have come down to us.

The reputation of this poet was very great during his life, and subsisted long after his death to such a height, that in Quintilian's time, he continued to have admirers so zealous, as to prefer him not only to all who had wrote in the same way, but to all the poets of antiquity in general.⁷ Horace judged very differently of him.⁸ He represents him to us indeed as a poet of a fine taste, and delicate in his raillery, *factus, emuncte naris*: but hard and stiff in his compositions; not being able to take the pains necessary towards writing well; for to write much, was his great fault. He was highly satisfied with himself, and believed he had done wonders, when he had dictated two hundred verses in less time than one could throw them together on paper. In a word, Horace compares him to a river, that with a great deal of mud, carries, however, a precious sand along with it in its current.

The judgment Horace⁹ passed upon Lucilius, occasioned great clamour at Rome. The admirers of the latter, enraged at his having presumed to treat their favourite in that manner, gave out, that Horace had dispraised Lucilius out of envy only, and with the view of setting himself above him. We ought not to be angry with them on account of these complaints, how unjust soever they might be: for they were the means of drawing forth an excellent satire, wherein Horace, in rendering Lucilius all the justice he deserved, sustains and confirms the judgment he had passed on him by the most solid proofs.

For Quintilian's honour, I am sorry that a critic of his profound judgment and just taste, should differ in opinion with Horace in this point. He cannot forgive him for having compared the writings of Lucilius to muddy waters, from which, however, something valuable might be extracted; "For my part," says he, "I find surprising erudition and a noble liberty in him, which gave his works poignancy with

¹ Terentii scripta sunt in hoc genere elegantissima.

abundance of salt."† Horace allows him the last qualities, which did not prevent Lucilius from having abundance of vicious passages in him, that ought either to have been amended, or retrenched. As to erudition, Quintilian differs directly in that respect with Cicero's opinion. For says the latter, speaking of Lucilius: "His works are light and frothy, and with exceeding pleasantry have no great erudition."² To conclude, we can form at present no proper judgment of a poet, of whose works almost nothing has come down to us.

SECTION II.—SECOND AGE OF LATIN POETRY.

THE interval of which I am now to speak, continued from the time of Julius Cæsar to the middle of Tiberius' reign, and included about an hundred years. It was always considered as the golden age of polite learning, during which a crowd of fine geniuses of every kind, poets, historians, and orators, carried Rome's glory to its greatest height. Literature had before made great efforts, and one may also say great progress: but it had not yet attained that degree of maturity, which constitutes perfection in arts. Writings did not want good sense, judgment, solidity, and force; but they had little art, less ornament, and no delicacy. A small number of persons of great talents, rising up together in a space of time of no great duration, on a sudden, and as if inspired, by adding to the excellent qualities of their predecessors, others which they had wanted, established good taste of every kind irrevocably and for evermore; so that as soon as the world began to lose sight of those perfect models, every thing immediately began to decline and degenerate.

The happy beginnings which we have related, prepared the way for the wonders that succeeded them; and as Rome derived her first notions of polite learning from Greece, so it was by her industrious perservance in studying the Greek writers, that the Romans attained perfection. The first poets, and especially the Tragic and Comic, contented themselves with translating the works of the Greeks.

Tentavit quoque, rem si dignè vertere posset,
Et placuit sibi. *Horat. Epist. l. i. 2.*
Essay'd to make it speak our tongue with grace,
And pleas'd themselves.

They afterwards took a farther step. They ventured to soar with their own wings, and composed originals entirely Roman.

Nil intentatum nostri liquere potim,
Nec minimum meruere decus, vestigia Græcæ
Ausi deserere, et celebrare domestica facta;
Vel qui Prætextas, vel qui docuere Togatas.
Id. de Art. Poet.

Our authors have attempted every way,
And well deserve our praise, whose daring muse
Durst not to be beholden to the Greeks,
And found fit subjects for her verse at home.

Roscommon.

Though the dramatic poets did not entirely succeed in these attempts, Horace did in lyric poetry. Rome, animated with a noble emulation, which arose from reading the Greek authors, and the esteem she had conceived for them, proposed to herself to equal, and even, if possible, to surpass them: a very laudable and useful dispute between nations, and equally for their honour! Add to this first motive the admirable character of the persons at that time in supreme authority at Rome; the esteem for men of letters; the marks of distinction with which they were honoured; the solid rewards conferred on them; and the general respect paid to persons of singular merit of every kind: a respect which almost rose so high as to place them on an equality with the greatest and most powerful of the commonwealth. It has been the saying of all times, and cannot be too often repeated: emulation nourishes genius.³ The view

of merit in others, united with a just admiration for their excellent works, and a secret regret from the sense of our own inferiority, inspire an ardour for glory, to which nothing is impossible. And it is from these generous efforts, excited and sustained by the hopes of success, that arts attain their final perfection.

This is what happened, especially in the time of Augustus, in respect to poetry, history, and eloquence. But poetry is our subject in this place. I shall relate, in few words, the history of the poets who distinguished themselves most during this glorious age of Rome. Terence, of whom I have spoken above, may in my opinion be included in this class; who, though he preceded them in time, does not give place to them in merit. He is the first of the Latin poets, who seems in some measure to have set up the standard of perfection, and to have inspired others by his example with the desire and hope of attaining it.

AFRANIUS: (L. AFRANIUS QUINTIANUS.)

AFRANIUS was much esteemed by the ancients. He excelled in the comedies called *Togæ*:⁴ and *Atellanzæ*.⁵ Horace seems to compare him with Menander:—

Dicitur Afrani toga convenisse Menandro.

In Art. Poet.

He was cotemporary with Terence, but much younger than him, and did not begin to grow in reputation till after his death. He ranked him above all other poets, and could not bear that any should be compared with him, of those who had wrote in the same way:—

Terentio non similem dices quenpiam. Fragm. Afran.

He was highly esteemed for his poetical works, and no less condemned for the depravity of his manners.⁶

LUCRETIVS.

LUCRETIVS (*Titus Lucretius Carus*) was born, according to the chronicle of Eusebius, in the second year of the 171st Olympiad, A. M. 3908, twelve years after Cicero, in the consulship of L. Licinius Crassus and Q. Mutius Scævola, in the 685th year of Rome. A philter, or love potion, had been given him that drove him deranged. He had some lucid intervals from his frenzy, during which he composed his six books—*De rerum natura*, wherein he explains at large the doctrine of Epicurus, of which we shall speak in its place. He inscribed his poem to C. Memmius, who had the same master, and without doubt, the same sentiments as himself. The same chronicle of Eusebius informs us, that this work was corrected by Cicero after its author's death. Cicero speaks of Lucretius only once, though he had often occasion to mention him, and the passage where he does so, besides being very obscure, is variously read. *Lucretii poemata, ut scribis, lita sunt*, (others read *non lita sunt*) *multis luminibus ingenti, multa tamen artis*.⁷

No man ever denied providence more boldly, or treated the Divinity with more insolence and presumption than this poet. He introduces his subject with this preface, in praise of Epicurus, "Whilst mankind," says he, "groaned in shameful subjection to the oppressive yoke of imperious religion, which declared itself descended from heaven, and made the whole earth tremble at the frowns and horrors of its aspect; a mortal native of Greece first boldly ventured to expose its falsehood to the eyes of men, and to declare against it, without the fame of the gods, the fear of thunders, or the rumbling noise of threatening skies, being able to awe or stop him. All those subjects, on the contrary, only serve to exalt his courage, and confirm him in the design of being the first to force the barriers of nature, and to penetrate into her most mysterious secrets."

¹ Nam et eruditi in eo mira, et libertas, atque inde acerbitas, et abundè satias. *Lib. x. c. 1.*

² Et sunt scripta illius (Lucilii) leviora, ut urbanitas summe apparent, doctrina mediocri. *Cic. de Fin. l. i. n. 7.*

³ Alit emulatio ingenia, et nunc invidia, nunc admiratio, incitationem accendit; naturaque, quod summo studio petulum est, ascendit in summum. *Vall. Patere. l. i. c. 7.*

⁴ Togatis excellit Afranius. *Quintil. l. x. c. 1.*

⁵ These comedies were called *Atellanzæ*, from *Atella*, a city of Campania, whence they were brought to Rome; and *Togatzæ*, because they represented only Roman actions and persons, impled by *Toga*, their peculiar habit.

⁶ *Quintil. l. x. c. 1.* ⁷ *Cic. ad Quint. Fr. Ep. 11. l. 11.*

Humana ante oculos fariâ cum vita jaceret
In terris oppressa gravi sub religione,
Quæ caput à colli regionibus ostendebat,
Horribili super aspectu mortalibus instans:
Primum Graius homo mortales tollere contrâ
Est oculus auctus, primusque obistere contrâ
Quem nec fama deum, nec fulmina, nec miniantia
Murmure compressit cælum; sed eo magis æcerem
Iurât virtutem animi, confringere ut arcta
Naturæ primus portarum claustra cospiret.

Lucretius, throughout his whole work, lays down as a principle, that the gods neither regard nor interfere in any thing; and takes it upon him to explain the effects of nature, and the formation and conservation of the world, by the sole motion of atoms, and to refute those, who acknowledge the power and wisdom of a Divinity as the first cause of all things. The reader will be better acquainted with his opinions, when I come to explain those of his master Epicurus.

This poet has abundance of genius, force, and sublimity; but his verses are so very remote from the sweetness and harmony of Virgil's, that one would believe he had lived long before him.

CATULLUS.

CATULLUS (*Caius* or *Quintus Valerius Catullus*.) was born at Verona in the 66th year of Rome, A. M. 3916. The delicacy of his verses acquired him the friendship and esteem of the men of learning and wit, of whom there were then great numbers at Rome.

He wrote two satirical epigrams against Cæsar, in one of which he speaks of him with an air of haughtiness and contempt, that Quintilian justly treats as extravagance.¹

Nil nimium, Cæsar, studeo tibi velle placere;
Nec scire utrum sis ater an albus homo.

To please you, Cæsar, is not much my care;
Nor to know whether you are black or fair.

These verses, disrespectful as they were, only served the person offended, as an occasion of distinguishing his moderation. Cæsar did not dissemble his displeasure, but contented himself with obliging the poet to ask his pardon, and invited him to supper the same evening.

An elegant simplicity, and natural grace, form the character of Catullus. Happy, if he had not often disgraced that amiable delicacy by his Cynic immodesty.

LABERIUS:—(DECIMUS.)

LABERIUS, a Roman knight, succeeded admirably in composing mimes or farces, A. M. 3952. At Rome, a man of birth did not disgrace himself by writing poetry for the stage; but he could not act them without degrading himself. Notwithstanding this had long been an established opinion, Julius Cæsar pressed Laberius very earnestly to act one of his pieces upon the stage, and to induce him to comply, gave him a considerable sum of money. The poet refused it for some time, but was at last obliged to yield. The desire of a prince upon such an occasion, is a command.² In the prologue to this farce, Laberius vents his grief most respectfully with regard to Cæsar, but at the same time in very pathetic terms. It is one of the finest fragments of antiquity, and I have inserted it at length, with the translation, in the first volume of the second edition of my treatise upon fragments. Macrobius has preserved it with some other fragments of the same piece of poetry. He informs us also that this Roman knight, out of his great regret to see his age dishonoured in that manner, and to avenge himself by the only means in his power, maliciously inserted in the farce we speak of, several home strokes against Cæsar. A servant, beaten by his master, cried out,—“Help, Romans, we lose our liberty.”

Porro, Quirites. libertatem perdimus.

¹ Negat se magni facere aliquis poetarum, utrum Cæsar ater an albus homo sit: insaniam. *Quintil.* l. xi. c. l.

² Potestas, non solum si invitet, sed et, si supplicet, cogit. *Macrob.*

Quod est potentissimum imperandi genus, rogabat qui jutare poterat. *Auson.*

And a little after he added:—“He must necessarily fear many, whom many fear.”

Necesse est multos timeat, quem multi timeant.

The whole people knew Cæsar in those strokes, and cast their eyes upon him. When the performance was over, Cæsar, as if to re-instate him in the dignity of a Roman knight, from which he had departed through complaisance for him, rewarded him with a ring, which might be considered as a new patent of nobility. Laberius went afterwards to take his place among the knights; but they pressed together in such a manner, that there was no room for him.

SYRUS.

P. SYRUS was a Syrian by birth, whence he took his surname of Syrus. From a slave at Rome, whither he was brought in infancy, he became a freedman very soon, and was instructed with great distinction. He excelled in mimic poetry, in which he was Laberius' rival, and even surpassed him in the judgment of Cæsar. But the preference Cæsar gave him was thought to be intended only to mortify Laberius, for his having thrown some malicious strokes against him into his farce.

We have a work of Syrus', which consists of sentences in Iambic verse, disposed alphabetically. Seneca the elder repeats the opinion of Cassius Severus, who preferred these sentences to any thing in the tragic and comic poets. This is saying a great deal. Seneca the younger considered them also as an excellent model.

Not long since a translation of these sentences, and a poem of Cornelius Severus, entitled *Ætina*,³ which had never appeared before in French, have been published. We are much obliged to authors, who endeavour to enrich our language with ancient works, unknown, and therefore new to it. This translator⁴ observes, that La Bruyere has scattered almost all the sentences of P. Syrus throughout his characters, of which he gives us several examples like the following:—

Fortuna una dat multa, mancipio nihil.
Levis est fortuna; cito reposcit, quod dedit,

“Fortune gives nothing, and only lends for a time. To-morrow the fickle goddess resumes from her favourites, what now she seems to give them for ever.”

Mortem timere crudelis est, quam mori.

“Death comes but once, though it puts us in mind of it at every moment of our lives. It is much more grievous to apprehend, than to suffer it.”

Est viti misero longa, felici brevis.

“Life is short to those who possess it in pleasures and enjoyments: it seems long only to such as languish in affliction.”

POLLIO.

POLLIO (*C. Asinius Pollio*), a person of consular dignity and a celebrated orator, had also composed tragedies in Latin which were much esteemed in his time. Horace speaks of him more than once.

Paulum severæ Musa Tragediæ
Deiit theatris— *Ods* l. l. 2.

—Pollio regum
Fata canit pede ter percussu. *Sat.* x. l. 2.

Virgil also mentions him with praise,—

Pollio et ipse facit nova carmina. *Eclæg.* iii.

He was the first who opened a library at Rome for the use of the public.⁵

³ This poem is written in hexameters, and is the second in the Opuscula ascribed to Virgil, in the folio edition of Crespinus, Lugduni, 1539, which, perhaps, Mr. Rollin never saw. Domitius Calderinus, the commentator, tells us in the argument:—Hoc Virgilianum esse opus plerique ex auctoribus testantur: et Seneca in epist. addit ut Nasennem non ob aliam causam quam de *Ætina* dimississe affirmet, nisi propter Virgilium, quem jam scriptissimum compertum habebat. Cornelius Severus etiam ob eandem causam deterritus tradidit.

⁴ M. Arcanias of Serienne.

⁵ Asinius Pollionia hoc Romæ inventum, qui primus, Bibl. liothecam dicando, ingenia omnium rem publicam fecit.—*Plin.* l. xxv. c. l.

Augustus pressing him to espouse his party against Antony, he represented to him that the services he had done and received from that competitor would not admit his entering into engagements against him: that therefore he was determined to continue neuter, well assured that he should become the victor's prey. The same prince, having on another occasion, wrote Pescennine verses against him; "I shall take great care," said he, "not to answer. For it is not easy to scribble against a man who can proscribe."¹

VIRGIL.

VIRGIL (*Publius Virgilius Maro*) was born A. M. 3934, Ant. J. C. 684, in a village called Andes near Mantua, of very obscure parents, in the consulship of Cn. Pompeius Magnus, and M. Licinius Crassus.² He passed the first years of his life at Cremona, and at seventeen put on the *toga virilis*, (the habit of manhood) on the same day that the poet Lucretius died. After having made some stay at Milan he removed to Naples, where he studied the Greek and Roman literature with extreme application, and afterwards the mathematics and physic. Several little poems are ascribed to Virgil's youth, which seem unworthy of him. Having been driven out of his house and a small piece of land, A. M. 3963, Ant. J. C. 713, which was his whole estate, by the distribution of the territory of Mantua and Cremona amongst the veteran soldiers of Augustus, he came for the first time to Rome, and by the favour of Pollio and Mæcenas, both patrons of learning and learned men, recovered his estate, and was again put into possession of it.

This occasioned his first eclogue, and made him known to Augustus, upon whom he had bestowed a fine compliment in that poem, a precious monument of his gratitude. Thus his distress became in its consequence the source of his good fortune. He finished his *Bucolics* in three years: a work of extreme delicacy, and a specimen of what was to be expected from a hand, that knew so well how to unite the graces of nature with correctness and purity of style. Horace gives us the character of these pastorals in two words:

Molle atque facietum
Virgilio annuerunt gaudentes rure Camœnæ.
The soft and easy grace of rural strains,
The muses, that delight in woods and plains,
Have giv'n to Virgil.

Every body knows that in good Latinity the word *facetus* is not only applicable to raillery and pleasantry, but to every discourse and work of wit, in which fine genius, delicacy, and elegance, are the prevailing characters.³

Mæcenas, who had a great taste for poetry, and had discerned all Virgil's merit in the proof he had lately given of it, would not suffer him to rest till he had engaged him to undertake a new work more considerable than the former. It is making a noble use of one's influence, and rendering great service to the public, to animate persons of learning in this manner, who often, for want of such inducements, remain inactive, and leave the greatest talents unemployed and useless. It was therefore by the advice of Mæcenas, that Virgil began the *Georgics*, to which he applied himself seven years. To enable himself to devote his whole attention to it, and to avoid every thing that might divert his thoughts, he retired to Naples, A. M. 3967, An. U. C. 717. He tells us this circumstance himself at the end of the fourth book of the *Georgics*, and also gives us the date of the time, when he finished them, which was in the 724th year of Rome, when Augustus, on his return from Egypt, having advanced towards the Euphrates, by the terror of his arms, and the fame of the victories he had lately obtained, put the country into a consternation, and obliged Tiridates and Phraates, who disputed the Parthian empire with each other, to conclude a kind of accommodation.⁴

Hæc super avorem cultu pecorumque canebat,
Et super arboribus: Cæsar dum magnus ad altum
Fulminat Euphraten bello, victorque volentes
Per populos dat jura, viamque affertat Olympi.
Illo Virgilium me tempore dulcis alebat
Parthenope, studiis florentem ignobilis oti.

The leisure he enjoyed at that time at Naples was far from ignoble and obscure, as he thought fit to call it in this place. His *Georgics*, which were the fruits of it, in respect to diction, are the most finished of all the works he has left us, and even of all the poems that were ever composed in Latin. This proceeded from his having sufficient time to polish, and put the last hand to them. He retouched his works with an attention and accuracy not easily to be conceived. When the first fire of composing, in which every thing pleases, was over, he revised his productions, not with the complaisance of an author and parent, but the inexorable severity of a rigid critic, and almost an enemy. In the morning he composed a considerable number of verses; and returning to the examination of them, employed the rest of the day in correcting, and reducing them to a very small number. He used to compare himself to the bear, who from gross and unformed lumps, as her young ones are at their birth, gives them shape and proportion, by the pains she takes in licking them. Thus excellent works are formed. It was by this diligence in correcting, Virgil became the standard of good poetry amongst the Latins, and set the example of accurate, sweet, and harmonious versification. If we compare his verses, not only with those of Cicero, but of Lucretius and Catullus, the latter will appear rough, unpolished, harsh, antique, and, as I have said before, we shall be tempted to believe them verses of some ages before Virgil.

We are told that Augustus, at his return from his military expedition, believed he could not unbend himself better after his fatigues, than by hearing this admirable poem read, to which he devoted four days successively. Virgil read him one book each day. He had a wonderful talent in making the beauty of his verses sensible by a sweet, articulate, and harmonious pronunciation. As soon as he seemed a little out of breath, Mæcenas took his place, and went on. Days passed in this manner are highly agreeable to a prince of fine taste and genius: a pleasure infinitely superior to those insipid and frivolous diversions, which almost engross the generality of men. But at the same time how admirable is the goodness of this lord of the world, who thus familiarizes himself with a man of letters, who treats him almost as his equal, who carefully spares him his voice and his spirits, and considers his health as a public good! I do not know however whether it was sparing Virgil, to treat him with such affecting marks of friendship and esteem. For an author, after such favours, spares himself no longer, and sooner or later consumes himself by his tenacious attachment to his studies.

Virgil immediately after began his *Æneid*, to which he applied himself twelve years. Augustus when employed in the war against the Cantabri, pressed him earnestly, by several letters which he wrote him, to send him some part of the *Æneid*; but Virgil always excused himself. He represented to him, that if he had thought his *Æneas* worthy of that honour, he should willingly have sent him to Cæsar; but that he had found the work far more difficult than he imagined it, and that he began to fear, that it was rashness and a kind of madness in him to undertake it.⁵

On the return of that prince, A. M. 3976, An. U. C. 731, Virgil could no longer refuse to satisfy his just impatience, and accordingly read him the second, fourth, and sixth books of the *Æneid*, in the presence of his sister Octavia. She had some time before lost her son M. Claudius Marcellus, a prince of great merit, whom Augustus intended for his successor in the empire. Virgil had given the praise of young Marcellus a place in the sixth book of the *Æneid* with

¹ At ego taceo. Non est enim facile in eum scribere, qui potest proscribere.

² Vit. Virg. inært. Auct.

³ Facietum non tantum circa ridicula opinor consistere decoris hanc magis, et exultum cujusdam elegantie appellationem x. o. Quinetil. v. c. 3.

⁴ Dio Cass. l. 2.

⁵ De *Æneide* quidem meo, si mehercule jam dignam auri-bus habereum tuis, libenter mitterem. Sed tanta inchoata res est, ut penè vitio mentis tantum opus ingressus mihi videar. Marob. l. i. c. ult.

so much address, that it is impossible to read it without being exceedingly moved. When he came to this passage, the rehearsal of the verses, which are twenty-six in number, made the emperor and Octavia weep immoderately. It is even said, that Octavia swooned away at these words: *Tu Marcellus eris*. She ordered (*dena sestertia*) ten great sestercies to be paid the poet for each of these verses, which amounted to about seventeen hundred pounds sterling.

Virgil after having finished the *Æneid* designed to retire for three years in order to revise and polish it. He set out with this view for Greece. At Athens he met Augustus on his return from the East, and thought proper to change his purpose and to attend that prince to Rome. He was taken sick upon the way and stayed behind at Brundisium. Finding his illness increase, he earnestly desired his manuscripts to be brought him, in order to throw the *Æneid* into the fire. Because nobody had complaisance enough to comply with that request, he ordered that poem by his will to be burned, as an imperfect work. Tucca and Varius, who were with him, represented, that Augustus would never suffer it, and upon that remonstrance Virgil left his writings to them, upon condition that they would add nothing to them, and leave the hemistichs as they found them.

Virgil died at Brundisium, in the 735th year of Rome, A. M. 3980, aged fifty-two. His bones were carried to Naples, and buried two miles from that city, with this inscription on his tomb, which he made himself, and which in two lines includes the place of his birth, death, and burial, with the number of his works:—

*Mantua me genuit, Calabri rapuere, tenet nunc
Parthenope, cecini, pascua, rura, duces.*

The epic poem must be a work of extreme difficulty, as during so many ages, Greece and Rome scarce produced two geniuses sufficiently sublime to sustain it in all its spirit and dignity. And since them, has the world, in any language whatsoever, poems of this kind, that can justly be compared with those of Homer and Virgil?

I have observed, in speaking of the former, in what manner Virgil had formed the design and plan of the *Æneid* upon the *Iliad* and *Odyssey* of Homer, which gives the original a great advantage over the copy. Past ages however have not yet decided, to which of the two the preference ought to be given. Till judgment can be passed on this point, which in all probability will never happen, we may adhere to Quintilian's opinion, cited before in the article of Homer. There is, says he, more genius and force of nature in Homer; and more art and labour, because more of both was necessary, in Virgil. The first is indisputably superior in the grand and the sublime: the other perhaps makes us amends for what he wants in these points, by the harmony of parts and the exact equality he supports throughout his work. To this we may add, that Virgil did not live to put the last hand to his poem, which without doubt would have made it much more perfect than it is, though, as we have it, it is of inestimable value.

We may most certainly ascribe to Caligula's madness the contempt and hatred he expressed for Virgil, whose writings and portraits he industriously endeavoured to have banished out of all libraries.³ He had the extravagance to say, that poet had neither wit nor learning: *nullius ingeni, minimeque doctrine*. The emperor Alexander Severus judged very differently of him.⁴ He called him the Plato of the poets, and placed his picture, with that of Cicero, in the chapel, where he had placed Achilles and other great men.

It is highly for the honour of learning to see an emperor give poets, orators, and conquerors the same rank.

In the life of Horace, I shall relate a circumstance in that of Virgil, which in my judgment does him as much or even more honour than his genius for poetry.

HORACE.

HORACE (*Quintus Horatius Flaccus*) was of Venusium, and, as he says himself, the son of a freedman. He was born in the 688th year of Rome, A. M. 3940. His father, though only a freedman, and of a very moderate fortune, took particular care of his education.⁵ Persons of fortune, and rich officers of the army, contented themselves with sending their children to a master, who taught them to read, write, and cast accounts. But Horace's father, who had discovered in his son a fund of genius capable of the greatest things, had the courage to carry him to Rome, in order to give him such an education as knights and senators gave their children. To see the manner in which young Horace was dressed, and the slaves that followed him, one might have taken him, says he of himself, for the rich heir of a long train of opulent ancestors; whilst his father however had only a small piece of land for his whole estate. He was perhaps excessive in this point; but who would venture to condemn him? He was not afraid of ruining either himself or his son by employing his whole income for his instruction; judging a good education the best patrimony he could leave him. He did more; he took upon himself the care of him, served him instead of a governor, and went with him to all his masters.

*Ipsæ mihi custos incorruptissimæ omnes
Circum Doctores aderat.*

We are charmed with the respect and warm gratitude, which Horace, during his whole life, expresses for such a father. "By his care," says he, "he preserved me free, not only from all acts of impurity, which is the highest praise of virtue, but from all reproach or suspicion of that kind." Let young persons consider well these words, and remember that it is a heathen who thinks and speaks in this manner.

*Quid multa? Pudicum
Qui primus virtutis honore, servavit ab omni
Nou solum factis, verum opprobrio quoque turpi.*

Horace's father, though a man of no letters or erudition, was of no less use to his son, than the most able masters he could hear. He took pains himself to form him, instructed him familiarly, and made it his business to inspire him with an abhorrence for vice, by pointing it out to him under sensible examples. If he would have him avoid some criminal action: could you doubt, said he to him, whether the action I would have you shun, be contrary to virtue and your true interest, when such an one who had committed it, is universally condemned and despised for it? That such an one by his debauched life, has ruined his health and fortune; (and it was here the strokes of satire came in.) On the contrary, if he desired to recommend some good action to his imitation, he cited somebody who had done it with success; and always chose his examples out of the principal persons of the senate, and those of greatest worth.

This manner of instructing youth has its great utility, provided it does not degenerate into detraction and satire. For examples make much more impression upon the mind, than any discourses, or precepts of morality.⁶ It is in the same manner Demea instructs his son in Terence's *Adelphi*.

*Nihil prætermittito, consuefacio. Denique
Inspicere tanquam in speculum in vitas omnium
Jubeo, atque ex aliis sumere exemplum sibi.
Hoc facito et hoc fugito, &c.* *Act III. Sc. 2*

"I omit nothing, and gradually accustom him to virtue. In fine, I oblige him to look into the lives of others, as into a glass, and to learn from their example to imitate the good, and fly the bad."

⁵ Horat. Sat. 6. l. 1.

⁶ Longum iter est per precepta, breve et efficax per exempla. Senec. Epist. 6. l. 1.

³ It is certain that our MILTON was not inferior to either of them in many of the characters of Epic poetry; and that he was in some superior to them both; as in the grandeur of his matter, his learning, characters, and the machinery of his work. See *Addison on Milton*.

⁴ It is here, at illi nature celestis atque immortalis cesserimus, ita curæ et diligentie vel idcirco in hoc plus est, quod est fuit magis laborandum: et quantum eminentioribus vincimus, fortasse æquitate pensamus. *Quintet. lib. i. cap. 1.*

⁵ Sueton. in Calig. c. 34. ⁶ Lamprid. Alex. Sever.

If we may believe Horace, it is to these paternal instructions, received with attention and docility, that he was indebted for being exempt from great failings.

Ex hoc ego sanus ab illis
Perniciem quæcumque ferunt, mediocribus, et quæ
Ingenuas, vitis teneor.

But it is also to the same lessons he ascribes, whether out of pleasantry or otherwise, the taste for satire which he retained during his whole life.

He is never weary of expressing himself upon his good fortune in having such a father, and speaks of him with a gratitude that we cannot sufficiently esteem. "As long as I am capable of thinking with reason, I shall never be ashamed of so good a father. I shall never imitate the generality, who to excuse the meanness of their extraction, take care to observe, that if they do not descend from illustrious ancestors, it is no fault of theirs. I think and speak quite differently. For, did nature permit us to begin our lives again after a certain number of years, and would give us the liberty of choosing such parents as we thought fit, others might choose theirs by their vanity: but for my part, contented with my own, I would not seek for noble ones distinguished by rods and axes, and curule chairs."

Nil me pœniteat sanum patris hujus; eoque
Non, ut magna dolo factum negat esse suo pars,
Quod non ingenuos habeat clarosque parentes,
Sic me defendam. Longe mea discrepat istis
Ex vox et tractio. Nam, si natura juberet
A certis annis ævum remeare peractum,
Atque alios legere; ad festum quocumque parentes
Pascere sibi quisque: meis contentus honestos
Fascibus et sellis nollem mihi sumere. Sat. 6.

It must be confessed that there is great meanness of spirit in blushing at meanness of birth. The reader no doubt has observed, that most of the illustrious writers hitherto mentioned were of obscure condition, and that many of them were even slaves. Did it ever enter into the thoughts of any man of sense to esteem them the less upon that account? Nobility, riches, office, can they be brought into competition with the talents of the mind, and are they always proofs of merit?

When Horace had attained to about nineteen years of age, his father sent him to study at Athens, for he would not let him go, and kept him always under his eye, till he was of years to take care of himself, and to avoid the corruption of manners which then prevailed. He had studied polite learning at Rome, and had formed his taste principally by reading Homer. He proceeded to more exalted science in Greece, and applied himself to the study of philosophy. That study seems to have pleased him exceedingly, and he extremely regretted leaving so agreeable a residence sooner than he desired. Brutus, passing by the way of Athens into Macedonia, carried several young persons thence along with him, of which number was Horace. He made him a tribune of the soldiers. Horace had then been four or five years at Athens.

Rome nutrirî mibi contigit, atque doceri
Iratu Graii quantum nocuisse Achilles,
Adjecere bonæ paulo plus artem Athenæ,
Scilicet at possem curvo dignoscere rectum,
Atque inter sylvas Academi querere verum.
Dura sed emovere loco me tempora, grato,
Civilisque rudem belli tulit æque in arma,
Cæsaris Augusti non responsura lacertis. Epist. ii. l. 2.

A year after, the battle of Philippi was fought, in which our poet, who was not born for arms, gave no proofs of his bravery, having taken to flight, and abandoned his buckler, as he confesses himself:

Tecum Philippo et celerem fugam
Sensi, relicta non bene parmula. Od. vii. l. 2.

Horace, on his return, was not long before he became known to Mæcenas. It was the excellent Virgil, for so he calls him, *optimus Virgilius*, who first spoke of his dawning merit to his patron. Varius afterwards confirmed what he had said, and seconded him. Horace was introduced. When he appeared before Mæcenas, respect for a person of his grandeur and his

natural timidity, confounded him so much, that he spoke very little, and with great hesitation. Mæcenas answered him in a few words, according to the custom of the great, after which Horace withdrew. Nine months passed without Horace's hearing any farther, or taking any pains to do so on his side. It might have been thought, that Mæcenas, little pleased with his first visit, which did not seem to argue a man of great parts, had no farther thoughts of Horace. At the expiration of that term, he sent for him, and admitted him into the number of his friends; (these are Horace's own words,) and from that time they lived in the greatest intimacy.

Nulla etenim mihi te fors obtulit. Optimus olim
Virgilius, post hunc Varius, dixere quid essem
Ut veni coram, singulum paucula locutus,
(Infans namque pudor prohibebat plura profari
Non ego me, &c.
Sed quod eram, narro. Respondes, ut tuus est mos,
Pauca. Ab eo: et revocas nono post mense, jubesque
Esse in amicorum numero. Satyr. vi. l. 1.

Custom with us (in France) does not allow a man of learning, scarce known as such, to style himself the friend of so great a lord as Mæcenas. The ancients had more simplicity, but at the same time a more noble freedom of manners and greatness of soul. The Roman language, which was born in the bosom of liberty, had nothing of mean and servile in it, and did not admit any of those frivolous compliments with which ours is overrun. *Jubes esse in amicorum numero.*

But what I admire here, is the generous behaviour of Virgil. He knew the young poet's merit, and perceived in him a genius formed for success in courts; and the event demonstrated he was not mistaken. He might have apprehended setting himself up in his person a dangerous rival, who from sharing at first in the favour of their common patron, might afterwards supplant him entirely. Virgil had none of these thoughts, which suit only a mean and sordid spirit, and which he would with reason have judged injurious to his friend, and still more so to Mæcenas. For the house of that favourite was not like those of most great lords and ministers, where every body regards solely their own interest; where the merit of others gives umbrage, and every thing is carried on by cabal and secret collusion; where fidelity and honour are little known, and where the blackest designs are often covered under the specious out-sides of great friendship and affection. "It is not in this manner," says Horace to one who promised, if he would procure him the least access to the person of Mæcenas, to put him soon into a condition of supplanting all others in his favour, "it is not thus we live at Mæcenas's. There never was a house of greater integrity, nor more remote from all intrigue and cabal than his. A richer, or more learned person there, gives me no manner of pain or umbrage. Every one there has his due place, and is contented with it."

Non into vivimus illic.
Quo tu rere modo. Domus hac nec prior ulla est,
Nec magis his aliena malis. Nil mi offert animum
Ditior hic, aut est quis doctior. Est latior aula
Cuique suus. Sat. ix. l. 1.

Mæcenas, from the first, did Horace good offices with the prince, against whom he had borne arms on the side of Brutus. He obtained his pardon with the restitution of his estate. From that time Horace began to be very familiar with Mæcenas, and to share in his confidence and pleasures. He accompanied him in his journey to Brundisium, as appears from the fifth satire of the first book. Horace's credit and reputation increased every day by the poems he published, as well upon the victories of Augustus, as other events, and various subjects, whether odes, satires, or epistles.

The poet Quintilius Varus, Virgil's relation, being dead, Horace endeavours to console his friend upon that occasion by the xxivth ode of book I.

Ergo Quintilium perpetuus opor
Urget? cui pudor, et justitiam soror
Incorrupta fides, nudaque veritas,
Quando ullum invenient parem?

Multi ille quidem stobilis occidit,
Nulli stobilior quam tibi, Virgili.
Te frustra pius, heu, non ita creditum
Poësis Quinctilian deos.

When Virgil himself set out for Greece with design to employ his leisure in revising, and putting the last hand to the *Æneid*, Horace, upon occasion of that voyage, composed on ode full of vows, which unfortunately were not heard. It is the third of the first book.

Sic te diva potens Cyprî,
Sic fratres Helenæ, lucida sidera,
Ventortumque regat pater,
Obstrictis aliis, præter Iapyga,
Navis, quæ tibi creditum
Debis Virgilium; finibus Atticis
Reddas incolumem, precor,
Et serves animæ didimul meæ.

So may th' auspicious queen of love,
And the twin stars, the seed of Jove,
And he, who rules the raging wind,
To thee, oh sacred ship, be kind,
And gentle breezes fill thy sails,
Supplying soft Elysian gales;
As thou to whom the muse commends,
The best of poets, and of friends,
Dost thy committed pledge restore,
And land him safely on the shore,
And save the better part of me
From perishing with him at sea.

Dryden to Lord Roscom.

We may judge of Mæcenas's tender friendship for Horace, by the few words he wrote to Augustus in his will: "I conjure you to have the same regard for Horace as myself." Augustus offered him the employment of secretary to himself, and wrote for that purpose to Mæcenas in these terms: "Hitherto I have had no occasion for any body to write my letters: but at present the multiplicity of affairs, and my infirmity, make me desire you to bring our Horace with you. Let him then cease to be a parasite at your table, and come to mine to assist me in writing my letters."¹ Horace, who was very fond of his liberty, did not think proper to accept so honourable an offer, which would have laid him under too great restraint, and excused himself upon account of his real or pretended infirmities. The prince was not in the least offended by Horace's refusal of that office, and retained the same friendship for him as before. Some time after he wrote to him to this effect. "Believe you have some right to be free with me, and pray use it, as if we lived together: in doing which, you only act as you may with the justest pretence; for you know it was my desire, that we should have been upon these terms, if your health would have admitted it."²

With how many reflections does this little circumstance supply us in respect to the goodness of Augustus, the frankness of Horace, the simple and unrestrained intercourse of the world in those days, and the difference between ours and the manners of the ancients. A privy secretary at the table with an emperor! A poet refuses that honour, without the emperor's taking offence!

Horace's pleasures were confined to his houses either in the country of the Sabines, or at Tibur, where, free from care and disquiet, he enjoyed in an agreeable retreat all the sweets of leisure and repose, the sole objects of his wishes.

O rura, quando ego te aspiciam, quandoque licebit
Nunc veterum libris, nunc somno et inertibus horis,
Ducere sollicitæ jucuenda oblivis vitæ?

The court, which is so pleasing to the ambitious, was to him only banishment and a prison. He thought he only lived and respired when he returned to his dear country abode, where he found himself more happy than all the monarchs of the earth.

¹ Veniet igitur ab ista parasitica mensa ad hanc regiam. The pleasantry of Augustus turns upon Horace's not being of Mæcenas's family, and consequently having no right to eat at his table.

² Sume tibi aliquid juris apud me, tanquam si convictor mihi fueris. Rectè enim et non temerè feceris quoniam id vobis mihi tecum esse voluit, si per valetudinem tuam fieri posset. *Suet. in vit. Virg.*

—Vivo et regno, simul ista resiqui,
Quæ vos ad cælum effertis clamore secundo.

He died in the consulship of C. Marcus Censorinus and C. Asinius Gallus, A. M. 3997, Ant. J. C. 7 at the age of fifty-seven, after having nominated Augustus his heir before witnesses, the violence of his illness not allowing him time to sign his will. He was interred at the extremity of the Esquiline hill in a tomb joining to that of Mæcenas, who died a little before him the same year. He had always desired, and even seemed to have bound himself by oath, not to survive him.

Ab te mem si partem animæ rapit
Maturior vis, quid moror altera,
Nec carus æquè, nec superstes
Integer? Ille dies utramque
Ducet ruinam. Non ego prædum
Dixi sacramentum. Ibmus, ibimus
Utumque præcedes, supremum
Carpere iter comites parati.—*Od. xvii. l. 2.*

The works of Horace consist only of his Odes, Satires, and Epistles, with the Art of Poetry. I have spoken of his Odes, and given their character in comparing them with those of Pindar. His Satires and Epistles are, in my opinion, of inestimable value. They are void of all show and glitter. Their style is generally a kind of prose in verse, that has neither the pomp nor even the sweetness and harmony of poetical measures. This does not proceed from the incapacity of Horace to make fine verses. Does not the passage by which he excuses his want of sufficient talents for celebrating the actions of Augustus, demonstrate how capable he was of it?

—Cupidum, pater optime, vires
Deficiunt. Neque enim quivis horrentia plii
Agmina, nec fracta percutens cuspidè Gallos
Aut labentis equo describat vulnera Parthi.

Sat. i. l. 2.

Is there in any poet a description of greater elegance, expression, and energy, or one that paints a fact in livelier colours, than that of the country mouse's entertainment of the city mouse?

—Olim
Rusticus urbanum murem mus paupere fertur
Accepisse cavo, veterem vetus hospes amicum:
Asper, et attentus quæsit: ut tamen arcum
Solveret hospitii animum. Quid multa? Nequo illi
Sepositi cicoris, nec longæ invidit avenæ:
Aridum et ore ferens acinum, semesaque lard
Frusta dedit, cupiens variâ fastidia cœnâ
Vincere tangentis malè singula dente superbo.

Sat. vi. l. 2.

The rest of the fable is in the same taste.

This elegance, this grace and spirit of language and images are not (generally speaking) to be found either in the satires or epistles. What is it then that affects us so agreeably in reading them? It is the delicacy, urbanity, fine raillery, and easy manner, which prevail in them: it is a certain air and vigour of nature, simplicity, and truth: it is even that affected negligence in the measure of the verses, which still adds a more native air to the sense, an effect the Marotic style³ has in our language: it is a fund of reason, good sense, and judgment, that shows itself every where; with a wonderful art in painting the characters of men, and placing their faults and ridiculous points in full light. Only great and peculiar beauty and force of genius can make such lively impressions as these on the mind without the help of poetical graces, numbers, and harmony. Quintilian contents himself, after having spoken of Lucilius, with saying, "that Horace has much more elegance, and purity of style, and that he excels in criticising the manners and vices of men."⁴

The Art of Poetry, with some of the satires and epistles that turn upon the same subject, include whatever is most essential in regard to the rules of poetry. This little essay may be considered as an

³ The style of C. Marot, a French poet, in which Fontaine followed and excelled him. Its characters are the natural, simple, humorous, and antique, of which last it affects the terms.

⁴ Multo est tertior ac purius magis Horatius, et ad notandos hominum mores precipuus. *Lib. x. c. 1.*

excellent abridgment of rhetoric, and highly proper to form the taste.

I say nothing of the manners of Horace. To judge of him only by certain passages in his works, one would take him for the most virtuous man in the world, and even an austere philosopher. If we may believe him, "he finds all time long and tedious, but that which he employs in the sole object worthy of our cares, which is equally useful to rich and poor, and when neglected, is alike pernicious to youth and age."

*Sic mihi tarda fluunt ingrataque tempora, quæ spem
Consiliumque morantur agendi gnæviter id quod
Æquè pauperibus prodest, locupletibus æquè,
Æquè neglectum senibus puerisque nocebit.*

At bottom he is a true Epicurean, solely intent upon his pleasures, and so loose in his sentiments and expressions, that, as Quintilian says of him, a man of breeding or morality would not willingly explain certain passages in his works: *Horatium in quibusdam nolim interpretari*. This does not prevent his having excellent maxims of morality. It is with Horace, as with the rest of the heathen authors. When it does not clash with their darling passion, and the question is to lay down fine principles, not to put them in practice, they not only speak the most refined truths and the most elegant reason, but often even religion, in the most beautiful and just terms. This we ought to consider as the precious remains of the esteem for beauty and perfection, implanted in the heart of man by the Author of nature, and which his corruption could not entirely extinguish.

OVID.

OVID, (*Publius Ovidius Naso*) of the equestrian order, was born in the consulship of Hirtius and Pansa, as well as Tibullus, in the 709th year of Rome, A. M. 3961, Ant. J. C. 43. He studied eloquence under Arellius Fuscus, and declaimed in his school with great success. He had by nature so strong an inclination for versifying, that to indulge it, he renounced all care of his fortune. But if this propensity to verse entirely extinguished in him the flame of ambition, it nourished and augmented that of love, a most pernicious passion to those who abandon themselves wholly to it. His father saw him quit the usual course of the Roman youth with pain, and absolutely renounce the hopes of honours and offices, to pursue an unhappy taste that tended to nothing, and of which no doubt he foresaw all the bad effects. He spoke to him in the strongest terms, made use of remonstrances and entreaties, asking him what advantage he could propose to himself from that frivolous study, and whether he imagined he should excel Homer either in reputation or fortune, who died poor. The lively reproaches of his father made an impression upon him. In deference to his advice, he determined to make no more verses, to write only in prose, and to qualify himself for the employments that suited young men of his rank. Whatever efforts he made, or pretended to make, nature still prevailed. Ovid was a poet in spite of himself: the feet and numbers rose of themselves under his pen; and every thing he attempted to write, was verse.

*Sæpe pater dixit: studium quid inutile tentas?
Mæonides nullas ipse reliquit opes.
Motus eram dictis, totoque Helicone relicto
Scribere conabar verba soluta modis.
Sponte sua carmen necesse veniebat ad aptos
Et, quod tentabam scribere, versus erat.*

He composed with wonderful facility, and could not give himself the trouble to retouch his verses; all fire in composing, and all ice in correcting, as he tells us himself. The negligence of his style might be forgiven, if it was not attended with unbounded licentiousness in point of manners, and if he had not filled his poems with filth and obscenity. Augustus made this the pretext for banishing him: a very laudable motive, if the real one, for that conduct. Such poems are poison and contagion to the public, with whom all intercourse ought to be prohibited, and

their poems to be abhorred as the bane of mankind. But this was only pretext. A secret cause of discontent, of which Ovid often speaks in his verses, but in general terms and without explaining it, that has always remained unknown, was the cause of his misfortune.

He was banished to Tomos, a city of Pontus in Europe, upon the Euxine sea, near the mouths of the Danube. The emperor neither confiscated his estate, nor caused him to be condemned by a decree of the senate, but made use of the term *relegare*, which in the Roman law is of more gentle construction than to banish.

He was in the fifty-first year of his age when he set out from Rome to Tomos, and had composed his *Metamorphoses* before his disgrace. On his condemnation to quit Rome he threw it into the fire, either out of indignation, or because he had not put the last hand to it, and entirely finished it.

*Carmina mutatas hominum dicentia formas,
Infelix domini quod fuga rupit opus:
Hinc ego discedens, sicut bona multa meorum,
Ipse mea posui manus in igne manu.*

Trist. l. i. Eleg. 6. l. iii. Eleg. 14.

Some copies, which had before been taken of that work, prevented its being lost.

The place to which he was sent, was a real place of punishment to him: he gives us terrible descriptions of it in several parts of his poem. What distressed him most there, was his being exposed to the severe coldness of the climate, in the neighbourhood of a barbarous and warlike people, who were always in arms, and giving him perpetual apprehensions: a melancholy situation for a delicate Italian, who had passed his life in a mild and agreeable climate, and had always enjoyed ease and tranquillity. Though he could not obtain either to be recalled, or to have the place of his banishment changed, he never failed in his respect for the emperor, and persisted unalterably in praising him with an excess next to idolatry. He may even be said to have literally and actually idolized him, when he was informed of his death. He not only wrote a poem in his praise in the Getic language, to make him known and respected by those barbarous nations, but invoked him also, and consecrated a chapel to him where he went every morning to offer incense, and adore him.

*Nec pietas ignota mea est: videt hospita terra
In nostra sacrum Cæsaris esse domo.
Hic ego do toties cum trepidantia verba,
Eco quæties surgit ab orbe dies.*

De Ponto. l. iv. Epist. 19.

The successor and family of that prince had a great share in all this worship, and were evidently the real objects of it. Ovid however did not find it a remedy for his misfortunes. The court was as inexorable under Tiberius as before. He died in his banishment in the fourth year of that emperor's reign, and the 771st of Rome, at about sixty years of age, after having been nine or ten years in Pontus.

He had desired, in case he died in the country of the Getæ, that his ashes might be carried to Rome, in order that he might not continue an exile after his death, and that the following epitaph might be inscribed on his tomb.

*Hic ego qui jaceo tenerorum lueror amicum,
Ingenio periti Naso poëta meo.
At tibi, qui transiis, ne sit grave, quicquid anasti.
Dicere: Nasonis molliter ossa cubent.*

*Hæc Naso lies, who sung of soft desire,
Victim of too much wit, and too much fire,
Say, who have liv'd, whenever you pass these stones,
Light lie the earth on hapless Naso's bones.*

Ovid apprehended the immortality of the soul, (with more reason than he thought) and desired that it might perish with the body, for he did not care that his shade should wander amongst those of the Sauronnæ. Hence he desired that his bones might at least have a grave at Rome.

*Atque utinam perescent animæ cum corpore nostræ,
Effugiatque avidos pars mea nulla rogos,
Nam si morte carentis vacuus volat altus in auras
Spiritus, et Samiis rata diæta senis;*

Inter Sarmaticas Romana vagabitur umbras,
Perque ferus manes hospita semper erit.
Ossa tamen facito parva referantur in urna:
Sic ego non etiam mortui s exul ero.

He had composed both before and after his banishment a great number of verses, of which many are lost; and it were to be wished that still less had come down to us. His *Medea* is extolled for a perfect tragedy, which shows, says Quintilian, in whose time it was extant, of what that poet was capable, if instead of abandoning himself to the luxuriance of his too easy and fertile genius, he had chose rather to check, than indulge, its rapidity. *Ovidii Medea videtur mihi ostendere quantum vir ille præstare poterit, si ingenio suo temperare quam indulgere maluisset.*

The same Quintilian passes his judgment upon this poet's works in few, but very just and expressive words, and which in my opinion, perfectly characterize them. *Lascivus quidem in Heroicis quoque Ovidius, et nimium amator ingenii sui; laudandus tamen in partibus.* And indeed, Ovid's great fault is redundancy, which proceeded from the warmth and abundance of his genius, and his affecting wit at the expense of the solid and the great; *lascivus.* Every thing he threw upon paper, pleased him. He had for all his productions a more than paternal indulgence, which would not permit him to retrench, or so much as alter, any thing. *Nimium amator ingenii sui.* It must however be confessed that he is admirable in parts; *laudantur tamen in partibus.* Thus in his *Metamorphoses*, which are indisputably the finest of his works, there are a great number of passages of exquisite beauty and taste. And this was the work he valued most himself, and from which he principally expected the immortality of his name.

Jamque opus exegi, quod nec Jovis ira, nec ignes,
Nec poterit ferrum, nec edax abolere vetustas.
Metam. lib. xv. in fine.

TIBULLUS AND PROPERTIUS.

THESE two poets, who flourished at very nearly the same time, and excelled in the same kind of poetry, are judged to have wrote with great purity of style and delicacy. Tibullus is preferred to Propertius.

PHÆDRUS.

PHÆDRUS, a native of Thrace, Augustus's freedman, wrote in the time of Tiberius. We have five books of Fables, composed by this author in Iambic verse, which he himself called *Æsop's* fables, because he made that inventor of them his model; from whom he has also often borrowed the subject of his fables.

Æsopus auctor quam materiam repperit,
Hanc ego polivi versibus senariis.
Prolog. l. i.

He declares from the beginning of his work, that this little book has two advantages; which are, to amuse and divert the reader, and at the same time to supply him with wise counsels for the conduct of life.

Duplex libelli dos est, quod risum movet,
Et quod prudenti vitam consilio monet.
Ibid.

And indeed, besides that the subjects of this work, in which beasts, and even trees are introduced speaking with wit, are diverting in themselves, the manner in which they are treated has all the beauty and elegance it is possible to throw into it; so that Phædrus may be said to have used in his fables the language of nature herself, so plain and simple is his style, and at the same time so full of wit and delicacy.

They are no less valuable in respect to the wise counsels and solid morals they contain. I have observed elsewhere, in speaking of *Æsop*, how much this manner of instructing was in honour and use among the ancients, and the value the most learned men set upon it. Were we only to consider these fables by the advantage to be made of them in the education of children, to whom under the appearance of agreeable stories, they begin so early to propose

principles of probity and wisdom, we could not but conceive highly of their merit. Phædrus has carried his views still farther: there is no age, nor condition but may find excellent maxims in them for the conduct of life. As virtue is every where treated with honour and crowned with glory in them; so they represent the vices, as injustice, calumny, violence, in lively but frightful colours, which make them the contempt, hatred, and detestation of every body. And this undoubtedly was what exasperated Sejanus against him, and exposed him to extreme danger under a minister who was the irreconcilable enemy of all merit and virtue. Phædrus mentions neither the cause, any particular circumstance, nor the event of this animosity. He only complains that all the forms of justice are violated in regard to him, having his declared enemy Sejanus himself for his accuser, witness, and judge.

Quid si accusator alius Sejanus foret,
Si testis alius, judex alius denique,
Dignum faterer esse me tantis malis.

In Prolog. l. iii.

It is very probable that an unworthy favourite, who insolently abused his master's confidence, had taken offence at some strokes in those fables, which might be applied to him. But as there was no name to them, his making that application, was confessing, or at least knowing, himself guilty; Phædrus having no other view than to lash the vices of mankind in general, as he expressly declares.

Suspicio si quis errabit aus,
Et rapiet ad se quod erit commune omnium;
Stultè nudabit animi conscientiam.
Huic excuratum me velim nihilominus.
Neque enim notare singula mors est mihi.
Verùm ipsam vitæ et mores hominum ostendere.
Ibid.

Neither the time, place, nor any other circumstance of his death, is known. He is believed to have survived Sejanus, who died in the eighteenth year of the reign of Tiberius.

Phædrus has given a very honourable testimony of himself, in declaring that he had banished all desire of riches from his heart.

Quamvis in ipsa natus penè sim acholæ,
Coramque habendi penitus corde eraserim.
Ibid.

He does not seem either so indifferent or disinterested with regard to praise; and is very apt to speak of his own merit. It was indeed so great, that nothing of antiquity surpasses his fables in simple and natural beauty.

It is surprising that with all this merit Phædrus should be so little known and celebrated by ancient authors. Only two speak of him, Martial² and Avienus; and it is still doubted, whether the verses of the first, that mention Phædrus, mean our author. So learned a man as Casaubon did not know that there was such a book as Phædrus' in the world, till the edition published at Troies by Peter Pithou in 1596. The latter sent one of them to F. Sirmond, who was then at Rome. That Jesuit showed it to the learned there, who at first judged it spurious. But upon a nearer examination they changed their opinion, and believed that they saw some characters of the Augustan age in it. Father Vasseur³ relates this little circumstance with his usual elegance.

Fontaine, who carried this kind of writing to its highest perfection in the French language, by treading in the steps of Phædrus, has however differed greatly from his original. Whether he thought the French language not susceptible of that happy simplicity, which charms and transports all persons of taste in the Latin authors; or found that manner of writing did not suit his genius, he formed a style entirely peculiar to himself, of which perhaps the Latin tongue itself is incapable, and which without being less elegantly plain and natural, is more humorous, more various, easy and full of graces, but graces which have nothing of pomp, swell, and affectation, and which only serve to render the sense and circumstances more gay and amusing. The same, in my opinion, may be

¹ Quintil. l. x. c. 1

² Epig. 20. l. iii.

³ In Tract. de Ludicra dict.

said in respect to Terence and Molière. They both excel in their way, and have carried comedy in the highest perfection, to which perhaps it is capable of attaining. But their way of writing is different. Terence excels Molière in purity, delicacy, and elegance of language. But then the French poet is infinitely above Terence in the conduct and plan of his plays, which form one of the principal beauties of dramatic poems; and especially in the justness and variety of his characters. He has perfectly observed the precept Horace gives poets who would succeed in this way of writing, that is, to copy nature in the manners and inclinations of men, which age and condition vary exceedingly.

*Ætati cujusque notandi sunt tibi mores,
Mobilibusque decor naturis dandus et annis.*

Horat. in Art. Poet.

SECTION III.—THIRD AGE OF THE LATIN POETRY.

I HAVE already said, that this third age of Latin poetry began about the middle of Tiberius's reign. Some of the poets, of whom I shall soon speak, might be ranked among those of the best age, to which they are very near both in time and merit. It is however believed, that there is some difference discernible in them.

SENECA.

Of the ten Latin tragedies which have been collected and published together under the name of Seneca, it is generally enough agreed, that the finest were written by the celebrated philosopher, who was Nero's preceptor. The *Medea* is believed to be undoubtedly his, because Quintilian quotes a passage from it, to which he adds his name. There are some particular reasons also for ascribing the *Edipus* to him. Mr. Le Fevre finds too much of declamation in the *Agamemnon*, *Troas*, and *Hercules*. Others, however, believe the *Troas*, and *Hippolytus* are really his: but that the *Agamemnon*, *Hercules furens*, *Thyestes*, and *Hercules Oëtes*, are either Seneca the father's, or some other unknown author's. As to the *Thebais* and *Octavia*, they are thought entirely unworthy of Seneca's genius and eloquence. And it is certain that the latter was not written till after the death of Seneca, and even of Nero.

PERSIUS.

PERSIUS, (*Aulus Persius Flaccus*) a satiric poet in the reign of Nero, was born at Volaterræ, a city of Tuscany. He was of the equestrian order, and related and allied to persons of the first rank. He studied till twelve years old at Volaterræ; and afterwards at Rome under the grammarian Palemon, the rhetorician Verginius, and a Stoic philosopher named Cornutus, who conceived a particular friendship for him, and with whom he always lived in the greatest intimacy.

This poet was of a very gentle and humane disposition, very friendly and obliging to his relations and acquaintance, and extremely regular in his manners and conduct. In his satires he often censures the faults of the orators and poets of his time, without sparing Nero himself.

Auriculas asini quis non habet?

We read there also these four verses, which are believed to be Nero's, and which he cites as an example of the tumid or bombastic style.

*Torva Mimallonis implerunt cornua bombis,
Et raptum vitulo caput ablatura superbo
Bassaris, et lyncem Menas flexura corymbis
Evion ingeminat: reparabilis adsonat Echo.*

Boileau justifies himself by this example: "I let us examine Persius," says he, "who wrote in the reign of Nero. He does not confine himself to ridiculing the works of the poets of his time; he attacks the verses of Nero himself, for every body knows, and Nero's son knew, that the four verses *Torva Mimallonis*, &c. which Persius rallies so severely in his first satire,

* Lib. ix. c. 2.

It is said he wrote at first, *Auriculas asini Mida rex*

was Nero's. However we do not find that Nero alluded to Nero as he was, indicted any punishment upon Persius: that tyrant, the enemy of reason, and enamoured as all know, of his own works, was however so much a gallant man, as to understand railery in respect to his verses, and did not believe the emperor, on this occasion, ought to take upon himself what concerned the poet."

The work of Persius, in which refined morality, and a wonderful fund of sense, distinguished themselves every where, though of no great extent, has acquired him great glory, and a glory of the most solid kind, says Quintilian. *Multum, et vera, gloria quamvis uno libro, meruit Persius.* It must however be owned, that the obscurity which prevails in his satires exceedingly diminishes their merit. This made a certain person say, that since Persius would not be understood, he would not understand him. *Si non vis intelligi, nec ego volo te intelligere.*

He died at only twenty-eight years of age, in the 62d year of our Lord, which was the 8th year of Nero's reign. In gratitude to his master and friend Cornutus, he left him his library, which consisted of seven hundred volumes, a very considerable one in those days, with a great sum of money. Cornutus accepted the books, but gave the money to the heirs of Persius, who were his sisters.

JUVENAL.

I antedate the time of Juvenal here, in order to join these two satiric poets together.

JUVENAL (*Decimus, or Decius Junius Juvenalis*) was of Aquinum in the kingdom of Naples. He lived at Rome about the end of Domitian's reign, and even in Nerva's and Trajan's. He acquired great reputation by his satires, of which sixteen are come down to us. He passed the greatest part of his life in the exercises of the schools, where he was famous for being a vehement declaimer:

*Juvenal, élevé dans les cris de l'Ecole,
Poussa jusqu'à l'excès sa mordante hyperbole.*

Boileau.

He, bred in bawling schools debate to wage,
Push'd to excess his hyperbolic rage.

Julius Scaliger, who is always singular in his sentiments, praises the force of Juvenal to Horace's simplicity. But all people of good taste agree, that the declamatory and bitter genius of Juvenal, is much inferior to the natural, delicate, and refined simplicity of Horace's satire.

In his seventh satire he had ventured to attack the comedian Paris, whose power was enormous at court, and who bestowed all offices both civil and military.

*Ille et militum multis largitur honorem,
Semestri vatam digitos circumligat auro
Quod non dant proceres, dabit histrio.*

The proud comedian did not suffer so offensive an attempt without resenting it. He caused Julian to be banished into Egypt, by sending him thither to command a body of troops encamped at the extremity of that country. After Domitian's death he returned to Rome, where he remained, as is judged from some of his satires, till the reign of Adrian.

It is believed that Quintilian, who made it his rule not to name any living author, means Juvenal, when he says that there are satiric poets of his time well worthy of esteem, and who will one day be very famous. *Sunt clari hodieque et qui olim nominabuntur.*

It were to be wished, that, in reproving the manners of others with too much severity, he had not shown, that he himself was void of modesty; and that he had not combatted vices in a manner, that rather teaches the practice, than inspires the horror of them.

LUCAN.

LUCAN (*M. Annæus Lucanus*) was Seneca's nephew. The most celebrated of his works is the *Pharsalia*, in which he relates the war of Cæsar and Pompey. He abounds with fine thoughts, and there is great spi-

* Vet. Juven. vit.

* Lib. x. c. 1

it and vivacity in his style: but Quintilian¹ thinks him rather to be reckoned among the orators than the poets. *Lucanus ardens, et concitatus, et sententiis clarissimus; et, ut dicam quod sentio, magis oratoribus quam poetis annuerendus.* To equal Lucan with Virgil, as some are willing to do, is not exalting Lucan, but showing little discernment. We may however say of him, that if years had ripened Lucan's genius, who perhaps was not twenty-six when he died, and added Virgil's judgment to his fire and sublimity, he might have been a consummate poet. Many of his poems are lost.

The life of Lucan, ascribed to Suetonius, accuses him of a light intemperate tongue, and particularly of having spoken of Nero, who loved him, in a manner capable of exasperating even a mild and rational prince. He was one of the first who entered into Piso's conspiracy, out of resentment to Nero, who, through mean jealousy, suppressed the reputation of his poems, and prevented him from publishing them.² That prince ordered Lucan to be put to death, and his veins were opened. When he perceived the warmth abandon the extremities of his body, remembering that he had formerly described a soldier expiring in that manner, he repeated the verses that expressed his death, which were his last words: a frivolous consolation for a dying man, but worthy a heathen poet. He died in the 65th year of the Christian era, and in the twelfth of Nero.

PETRONIUS.

PETRONIUS (*Petronius Arbiter*) was of Provence, in the country near Marseilles, as Sidonius Apollinarius informs us, and lived, according to the more received opinion, in the reigns of Claudius and Nero.

We have of this author's works the remains of a satire, or rather of several satirical books (*Satyricon*) which he composed both in verse and prose. This is a kind of romance in the same form as the satires, which Varro, as I have said before, had invented by mingling verse and prose, the serious with the gay, agreeably; and which he called *Menippeæ*, from Menippus the Cynic, who before him had treated grave subjects in a style of pleasantry and ridicule. These fragments are only an indigested collection of detached parts, taken from the papers of somebody, who had extracted what he liked best from Petronius without any order. The learned find in them extreme refinement and delicacy of taste, and a wonderful happiness in painting the different characters of those he introduces speaking. They observe however, though Petronius seems to have been a great critic, and a writer of a most exquisite taste, that his style does not entirely come up to the delicacy of his judgment; that it is not without some affectation; is too florid and elaborate; and that it degenerates even so early as his time, from the natural and majestic simplicity of the golden age of Augustus. But were his style much more perfect, he would be still the more dangerous to his readers, from the obscenities with which he has filled his work.

It is doubted whether this Petronius be the same mentioned by Tacitus. That historian gives us the following picture of Petronius Turpilianus, which sufficiently agrees with the idea the reading of the work in question gives us of its author. "He was a voluptuous man, who passed the day in sleep, and the night in pleasures or business. As others acquire reputation by industry, he had made himself famous for his idleness. He did not pass however for a prodigal and a debauchee, like those who ruin themselves by excesses void of sense and taste, but for a man of a refined and earned luxury. All his words and actions were the more pleasing, as they carried with them, even when loosest, a certain air of negligence peculiar to him, which as it seemed nature itself, had all the charms of simplicity. Notwithstanding, when he was proconsul of Bithynia, and afterwards when consul, he discovered a capacity for the greatest employments. Return-

ing after to a voluptuous life, either out of inclination or policy, because the prince loved debauch, he became one of his principal confidants. It was he who regulated every thing in Nero's parties of pleasure; who thought nothing agreeable nor in taste, which Petronius had not approved. This excited the envy of Tigellinus against him, as a dangerous rival, that excelled himself in the knowledge of pleasures, and the science of voluptuousness."³ Petronius killed himself to avoid the death, to which the emperor had condemned him upon a false accusation.

If this Petronius be not the writer intended here, so admirable a picture will at least serve to give us an idea of the style of Tacitus, of whom I shall have occasion to speak in the sequel.

SILIUS ITALICUS.

C. SILIUS ITALICUS rendered himself famous by his poem on the second Punic war. He was not born a poet, and study did not entirely supply what he wanted on the side of nature.⁴ Besides, he did not apply himself to poetry till after he had long exercised the function of an advocate at the bar, and had been consul, that is to say, in a very advanced and languid period of life.⁵

Whatever praises Martial bestowed on him,⁶ he is not much esteemed as a poet: he is however deemed to excel all the writers of his time in purity of language. He follows the truth of history exactly enough, and lights may be found in his poem, though not his principal design, into things which passed in the times of which he writes; there being facts in him not to be found elsewhere.

What he says of Domitian, sufficiently shows, that he wrote in the reign of that prince, after the war with the Sarmatæ, in which that with the Daci may be included. He is believed to have died in the time of Trajan, in the year 100.7 He starved himself to death, not being able to bear the pain of an ulcer, which the physicians could not cure. Pliny observes, that Silius having retired into Campania upon account of his old age, did not quit his retreat to come to Rome, in order to congratulate Trajan upon his accession to the empire. That prince⁸ was highly praised for not being offended at such a liberty; and he for venturing to take it.

If our poet could not attain to a perfect imitation of Virgil, at least it was impossible to carry respect for him higher than he did. When he had got possession of the place where Virgil's tomb stood,⁹ it became sacred, and a kind of a temple to him. He celebrated that poet's birthday every year with greater joy and solemnity than his own. He could not suffer so venerable a monument to remain neglected in the hands of a poor peasant, and purchased it.

Jam propè desertos cineres, et sancta Maronis

Nomina qui colet, pauper et unus erat

Silius optat succurrere censis umbræ:

Silius et vatem, non minor ipse, colit.

Martial. Epig. 50. . xl.

Silius's work had lain buried for many ages in the

• Illi dies per somnum, nox officia et oblectamenta vitæ transigebant. Utque alius induit, ita hunc ignavia ad famam protulerat, habebaturque non ganeo et profligator, ut plerique sua haurientium, sed erudito luxu. Ac dicta factaque ejus, quanto solutiora, et quondam sui negligentiam preferentia, tanto gratius inspeciem simplicitatis accipiebantur. Proconsul tamen Bithyniæ, et mox Consul, vigetem se ac præsen negotiis ostendit: deinde revolutus ad vitia sua vitorum imitationem, inter paucos familiarium Neroni adsumtus est, elegantior arbiter, dum nihil amicum et molle, nisi quod ei Petronius approbasset. Unde invidia Tigellini, quasi adversus æmulum, et scientia voluptatum potiorum. *Tacit. Annal. l. xvi. c. 18.*

dust of the library of St. Gal. Poggius found it there during the council of Constance, with many other manuscripts, as I have already observed elsewhere.

STATIUS.

STATIUS (*P. Statius Papinius*) lived in the reign of Domitian. Martial never mentions him, though they were contemporaries at Rome, which is believed to proceed from jealousy, because the extreme facility of Statius in making extemporary verses made him highly agreeable to Domitian.

We have two heroic poems of Statius: the *Thebaid* in twelve books, and the *Achilleid* in only two, because he was prevented by death from making an end of it.

His poems were highly esteemed at Rome in his time. Juvenal mentions the extraordinary crowding to hear them, and the applause they received.

Curritur ad vocem jucundam, et carmen amicum
Thebaidos, lætam fecit cum Statius urbem,
Promisitque diem: tanta dulcedine captos
Adhuc ille animos, tantæque libidine vulgi
Auditur.

Sat. 6. l. iii.

If we are to take the verses that follow these literally, and if they are not one of the hyperboles so common to Juvenal, they tell us that Statius was poor, and after having acquired great reputation by his *Thebaid*, was obliged to compose dramatic poems, and sell them to the actors for the means of life.

Sed cum fregit subælia verum,
Esurit, intactam Paridi nisi vendat Agaven.

Julius Scaliger affirms that no author, either ancient or modern, comes so near Virgil as Statius, and makes no hesitation in giving him the preference to all the heroic poets, Greek or Latin, maintaining at the same time, that his verses are better even than Homer's. Such a judgment shows that illustrious critic not to have had so much justness of taste, as erudition. The one often hurts the other.

Statius, as well as Lucan and Silius, has treated his subject rather like an historian than a poet, without confining himself to what constitutes the essence of a true Epic poem. As to his diction and versification, in too much endeavouring to rise and appear great, he gives into bombast, and becomes tumid.

VALERIUS FLACCUS.

As the reign of Augustus produced the most excellent of the Latin poets, that of Domitian has also given us the most considerable poets of the second class.

C. Valerius Flaccus Suetonius Balbus. This poet was born at Setia, a town of Campania, but had fixed his abode at Padua. His heroic poem upon the voyage of the Argonauts in eight books is come down to us. It was begun in the reign of Vespasian, to whom it is inscribed; but the author was prevented from finishing it by a sudden death. The best judges have but an indifferent opinion of this work, because there are several things in it contrary to the rules of art, no grace and beauty, with a style, which, from affecting a greatness it wants nerve to sustain, becomes cold and languid. Quintilian says, however, that the Latin poetry has lost much by his death, which happened in the latter part of Domitian's reign. *Multum in Valerio Flacco nuper amissimus*.¹ Martial writes to him as to his friend, and advises him to renounce poetry for the bar, and apply himself to something, by which more is to be got than by courting the muses, from whom he has nothing to expect, but unavailing wreaths and barren praise, attended with want and misery.

Fierios differ cantusque chorusque Sororum:
Æa dabit ex illis nulla puella tibi
Prætor aquas Helicon, et sortis, lyraeque donum,
Nil habet, et magnum sed peritane sophos.

Ep. lxxvi. li.

MARTIAL.

MARTIAL (*M. Valerius Martialis*) succeeded in the epigram. He was a Spaniard of the city of Bilbilis, which is said to have been not far from that of Calatunda in Arragon. He was born in the time of Clau-

dus, and at the age of twenty came to Rome in Nero's reign, where he stayed thirty years, beloved by the emperors, and in particular by Domitian, who conferred many favours upon him. It is believed, that his not being so well treated after the emperor's death, induced him to retire into his own country. He had full time there to grow weary of it, for want of good company, and such as had a taste for polite learning, which made him often think of his residence at Rome with regret. For instead of his verses being exceedingly admired and applauded, as they were in that learned city, at Bilbilis they only excited envy and slander against him; a treatment very hard to bear every day with patience. *Accedit his municipium rubigo dentium, et judicii loco livor*—*adversus quod difficile est habere quotidie bonum stomachum*.² He died in the reign of Trajan, about the year of Christ 100.

Fourteen books of epigrams and one upon shows remain of his writings. Vossius believes the latter a collection of Martial's verses, and those of some other poets of his time upon the shows exhibited by Titus in the year of Christ 80.

Pliny, in honour of whom he had composed an epigram, (the 19th of the 10th book) gave him a sum of money when he retired from Rome:³ for he had made but small acquisitions in respect to the goods of fortune. Pliny on this occasion observes, that it was anciently the custom to confer rewards either of profit or honour upon those who had celebrated the glory of cities, or certain illustrious persons. At present, says he, that fashion is expired, with others no less great and noble. When we left off doing actions worthy of praise, we began to despise it, (if not with justice, at least with reason; for it reproached our want of merit.) *Postquam destimus facere laudanda, laudari quoque ineptum putamus*. He lamented the death of Martial, when he was informed of it, and loved and esteemed his genius; but it were to be wished, that his verses had always been as chaste and modest, as they are sometimes witty. He is reproached for too much bitterness and ill-nature, his shameful flattery of Domitian, and his unworthy treatment of him after his death.

The love of subtleties or witticism, and the affectation of points in discourse, had from the time of Tiberius and Caligula, taken place of the fine taste that prevailed in the reign of Augustus. Those defects increased perpetually, which occasioned Martial's pleasing so much. All his epigrams are far from having the same force and spirit; to which this verse of his own has been justly applied:

Sunt bona, sunt quædam mediocria, sunt mala plura.

Some good, some tolerable, but more bad.

And indeed most of them are bad; he has however some that are excellent: of which I shall give the reader the following examples.

Upon an Excellent Piece of Sculpture.

Artis Phidiamæ toreuma clarum
Pisces adspicis: adde aquam, natant. Ep. xxxv. l. 3.

Upon the Slowness of a Barber.

Eutrapelus tonsor dum circuit ora Luperci,
Expingitque genas, altera barba subit.
Ep. lxxliii. l. 7.

Advice to a Person not to go to Law.

Et judex petit, et petit patronus:
Solvat censeo, Sexte, creditori. Ep. xlii. l. 2.

A judge, you say,—and patron you must get?
Take my advice, good Sextus; pay the debt.

Upon the sudden death of one who had often been victorious in the Races of the Circus.

Ille ego sum Scorpis, clamosi gloria Circi;
Plausus, Roma, tui, deliciæque breves:
Invidi quem Lachesis raptum triceretæ nona,
Dum numerat palmas, credidit esse senem.
Ep. li. l. 10.

Upon the bold action of Mucius Scaevola.

Dum peteret Regem decepta satellitis dextra,
Injecit sacris æ peritura scia.

¹ Lib. 10. c. 1.

² Martial in Pref. l. xli.

³ Plin. Ep. 11. l. 14.

Bed tam seva pius miracula non tulit hostis,
Et raptum flammis jussit abire virum.
Urere quam potuit contempto Mucius igne,
Hanc spectare manum Porcena non potuit.
Major deceptæ fama est et gloria dextræ:
Sed non crasset, fecerat illa minus. *Ep. xxii. l. 1.*

Against the inhumanity of a Covetous rich Man.

Tu spectas hiemem succincti lentus amicti,
(Præ seclus!) et lateris frigora trita mei.
Quantum erat, infelix, pannis fraudare duobus,
(Quid renuis?) non te, Nævole, sed tincas?

Ep. xvi. l. 2.

No riches are in reality saved but those we give away.

Callidus effractus nummos fur auferet arca:
Frosterneat patrios impia flamma lares—
Extra fortunam est quicquid donatur amicis;
Quas dederis, solas semper habebis opes.

Ep. xlii. l. 8.

Praise and description of a little bitch. It is somewhat long, but of exceeding delicacy, and I could wish, for the sake of the ladies, that some able hand would translate it into our language in verse.

Issa est passere nequior Catulli:
Issa est purior osculo columbæ:
Issa est blundior omnibus puellis:
Issa est carior Indiciæ lapillis:
Issa est deliciæ catella Publi.
Hanc tu, si queritur, loqui putabis.
Sentit tristitiamque gaudiumque
Colla nixa cubat, capitiq; somnos,
Ut suspiria nulla sentiantur:
Et desiderio coacta ventris,
Gutta pallia non fefellit ulla:
Sed blando pede suscitât, toroque
Depondi monet, et rogat levâri.
Castæ tantus inest pudor catellæ!
Ignorat Venerem, nec invenimus
Dignum tam tenera virum puella.
Hanc ne lux rapiat suprema totam,
Picta Publius exprimit tubella.
In qua tam similis videbis Issam
Ut sit tam similis sibi nec Issa.
Issam doneque pone cum tabella,
Aut utramque putabis esse veram,
Aut utramque putabis esse pictam.

Ep. cix. l. 4.

[For the sake of the ladies, as Mr. Rollin recommends it, the translator has attempted, or rather imitated this little poem in English measure, how unequally the comparison will best explain.]

Pretty Issa, what can be,
Of pretty things, compared to thee?
Leebia's sparrow in its play
Was not half so arch and gay;
Issa's kisses sweeter far
Than the billing turtle's are:
Issa, fondler than the dove:
Issa, kind as maids in love:
India's gems with her compare!
Gems and gold are not so rare:
Chomp are those in Publius' sight;
Issa is his sole delight.
Issa has the art to trace
Joy and sadness in a face:
And such notice seems to take,
Issa, one would think, could speak.
Whilst she sleeps, her neck sustaining,
Not a breath her life explaining,
Should a call of nature take her;
No distresses rude can make her;
But soft-riving from her place,
Not a drop to her disgrace,
"Set me down," she tells you plain,
And now, "take me up again."
And so chaste's the little creature,
One would think her not of nature:
Never Venus and her son
To her spotless breast were known;
Nor a spouse could we provide
Worthy of the tender bride.

Least death snatch her whole away,
Grief to think! at her last day,
Publius does her picture take,
Long to keep for Issa's sake:
Issa there as like you see,
As Issa can to Issa be:
Issa by her picture place,
Issa's two with every grace!
Both painted seem, and both seem true;
They puzzle me and so would you.

SULPITIA

SULPITIA, a Roman lady, was the wife of Calenus. She wrote a poem upon the expulsion of the philosophers, wherein she severely lashes Domitian, and menaces him with death. It is the only one of a great number of poems composed by her, that has come down to us, and is usually printed at the end of Juvenal's satires. We have reason to regret the loss of the verses she inscribed to her husband upon conjugal love, and the chastity and fidelity to be observed in the married state. Martial gives her great praise in one of his epigrams, of which I shall repeat only some verses.

Omnes Sulpitiam legant puellæ,
Ut quæ cupiunt viro placere.
Omnes Sulpitiam legant mariti,
Ut qui cupiunt placere nuptæ:
Hæc condicipula, vel hæc magistra,
Esset doctior et pudica Sappho.

Epist. xxxv. l. 10.

IMITATED.

Ye tender brides, whom virtuous love inspires,
Refine by wise Sulpitia your desires;
— She can the useful science well impart,
To keep one happy married lover's heart:
And you, who'er desire one bride to charm,
Yourself with bright Sulpitia's dictates arm;
With her conversant, by her lessons taught,
Her lovely pupils rise, enlarged in thought;
Chaste and more learned Sapphos they become,
Their sex's glory, and the pride of Rome.

NEMESIANUS AND CALPURNIUS.

We have some eclogues, and part of a poem upon hunting wrote by *M. Aurelius Olympius Nemesianus*, who was very famous in his time for his poetical works. We are told that he was a native of Carthage. He inscribes his poem upon hunting to Carinus and Numerianus, after their father's death, that is to say in the year 284.

TITUS CALPURNIUS of Sicily, lived in the reigns of Carus, Carinus, and Numerianus. He composed seven eclogues, which he inscribed to Nemesianus, a pastoral poet as well as himself. The verses of both these poets have the character of the age in which they were written.

PRUDENTIUS.

PRUDENTIUS, (*Aurelius Prudentius Clemens*) a Christian poet, and officer in the court of the emperor Honorius, was born at Saragosa in Spain in the year 348, and died about 412. He did not begin his poems upon religion till the fifty-seventh year of his age. He had been first an advocate, then a judge, afterwards a soldier, and at last a retainer to the court in an honourable employment. He informs us himself of these circumstances in the prologue of his works.

Per quinquennia jam decem,
Ni fallor, sumus: septimus insuper
Annus carde rotat, dum fruimur sole volubili

After having spoken of his youth he mentions his different employments.

Exiis jurgia turbidos
Armarunt animos, at male peritæ
Vincendi studium subjucit casibus asperis.
His legem moderamine
Frenos nobilium revinximus arbutum:
Jus civile bonis reddidimus, teruimus reos.
Tandem militum gradu
Erectum pietas principis extul.
Adaptum propius stare jubens ordines proximo.

The poems of Prudentius come down to us, abundant more with zeal for religion than ornaments of art. They are full of false quantities; besides which he is not always orthodox in his notions. We must, however, confess, that there is considerable taste and delicacy in many passages of his works: his hymns upon the Innocents are sufficient proofs of this, from which I shall repeat some strophes.

Salvete flores martyrum,
Quos lucis ipso in limine,

Christi iusceptor sustulit,
 Ceu turbo nascentes zonas,
 Vos prima Christi victima,
 Grex immo'atorum tener,
 Aram sub ipsam simplicia
 Palma et coronis luditis
 Auditi tyrannus anxius
 Adesse regum principem,
 Qui nomen Israel regat,
 Teneatque David regiam.
 Exclamat amens nuntio:
 Successor instat, pellimur.
 Satellisti, ferram rape,
 Perfunde cunas sanguine.
 Transfigit ergo carnifex
 Mucrone districto furens
 Effusa nuper corpora,
 Animasque rimatur novas.

The Augustan age has nothing more animated, nor more delicate, than these strophes.

CLAUDIAN.

CLAUDIAN, (*Claudius*), a Latin poet and a pagan, was a native of Egypt. He lived in the reign of Arcadius and Honorius, who caused a statue to be erected in honour of him. He died soon after Arcadius. He merits the first rank amongst the heroic poets, who appeared after the Augustan age. Of all those who have endeavoured to follow and imitate Virgil, none come so near the majesty of that poet, and retain less of the corruption of the age he lived in, than he. He everywhere shows abundance of genius, and that he was born a poet. He was full of that fire which produces enthusiasm. His style is correct, sweet, elegant, and at the same time noble and sublime. He has, however, too many flights and sallies of youth, and swells too much. He has wit and imagination, but is far from that delicacy of numbers, that natural and exquisite harmony of verse which the learned admire in Virgil. He rings perpetually the same round of measures, the same cadence, the effect of which is, that one can scarce read him without being tired. Of the several poems of Claudian, his invectives against Rufinus and Eutropius have been highly esteemed.

AUSONIUS.

AUSONIUS, (*Decius*, or rather *Decimus Magnus Ausonius*), was born at Bourdeaux. At the age of thirty he was chosen professor of grammar, and afterwards of rhetoric. He acquired so great a reputation in the latter employment, that he was sent for to the Imperial court, and made preceptor to Gratian the son of the emperor Valentinian I., (An. 367.) He accompanied his pupil in that young prince's journey with his father into Germany. This employment acquired him the highest dignities of the empire. He was made quæstor by Valentinian. After the death of that prince, Gratian made him *Præfectus Prætorio*; which office he had twice, first for Italy and Africa, and afterwards for the Gauls. He was at length declared consul, (An. 379.) at which time Juvenal's maxim was again verified, "That when fortune pleases, she makes a consul of a rhetorician."

Si fortuna volet, fies de rhetore consul.

The emperor, in conferring that dignity upon him, forgot nothing that could exalt the favour by the obliging and generous manner of doing it. To know how to improve gifts and graces thus, is a science worthy of a prince. He immediately despatched a courier to Ausonius with advice of his being nominated consul, and wrote to him in these terms.—"When I considered some time ago about the creation of consuls for this year, I implored the assistance of God, as you know it is my custom to do in whatever I undertake, and as I know it is your desire that I should. I believed it incumbent on me to nominate you first consul, and that God required that acknowledgment from me of the good instructions I have received from you. I therefore pay you what I owe you, and as I am sensible that we can

never sufficiently discharge our obligations to our parents and masters, I confess myself still no less in your debt than I was before." That nothing might be wanting to the favour he did him, he accompanied this letter with the present of a very rich robe, in which the figure of the emperor Constantius, his father-in-law, was embroidered in gold. Ausonius, on his side, employed the whole force and delicacy of his genius in praising his august benefactor both in verse and prose. His oration of thanks to the emperor is still extant, and has been highly esteemed. There is a great deal of wit in it, perhaps too much; with fine and solid thoughts, and sprightly turns, but often far-fetched and too much studied. The Latinity of it is hard, and speaks the age in which the author lived. That the reader may have some idea of his style, I shall repeat here the beginning of this speech, which he pronounced before the emperor.—"Ago tibi gratias, Imperator Auguste: si possem, etiam referrem. Sed nec tui fortuna desiderat remunerandi vices, nec nostra suggerit restituendi facultatem. Privatorum ista copia est, inter se esse munificos. Tua beneficia, ut majestate præcellunt ita mutuum non repossunt. Quod solum igitur nostræ opis est, gratias ago, verum ita, ut apud Deum fieri solet, sentiendo copiosius, quam loquendo; atque non in sacratio modò Imperialis oraculi, qui locus horrore tranquillo et pavore venerabili rard eundem animum prestat et vultum: sed usquequaque gratias ago, tum tacens, tum loquens; tum in cætu hominum, tum ipse tecum; et cum voce potui, et cum meditatione recessi; omni loco, actu, habitu, et tempore. Nec mirum, si ego terminum non statuo tam grata profutendi, cum tu finem facere nescias honorandi. Qui enim locus est, aut dies, que non me hujus aut similis gratulationis admonent! Admonent autem! O inertiam significationis ignavæ! Quis, inquam, locus est, qui non beneficiis tuis agitet, inflamment?"

There is an extreme inequality in the works of Ausonius. His style is stiff and hard, as I have already observed, but that stiffness, that roughness, is the least fault of his poems. The obscenities with which they abound, forbid the reading of them to every one who has not renounced all feelings of shame.

ST. PAULINUS.

ST. PAULINUS, bishop of Nola, was born at Bourdeaux, about the year 353. The celebrated Ausonius, of whom I spoke last, was his master in profane learning. St. Paulinus declares more than once that he was indebted for every thing to Ausonius, whom he calls his patron, master, father, and to whom he acknowledges himself indebted for the progress he had made in learning, and his elevation to offices and dignities.

Tibi disciplinas, dignitatem, litteras,
 Lingue, et tunc, et famæ decus,
 Profectus, altus, institutus debito,
 Patrone, præceptor, parens.

Carm. 16.

He made a great progress under such a master; Ausonius congratulates him upon it in several of his poems, and owns, which is no small thing for a poet to allow, that his disciple carries the bays by his verses against him.

*Cedimus ingenio, quantum præcedimus ævo.
 Assurgit Musæ nostra Camæna tue.*

Auson. Epist. 20.

The retirement of St. Paulinus, who went into Spain to hide himself in solitude, drew upon him violent reproaches from Ausonius.² That worldly man wrote him many letters complaining of his injurious state of oblivion, and directing his severity particularly against his *Tanaquil*; by which odious name he means his wife Therasia, to whom he imputes that change. He accused his disciple of having lost his former good nature, and of having become morose, and a hater of mankind. He ascribes to him in terms sufficiently express, a mind perverted by spleen and melancholy, that induced him to fly the society and intercourse of men: the reproach usually made by

¹ Auson. in Grat. act.

² Id. Epist. xxiv. and xxv.

persons of the world to those who quit it. Divine providence prevented him from receiving any of these letters, till he was strong enough to resist the snares which the devil laid for him by the hand of a late esteemed, and much beloved master. At the end of four years he received three of them, which he answered by several on his side. After having explained the reason of his long silence, he excuses himself from resuming the study of profane poetry, which did not suit a person like him, who had devoted his thoughts solely to God.

Quid abdicatas, in meam curam, pater
Redire Musas præcipis?
Negant Camænis, nec patent Apollini
Dicata Christo pectora.

He says that he is now no longer to invoke Apollo and the muses, divinities impotent and deaf; that a God more powerful has taken possession of his mind, and requires other sentiments and a different language from him—

Nunc alia mentem via agit, major Deus
Aliosque mores postulat.

He afterwards describes the wonderful change operated by grace in the heart of man, when it has seized it by right of conquest, and has entirely subjected it to itself, in making it by a chaste and pure joy lose all taste for its former pleasures and wordly delights; in extinguishing all the pains and disquiet of the present life by a lively faith and hope of future happiness; and in leaving it no other care, than to employ itself with its God; in contemplating his wonderful works, in studying his holy will, and endeavouring with all the powers of the soul to render him an homage worthy of him by an undivided love that knows no bounds.

Hic ergo nostra ut sum præcordiis
Vibraverit cælo jubar,
Abstergit ægrum corporis pigri situm
Habitumque mentis innovat.
Exhaurit omne quod juvabat antea,
Castæ voluptatis vices.
Totoque nostra jura domini vindicat
Et corda, et ora, et tempora.
Socogitari, intelligi, credi, legi,
Se vult timeri et diligere.
Æstus inanes, quos movet vitæ labor
Præsentis ævi tramite,
Aboluit futuræ cum Deo vitæ fides, &c.

To all this he adds a strong temptation never to be wanting in what his obligations to Ausonius required of him.

The praises which Ausonius gives St. Paulinus in many places, seems rather to regard the poems he composed before his renouncing the profane muses, than those he wrote after. For, after so uncommon and generous an abdication, he studied to extinguish the greater part of his fire; and having stifled in himself all desire of wordly reputation, he checked and neglected his genius and style, and confined himself within the bounds of a simplicity averse to all pride, and such as the Christian modesty requires. He carried this departure from the poet so far, as to disregard even the rules of prosody. But with all the air of negligence, that appears no less in his versification than in the general style of his poems, we always find certain natural charms and beauties, which makes us love the author and his works.

ST. PROSPER.

ST. PROSPER was of Aquitaine. He was married, and a layman, and secretary of the briefs, to St. Leo, the Pope.

Besides several other little pieces, which are dubious, we have a considerable poem of St. Prosper's against the ungrateful, that is to say, against the enemies of the grace of Jesus Christ, wherein as a profound theologian, he explains the doctrine of the church against the Pelagians and Semipelagians. Mr. Godeau, after many other authors, judges this work an abridgment of all St. Augustin's books upon this subject, and particularly of those which he wrote against the Pelagians. He adds, that the expressions are

wonderful, and that in many places, there is reason to be amazed how it was possible for this saint to unite the beauty of versification with the severity of his subject. What is besides surprising in this poem, is to see the exact regularity with which the maxims of the faith are observed in it, notwithstanding the constraint of verse, and the freedom of the poetic spirit; and that the truths of religion are neither altered nor weakened by the ornaments of poetry. This poem has been translated into French verse. I shall give the preface of it a place here, which will show both the subject of this excellent work, and the style of its author.—

PREFATIO.

Unde voluntatis sanctæ subsistat origo,
Unde animis pietas insit, et unde fides:
Adversum ingratos, falsa et virtute superbo,
Centenis decies versibus excolui.
Quos si tranquilla studeas cognoscere cura,
Tutus ab adverso turbine, Lector, eris.
Nec libertate arbitrii rapiere rebellis,
Ulla nec audebis dona negare Dei.
Sed bona que tibi sunt, operante futebere Christo,
Non esse ex merito sumpta, sed ad meritum.

FRENCH TRANSLATION.

Ma plume en mille Vers combattant pour la Grace,
A pour Dieu combattu,
Attaquant ces Ingrats pleins de la vaine audace
D'une fausse vertu.
J'ai fait voir d'où nos cœurs conçoivent la racine
D'un céleste dessein,
D'où la foi naît dans nous, d'où la vertu divine
Germe dans notre sein.
Si donc ton esprit calme, en lisant cet ouvrage,
N'y cherche que du fruit,
Ces Vers te sauveront du funeste naufrage
Où l'erreur nous conduit.
Tu n'élèveras point contre ton Roi suprême
Ta fière liberté,
Et tu ne croiras point mériter par toi-même
Les dons de sa bonté.
Mais tu reconnaitras que tu dois toute chose
Au Dieu qui t'est si doux;
Et que notre mérite est l'effet, non la cause
De sa Grace dans nous.

THE SAME IN ENGLISH.

Whence holiness of will derives its birth,
Whence piety, and faith, illumine earth,
'Gainst men ungrateful, of false virtue vain,
I sing: a thousand verses form the strain.
If, reader, to such knowledge you aspire,
Search here, and gratify your good desire.
From frantic error safe, the growth of pride,
These, if you study well, will be your guide:
Nor will you dare against the God of Grace
Rebellious human liberty to place,
Nor will you any of his gifts disown;
Nor think you merit, but by Him alone:
Whatever is good in you, you here will trace,
Not as the cause, but the effect, of Grace.

SIDONIUS APOLLINARIS.

C. SOLLIUS APOLLINARIS SIDONIUS was born at Lyons. His father was *præfectus prætorio*, and son-in-law of the emperor Avitus. We have twenty-four of his poems, which are usually printed with the nine books of his epistles. The age in which he lived is an excuse for the hardness and obscurity of his style, and the false quantities of his verses. He renounced poetry with secular things, and composed no verses after he was made bishop of Clermont in Auvergne, which happened in the year 472.

AVIENUS.

RUFUS FESTUS AVIENUS lived in the reign of Theodosius the elder. This author translated the *Phænomena* of Aratus, and the *Metamorphoses* of Dionysius, that is to say, his description of the earth, into Latin verse. He had also turned all Livy into Iambics: a work useless enough, and of which the loss is only to be regretted, as it contained the substance of that excellent historian's matter not come down to us. There are fables of his extant, which he made into elegiac verse from *Æsop*, and dedicated to Theodosius, who is in reality Macrobius: they are very far remote from the purity, beauty, and elegance of Phædrus.

BŒTIUS.

BŒTIUS (*Anicius Manlius Severinus Bœtius*) was sole consul in the year 510. What verses this great man made, are inserted in his five books *De Consolatione Philosophiæ*, which he composed in the prison, where Theodoric king of the Goths, whose prime minister he was, confined him. His prose, which is not the most excellent, seemed to have contributed like shades in painting, to exalt the beauties of his poetry, that abounds with grave sentences and fine thoughts.

FORTUNATUS.

FORTUNATUS was born in the marquise of Trevisano. He was made bishop of Poitiers, and died about the beginning of the seventh century. He is one of the most considerable of the ancient Christian poets. We have eleven books of his miscellaneous poems in lyric and elegiac verse; and four of the Life of St. Martin in hexameters. The merit of his verses is to be judged from the age in which he lived.

CHAPTER II.

OF HISTORIANS.

HISTORY has with reason been called the evidence of time, the light of truth, the school of virtue, the depository of events, and, if the expression may be allowed, the faithful messenger of antiquity. And indeed it opens to our view the vast series of all past ages, and brings them in a manner down to our own times. It makes conquerors, heroes, princes, and all other great personages, appear before us; but without the pompous train which attended them during their lives, and reduced to their own persons, in order to render an account of their actions at the tribunal of posterity, and submit to a judgment, in which flattery has no longer any part, because they have no longer any power. History has also the privilege of approaching the thrones of the princes that reign, and is almost the only counsellor, who either can or dare impart truth to them, and even show them their faults if they have any, but under foreign names, to spare their delicacy, and to render its advice useful by avoiding to give them offence. It is no less intent upon the instruction of private persons. It sets before all in general, of whatsoever age or condition they be, both the models of virtue they are to follow, and the examples they ought to shun.

It is easy to conceive, that history, while artless and rude in its infancy, was not capable of rendering these important services to mankind. It contented itself at first with preserving the remembrance of events, by carving them upon stone and brass, in fixing them by inscriptions, by inserting them into public registers, and by consecrating them in some measure in hymns and songs of religion. It rose by degrees, till at length it attained that height of perfection, to which the Greek and Latin writers carried it.

I shall say nothing of the history of the people of God, composed by Moses, the most ancient and venerable of all historians: neither shall I speak of several historians, whose names only, or at most some small fragments of their writings, have come down to us. I shall confine myself here to the Greek and Latin historians whose works, either in whole or in part, are still extant. As I have taken care to quote them exactly in my Ancient History, and as they are my authorities for what I advanced there, it seemed necessary, that such of my readers as have not been conversant with them, should have some small knowledge of them, and know at least the times in which they lived, the principal circumstances of their lives, the works they composed, and the judgment passed on them by the learned.

ARTICLE I.

OF THE GREEK HISTORIANS.

SECTION I.—HERODOTUS.

HERODOTUS was of Halicarnassus, a city of Caria. He was born in the same year Artemisia queen of Caria died, and four years before the descent of Xerxes

upon Greece, A. M. 3520, Ant. J. C. 484. Seeing his country oppressed by the tyranny of Iydgamis, Artemisia's grand-son, he quitted it, and retired into the Isle of Samos, where he learned the Ionic dialect perfectly. It was in this dialect he composed his history in nine books. He begins it at Cyrus, according to him first king of Persia, and continues it to the battle of Mycale, fought in the eighth year of Xerxes, which includes an hundred and twenty years under four kings of Persia, Cyrus, Cambyses, Darius, and Xerxes, from the year of the world 3405 to 3524. Besides the history of the Greeks and Persians, which are his principal subjects, he treats that of several other nations, as the Egyptians, which takes up his second book. In the work of his which we have, he cites his histories of the Assyrians and Arabians;¹ but nothing of them is come down to us, and it is even doubted whether he finished them, because they are not mentioned by any author. The Life of Homer, ascribed to Herodotus, is not believed to be his.

Herodotus, in order to make himself known to all Greece at one and the same time, chose to make his appearance at the Olympic games, and read his history there, which was received with great applause.² The style in which it is wrote seemed so sweet and flowing, that the audience thought they heard the muses themselves; and on that account, the names of the muses were afterwards given to the nine books of which the history consists. It appears, that he gave a particular reading of his work to the city of Athens, which well deserved that distinction: this was at the celebrated feast of the *Panathenæa*. It is easy to judge how highly a history, composed with so much art and eloquence, must have pleased such refined and delicate ears, and with so curious, and of so exquisite a taste, as those of the Athenians. It is believed to have been rather at this assembly, than the Olympic games, that Thucydides, then very young, perhaps about fifteen, was so much affected with the beauty of this history,³ that he was seized with a kind of transport and enthusiasm, and shed tears of joy in abundance. Herodotus perceived it, and complimented Olorus, the father of the youth, upon that occasion; exhorting him in the strongest terms to take particular care of a son, who already showed so extraordinary a taste for polite learning, and who might one day be the honour of Greece. Great persons cannot be too attentive in encouraging young men by just praises, in whom they observe fine talents, and generous inclinations. It is perhaps to these few words of Herodotus, that the world is indebted for the admirable history of Thucydides.

I have said, that Thucydides might be about fifteen when he was present at the reading of Herodotus's history at Athens. Suidas says, that he was then only a child, or rather very young, *ἡρῶς*. As he was born but thirteen years after Herodotus, the latter himself in consequence could not at that time be above twenty-eight, which highly adds to the merit of that author, who at that age had composed so valuable a work.

Herodotus, crowned with glory, thought of returning into his own country; whither the heart always recalls us. When he arrived there, he exhorted the people to expel the tyrant that oppressed them, and to restate themselves in the possession of their liberty, dearer to the Greeks than life itself. His remonstrances had all the success that could be expected, but met with no other reward than ingratitude, through the envy so glorious and successful an enterprise drew upon him. He was obliged to quit an ungrateful country, and thought proper to take the advantage of an opportunity that offered itself very favourably. The Athenians were at this time sending a colony to Thurium, in that part of Italy called Græcia Major, to inhabit and repeople that city. He joined this colony, and went with it to settle at Thurium, where he ended his days. Thurium was the ancient Sybaris, or at least that city was built in the neighbourhood of Sybaris, and the remaining peo

¹ Suidas.² Lib. i. c. 184.³ Suidas⁴ Marcellin. de vit. Thucyd. Suidas

ple of that ancient place, ruined by the Crotoniate, were settled there.

I defer speaking of the judgment to be passed on Herodotus, till I have gone through the article of Thucydides, in order to compare them with each other.

SECTION II.—THUCYDIDES.

THE birth of Thucydides is dated in the 77th Olympiad, thirteen years after that of Herodotus, A. M. 3533, Ant. J. C. 471. His father was Oloros (so called from a king of Thrace) and his mother Hegesipyle.¹ One of his ancestors was the ancient Miltiades, the son of Cypselus, the founder of the kingdom of the Thracian Chersonesus, who having retired into Thrace by the consent of Pisistratus, there married Hegesipyle the daughter of Oloros king of Thrace, whose daughter of the same name was very probably the mother of our historian. He studied rhetoric under Antiphon, and philosophy under Anaxagoras. He speaks of the first in his viii. book,² and says that he was for abolishing the popular government, and establishing that of the four hundred at Athens. We have already said, that at the age of fifteen he had heard Herodotus's history read with extreme pleasure, either at Olympia, or Athens. As he had a violent inclination for study, he had no thoughts of concerning himself in the administration of the public affairs; and only took care to form himself in the military exercises that suited a young man of his birth. He was employed in the army, and made some campaigns. At twenty-seven he was joined in commission for conducting and settling a new colony of Athenians at Thurium, A. M. 3560, Ant. J. C. 444. He passed three or four years in that employment, after which he returned to Athens. He then married a very rich wife of Thrace, who had a great number of mines in that country. By this marriage his circumstances were rendered easy, and he obtained the means of expending considerable sums. We shall soon see the good use he made of this advantage.

In the meantime the Peloponnesian war broke out, and occasioned great revolutions and troubles in Greece, A. M. 3573, Ant. J. C. 431. Thucydides, who foresaw that it would be of long duration, and attended with important events, formed from the first the design of writing the history of it.³ It was necessary for this purpose to have the most faithful and certain accounts, and to be informed to the most minute circumstances of all that passed on both sides in every expedition and campaign. And this he effected in an admirable manner that has few examples. As he served in the troops of Athens, he was an eyewitness of what passed in the army of the Athenians till the eighth year of that war, that is to say, till the time of his banishment, of which this was the occasion, A. M. 3580, Ant. J. C. 424.⁴ He had been commanded to go to the relief of Amphipolis upon the frontiers of Thrace, a place of great importance to both parties. Brasidas, general of the Lacedæmonians, marched thither first, and took the place. Thucydides on his side took Elone upon the river Strymon. This advantage, which was inconsiderable to Athens in comparison with the loss of Amphipolis, was looked upon as nothing. His having failed of relieving Amphipolis through want of expedition, was made a crime, and the people, at the instigation of Cleon, punished his pretended fault by sentence of banishment.

Thucydides made his disgrace conduce to the preparation and executing of the great design he had formed of composing the history of this war. He employed the whole time of his banishment, which continued twenty years, in collecting his materials with more diligence than ever. His residing sometimes in the country of Sparta, and sometimes in that of Athens, extremely facilitated the inquiries he had to make. He spared no expense for that purpose, and made great presents to the officers on both sides, in order

to his being informed of all that passed in the two armies. He had taken the same method whilst in the service.

The Athenians, after the expulsion of the thirty tyrants by Thrasybulus, permitted all the exiles to return, except the Pisistratides, A. M. 3601, Ant. J. C. 403. Thucydides took the benefit of this decree, and returned to Athens after a banishment of twenty years, at the age of sixty-eight. It was not till then, according to Mr. Dodwell, that Thucydides actually applied himself to the composition of his history, of which he had hitherto been collecting and disposing the materials with incredible care. His subject, as I have already observed, was the famous Peloponnesian war, which continued twenty-seven years. He carried it down no farther than the twenty-first inclusively. The six years which remained were supplied by Theopompus and Xenophon. He used the Attic dialect in his history, as the purest, and most elegant, and at the same time the most nervous and emphatical: besides which it was the idiom of Athens his country. He tells us himself, that in writing it, his view was not to please, but to instruct his readers.⁵ For which reason he does not call his history a work composed for ostentation, *ἀνὰ δόξαν*, but a monument to endure for ever, *κατὰ τὸ αἶμα*. He divides it regularly by years and campaigns. There is a French translation of this excellent historian by Mr. D'Ablancourt.

Thucydides is believed to have lived thirteen years after his return from banishment, and the end of the Peloponnesian war. He died A. M. 3613, Ant. J. C. 391, at the age of fourscore and upwards, at Athens according to some, and in Thrace according to others whence his bones were brought to Athens. Plutarch says, that the tomb of Thucydides was shown in his time within the monument of Cimon's family.⁶

COMPARISON OF HERODOTUS AND THUCYDIDES.

DIONYSIUS of Halicarnassus, an excellent historian and critic, in a letter to Pompey the Great, compares Herodotus and Thucydides, the two most esteemed of the Greek historians, and expresses his judgment of them, as well in respect to history itself, as the style they use. I shall repeat in this place the principal points in this short dissertation: but we must remember that our critic is of Halicarnassus as well as Herodotus, which may perhaps give room to suspect him of some partiality to his countryman.

I. MATTER OF HISTORY CONSIDERED.

THE first duty of an author, who intends to compose a history, and to transmit the knowledge and remembrance of past actions to posterity, is, in my opinion, to make choice of a subject great, noble, and affecting: which by the variety and importance of facts, may render the reader attentive, and keep him always in a kind of busy suspense; and, lastly, engross and please him by the nature itself of the events, and the good success that terminates them.

Herodotus may indisputably in this point be said to take place of Thucydides. Nothing could be more agreeable and affecting than the subject chosen by the former. It is all Greece, jealous to the degree every body knows she was of her liberty, attacked by the most formidable power of the universe, which, with innumerable forces by sea and land, undertakes to crush and reduce her into slavery. It is nothing but victories upon victories, as well by sea as land, gained over the Persians by the Greeks, who, without mentioning the moral virtues carried to the highest degree of perfection, show all the valour, prudence, and military abilities, that can be expected from the greatest of captains. In fine, this war, so long and terrible, in which all Asia, departing out of herself and overflowing like a deluge, seems to make the total destruction of the little country of Greece inevitable, terminates with the shameful flight of Xerxes, the most powerful king of the earth, who is reduced to escape in a little boat, and with a success, that extinguishes for ever in the Persians all thoughts and desires of attacking Greece again with open force.

¹ Marcellin. de vit. Thucyd. Suidas.

² Thucyd. l. viii. p. 592.

³ Thucyd. l. i. p. 351.

⁴ Thucyd. l. iv. p. 321.

⁵ Thucyd. l. i. pp. 15, 16.

⁶ In vit. Cim. p. 480.

We see nothing of this kind in the choice Thucydides has made of his subject. He confines himself to a single war, which is neither just in its principle, very various in its events, nor glorious to the Athenians in its success. It is Greece become frantic and possessed with a spirit of discord, that imbrues her hands in her own blood, arming Greeks against Greeks, allies against allies. Thucydides himself, from the beginning of his history, declares and gives his reader a view of all the evils, with which that unfortunate war would be attended: slaughter of men, plundering of cities, earthquakes, droughts, famine, diseases, plagues, pestilence, in a word, the most dreadful calamities. What a beginning, what a prospect is this! Is there any thing more capable of disgusting and shocking the reader?

Such is the first reflection of Dionysius of Halicarnassus, which, in my opinion, does not at all affect the merit of the writer. The choice of the matter, and the glorious success of a war, do not depend upon an author cotemporary with his subject, who is not master of his events, and who neither can nor ought to write any thing but what happens. He is unfortunate in being the witness of none but deplorable facts, but not the less excellent for that reason; which is at most a reproach, that will lie only against a tragic or epic poet, who disposes his matter at his own discretion. But as to an author, who writes the history of his own times, we have no right to require any thing of him, but that he should be true, judicious, and impartial. Is the sole end of history to delight the reader? Ought it not rather be to instruct him: and are not the great calamities, which are the necessary effects of bad passion and injustice, highly useful in teaching mankind to avoid them?

In the second place, it is very important for the writer to make a good choice of his point of view, in order to know where he is to begin, and how far carry on, his history. And in this Herodotus has succeeded wonderfully. He begins with relating the cause of the war declared by the Persians against Greece, which is the desire to revenge an injury¹ received above two hundred years before, and he concludes the relation of it with the exemplary punishment of the Barbarians. The taking of Troy could at most be only the pretext of this war, and what a pretext was it! The real cause was undoubtedly the ambition of the kings of Persia, and the desire of avenging themselves upon the Greeks for the aid they gave the Ionians. As for Thucydides, he begins his history with describing the unhappy situation of the affairs of the Greeks at that time; a first prospect little agreeable and affecting. He expressly imputes the cause of this war to the city of Athens; though he might have ascribed it to the envy of Sparta, its rival from the time of the glorious exploits by which the Athenians had so highly distinguished themselves in the war with the Persians.

This second reflection of our critic seems still worse founded than the first. Thucydides might have advanced this pretext, but I do not know whether he could have done it with truth and justice: or rather one may positively affirm, that he could not advance it with any appearance of reason whatsoever. It is certain, if we may believe Plutarch, that the cause of the war ought to be imputed to the unbounded ambition of the Athenians, who affected universal domination. It is noble in Thucydides, to have sacrificed the glory of his country to the love of truth: a quality in which the most essential merit and highest praise of a historian consist.

Thirdly, Herodotus, who knew that a long relation of the same matter, how agreeable soever it might be, would disgust, and become tedious to the reader, has varied his work, after the manner of Homer, by episodes and digressions, which add much to its beauty and the reader's pleasure. Thucydides, on the contrary, is always uniform and in the same tone, and pursues his subject without giving himself time to take breath: heaping up battles upon battles, preparations upon preparations, harangues upon harangues; per-

celling out, to use that expression, actions by campaigns, which might have been shown in all their extent with more grace and perspicuity.

Dionysius Halicarnassensis seems here not to have had sufficient attention to the laws of history, and to have almost believed, that an historian might be judged of in the same manner as a poet. Many people blame Herodotus for his long and frequent digressions, as a considerable defect in point of history. I am far from agreeing with this opinion. They must have been very agreeable to the Greeks, at a time when the history of those different nations, of which they treat, was entirely unknown to them. But I am still farther from blaming the plan and conduct of Thucydides, who hardly ever loses sight of his subject; for this is one of the principal rules of history from which a writer ought never to depart without the justest reasons.

Fourthly, Thucydides, religiously attached to truth, which ought to be the foundation of history, and which is certainly the first and most essential quality of a historian, inserts nothing fabulous in his work, has no regard to embellishing and enlivening it by relating facts and events of the marvellous kind, and does not, upon every occasion, introduce the gods and goddesses, acting by dreams, oracles, and prodigies. In this he is indisputably superior to Herodotus, who is little delicate and cautious in respect to many facts which he advances, and is generally credulous even to weakness and superstition.

Fifthly, if we may believe Dionysius of Halicarnassus, there is in the writings of Thucydides a gloominess of character, and a natural roughness of humour, which his banishment had sharpened and exasperated. He is most exact in noting all the faults, and wrong measures, of the generals; and if he sometimes remarks their good qualities and successes, for he often passes them over in silence, he seems to do it with regret and against his will.

I do not know whether this censure be well founded; but my reading of Thucydides gave me no such idea of him. I perceived indeed that his matter was sad and gloomy, but not the historian. Dionysius of Halicarnassus discerns a quite different temper in Herodotus, namely, a character of kindness and good nature always equal to itself, with an extreme sensibility for the good and bad fortune of his country.

2. ELOCUTION CONSIDERED.

Several things may be considered in respect to elocution.

Purity, propriety, and eloquence of language, These qualities are common to both our historians, who equally excelled in them, but always in adhering to the noble simplicity of nature. It is remarkable, says Cicero, that these two authors, who were cotemporary with the sophists, that had introduced a florid, trim, formal, artificial style, and whom Socrates to that reason called *σοφιστικῶς*; never gave into those minute or rather frivolous ornaments.²

Diffusion or brevity of style. These particularly distinguish and characterize them. The style of Herodotus is sweet, flowing, and more diffuse; that of Thucydides lively, concise, and vehement. "The one," to use Cicero's words, "is like a calm stream, whose waves flow with majesty; the other like an impetuous torrent; and when he speaks of war we seem to hear the trumpet sound." *Alter sine ulla salebris quasi sedatus amnis fluit: alter incitator fertur, et de bellicis rebus canit etiam quodammodo bellicum.*³ "Thucydides is so full of things, that with him the thoughts are almost equal in number to the words; and at the same time he is so just and close in his expressions, that one cannot tell whether it be the words that adorn the thoughts, or the thoughts the word." *Quæ (Thucydides) ille creber est*

¹ Sophistes *σοφιστικῶς* appellat in Phædro Socrates quorum satis arguta multa, sed æmula quædam—nimiumque depicta. Quæ magis aut. Herodotus Thucydidesque mirabiles: quorum ætas cum le coram tempora, quos nominamus, incidisset, longissimæ tamen ipsi à talibus delicia, vel potius ineptiis absteruerunt. Cic. in Orat. c. 39.

² Orat. c. 39.

³ The destruction of My by the Greeks, which city was in alliance with Persia.

*verum frequentia, ut verborum prope numerum sententiarum numero consequatur: ita porro verbis aptus et pressus ut necias utrum res oratione, an verba sententia illustrentur.*¹ This close, and in a manner abrupt, style, is wonderfully proper for giving strength and energy to discourse, but is generally attended with obscurity. And this is what has happened to Thucydides, especially in his harangues, which in many places are almost unintelligible. *Ipsæ illæ sententiæ quæ multas habent obscuras abditasque sententias, vix ut intelligantur.*² so that the reading of this author requires an uninterrupted attention, and becomes a serious study. For the rest, it is not surprising that Thucydides, as he alludes in his harangues to many circumstances well known in his time, and forgot afterwards, should have obscurities in the sense of readers so many ages removed from those events. But that is not the principal cause of them.

What has been said, shows what we are to think of our two historians, in respect to the passions, which, as every body knows, prevail in and constitute the principal merit of Eloquence. Herodotus succeeds in those which require sweetness and insinuation, and Thucydides in the strong and vehement passions. Both have harangues, but they are less frequent and shorter in the first. Dionysius of Halicarnassus finds a defect in those of Thucydides, which is, that they are always in one and the same form and tone, and that the characters of the speakers are ill sustained in them; whereas Herodotus is much happier in those respects. Some persons blame harangues in history in general, and especially the direct. I have answered this objection elsewhere.

I shall conclude this article, which has become longer than I intended, with the elegant and judicious character Quintilian³ has drawn of our two authors, in which he includes part of what has hitherto been said. *Historium multi scripsere, sed nemo dubitat duos longe ceteris præferendos, quorum diversa virtus laudem pene æq. parem consecuta. Densus, et brevis, et semper instans sibi Thucydides: dulcis, et candidus, et fugax Herodotus. Ille concitatus, hic remissis affectionibus melior: ille concionibus, hic sermonibus: ille vi, hic voluptate.* "Greece has produced many famous historians; but all agree in giving the preference greatly to two of them, who by different qualities have acquired almost equal glory. Thucydides is close, concise, and always hastening on⁴ to the point in view; Herodotus is sweet, perspicuous, and more diffused. The one is best for the vehement passions, the other for the soft and agreeable. The one succeeds in harangues, the other in common discourse. Force strikes us in the one, and pleasure charms us in the other." What, in my opinion, highly exalts the merit of Herodotus and Thucydides, is that both of them, with few models they could follow, carried history to its perfection by a different method. The general esteem of the ancients for these two authors, is a circumstance highly in their favour. So many great men could hardly be mistaken in their judgment of them.

SECTION III.—XENOPHON.

I HAVE elsewhere treated with sufficient extent all that relates to the life and works of Xenophon; I shall only say a few words regarding them here, to recall the reader's remembrance of them, and their dates.

Xenophon, the son of Gryllus, was born at Athens in the third year of the 82d Olympiad, A. M. 3554, Ant. J. C. 450. He was something more than twenty years younger than Thucydides; and was a great philosopher, historian, and general. He engaged himself in the troops of young Cyrus, who marched against his brother Artaxerxes Mnemon king of Persia, in order to dethrone him, A. M. 3603, Ant. J. C. 401. This occasioned his banishment, the Athenians

being at that time in amity with Artaxerxes. The retreat of the Ten Thousand under the conduct of Xenophon is known to every body, and has immortalized his fame. After his return, he was employed in the troops of Sparta, at first in Thrace, and afterwards in Asia, till Agesilaus was recalled, whom he accompanied as far as Bœotia. He then retired to Scyllounta, where the Lacedæmonians had given him lands, situate at no great distance from the city of Ellis. He was not idle in his retirement. He took advantage of the leisure it afforded him to compose his histories. He began with the Cyropædia, which is the history of Cyrus the Great, in eight books. It was followed with that of Cyrus the younger, which includes the famous expedition of the Ten Thousand in seven books. He then wrote the Grecian history in seven books also, which begins where Thucydides left off. It contains the space of almost forty-eight years, from the return of Alcibiades into Attica, to the battle of Mantinea. He also composed several particular tracts upon historical subjects.

His style, under an air of simplicity and natural sweetness, conceals inimitable graces, which persons of little delicacy of taste may not fully perceive and admire, but which did not escape Cicero, and which made him say, "That the muses seemed to speak by the mouth of Xenophon:" *Xenophonis voce musas quasi locutas ferunt.*⁵ Quintilian, in the praise he has left us of this author, has done little more than paraphrase that thought. *Quid ego commemorem Xenophonis jucunditatem illam inefficetam, sed quam nulla possit affectatio consequi? ut ipsæ finitise sermonem Gratia videantur: et, quod de Pericle veteris Comædiæ testimonium est, in hunc transferri justissimè possit, in labris ejus sedisse quandam persuadendi deam.*⁶ "What praises does not the charming sweetness of Xenophon deserve? so simple, so remote from all affectation, but which no affectation can ever attain. The Graces themselves seem to have composed his discourse; and what the ancient comedy said of Pericles may most justly be applied to him, that the goddess of persuasion dwelt upon his lips."

SECTION IV.—CTESIAS.

CTESIAS of Caidos was Xenophon's cotemporary. He was taken prisoner after the battle of young Cyrus with his brother Artaxerxes. Having cured the king of the wound he received in it, he practised physic in the court of Persia with great success, and continued near the person of that prince seventeen years.

He wrote the history of the Assyrians and Persians, in twenty-three books.⁷ One of the fragments preserved by Photius, (for we have nothing of Ctesias but fragments) informs us, that his six first books treated of the history of Assyria, and of all that had happened there before the foundation of the Persian empire: and that from the seventh to the thirteenth inclusively, he related at large the reigns of Cyrus, Cambyses, Magus, Darius, and Xerxes. He continued the history of the Persians down to the third year of the 95th Olympiad, at which time Dionysius the elder, tyrant of Syracuse, was making great preparations of war against the Carthaginians.⁸

He contradicts Herodotus almost in every thing, and is particularly industrious to render him discreditable.⁹ But his attempt has fallen upon himself, and he is regarded by all the learned as a writer full of lies and unworthy of belief, as Aristotle calls him — *ὁκλῆς ἱστοριογράφος*. He also differed very often with Xenophon in his accounts. It is surprising that Diodorus Siculus, Trogus Pompeius, and some others, have chosen to follow Ctesias rather than Herodotus, and even than Xenophon. They were no doubt deceived by the assurance, with which he affirms, that he advanced nothing in his writings, of which he was not either an eye-witness himself, had been informed by the Persians concerned, or had extracted out of their archives.

⁹ Photius.

SECTION V.—POLYBIUS.

I HAVE already spoken of this celebrated historian in several parts of my history, and shall only add in this place what seems most necessary for giving the reader some idea of his character, actions, and works. His life, of sufficient extent and very well wrote, may be found annexed to the Chevalier Folard's translation of Polybius, of which I shall make great use, but not without abridging it considerably.

Polybius was of Megalopolis, a city of Peloponnesus in Arcadia. He came into the world about the 548th year from the foundation of Rome, A. M. 3800, Ant. J. C. 204. His father's name was Lycortas, famous for his constancy in supporting the interests of the Achæan league, whilst under his government. He was educated, like all the children of his nation, in the highest veneration for the Divinity; a pious opinion in which the Arcadians placed their principal glory, and in which he persevered with so much constancy during his whole life, that few profane authors have thought more religiously, or spoke with more dignity, of the Godhead than he. Lycortas his father, a profound statesman, was his master in politics; as Philopœmen, one of the greatest and most intrepid captains of the ancient world, was in war. He reduced to practice the excellent lessons they had taught him in the different negotiations and affairs, wherein he was employed either jointly with his father or alone, especially during the war of the Romans with Perseus the last king of Macedonia, as I have observed in its place.

The Romans, after the defeat of that prince, in order to humble and punish such of the Achæans, as had been most warm in supporting the Achæan league, and had seemed most averse to their views and interests, carried away a thousand of them to Rome, A. M. 3837, Ant. J. C. 167: of which number was Polybius.

During his stay there, whether from his reputation having gone before him, or his birth and merit having made the greatest persons of Rome desire his acquaintance, I know not, but he soon acquired the friendship of Q. Fabius, and of Scipio the younger, both sons of Paulus Æmilius, the one adopted by Q. Fabius, and the other by P. Cornelius Scipio, the son of the first Scipio Africanus. He either lent them his own, or borrowed books for them of others, and conversed with them upon the subjects of which they treated. Charmed equally with his great qualities, they prevailed with the prætor, that he should not leave Rome with the rest of the Achæans. What passed at that time between young Scipio, who was but eighteen, and Polybius, and which made way for the great intimacy they afterwards contracted, is, in my opinion, a most affecting piece of history, and may be of great instruction to young nobility. I have related this circumstance at the end of the history of the Carthaginians.

It is evident that Polybius composed the greatest part of his history, or at least collected his materials for it, at Rome. For where could he be better informed of the events which had passed, either during the whole course of the second Punic war, than in the house of the Scipios; or during the campaigns against Perseus, than in that of Paulus Æmilius? The same may be said in respect to all the foreign affairs, which occurred either whilst he was at Rome, or accompanied Scipio. As he was upon the spot either to see with his own eyes, or to receive news from the best informed, he could not fail of being exactly informed of every thing most memorable that happened.

The Achæans, after many fruitless applications to the senate, at length obtained the return of their exiles, A. M. 3854, Ant. J. C. 150: their number was then reduced to three hundred. Polybius did not use this permission to go home to Megalopolis, or if he did, it was not long before he rejoined Scipio, as he was with him three years after at the siege of Carthage. After this expedition, he made some voyages upon account of the history he had always in view. But how great was his grief, when in re-

turning into Peloponnesus he saw Corinth burned and demolished, his country reduced into a province of the Roman empire, and obliged to submit to the laws of a foreign magistrate to be sent thither every year from Rome. If any thing could console him in so mournful a conjuncture, it was the opportunity his credit with the Romans gave him of obtaining some mitigations of the misfortunes of his country, and the occasion he had of defending the memory of Philopœmen, his master in the art of war, whose statues some were for pulling down. I have related this fact.

After having rendered his country many services, he returned to Scipio at Rome, whence he followed him to Numantia, at the siege of which he was present, A. M. 3877, Ant. J. C. 127. When Scipio died he retired into Greece; (for what security could there be for Polybius at Rome, after Scipio had been put to death by the faction of the Gracchi?) and having enjoyed during six years in the bosom of his country, the esteem, gratitude, and affection of his dear citizens, he died at the age of fourscore and two, of a wound he received by a fall from his horse, A. M. 3883, Ant. J. C. 121.

His principal works are, the life of Philopœmen; a treatise upon the Tactics, or the art of drawing up armies in battle; the history of the Numantian war, of which Cicero speaks in his letter to Lucceius; and his universal history. Of all these works only the last remains, and that very imperfectly. Polybius himself calls it *Universal History*, not in respect of times, but of places, because it contained not only the wars of the Romans, but all that passed in the known world during the space of fifty-three years from the beginning of the second Punic war to the reduction of the kingdom of Macedonia into a province of the Roman empire.

No history presents us, in so short a space of time, with so great a diversity of events, all of them decisive, and of the last importance. The second Punic war between the two most powerful and warlike people of the earth, which at first brought Rome to the very brink of destruction, and then, by a very surprising reverse of fortune, reduced the power of Carthage, and prepared the way for its final ruin; the war with Philip, whom the ancient glory of the Macedonian kings, and the name of Alexander the Great, still dreadful in some sense, rendered formidable; the war with Antiochus, the most opulent king of Asia, who drew after him great armies both by sea and land; and that with the Ætolians his allies, a warlike people, who pretended to give place to no nation in valour and bravery; and finally, the last Macedonian war with Perseus, which gave the fatal blow to that empire, once so terrible, and to which the whole earth was too narrow;—all these events, within the space of little more than fifty years, gave the wondering world a sense of the Roman greatness, and showed it that Rome was destined to command all the nations of the universe. Could Polybius desire a greater, more magnificent, or more affecting subject of history? All the facts which happened in this space of time, composed thirty-eight books, in the front of which he had placed two, by way of introduction to the others, and of continuation to the history of Timeus. His own consisted therefore of forty books, of which we have only the five first as Polybius left them, and fragments, sometimes considerable enough, of the twelve that follow, with the *embassies, and examples of virtue and vice*, which the emperor Constantine Porphyrogenitus, in the twelfth century, caused to be extracted from Polybius' history, and to be inserted in his *Political Fables*; a great collection, in which all that had been written by the ancient historians upon certain matters, were disposed under their several heads, and in which one might get instruction with regard to any particular circumstance in which one might be placed without the trouble of reading all these historians. And this is the use and great advantage of history which, properly speaking, is the science of kings

generals, ministers of state, and of all who are employed in, or have any relation to, government. For men are always the same; they act in all ages upon the same principles, and the same springs almost always set states in motion, and occasion the various revolutions that happen in them. That prince was therefore very wise to conceive the design of establishing in his empire a kind of perpetual council, composed of the most prudent, the most experienced, and most profound persons of every kind, that the ancient world had produced. This design, so laudable in itself, proved however the great misfortune of all succeeding ages. As soon as it became the habit to consult only these abridgments, (to which our natural indolence and sloth soon lead us) the originals were considered as useless, and no farther pains were taken to copy them. The loss of many important works are ascribed to this cause; though other circumstances no doubt contributed also to it. The abridgments themselves, of which I am speaking, are a proof of this. Of fifty heads, which they contained at first, only two are come down to us. If they had been preserved entire, they might in some manner have consoled us for the loss of the originals. But all has undergone the common fate of human things, and leaves us only matter of regret.

What a misfortune it is that such an history as Polybius' is lost! Who ever was so attentive and exact in assuring himself of the truth of facts as he? That he might not err in the description of places, a circumstance highly important in relating military affairs, as an attack, a siege, a battle, or a march, he went to them himself, and made a great number of voyages with that sole view.¹ Truth was his only view. It is from him we have this celebrated maxim, "That truth is to history, what eyes are to animals;" that as the latter are of no use without sight, so history without truth is only amusing and unprofitable narration. But the facts may here be said to be the least we have to regret. What an irreparable loss are the excellent maxims of policy, and the solid reflections of a man, who, with a natural passion for public good, had made it his whole study; who during so many years had been present in the greatest affairs; who had governed himself, and whose government had given such general satisfaction! In these the principal merit of Polybius consists, which is what a reader of taste ought principally to look for in him. For we must allow, that the reflections (I mean those of so wise a man as Polybius) are the soul of history.

His digressions are condemned. They are long and frequent, I confess; but they abound with such curious facts, and useful instructions, that we ought not only to pardon him that fault, if it be one, but think ourselves obliged to him for it. Besides, we should remember, that Polybius undertook the universal history of his own times, as he entitles his work; which ought to suffice in vindication of his digressions.

Dionysius of Halicarnassus, a critic of great reputation in the ancient world, has passed an opinion upon our historian, which gives us great reason to question his judgment in matters of criticism. Without any circumspection he flatly tells us, that no patience is of sufficient proof to endure the reading of Polybius; and his reason for it is, because that author knows nothing of the disposition of words: that is to say, his history had not such round, flowing, numerous periods, as he uses himself, which is an essential fault in history. A military, simple, negligent style, is to be pardoned in such a writer as ours, who is more attentive to things, than to turns of phrase and diction.² I shall make no scruple therefore to prefer the judgment of Brutus to that of this rhetorician, who, far from finding it tedious to read Polybius, was continually perusing him, and made extracts from him at his leisure hours. We find him employed in this manner the evening before the battle of Pharsalia.

SECTION VI.—DIODORUS SICULUS.

DIODORUS was of Agyrium, a city of Sicily, whence he was called *Diodorus Siculus*, to distinguish him from several other authors of the same name. He lived in the time of Julius and Augustus Cæsar.

The title of his work is, *The Historical Library*. It contains the history of almost all the nations of the world, whom he in a manner passes in review before his reader: Egyptians, Assyrians, Medes, Persians, Greeks, Romans, Carthaginians, and several more. It consisted of forty books, of which he gives us the plan and series in his preface. The six first, says he, contain what passed before the Trojan war, that is to say, all the fabulous time; in the first three are the antiquities of the barbarians, in the other three those of the Greeks. The eleven that follow contain the history of all nations from the Trojan war to the death of Alexander the Great, inclusively. In the other twenty-three this general history is continued down to the beginning of the war with the Gauls, in which Julius Cæsar, after having subjected many very warlike nations of Gaul, extended the limits of the Roman empire to the British Isles.

Of these forty books, only fifteen remain with some fragments, most of them preserved by Photius, and the extracts of Constantine Porphyrogenitus. The five first follow each other in their order. In the first, Diodorus treats of the origin of the world, and of what relates to Egypt. In the second, of the first kings of Asia, from Ninus to Sardanapalus; of the Medes, Indians, Scythians, and Arabians. In the third, of the Æthiopians and Libyans. In the fourth, of the fabulous history of the Greeks. In the fifth, of the fabulous history of Sicily, and the other islands. The sixth, seventh, eighth, ninth, and tenth books are lost. The following seven, from the eleventh to the seventeenth, inclusively, contain the history of ninety years, from the expedition of Xerxes into Greece to the death of Alexander the Great. The three following, the eighteenth, nineteenth, and twentieth, treat of the disputes and wars of Alexander's successors down to the disposition of the two armies for the battle of Ipsus. And there ends what remains of the history of Diodorus Siculus, in a very important part of it, and at the moment a battle is going to be fought, which decides the fate of Alexander's successors. In these last ten books, which properly include the continued history of the Persians, Greeks and Macedonians, Diodorus introduces also the history of other nations, and in particular that of the Romans, according as its events concur with his principal subject.

Diodorus tells us himself in his preface, that he employed thirty years in composing his history, in which his long residence at Rome was of great use to him. Besides this he travelled over, not without frequent dangers, many provinces of Europe and Asia, to inform himself fully of the situation of the cities and other places of which he was to treat; which is no indifferent circumstance in respect to the perfection of history.

His style is neither elegant nor florid, but simple, clear, and intelligible: that simplicity has however nothing low and creeping in it. Though he does not approve of interrupting the thread of history with frequent and long harangues, he does not entirely reject the use of them, and believes they may be employed with great propriety, when the importance of the subject requires it.³ After the defeat of Nicias, the Syracusans deliberated in their assembly upon the treatment it was proper to give the Athenian prisoners.⁴ Diodorus repeats the harangues of two orators, which are long and very fine, especially the first. Neither his Chronology, nor the names either of the Archons of Athens, or of the consuls and military tribunes of Rome, into which many errors have crept, are to be relied on. Very solid and judicious reflections occur from time to time in this history. He takes particular care not to ascribe the success of wars, and other enterprises, to chance or blind fortune, with

³ Diod. l. xx. p. 749.

⁴ Ibid. l. xiii. p. 149—161

many other historians, but to a Wisdom and Providence which presides over all events. Every thing well weighed and considered, we ought to set a great value upon the works of Diodorus come down to us, and very much to regret the loss of the rest, which would have thrown great light upon every part of ancient history.

DIONYSIUS OF HALICARNASSUS.

THE historian of whom we now speak, apprises us himself, in the preface of his work, that there is little known of his person and history. He was a native of Halicarnassus, a city of Caria in Asia Minor, the country of the great Herodotus. His father's name was Alexander, of whom nothing more is known. He arrived in Italy about the middle of the 187th Olympiad, at the time Augustus Cæsar terminated the civil war with Antony. He remained twenty-two years at Rome, which he employed in attaining the Latin tongue with great exactness, in studying the literature and writings of the Romans, and especially in carefully collecting materials for the work he had in view: for that seems to have been the motive of his voyage. In order to succeed the better in it, he contracted a great intimacy with all the most learned persons of Rome, with whom he frequently conversed. To their informations by word of mouth, which were of great use to him, he added a close application to the study of the Roman historians in greatest esteem, as Cato, Fabius Pictor, Valerius Antias, and Licinius Macer, who are often quoted by Livy. When he believed himself sufficiently informed in all that was necessary to the execution of his design, he applied himself to it. The title of his work is *The Roman Antiquities*, which he called it, because, in writing the Roman history, he traces it back to its most ancient origin. He continued his history down to the first Punic war, at which period he stopped, perhaps because his plan was to clear up that part of the Roman history which was least known. For, from the first Punic war, that history had been wrote by cotemporary authors in every body's hands.

Of the twenty books, which compose his *Roman Antiquities*, we have now only the first eleven, that come down no farther than the 312th year from the foundation of Rome. The nine last, which contained all that happened to the 488th according to Cato, and the 490th according to Varro, have perished through the injuries of time. Almost as often as we speak of any ancient author, are we obliged to deplore the loss of part of his works, especially when they are excellent, as were those of the writer in question.

We have also some fragments of his upon the subject of embassies, which are only detached and very imperfect pieces. The two heads of Constantine Porphyrogenitus which remain, have also preserved several fragments of this author. Photius, in his *Bibliotheca*, speaks of the twenty books of antiquities, as of a perfect work which he had read. He cites, besides, an abridgment, which Dionysius Halicarnassensis made of his history in five books. He praises it for its purity, elegance, and exactness; and makes no scruple to say, that this historian in his epitome has excelled himself.

We have two translations sufficiently recent of the history of Dionysius Halicarnassensis, which have each their merit, but of a different kind. It does not belong to me to compare them, or to give one the preference to the other. I leave that to the public, which has a right to pass judgment upon the works laid before it. I only propose to make great use of them in composing the Roman history.

Father Jay, the Jesuit, in the preface to his translation of Dionysius of Halicarnassus, gives us an idea and character of this author, to which it is hard to add any thing. I shall almost do no more than copy him, except it be in abridging him in some places.

All the writers, ancient and modern, who have spoke, with any judgment, of his history, discover in him facility of genius, profound erudition, exact discernment, and judicious criticism. He was versed

in all the liberal arts and sciences, a good philosopher, a wise politician, and an excellent rhetorician. He has drawn himself in his work without designing it. We see him there a friend of truth, remote from all prejudice, temperate, zealous for religion, and a declared enemy of the impiety which denies Providence. He does not content himself with relating the wars abroad; but describes with the same care the transactions of peace, that conduce to good order at home, and to the support of union and tranquillity among the citizens. He does not tire the reader with tedious narrations. If he deviates into digressions, it is always to instruct him in something new and agreeable. He mingles his accounts with moral and political reflections, which are the soul of history, and the principal advantage to be attained from the study of it. He treats his matter with far more abundance and extent than Livy; and what the latter includes in his three first books, the Greek authors make the subject of eleven. It is certain that, without what remains of Dionysius Halicarnassensis, we should be ignorant of many things, of which Livy and the other Latin historians have either neglected to inform us, or speak of very superficially. He is the only writer that has given us a perfect knowledge of the Romans, and has left posterity a circumstantial account of their ceremonies, worship, sacrifices, manners, customs, discipline, triumphs, *Comitia* or assemblies, *Census* or the numbering, assessing, and distribution of the people into tribes and classes. We are indebted to him for the laws of Romulus, Numa, and Servius Tullius, and for many things of the like nature. As he wrote his history only to inform the Greeks, his countrymen, in the actions and manners of the Romans, which were unknown to them, he thought himself obliged to be more attentive and particular upon those heads than the Latin historians, who were not similarly situated.

As to the style which the Greek and Latin historians have used in their work, F. Jay contents himself with the judgment Henry Stephens passes upon it: "That the Roman history could not be better written than Dionysius of Halicarnassus has done it in Greek, and Livy in Latin." For my part I am far from subscribing to this opinion, which gives Dionysius of Halicarnassus a kind of equality with Livy and seems to make them equal in point of style. I find an infinite difference between them in this respect. In the Latin author, the descriptions, images and harangues, are full of beauty, force, vivacity, sublimity, majesty: in the Greek, every thing is weak, prolix, and languid, in comparison with the other I could wish, that the limits of my work would admit me to insert here one of the finest facts in the history of ancient Rome: that is the combat of the Horatii and Curiatii, and to compare the two passages together. In Livy the reader believes himself actually present while they engage. At the first sight of their naked swords, the noise and clash of their arms, and the blood streaming from their wounds, he finds himself struck with horror. He shares with the Romans and Albans their different emotions of fear, hope, grief, joy, which on both sides alternately succeeded each other. He is continually in suspense, and anxiously waits the success, which is to decide the fate of the two people. The narration of Dionysius, which is much longer, gives the reader scarce any of these emotions. He runs it over in cold blood, without quitting his natural tranquillity and indifference, and is not in a manner transported out of himself by the violent agitations he feels from Livy on every change that happens in the fortune of the combatants. Dionysius of Halicarnassus may have several advantages over Livy in other respects, but, in my opinion, is by no means to be compared to him in respect of style.

PHILO. ΑΡΙΩΝ.

PHILO was a Jew of Alexandria, of the sacerdotal race, and descended from the most illustrious families of the whole city. He had several sacred writings, which are the science of the Jews, with great care. He acquired much reputation also by human

earning and philosophy, especially that of Plato. He was deputed by the Jews of Alexandria to the emperor Caligula, to vindicate the right they pretended to have to the freedom of that city.

Besides many other works, according to Eusebius,¹ he wrote the sufferings of the Jews under Caligula, in five books. Only the two first have been preserved, of which the one has for its title *Embassy to Caius*. The three others are lost.² It is said that Philo in the reign of Claudius having read in the full senate his writings against the impiety of Caligula, they were so well approved, that they were ordered to be placed in the public library.

APHION, or APPION, was an Egyptian, born at Oasis, in the most remote part of Egypt. But having obtained the freedom of Alexandria, he called himself a native of that place. He was a grammarian by profession, as those who excelled in human learning and the knowledge of antiquity were termed in those times. He was placed at the head of the deputies sent by the people of Alexandria to Caligula against the Jews of that city. He had been the pupil of Didymus, a celebrated grammarian of Alexandria.³ He was a man of great learning, and perfectly versed in the Grecian history, but very full of himself, and passionately enamoured of his own merit.

His history of Egypt is cited by authors, and contained almost whatever was most memorable in that famous country. He spoke very ill of the Jews in it, and still worse in another work, in which he had industriously collected all kinds of calumny against them.

The story of a slave called Androcles, who was provided with food during three years by a lion he had cured of a wound, and afterwards recognized by the same lion in sight of the whole city of Rome, when he was exposed to fight with wild beasts, must have happened about the time we speak of, because Apion, from whom Aulus Gellius quotes it, declared that he was an eye witness of it.⁴ The slave, in consequence, was rewarded with his life and liberty, besides the lion. This fact is described at large in Aulus Gellius, and is worth reading.

JOSEPHUS.

JOSEPHUS was of Jerusalem, and of the sacerdotal race.⁵ He was born in the first year of Caligula, A. D. 37. He was so well instructed, that at the age of fourteen the Pontiffs themselves consulted him concerning the law. After having carefully examined the three sects into which the Jews were then divided, he chose that of the Pharisees. At the age of nineteen he began to have a share in the public affairs. He sustained with incredible valour the siege of Jotaphat for almost seven weeks. That city was taken in the thirteenth year of Nero, and cost the Romans very dear. Vespasian was wounded in it. Forty thousand Jews were killed there; and Josephus, who had hid himself in a cave, was at last reduced to surrender himself to Vespasian.

I shall not relate all that passed from that time to the siege and taking of Jerusalem: he does it himself at large, to whom I refer the reader. I shall only observe, that during the whole war, and even whilst he continued captive, Vespasian and Titus always kept him near their persons; so that nothing happened of which he was not perfectly informed. For he saw with his own eyes all that was done on the side of the Romans, and set it down exactly; and was told by deserters, who all applied to him, what passed in the city, which no doubt he did not fail to note also.

It is more than probable that he learned the Greek tongue, after the taking of Jotaphat, and when he saw himself obliged to live with the Romans. He owns that he could never pronounce it well, because he did not learn it while young; the Jews setting little value upon the knowledge of languages.⁶ Photius judges his style pure.⁷

After the war, Titus went to Rome and took him

along with him, A. D. 71. Vespasian caused him to be lodged in the house he lived in before he was emperor, made him a citizen of Rome, gave him a pension with lands in Judea, and expressed much affection for him as long as he lived. It was undoubtedly Vespasian who gave him the name of Flavius, which was that of his family, when he made him a Roman citizen.

In the leisure Josephus enjoyed at Rome, he employed himself in writing the history of the war with the Jews from the materials he had prepared before. He composed it first in his own language, which was almost the same as the Syriac. He afterwards translated it into Greek for the nations of the empire, tracing it back to the time of Antiochus Epiphanes and the Maccabees. Josephus makes profession of relating with entire veracity all that passed on both sides, reserving of his affection for his country, only the right of deploring its misfortunes sometimes, and of detesting the crimes of the seditious, who had occasioned its final destruction.

As soon as he had finished his history in the Greek, he presented it to Vespasian and Titus, who were extremely pleased with it. The latter afterwards was not content with ordering it to be published, and placing it in a library open to every body; but signed the copy deposited there with his own hand, to show that he desired it might be from him alone that all the world should be informed of what passed during the siege, and at the taking of Jerusalem.

Besides the veracity and importance of this history, wherein we find the entire and literal accomplishment of the predictions of Jesus Christ against Jerusalem, and the terrible vengeance taken by God of that unfortunate nation for the death they had made his Son suffer, the work in itself is highly esteemed for its beauty. Photius's judgment⁸ of this history is, that it is agreeable, and full of elevation and majesty, without swelling into excess or bombast; that it is lively and animated, abounding with that kind of eloquence, which either excites or soothes the passions of the soul at pleasure; that it has a multitude of excellent maxims of morality; that the speeches in it are fine and persuasive; and that, when it is necessary to support the opinions of the opposite parties, it is surprisingly fruitful of ingenious and plausible reasonings on both sides. St. Jerome⁹ gives Josephus still higher praises in a single word, which perfectly expresses his character by calling him the *Livy* of the Greeks.

After Josephus had written the history of the destruction of the Jews, he undertook the general history of that nation, beginning at the creation of the world, in order to make known to the whole earth the wonderful works of God that occur in it. This he executed in twenty books, to which he gives the title of *Antiquities*, though he continues them down to the twelfth year of Nero, when the Jews revolted. It appears that he inscribed this work to Epaphroditus, a curious and learned man, who is believed to be the celebrated freedman of Nero, that Domitian put to death in the year 95. Josephus finished this work in the 56th year of his age, which was the 13th of Domitian's reign, A. D. 93. He declares¹⁰ in it that he neither adds to, nor diminishes any thing of what is contained in the Holy Scriptures, from which he has extracted what he relates, till after the return of the Jews from the Babylonish captivity. But he has not kept his word so religiously as might be desired. He inserts some facts which are not in the Scripture, retrenches many others, and disguises some in a manner that renders them merely human, and makes them lose that divine air, that majesty, which the simplicity of the Scripture gives them. Besides which, after having related the greatest of God's miracles, he is inexcusable for often weakening their authority by leaving every body at liberty to believe of them as they please.

Josephus was willing to annex the history of his own life to his *Antiquities*, whilst there were many persons still in being, who could have contradicted him, if he had departed from the truth. Accordingly it appears that he wrote it presently after them; and it is taken

as part of the 20th book of his Antiquities. He employs almost all of it in relating what he did when governor of Galilee before the arrival of Vespasian.

As many persons declared they doubted what he said of the Jews in his Antiquities, and objected, that if that nation were so ancient as he made it, other historians would have spoken of it; he undertook a work not only to prove, that many historians had spoken of the Jews, but to refute all the calumnies vented against them by different authors, and particularly Apion, of whom we have spoken; which occasions the whole work being usually called *Against Apion*.

No writings were ever more generally esteemed than those of Josephus. The translation of them appeared in our language at a time, when for want of better books, romances were the general study of the world. It contributed very much to abate that bad taste. And, indeed, we may easily conceive, that only persons of a wrong, light, superficial turn of mind could attach themselves to works, that are no more than the idle imaginations of writers without weight or authority, in preference to histories so fine and solid as those of Josephus. Truth alone is the the natural nourishment of the mind, which must be distempered to prefer, or even compare, fiction and fable to it.

SECTION VII.—PLUTARCH.

PLUTARCH was born at Chæronæa, a town of Bœotia, five or six years before the death of the emperor Claudius, A. D. 43, as near as can be conjectured. Bœotia was censured by the ancients as a country, that produced no men of wit or merit. Plutarch, not to instance Pindar and Epaminondas, is a good refutation of this unjust prejudice, and an evident proof, as he says himself, that there is no soil in which genius and virtue cannot grow up. He was descended from one of the best and most considerable families of Chæronæa. The name of his father is not known: he speaks of him as a man of great merit and erudition. His uncle was called Lamprias, of whom he says, that he was very eloquent, had a fruitful imagination, and excelled himself when at table with his friends. For at that time his genius conceived new fire, and his imagination, which was always happy, became more lively and abundant: Plutarch has preserved this witty saying of Lamprias upon himself: "That wine had the same effect upon his wit, as fire upon incense; it made the finest and most exquisite parts of it evaporate."

Plutarch tells us, that he studied philosophy and mathematics at Delphi, under the philosopher Ammonius, during Nero's voyage into Greece, at which time he might be about seventeen or eighteen years old. The talents of Plutarch seem to have displayed themselves very early in his country. For while he was very young, he was deputed with another citizen upon an important affair to the proconsul.¹ His colleague having stopped on the way, he went forward alone, and executed their joint commission. At his return, when he was preparing to give an account of it to the public, his father taking him aside spoke to him to this effect: "In the report you are going to make, son, take care not to say, 'I went, I spoke, I did thus;' but always say, 'We went, we spoke, we did thus;' giving your colleague a part in all your actions, that half the success may be ascribed to him, whom his country honoured with an equal share in the commission: by this means you may avoid the envy, which seldom fails to attend the glory of having succeeded." This is a wise lesson, but seldom practised by such as have colleagues, either in the command of armies, public administrations, or in any commissions whatsoever; in which it often happens, through a mistaken self-love, and a despicable and odious meanness of spirit, that men are for arrogating to themselves the honour of a success, to which they have only a right in common with their colleagues. They do not reflect, that glory generally follows those who fly it, and pays them back with great interest the praises they are willing to divide with others.

He made many voyages into Italy, on what occasion

is not known. We can only conjecture with very good foundation, that the view of carrying on and making his lives of illustrious men as complete as possible, obliged him to reside more at Rome, than he would otherwise have done. What he says in the life of Demosthenes,² strengthens this conjecture. According to him, "a man who undertakes to collect facts, and to write an history consisting of events, which are neither in his own hands, nor have happened in his own country, but which are foreign, various, and dispersed here and there in many different writings; it is absolutely necessary for such a man to reside in a great and populous city, where good taste in general prevails. Such a residence puts it into his power to have a multiplicity of books at his disposal, and to inform himself, by conversation, of all the particulars which have escaped writers, and which, from being preserved in the memories of men, have only acquired the greater authority from that kind of tradition. It enables the writer to compose a work, more perfect, and less defective in its particular parts."

It is impossible to tell exactly when he took these voyages. We can only say for certain, that he did not go to Rome for the first time till the end of Vespasian's reign, and that he went there no more after that of Domitian. For it appears, that he was finally settled in his own country, a little before the latter's death, and that he retired thither at the age of forty-four or forty-five. His motive for fixing his retirement there is worth observing. "I was born," says he, "in a very small city; and to prevent it from being smaller, I choose to remain in it." And indeed, what glory has he not brought it? Cato of Utica, having with difficulty prevailed upon the philosopher Athenodorus to go with him from Asia to Rome, was so much pleased with, and so proud of that conquest, that he considered it as a greater, more glorious, and more useful exploit, than the exploits of Lucullus and Pompey, who had triumphed over the nations and empires of the East. If a stranger, famous for his wisdom, can do so much honour to a city of which he is not a native, how much must a great philosopher, a great author, exalt the city that produced him, and in which he chooses to end his days, though he could find greater advantages elsewhere. Mr. Dacier says with reason, that nothing ought to do Plutarch more honour than this love and tenderness which he expressed for Chæronæa. We every day see people quit their country to make their fortunes, and aggrandize themselves; but none who renounce their ambition, to make, if we may be allowed to say so, the fortune of their country. Plutarch has rendered his very famous. Hardly any body remembers that Chæronæa was the place where Philip gained the great victory over the Athenians and Bœotians, which made him master of Greece; but multitudes say, it was there Plutarch was born, it was there he ended his days, and wrote most of those fine works that will be of lasting use and instruction to mankind.

During his stay at Rome, his house was always full of the lovers of learning, among whom were the greatest personages of the city, who went thither to hear his discourses upon the different subjects of philosophy. In those times, the principal persons of the state, and the emperors themselves, thought it for their honour, and made it their pleasure to be present at the lectures of the great philosophers and famous rhetoricians. We may judge of the passion with which these public dissertations of Plutarch were heard, and of the attention of his auditors, from what he tells us himself in his treatise upon curiosity.³ "Formerly, at Rome," says he, "when I was speaking in public, Arulenus Rusticus, whom Domitian afterwards put to death through envy of his glory, was one of my hearers. Whilst I was in the midst of my discourse, an officer came in and delivered him a letter from Cæsar (probably Vespasian.) The assembly kept a profound silence at first, and I stopped to give him time to read his letter: but he would not; and did not open it till I had done, and the assembly was dismissed." This was perhaps carrying deference for the orator a little

¹ Plut. in Moral. p. 816.

² In vit. Demost. p. 846.

³ P. 532.

too far. A fault not very common, with the excuse of a very laudable principle!

Plutarch's dissertations were always in Greek. For, though the Latin tongue was used throughout the empire, he did not understand it well enough to speak it. He tells us himself, in the life of Demosthenes, that during his residence at Rome, the public affairs, with which he was charged, and the number of persons that came every day to entertain themselves with philosophy, did not afford him time for learning it; that he did not begin to read the writings of the Romans till very late; and that the terms of that language did not serve so much to make him understand the facts, as the knowledge he had before of the facts, to make him understand the terms. But the Greek tongue was well known at Rome, and, properly speaking, was even the language of the sciences; witness the works of the emperor Marcus Aurelius, who wrote his admirable reflections in Greek. This want of knowing the Latin tongue made Plutarch commit some faults, which are to be observed in his writings.

He had the most considerable offices in his country: for he was Archon, or principal magistrate. But he had passed through inferior employments before, and had acted in them with the same care, application, and satisfaction to the public, as he did afterwards in the most important. He was convinced, and taught others by his example,¹ that the employments with which our country thinks fit to charge us, however low they may seem, reflect no dishonour upon us, and that it depends on a man of worth and sense to make them noble, by the manner in which he acquires himself of them; and this he proves by the example of Epaminondas.

As Plutarch punctually discharged all the duties of civil life, and was at the same time a good son, a good brother, father, husband, master, and citizen; he had the pleasure to find in his domestic affairs, and throughout his family, all the peace and satisfaction he could desire: a felicity not very common, and the effect of a wise, moderate, and obliging spirit. He speaks much in favour of his brothers, sisters, and wife.² The latter was descended from the best families of Charonea, and was esteemed a model of prudence, modesty, and virtue: her name was Timoxena. He had four sons successively by her, and one daughter. He lost two of the first, and after them the daughter at two years of age. We have his letter of consolation to his wife upon the death of this child. He had a nephew, called Sextus, a philosopher of such great learning and reputation, that he was sent for to Rome to teach the emperor Marcus Aurelius the Grecian literature. That emperor mentions him much for his honour in the first book of his reflections. "Sextus," says he, "taught me by his example to be mild and obliging, to govern my house as a good father of a family, to have a grave simplicity without affectation, to endeavour to find out and prevent the desires and wants of my friends, to bear the ignorant and presuming, who speak without thinking of what they say, and to adapt myself to the understanding of all men," &c. These are all excellent qualities, especially that which induced him to "find out and prevent the desires and wants of his friends," because it shows that Marcus Aurelius knew the essential duty of a prince, which is to be fully convinced within himself, that, as a prince, he is born for others, and not others for him. As much may be said of all persons in place and authority.

It is time to proceed to the works of Plutarch. They are divided into two classes, the *Lives of Illustrious Men* and his *Morals*.

In the latter there are a great number of curious facts not to be found elsewhere, with very useful lessons both for the conduct of private life, and the administration of public affairs, and even admirable principles concerning the divinity, providence, and the immortality of the soul; but with a mixture every where of the absurd and ridiculous opinions, which we find in almost all the pagans. The ignorance also of

true physics renders the reading of many of these tracts tedious and disagreeable.

The most esteemed part of Plutarch's works is his *Lives of Illustrious Men*, Greeks and Romans, whom he matches as near as possible, and compares together. We have not all he composed; at least sixteen of them are lost. Those, of which the loss is most to be regretted, are the lives of Epaminondas and the two Scipios *Africani*. The comparisons of Themistocles and Camillus, of Pyrrhus and Marius, of Phocion and Cato, and of Cesar and Alexander, are also wanting. It would not be surprising, if a man of fine taste and judgment were asked, which of all the books of profane antiquity he would preserve, he having the choice of saving only one of them—it would not be surprising if such a man pitched upon Plutarch's *Lives*. It is not only the most accomplished work we have, but the most proper for forming men either for public affairs and functions abroad, or for private and domestic life. Plutarch does not suffer himself, like the generality of historians, to be dazzled by the splendour of actions, which make a great deal of noise, and attract the admiration of the vulgar, and the many. He usually judges of things by what constitutes their real value. The wise reflections, which he scatters every where in his writings, accustom his readers to think in the same manner, and teach them wherein true greatness and solid glory consist. He inflexibly denies those exalted attributes to every thing that does not bear the stamp of justice, truth, goodness, humanity, love of the public, and has only the appearances of them. He does not stop at the exterior and glittering actions, in which princes, conquerors, and the other great ones of the earth, intent upon acquiring themselves names, play each their part upon the stage of the world, where they exhibit, to use the expression, a transitory and assumed character, and succeed in the counterfeit for a time. He unmask and divests them of all the foreign glare and disguise that surround them; he shows them as they are in themselves; and to put it out of their power to escape his piercing sight, he follows them with his reader into the most secret recesses of their houses, examines them, if I may say so, in their dishabille, listens to their most familiar conversations, considers them at table where constraint seldom comes, and even at play, where disguise is still more unusual. These are the qualities in which Plutarch is wonderful, and which, in my opinion, are too much neglected by modern historians, who shun particulars of a common nature as low and trivial, which, however, show the characters of men better than more great and glaring circumstances. These details are so far from diminishing the merit of Plutarch's *Lives* that they are directly what renders them at the same time more agreeable, and more useful.

The reader will permit me to give an instance of this kind of action in this place. I have already cited it in my treatise upon the study of polite learning, in that part of it where I examine in what true greatness consists.

The marshal Turenne never set out for the army, without having first ordered all his tradesmen to be directed to deliver in their bills to his steward. His reason for it was, that he did not know whether he should return from the field. This circumstance may appear trifling and low to some people, and not worthy of a place in the history of so great a man as that marshal. Plutarch would not have thought so; and I am convinced, that the author of the new life of that prince, who is a man of sense and judgment, would not have omitted it, if it had come to his knowledge. For indeed it argues a goodness, equity, humanity, and even religion, which are not always to be found in great lords, who are too apt to be insensible to the complaints of the artisan and the poor, the payment of whom, however, deferred only a few days, according to the Holy Scripture, cries for vengeance to heaven, and does not fail to obtain it.

As to the style of Plutarch, his diction is neither pure nor elegant: but to make us amends, it has a wonderful force and energy in painting the most lively images in few words, in venting the sharpest and most piercing things, and in expressing noble and sublime

¹ P. 846.

² Consol. ad uxorem, p. 608, &c.

³ In *Moral*, p. 811.

thoughts. He frequently enough makes use of comparisons, which throw grace and light into his narrations and reflections; and has harangues of inimitable beauty, almost always in the strong and vehement style.

The beauties of this author must be very solid and bear much of the stamp of good taste in them to make themselves so perceptible as they still are in the old French of Amiot. But I mistake. That old French has an air of freshness, a spirit in it, that seems to make it bloom and grow young again every day. Hence it is that very good judges choose rather to use the translation of Amiot, than to translate the passages they quote from Plutarch themselves, "not believing," says Mr. Racine, in the preface to his *Mithridates*, "themselves capable of equalling the beauties of it." I never read it, without regretting the loss of many happy terms and expressions in that old language, which have almost as much energy as those of Plutarch. We suffer our language to impoverish itself every day, instead of being studious, after the example of our neighbours the English, of discoveries to enrich it. It is said that our ladies, out of too much delicacy, are partly the cause of that dearth, to which our language is in danger of being reduced. This would be very wrong, and they ought rather to favour with their suffrages, which would bring over abundance of followers, the prudent boldness of writers of a certain rank and merit; who, on their side, should assume more boldness, and venture more new words than they do, but always with judicious reserve and discretion. We are, however, obliged to Mr. Dacier for having substituted a new translation of Plutarch's *Lives* to that of Amiot, and for having thereby enabled a greater number to read them. It might have been more elegant and more laboured. But to carry a work of so vast an extent to its ultimate perfection, would require the whole life of an author.

ARRIAN.

ARRIAN was of Nicomedia. His learning and eloquence, which acquired him the title of the new Xenophon, raised him to the highest dignities, and even the consularship at Rome. There is reason to believe him the same Arrian who governed Cappadocia in the latter part of Adrian's reign, and repulsed the Alans. He lived at Rome in the time of Adrian, Antoninus, and Marcus Aurelius. He was the disciple of Epictetus, the most celebrated philosopher of that time. He wrote a work upon the *Conversations of Epictetus*, in eight books, of which we have only the four first, and composed many other treatises.

His seven books upon the expeditions of Alexander are come down to us; a history the more valuable, as we have it from a writer, who was both a warrior and a good politician. Photius accordingly gives him the praise of having wrote the life of that conqueror better than any body. We have from that critic an abridgment of the lives of Alexander's successors, which Arrian also wrote in ten books. He adds, that the same author composed a book upon India; and it is still extant, but has been made the eighth book of the History of Alexander. He also wrote a description of the coast of the Euxine Sea. Another is ascribed to him upon those of the Red Sea, that is to say the eastern coast of Africa, and those of Asia as far as India. But this seems to be a more ancient author's, cotemporary with Pliny the naturalist.

ELIAN. (CLAUDIUS ELIANUS.)

ELIAN was of Præneste, but passed the greater part of his life at Rome; for which reason he calls himself a Roman. He wrote a little work, in fourteen books, entitled, *Historia Varia, or Miscellaneous Histories*; and another in seventeen books, upon the History of Animals. We have a treatise in Greek and Latin upon the order observed by the Greeks in drawing up armies ascribed to Adrian, and composed by one of the name of Elian. All these works may be the same author's, who is believed to be the person whose eloquence Martial praises in one of his epigrams.¹

APPIAN.

APPIAN was of Alexandria, and lived in the time of Trajan, Adrian, and Antoninus. He plead some time at Rome, and was afterwards comptroller of the imperial domains. He wrote the Roman History, not in the order of time like Livy, but making each nation subjected by the Romans a work apart, and relating events as they happened to each separately. According to his design was to write an exact history of the Romans, and of all the provinces of their empire, down to Augustus; and sometimes he went also so low as to Trajan. Photius speaks of twenty-four books of it, though, when he wrote, he had not seen all those which Appian mentions in his preface.

We have at present the history of the wars of Africa, Syria, Parthia, Mithridates, Iberia or Spain, and Hannibal; some fragments of those of Illyria; five books of the civil wars, instead of eight mentioned by Photius, and some fragments of several others, extracted by Mr. Valois out of the collections of Constantine Porphyrogenitus, with extracts of the like nature from Polybius, and several other historians. Photius observes, that this author has an extreme passion for the truth of history; that none teach the art of war better; and that his style is simple and void of superfluity, but lively and vigorous. In his harangues he gives his reader excellent models of conduct, either for re-animating troops when discouraged, or for appeasing them when mutinous and violent. He borrows many things from Polybius, and often copies Plutarch.

DIOGENES LAERTIUS.

DIOGENES LAERTIUS lived in the time of Antoninus, or soon after. Others place him in the reign of Severus and his successors. He wrote the *Lives of the Philosophers*, in ten books, and carefully relates their opinions and apophthegms. This work is of great use for knowing the different sects of the ancient philosophers. The surname of *Laertius* usually given him, probably implies his country, which was perhaps the fortress or city of Laertia in Cilicia. We find by his writings, that after having studied history and the maxims of the philosophers, he embraced the sect of the Epicureans, the farthest from truth and the most contrary to virtue, of them all.

DION CASSIUS. (COCCEIUS or COCCEIANUS.)

DION was of Nicea in Bithynia. He lived in the reigns of the emperors Commodus, Pertinax, Severus, Caracalla, Macrinus, Heliogabalus, and Alexander, who all had a very high regard for him, and confided the most important offices and governments of the empire to his care, A. D. 229. Alexander nominated him consul for the second time. After this consulship, he obtained permission to retire, and pass the rest of his life in his own country, upon account of his infirmities.

He wrote the whole Roman History,² from the arrival of Aeneas in Italy to the reign of the emperor Alexander, in eight decades, or fourscore books. He tells us himself,³ that he employed ten years in collecting materials of all that passed from the foundation of Rome to the death of Severus, and twelve years more in composing his history down to that of Commodus. He afterwards added to it that of the other emperors, with as much exactness as he could, to the death of Heliogabalus, and a simple abridgment of the eight first years of Alexander, because from having been little in Italy during that time, it had not been in his power to know so well how things had passed.

Photius observes that his style is lofty, and adapted to the greatness of his subject: that his terms are magnificent, and that his phrases and manner of writing have the air of antiquity: that he has taken Thucydides for his model, whom he imitates excellently in the turn of his narration and harangues, and has followed him in all things, except in being perspicuous. This praise is much in Dion's favour, but I do not know whether it does not a little exceed the bounds

of truth. Vossius says, and Lepsius had thought the same before him, that this historian is unpardonable for not having known how to esteem virtue according to its value, and for having censured the greatest men of antiquity, as Cicero, Brutus, Cassius, and Seneca, either out of malignity of mind, or corruption of manners and judgment. That he did so is certain; and whatever his motives were, the thing in itself can never be for his honour.

He composed, as we have said, fourscore books of the Roman history; but only a very small part of that great work has come down to us. For the first thirty-four books are lost, with the greater part of the thirty-fifth, except some fragments. The twenty that follow, from the end of the thirty-fifth to the fifty-fourth, are the part that remain entire. Vossius believes that the six following, which come down to the death of Claudius, are also perfect. But Bucherius maintains, that they are much otherwise; which seems very probable. We have only some fragments of the last twenty. This defect is somewhat supplied by an abridgment of Dion from the thirty-fifth book, the time of Pompey, to the end, composed by Johannes Xiphilinus, patriarch of Constantinople in the eleventh century. This epitome is found to be sufficiently just, Xiphilinus having added nothing to Dion, except in some very few places where it was necessary, and having generally made use of his own words. The history of Zonarus may also be called an abridgment of Dion, for he follows him faithfully, and sometimes informs us of things omitted by Xiphilinus.

HERODIAN.

NOTHING is known of the life of Herodian, except that he was of Alexandria, the son of a rhetorician named Apollonius *Dyscolus*, or the *Rigid*, and that he followed his father's profession. He is much known by his History of the Emperors, in eight books, from the death of M. Aurelius to those of Maximus and Balbinus. He assures us himself, that his history of those sixty years, is that of his own times, and what he had seen himself. He had borne different offices both in the court and civil government of Rome, which had given him a share in several of the events which he relates. As to his history, Photius judges much in its favour. For he tells us that it is perspicuous, lofty, and agreeable; that his diction is just and sober, observing the medium between the affected elegance of such as disdain simple and natural beauties, and the low and languid expression of those, who either do not know, or despise, the delicacy and refinements of art; that he does not aim at a false agreeable by multiplying words or things, and omits nothing necessary; in a word, that he gives place to few authors for all the beauties of history. Politian's translation of Herodian's work happily sustains, and almost equals, the elegance of the original. The French version of it which the Abbé Mongaut has given the public, improves much upon the Latin.

EUNAPIUS.

EUNAPIUS was of Sardis in Lydia, and came to Athens at the age of sixteen, A. D. 363. He studied eloquence under Proterus the Christian sophist, and magic under Chrysantus, who had married his cousin. Eunapius's Lives of the Sophists of the Fourth Century is extant. There are many circumstances in it relating to the history of that time. He begins with Plotinus, who appeared in the middle of the third century, and goes on to Porphyrius, Jamblichus, and his disciples, upon whom he expatiates particularly. He also wrote an History of the Emperors, in fourteen books, which began in the year 263, in the reign of Claudius the successor of Gallienus, and ended at the death of Eudoxia the wife of Arcadius. Some fragments of this history have been preserved in the extracts of Constantine Porphyrogenitus upon embassies, and in Suidas. We find in them that he was exceedingly exasperated against the Christian emperors, and especially against Constantine. The same spleen is observed to prevail in his lives of the sophists, especially against the monks. It is no wonder that a magician was an enemy to the Christian religion.

ZOSIMUS.

ZOSIMUS, count and advocate fiscal, lived in the time of Theodosius the younger, A. D. 415. He wrote the History of the Roman Emperors, in six books. The first, which contains the succession of those princes from Augustus down to Probus (for what relates to Diocletian is lost,) is extremely abridged. The other five are more diffuse, especially to the time of Theodosius the Great and his children. He goes no farther than the second siege of Rome by Alaric. The end of the sixth book is wanting. Photius praises his style. He says that Zosimus has almost only copied and abridged Eunapius's history, which perhaps occasioned its being lost. He is no less exasperated than the other against the Christian emperors.

PHOTIUS.

PHOTIUS, patriarch of Constantinople, lived in the ninth century. He was a person of immense erudition, and of still vaster ambition, which hurried him into horrible excesses, and occasioned infinite troubles in the church. But that is foreign to our present subject.

I have placed him among the Greek historians, and shall conclude my account of them with him, not because he composed an history in form, but because, in one of his works, he has given us extracts from a great number of historians, of whom many, without him, would be almost entirely unknown. This work is entitled *Μεταβιβλία*, *Bibliotheca*, or *Library*, and indeed it merits that name. Photius examines almost three hundred authors in it, and tells us their names, countries, times when they lived, works they composed, judgment to be passed on them in respect to style and character; and sometimes even gives us extracts of considerable length, or abridgments from them, which are to be found only in this work. Hence we may judge of how great value his work is to us.

ARTICLE II.

OF THE LATIN HISTORIANS.

I SHALL not say much upon the feeble beginnings, and, to use the expression, the infancy, of the Roman history. Every body knows that it consisted at the first only of simple notes or memorandums drawn up by the *Pontifex Maximus*,¹ who regularly set down every year whatever passed of most consequence in the state, either in war or peace; and this custom, established very early at Rome, subsisted to the time of P. Mucius the Pontifex Maximus, or to the year of Rome 629, or 631. The name of the *Great Annals* were given to these memoirs.

We may suppose, that in those early times these records were written in a very simple and even gross style. The pontiffs contented themselves with setting down the principal events, the times and places wherein they happened, the names and condition of the persons who had the greatest share in them, in a plain manner without regard to ornament.² However rude and imperfect these annals were, they were of great importance, because there were no other monuments to preserve the memory of all that passed at Rome, and it was a great loss when most of them were destroyed at the burning of the city by the Gauls.³

Some years after, history began to quit this gross antique garb, and to appear in public with more decency. The poets were the first who conceived the design of improving and adorning it. NÆVIUS com-

¹ Erat historia nihil aliud nisi Annalium confectio: cuius rei, memoriarque publicæ retinendæ causa, ab initio rerum Romanarum usque ad P. Mucium Pontificem maximum res omnes singulorum annorum mandabat literis Pontifex maximus—qui etiam nunc *Annales maximi* nominantur. Cic. l. ii. de Orat. n. 52.

² Sine ullis ornamentis monumenta solum temporum, hominum, locorum, gestarumque rerum reliquerunt—Nunc exornatores rerum, sed tantummodo narratores fuerunt. *Ibid.* n. 54.

³ Si quæ in commentariis Pontificum, aliisque publicis privatisque erant monumentis, incensa urbe plerumque interierunt. Liv. l. vi. n. 1.

nosed a poem upon the first Punic war, and ENNIUS wrote the annals of Rome in heroic verse.

History at length assumed a regular form, and appeared in prose. Q. FABIVS PICTOR is the most ancient of the Latin historians: he lived in the time of the second Punic war. L. CINCIUS ALIMENTUS was his cotemporary. Livy cites them both with praise.¹ It is believed that they wrote their histories first in Greek, and then in Latin. Cincius certainly wrote the history of Gorgias the celebrated rhetorician in the latter language.

CATO the censor (*M. Portius Cato*) has a juster title than them to the name of Latin historian: for it is certain that he wrote his history in that tongue. It consisted of seven books, and was entitled *Origines*, because in the second and third books he related the origin of all the cities of Italy.² We find that Cicero set a great value on this history. *Jam vero Origines ejus (Catonis) quem florem, aut quod lumen eloquentiæ non habent?*³ But upon Brutus' judging this praise excessive, he put a restriction to it by adding, That nothing was wanting to the writings of Cato, and the strokes of his pencil, but a certain lively glow of colours, not discovered in his time: *Intelligens nihil illius lineamenti nisi eorum pigmentorum, quæ inventa nondum erant, florem et colorem defuisse.*⁴

L. PISO FRUGI, surnamed Calpurnius, is also cited among these ancient historians. He was tribune of the people in the consulship of Censorinus and Manlius, in the 605th year of Rome. He was also several times consul. He was a civilian, orator, and historian; and had composed harangues, which were no longer in being in Cicero's time, with annals, of a style mean enough, in that orator's opinion. Pliny speaks more advantageously of them.

The true character of all these writers was great simplicity.⁵ They did not yet know what delicacy, beauty, and ornament of speech were. They were satisfied with making their readers understand them, and confine themselves to a close and succinct style.

I proceed now to the historians better known, and whose writings have come down to us.

SALLUST.

It is not without reason that Sallust has been called the first of the Roman historians;

Crispus Romana primus in historia.—Martial.

and that he has been believed equal to Thucydides, so generally esteemed among the Greek historians: *Nec opponere Thucydidi Sallustium verear.*⁶ But without determining their ranks here, which would not become me to do, it suffices to consider Sallust as one of the most excellent historians of antiquity. The reader may find very solid reflections upon his character in the preface to the French translation of this historian.

The prevailing quality of his writings, and that which characterizes Sallust in a more peculiar and singular manner, is the brevity of his style, which Quintilian calls *Immortalem Sallustii velocitatem*. Scaliger is the only one who denies him this praise; but, as I have already observed, he is almost always odd and singular in his judgments. This brevity of Sallust proceeds from the lively vigour of his genius. He thinks strongly and nobly, and writes as he thinks. His style may be compared to those rivers, which whilst they flow within narrower banks than others, are deeper, and carry greater burthen. The language in which he wrote was extremely adapted to a close diction, and thereby favoured him in following the bent of his genius. It has, as well as the Greek, the advantage of being equally susceptible of the two opposite extremes. In Cicero it gives us a numerous, flowing, periodic style: in Sallust, a short, broken,

precipitate one. The latter often suppresses words, and leaves the care of supplying them to his reader. He throws many terms and phrases together, without any conjunctions, which gives a kind of impetuosity to his discourse. He makes no scruple to use old words in his history, if they be shorter, or have more energy than the terms in fashion; a liberty for which he was reproached⁷ in his lifetime, as the following ancient couplet shows:

*Et verba antiqui multum furate Catonis
Crispe, Jugurthine conditor historie.*

But he especially makes great use of metaphors, and does not choose the most modest, and least glowing, as the masters of the art declare necessary, but the most concise, the strongest, the most lively, and the most bold. By all these methods, and others, which I omit, Sallust has succeeded in framing himself an entirely particular style, and one that suits him only. He quits the common road, but without going out of his way, and by paths that only shorten it. He seems not to think like other men, and yet good sense is the source of all his thoughts. His ideas are natural and reasonable: but all natural and reasonable as they are, they have the advantage of being new, from being peculiarly curious and exquisite.

We know not which to admire most in this excellent author, his descriptions, characters, or harangues: for he succeeds alike in them all; and we cannot discern upon what foundation Seneca the elder, or rather Cassius Severus, whose opinion he repeats, could say, that the harangues of Sallust are suffered only upon account of his history: *in honorem Historiarum leguntur*. Nothing can be added to their force, spirit, and eloquence. It is highly probable that the passage in question is not applied to the harangues inserted by Sallust in his history, but to those he spoke in the senate, or to some pleadings of his. When we read in the history of the Jugurthine war, the account of a fort surprised by a Ligurian soldier of Marius's army, so lively and animated is the description, that it is as if we saw him climb along the steep rocks, and even as if we climbed along with him.

We find five or six characters in Sallust, which are so many masterpieces; and I do not know whether there be any thing in the whole extent of literature of a beauty that approaches nearer the idea of perfection. I shall repeat two of them in this place, from which the reader may judge of the rest.

CHARACTER OF CATALINE.

"L. Catilina, nobili genere natus, fuit magna vi et animi et corporis, sed ingenio malo pravoque. Huic ab adolescentia bella int estina, cædes, rapine, discordi civilis grata fore, ibique juventutem suam exercevit. Corpus patiens inediae algoris, vigiliæ, supra quam cuiquam credibile est. Animus audax, subdolis, varius, cujuslibet rei simulator ac dissimulato: alieni appetens, sui profusus; ardens in cupiditatibus. Satis eloquentie, sapientiæ parum. Vastus animus immoderata, incredibilia, nimis alia semper cupiebat."

"L. Catalina was of noble birth, and of great strength both of body and mind, but of a disposition highly corrupt and depraved. From his earliest years, intestine wars, murders, rapine, and civil discord were his delight, and the usual exercises of his youth. He bore hunger, cold, watching and fatigues, with a patience not credible of any body. He was bold, deceitful, inconstant, and capable of assuming and disguising any thing: greedy of another's profuse of his own, and violent in all his appetites. He had eloquence enough, but little wisdom. His vast spirit, his boundless ambition, perpetually covered things of an excessive, incredible, and lofty nature."

CHARACTER OF SEMPRONIA.

"In his erat Sempronia, quæ multa sepe virilis audaciæ facinora commiserat. Hæc mulier genere atque forma, præterea viro atque liberis satis fortunata fuit. Literis Græcis et Latinis docta: psallere, saltare ele-

⁵ Quælibet apud Græcos Pherecydes, Hellenicus Ausculas fuit; talis noster Cato, et Pictor, et Piso: qui neque timentibus rebus ornatur oratio; (modis enim huc ista sunt importata) et, dum intelligatur quid dicant, enim dicendi laudem putant esse brevitatem. Lib. ii. de Orat. n. 53.

⁶ Quintil.

⁷ Sallustii novandi studium multa cum invidia fuit. Gell. l. iv. c. 13.

gantiùs, quàm necesse est probre: multa alia, quæ instrumenta luxuriæ sunt, sed ei cariora semper omnia, quàm decus atque pudicitia fuit. Pecuniæ an famæ minùs parceret, haud faciliè discerneres.—Ingenium ejus haud absurdum: posse versus facere, jocum movere, sermone uti vel modesto, vel molli, vel procaci. Prorus multa facetiæ, mulisque lepos inerat."

"Of this number was Sempronia, who had in many things frequently instanced a masculine boldness of genius for vice. This woman was sufficiently happy in her person and birth, as well as in her husband and children: she was well read in the Greek and Roman learning: could sing and dance with more elegance than was necessary for a matron of virtue; and had besides many of those qualities, that minister to luxury and render vice amiable, on which she ever set an higher value than upon the decency and chastity of her sex. It was not easy to say whether she was less frugal of her money or of her reputation. Her wit was by no means disagreeable: she could make verses, jest agreeably, and converse either with modesty and tenderness, or tartness and freedom: but in whatever she said there was always abundance of spirit and humour."

There are many admirable passages in Sallust, especially when he compares the ancient manners of the commonwealth with those of his own times. When we hear him speak strongly, as is usual enough with him, against luxury, debauchery, and the other vices of his age, one would take him for a man of the strictest habits and greatest probity in the world. But we must not conclude so from so plausible an appearance. His conduct was so immoral, that it occasioned his being expelled the senate by the censors.

Besides the wars of Cataline and Jugurtha, Sallust wrote a general history of the events that happened during a certain number of years, of which amongst other fragments there are several perfectly fine discourses.

CORNELIUS NEPOS.

For some time the works of Cornelius Nepos were ascribed by mistake to *Emilius Probus*. *Vossius* thought that that was the name of the bookseller who offered to *Theodosius* the *Lives of Great Generals*, written partly by his own hand and partly by that of his father and of his mother. *Cornelius Nepos* lived during the time of *Cæsar* and of *Augustus*, and died under the latter. He was born in *Cisalpine Gaul*, at *Hostilia*, a little village dependant upon *Verona*.

Of the different works which he composed, there now remain the *Lives of Great Generals* abridged, an abridgment of that of *Cato*, and the *Life of Pomponius Atticus*, which is sufficiently extended. There are twenty-two *Lives of Great Generals*, all *Grecians*, except the two last, *Hannibal* and *Hannibal*, who were *Carthaginians*. Between *Timoleon* and *Hannibal*, *Nepos* gives a kind of catalogue of kings, both of *Persia* and of *Greece*, in the twenty-first chapter, which is very short. He had written abridged *Lives of Roman Generals* on the same plan as those of the *Greeks*, in order that, as he himself says, a comparison may be made and judgment more easily passed on their respective merits.¹ It would appear, also, that he had composed *lives of other Greeks and Romans*. He speaks² of that of *Philistus* in his life of *Dion*. *Aulus Gellius* quotes from the first book of the life of *Cicero*. In the abridged life of *Cato*,³ which has come down to us, *Nepos* cites a more extended one, which he had written at the request of *Atticus*, and to which he refers his readers.⁴ In fine, we have the life of *Pomponius Atticus*, which is a precious morsel, and which of itself could give us an accurate idea of this historian's merit.

His style is pure, neat, elegant. Simplicity, which is one of his chief characteristics, is mingled with a remarkable delicacy, and relieved at times by reflections noble and solid. But that which appears to me the most valuable thing in this author is a marked regard for the great principles of honour, probity,

virtue, disinterestedness, and love of the public good which he has contrived to introduce into all his writings. His intimate connexion with *Atticus* and through it, of course, with *Hortensius*, *Cicero*, and his other illustrious contemporaries, are sufficient proofs of their esteem of the goodness of his heart and the excellence of his genius.

LIVY.

THE Latin preface to the new edition of *Livy*, of which *Mr. Crevier*, professor of rhetoric in the college of *Beauvais*, has lately published two volumes, would supply me with the little I intend to say here of this excellent historian. If I was less *Mr. Crevier's* friend, who insists absolutely upon my declaring him my pupil, which I think highly for my honour, I should expatiate upon the usefulness and merit of his work. The preface of it alone is sufficient to inform the reader what value he ought to set upon it.

The more earnestly we desire to know an author famous for his writings, the more we regret, that little or nothing more than his name is come down to us. *Livy* is one of those authors who have rendered their names immortal, but whose lives and actions are little known. He was born at *Padua*, in the consulship of *Piso* and *Gabinus*, fifty-eight years before the Christian era. He had a son, to whom he wrote a letter upon education and the studies proper for youth which *Quintilian* mentions in more than one place, and of which we ought very much to regret the loss. It is in this letter, or rather short treatise, that he says in respect to the authors proper to be recommended to the reading of youth, that they ought first to study *Demosthenes* and *Cicero*, and next such as resemble these excellent orators most: *Legendos Demosthenem atque Ciceronem, tum ita ut quisque esset Demostheni et Ciceroni similimus*.¹ He speaks in the same letter, of a rhetorician² who disapproved of the compositions of his pupils, when they were perspicuous and intelligible, and made them correct them, as he called it, by throwing obscurity into them. When they had retouched them in this manner, he would say, "Ay, this now is much better, I understand nothing of it myself."³ Could one believe so ridiculous an extravagance possible? *Livy* also composed some philosophical works, and dialogues, in which philosophy had a part. But his great work was the *Roman history* in an hundred and forty, or an hundred and forty-two books, from the foundation of *Rome* to the death and funeral of *Drusus*, which happened in the 743d year of *Rome*, and consequently included that number of years. We find, from some dates in his history, that he employed the whole time between the battle of *Actium* and the death of *Drusus* in composing it; that is to say, about twenty-one years. But he published it from time to time in parts;⁴ and this was what acquired him so great a reputation at *Rome* and the honourable visit of a stranger from the remotest part of *Spain*, who took so long a journey only for the sake of seeing him. The capital of the world had enough to engage and satisfy the eyes of a curious person in the magnificence of its buildings, and the multitude of its paintings, statues, and ancient monuments. But this stranger found nothing so rare and precious in *Rome* as *Livy*. After having enjoyed his conversation at pleasure, and entertained himself agreeably with reading his history, he returned with joy and content to his own country. And this is knowing the value of men.

Nothing more is known of what regards *Livy* personally. He passed a great part of his life at *Rome*, esteemed and honoured by the great as he deserved. He died in his country at the age of seventy-six, in the fourth year of the reign of *Tiberius*. The people of *Padua* have honoured his memory in all times, and pretend to have actually preserved among them

some remains of his body, and to have made a present in the year 1451, of one of his arms to Alphonso V. king of Arragon, at least the inscription says so. It were much more to be wished, that they had preserved his history. Only thirty-five books of it are come down to us, which is not the fourth part of the work, and even some of them imperfect. What a loss is this! The learned have flattered themselves from time to time with some faint hopes of recovering the rest, which seem solely founded in their great desire of them. *Johannes Freinshemius* has endeavoured to console the public for this loss by his *Supplements*; and has succeeded in it as far as it was possible. Freinshemius, born at Ulm in Suabia in 1608, studied at Strasburgh with great success. In 1642, he was invited into Sweden, where he filled several considerable employments of literature. Upon his return into his country, he was made honorary professor in the university established by the elector Palatine at Heidelberg, where he died in 1660. The commonwealth of letters is under infinite obligations to him for having rendered Livy the same service as he had before done Quintus Curtius, by filling up all we have lost of that great writer of the Roman history, with an hundred and five books of supplements. Mr. Doujat also filled up the deficient places in the last books which remain of Livy, but with very different success. Mr. Crevier has revised and retouched Freinshemius's supplements in several places, and worked those of Doujat entirely anew. By these means we have a continued and complete body of the history of the Roman commonwealth.

It is doubted whether Livy himself divided his history from ten to ten books, that is to say into decades. However that may be, the division seems commodious enough. Respecting the epitomes in the front of each book, the learned do not believe them either done by Livy or Florus. Whoever the author was, they have their use, as they serve to show, of what the books we have lost, treated.

Let us now examine the work in itself. There reigns throughout all its parts, an eloquence perfect, and perfect in every kind. In the narrations, descriptions, speeches, the style, though varied to infinity, sustains itself equally every where: simple without meanness, elegant and florid without affectation, great and sublime without tumour, flowing or concise, and full of sweetness or force, according to the exigency of the matter; but always clear and intelligible, which is not the meanest praise of history. Pollio, who was of a refined taste difficult to please, pretended he discovered *Patavinity* in the style of Livy: that is to say, some words or turns of phrase which savoured of the country of Padua.¹ A man born there might retain, if we may be allowed the expression, some smatch of the soil, and might not have all the refinement and delicacy of the Roman *urbanity*, which was not so easily communicated to strangers, as the freedom of the city. But this is what we can now neither perceive nor understand. This reproach of *Patavinity* has not hindered Quintilian² from comparing Livy to Herodotus, which is giving him great praise. He makes us observe the sweet and flowing style of his narrations, and the supreme eloquence of his harangues, wherein the characters of the persons he introduces speaking, are sustained with all possible exactness, and the passions, especially the soft and tender, are treated with wonderful art. All however that Livy could do was to attain, by qualities entirely different, to the immortal reputation which Sallust acquired by his inimitable brevity:

for these two historians have with reason been said rather to be equal, than like each other, *pares magis, quam similes*.

It is not only by his eloquence, and the beauty and spirit of his narration, that Livy acquired the reputation he has enjoyed for so many ages. He recommended himself no less by his fidelity, a virtue so necessary and desirable in a historian. Neither the fear of displeasing the power of his times, nor the desire of making his court to them, prevented him from telling the truth. He spoke in his history³ with praise of the greatest enemies of the house of the Cæsars, as of Pompey, Brutus, Cassius and others; and Augustus took no offence at it: so that we know not which most to admire, the moderation of the prince, or the generous freedom of the historian. In the thirty-five books that remain of Livy, he mentions Augustus only twice,⁴ and that too with a reserve and sobriety of praise, which reproaches those flattering, self-interested writers, who, without discretion or measure, are so lavish of an incense to office and dignity, due only to merit and virtue.

If any defect may be imputed to Livy, it is his over fondness for his country: a rock he has not always taken care enough to avoid. While he perpetually admires the greatness of the Romans, he not only exaggerates their exploits, successes, and virtues; but disguises and diminishes their vices, and the faults they commit.

Seneca the elder⁵ reproaches Livy with having expressed a mean jealousy of Sallust, in accusing him of stealing a sentence from Thucydides, and of having maimed it by translating it ill. What probability is there that Livy, who copied whole books from Polybius, should make it a crime in Sallust to copy a single sentence, or rather a line? Besides, it is perfectly well rendered. *ἄσιναι γὰρ αἱ ὑπερβασίαι συγκαταμίμνηται καὶ τὰ ἰσχυρὰ ἀποτμήματα. Res secunda mirè sunt vitis obtulit.* And how shall we reconcile this accusation with what the same Seneca says in another place, that Livy judged with the utmost equity and candour of the works of the learned? *Ut est natura candidissimus omnium magnorum ingeniorum æstimator T. Livius.*⁶ I believe we may rely upon this last testimony.

There is another complaint against him of a much more serious and important kind. He is taxed with ingratitude and want of fidelity, either in not having named Polybius, or for having done it with too much indifference, in places where he copied him word for word. I should be sorry if this reproach could be made with good foundation: for it affects the qualities of the heart, of which the honest man ought to be very jealous. But it is not probable, that he did speak of Polybius with praise in the other parts of his history not come down to us, that he did him all the justice due to his merit, and declared beforehand, that he made it his glory, and thought it his duty, to copy him word for word in many places, and that he should often do so without citing him, to avoid repeating the same thing too often? My own interest is a little concerned here: for in this point I have some occasion for the reader's indulgence.

These kind of blots observed in Livy have not however impaired his glory. Posterity on account of them has not admired his work the less, not only as a masterpiece of eloquence, but as a history, which everywhere inculcates the love of justice and virtue, wherein we find, mingled with his narration, the soundest maxims for the conduct of life, with a singular attachment and respect, that shines out every where, for the religion established at Rome when he wrote: (unfortunately for him it was false, but he knew no other;) in fine, a generous boldness and pious zeal in condemning with force the impious sentiments of the unbelievers of his age. *Nondum hæc*, says he in a passage of Lib. 3. n. 20. *que nunc tenet seculum, negligentia delum venerat: nec interpretando sibi quisque jusjurandum et leges aptas faciebat, sed suos potius mores ad ea accommodabat.* "The contempt of the gods,

¹ In Tito Livio miræ faciundum viro putat inesse Pollio Annius quondam Patavinus. Quare, si fieri potest, et verba omnia, et vox, hujus alumnus urbis oleant: ut oratio Romani planè videatur, non civitatis donata. *Quintil. l. viii. c. 1.*

² Nec indignetur sibi Herodotus æquari Titum Livium, cum in narrando miræ jucunditatis clarissimique candoris, tum in concinnibus supra quam dici potest eloquentem: ita dicuntur omnia cum rebus tum personis accommodata. so common in our age, was not yet known. Catha and the laws were the rules to which people conformed their conduct, and the art of adapting them to their own convenience by illusive interpretations was then unknown."

From what I have now said, it seems reasonable to justify Livy in respect to the pretended superstition with which he affects to relate such a number of miracles and prodigies equally ridiculous and incredible. The faith of history required, that he should not suppress things said to have happened before him, which he found in his own collections and the annals, and which made a part of the religion commonly received in those times, though perhaps he did not believe them himself. And he explains himself on this head often and clearly enough, attributing most of the pretended prodigies, which made so much noise, to an ignorant and credulous superstition.¹

CÆSAR.

C. JULIUS CÆSAR distinguished himself no less by his wit than his valour. He applied himself first to the bar, where he made a great figure. Only the desire of attaining the first rank in the commonwealth in respect to power, prevented him from disputing also the first rank at the bar in respect to eloquence.² His peculiar character was force and vehemence. The same fire which he made appear in battle, is discernible in his writings. To this vigour of style he added great purity and elegance of language, which he had made his peculiar study, and upon which he piqued himself more than any other Roman.

He composed many works, among others two books upon the analogy of the Latin tongue.³ Who could believe, that so great a warrior as Cæsar should employ himself seriously in composing tracts upon grammar? How different are our manners and inclinations from those of that age! It is in one of those books upon analogy, that he recommended avoiding new and unusual expressions, as rocks: *tanquam scopulum, sic fugias insolens verbum*.

There were several pleadings of his also extant. Besides the elegance of his Latinity, which is necessary, says Atticus, or rather Cicero, not only to every orator, but every Roman citizen of condition, he adds all the ornaments of art, but principally a wonderful talent in painting objects, and placing things in all their lights.⁴

Only two of Cæsar's works remain; his seven books of war with the Gauls, and his three of the civil war. They are properly speaking only Memoirs, and he made them public only as such: *Commentarii*. He wrote them hastily, and even in the midst of his expeditions; solely with the view of leaving materials to writers, for composing a history.⁵ The perspicuity and elegance of style, natural to him, are certainly evident in them: but he has neglected all the shining ornaments a genius so happy as his could have diffused throughout a work of that nature. All simple and negligent as it may appear, says Hirtius, it is however generally agreed, that no other work, however labour'd and polished, can come up to the beauty of Cæsar's Commentaries.⁶ His design was only to supply those

with materials, who might undertake to compose a history from them in form. "In which," says Cicero, "he may have pleased writers of men's parts, who will not fear disfiguring his natural graces with trivial ornament: but every man of sense will be far from touching or altering them in any manner whatsoever. For nothing in history gives so much pleasure as a clear and elegant brevity of style." *Dum voluit alios habere parata unde sumerent, qui vellet scribere historiam, ineptis fortasse gratum fecit, qui volent illa calamistria inurere; eos quidem homines à scribendo deterruit. Nihil enim est in Historia, pura et illustra brevitate dulcius.* Hirtius has the same remark respecting writers who should conceive thoughts of composing a history from Cæsar's Commentaries. "He certainly supplies them with the means," says he; "but if they are wise, those very means ought for ever to prevent their having such a thought." *Adeo probantur omnium judicio, ut præcepta non præbita facilius scriptoribus videatur.* Mr. Ablancourt's translation of Cæsar's Commentaries is very much esteemed. It might be improved, if some able hand would retouch it in some places.

Cæsar had undoubtedly great wit and the most happy natural parts: but he had also taken pains to cultivate them by assiduous study, and to enrich them with all that was most curious and exquisite in literature; by which means he arrived at excelling almost all the most eloquent orators of Rome in purity of language and delicacy of style.⁷ I purposely make this remark after Cicero, to excite our young nobility to follow so good an example, in uniting with the praise of valour that of fine sense and polite knowledge. I have seen young Englishmen of distinction, who have done me the honour of a visit, that were well read in the learning of the Greeks and Romans, and no less versed in history. In these points jealousy, or, to speak more justly, emulation, is laudable between nation and nation. The French youth are inferior to none in vivacity and solidity of genius. In my opinion, they ought to pique themselves upon not giving place in any thing to strangers, and in not abandoning to them the glory of erudition and fine taste. This is what Cæsar seems to advise: His Commentaries ought always to be in their hands. It is the soldier's book. The greatest generals in all times have made him their master. The reading of these memoirs have been always their employment and delight. They find in them the rules of the art military, whether in sieges or battles, reduced to practice. They may learn also there, the manner of composing memoirs, which is no vulgar talent. It were to be wished, that all generals would regularly set down all the operations of the campaigns in which they command. What an assistance would that be to historians, and what a light to posterity! Is there any thing more valuable than the memoirs of the Marshal Turenne printed in the second volume of his life, or than those of James II. king of Eng'nd, then duke of York?

He thus finished what Cæsar could not. The eighth book of the war with the Gauls is his, as well as those of the war of Alexandria, and that of Africa. It is doubted whether he is the author of the book which treats of the war in Spain.

Mr. Ablancourt's translation of Cæsar, as well as of Tacitus, is very good in many things, but wants retouching in many places.

PATERCULUS.

CAIUS, or PUBLIUS, or MARCUS VELLEIUS PATERCULUS flourished in the reign of Tiberius. There is great reason to believe that he was born in the 73rd year of Rome, A. D. 15. His ancestors were illustrious by their merit and offices. He was a tribune in the army, when Caius Cæsar, the grandson of Augustus, had an interview with the king of Parthia in an

sectum, quod non horum elegantia Commentariorum superetur. *Hirt. ibid.*

⁷ Audio (inquit Atticus Cæsarem) omnium fere oratorum latine loqui elegantissime—Et ut esset perfecta illa bene loquendi laus, multis literis, et iis quidem reconditis et exquisitis, summoque studio et diligentia est consecutus. *Cic. in Brut. n. 252, 253.*

¹ Romæ, aut circa urbem, multa ea hieme prodigia facta, ut (quod evenire solet motis semel in religionem animis) multa nuntiata et temere credita sunt. *Lid. xxi. n. 62.*

² Cumis (adeo minimis etiam rebus prava religio inserti dotes) mures in ade Jovis aurum rosasque nuntiatum est. *Lid. xxviii. n. 23.*

³ C. vero Cæsar, si soro tantum vacasset, non alius ex nostris contra Ciceronem nominaretur. Tanta in eo vis est, id acumen, ac concitatio, ut illum eodem animo dixisse, quo bellavi, appareat. Exorat tamen hæc omnia mira sermone, cæus proprio studio fuit elegancia. *Quintil. l. x. c. 1.*

⁴ Aut. Gell. l. i. c. 10.

⁵ Cum, inquit Atticus, ad hæc elegantiam verborum Latinorum (quæ etiamvis orator non sis, et sis ingenius civilis Romanus, tamen necessaria est) adjungit illa oratoria ornamenta dicendi: non videtur tanquam tabulas bene pictas collocare in bono lumine. *Cic. in Brut. n. 252.*

⁶ Cæteri quæ bene atque emendatè, nos etiam quæ facile atque celeriter esse confecerit, scimus. *Hirt. Pref. l. viii. de Bell. Gall.*

⁷ Constant inter omnes nihil tam operose ab aliis esse per-

island of the Euphrates.¹ He had a command in the cavalry under Tiberius, and attended that prince nine years successively in all his expeditions, who rewarded him honourably.² He was raised to the pretorship the same year in which Augustus died.³

The time when he began to write his history is not known, nor what it contained. The beginning of it is lost. What has come down to us of it is a fragment of the ancient Greek history with that of the Romans, from the defeat of Perseus to the sixteenth year of Tiberius. He addressed it to M. Vincius, who was consul at that time, and promised one of greater extent. His travels into different regions might have furnished him with very agreeable and curious facts.

His style is highly worthy of the age in which he lived, which was still that of fine taste and pure language. He excels principally in the characters of men, some of which I shall cite at the end of this article.

His narration is judged to be faithful and sincere down to the time of the Cæsars, and in such facts as do not concern them. For, from that time the desire of flattering Tiberius makes him either omit, disguise, or alter the truth in various instances. He accuses Germanicus of cowardice,⁴ or rather of a too soft complacency for the seditious, whilst he gives many others excessive praises. *Quo quidem tempore—pleraque ignare Germanicus.*⁵ He is justly reproached with having praised Tiberius extravagantly. His unfair evasions of offending that emperor appear, as I have already said, in the care he takes to run slightly over the glorious actions of Germanicus, to suppress most of them, and to attack the fame of Agrippina, and other persons hated by Tiberius.

But he is still more unpardonable for loading Sejanus with praises, who occasioned so many misfortunes to the empire, and for having represented him as one of the most virtuous personages the Roman commonwealth had ever produced. *Sejanus, vir antiquissimi moris, et priscam gravitatem humanitate temperans.*⁶ This is nothing to the panegyric he bestows upon him in the sequel. "He previously laid down by many examples the necessity princes were under of assistance in their government, and of associating coadjutors to divide with them the weight of public affairs." *Rarè eminentes viri non magnis adiutoribus ad gubernandam fortunam suam vii sunt—Etenim magna negotia magnis adiutoribus egent.*⁷ Who doubts it? but the question is to make a good choice. He proceeds then to Sejanus, and after having exalted the splendour of his birth, he represents him "as a man, who knows how to temper the severity of power with an air of sweetness, and the cheerful serenity of the ancients; who transacts the most weighty affairs with all the ease of leisure; who assumes nothing to himself, and thereby attains every thing; who always is less in his own opinion than in that of the public; whose aspect and behaviour appear calm and tranquil, while the cares of the state afford him no rest. In which judgment of his merits, the court and the city, the prince and the people, contend with each other." *"Virum severitatis lætissimæ, hilaritatis priscæ; actu otiosis simillimum; nihil sibi vendicantem, eoque assequentem omnia; semper infra aliorum æstimationes se metientem; vultu vitæque tranquillum, animo exsontem. In hujus virtutum æstimationem jampridem judicia civitatis cum judiciis principis certant."* How great was his love of the public good, if we may believe his historian! What application to business! What zeal for the interests of the prince and state! How amiable his character under the oppressive weight of the public business! What moderation, and in a word, what an assemblage of the greatest virtues, attested by the unanimous voice of all the world! In order to know what we are to think of them, let us consider a second picture of the same Sejanus drawn by another master, who did not receive

hire from him, and was never suspected of flattery. This was Tacitus, of whom we shall soon speak. "Sejanus Tiberium variis artibus devinxit adeo, ut obscurum adversus alios, sibi uni incautum interitumque efficeret; non tam solertia, (quippe isdem artibus victus est) quàm deùm ira in rem Romanam; cuius pari exito viguit, ceciditque. Corpus illi laborum tolerans; animus iudax, sui obtegens; in alios crimator; juxta adulatio et superbia; palam compositus pudor, itus summa apiscendi libido, ejusque causa modò largitio et luxus, sæpe industria ac vigilantia, haud minus noxiæ quotiens parando regno finguntur."⁸ "Sejanus by various arts gained the ascendancy of Tiberius so far, that though that prince was gloomy and impenetrable to every body else, he disguised nothing, and kept no secret from him; which is not so much to be ascribed to the craft and address of that minister, (for he fell by the same arts of cunning and deceit himself) as to the anger of the gods against the Roman empire, to which his power and fall were equally pernicious. He had strength of body to support great fatigues: the character of his mind was presumption, disguise, and malignity in calumniating others. He was at the same time a flatterer to the lowest degree of meanness and haughtiness to excess: his outside wore the appearance of great modesty and reserve; within the lust of gain and ambition wholly engrossed him. His means for the attainment of his ends were luxury and corruption, and sometimes vigilance and application, no less dangerous, when assumed for usurping empire." To say every thing in a word, Sejanus, so much extolled by Paterculus, was the scourge of the divine wrath against the Roman empire: *deùm irâ in rem Romanam*. Persons in high stations, who have the dispensation of graces and advantages, may judge from this of the value they ought to set upon the praises lavished upon them so immoderately, and often with so little shame.

I have said before that Paterculus excelled particularly in drawing the characters of men. Some of his descriptions are short, which are not the least beautiful; and many of greater extent. I shall repeat here some examples of both.

Marius.

"Hirtus atque horridus, vitæque sanctus; quantum bello optimus, tantum pace pessimus; immodicus gloriæ, instabilis, impotens, semperque inquietus." "Marius had something savage and horrid in his nature: his manners were austere, but irrevocable: excellent in war, detestable in peace; greedy, or rather insatiable of glory; violent, and incapable of rest."⁹

Sylla.

"Adeo Sylla dissimilis fuit bellator ac victor, ut, dum vincit, justissimo lenior; post victoriam, audito fuerit crudelior." "Nothing was more different than Sylla at war, and Sylla victorious. In the field, he was milder than the justest; after the victory, more cruel than the most barbarous."¹⁰

Mithridates.

"Mithridates, Ponticus rex: vir neque silendus, neque dicendus, sine cura. Bello acerrimus, virtute eximius; aliquando fortuna, semper animo maximus; consilii dux, miles manu, odio in Romanos Annibal." "Mithridates king of Pontus, of whom it is difficult either to speak or to be silent. Most expert in war, of extraordinary valour; sometimes very great by fortune, always by magnanimity: in counsels a general, in executing a soldier, in hatred to the Romans a Hannibal."¹¹

Mæcenas.

"C. Mæcenas, equestri sed splendido genere natus: vir, ubi res vigiliam exigeret, sanè exsomnis, providens, atque agendi sciens; simul verò aliquid ex ægotio remitti posset, otio ac mollioribus, penè ultra feminam fluens." "Mæcenas descended from an equestrian, but illustrious and ancient family. Where vir-

giance was necessary, he was able, provident, and active, without allowing himself rest. But as soon as affairs would admit of relaxation, he gave himself up to the charms of ease and voluptuousness with almost more than female softness.¹

Scipio Æmilianus

"P. Scipio Æmilianus, vir avitis P. Africani patrisque L. Pauli virtutibus simillimus, omnibus belli ac togæ dotibus, ingenique ac studiorum eminentissimus sæculi sui: qui nihil in vita nisi laudandum aut fecit, aut dixit, ac sensit.—Tam elegans liberalium studiorum omnique doctrinæ auctor et admirator fuit, ut Polybium Panætiumque, præcellentes ingenio viros, domi militique escum habuerit. Neque enim quisquam hoc Scipione elegantius intervalla negotiorum otio dispinxit: semperque aut belli aut pacis servit artibus; semper inter artem ac studia versatus, aut corpus periculis, aut animum disciplinis exercuit." "P. Scipio Æmilianus, who perfectly resembled Scipio Africanus his grandfather, and Paulus Æmilius his father, in their virtues, was the most eminent person of his age, for all the talents, natural or acquired, that could adorn peace or war; a man, who never during his life either did, said, or thought any thing but what deserved praise. He was so great an admirer of polite learning and science in general, in which he himself excelled, that he always had with him, as well at home as in the field, Polybius and Panætius, two of the most illustrious learned men of his time. No man knew how to apply the intervals of leisure from business with more elegance and taste than this Scipio: and as the arts of war or peace were his continual employments, between arms and books, he incessantly exercised either his body in the dangers and fatigues of the one, or his mind in the refined studies and speculations of the other."²

Cato of Utica.

"M. Cato, genitus proavo M. Catone, principe illo familie Porciæ: homo virtuti simillimus, et per omnia ingenio diis quam hominibus propior: qui nunquam rectè fecit, ut facere videretur, sed quia aliter facere non poterat; cuique id solum visum est rationem habere, quod haberet iustitiam: omnibus humanis vitis immunis, semper fortunam in sua potestate habui." "Cato of Utica's great grandfather was Cato the censor, that illustrious head of the Porcian family. He was in all things more like a god than a man, and seemed *virtus itself in human shape*. He never did any thing virtuous for the sake of seeming virtuous, but because he could not do otherwise; and never thought any thing could have reason, that wanted justice. Exempt from all human vices, fortune, to which he never gave way, was in his power, and in a manner his slave."³

Pompey.

"Innocentia eximius, cunctitate præcipuus, eloquentia mediis: potentiæ, quæ honoris causa ad eum deferretur, non ut ab eo occuparetur, cupidissimus. Dux bello peritissimus; civis in toga (nisi ubi vereretur ne quem haberet parem) modestissimus. Amicitiarum tenax, in offensis exorabilis, in reconcilianda gratia fidelissimus, in accipiendis satisfactione facilissimus. Potentiæ sua nunquam, aut raro, ad impotentiam usus: penè omnium vitiorum expertus, nisi numeraretur inter maxima, in civitate libera dominique gentium indignari, cum omnes cives jure haberet pares, quemquam æquelem dignitate conspicere." "Pompey's manners were blameless and noble, his probity supreme, his eloquence indifferer. He was extremely fond of power, when conferred upon him freely and for his honour, but not so much as to seize it by violence: a most able general in war, a most moderate citizen in peace, except when he apprehended having an equal. Tenacious in friendship, easy in forgiving injuries, most faithful in reconciliation, and far from rigid in exacting satisfaction. He never, or very rarely, employed his power in committing violence

and oppression: and might be said to be exempt from all vices, if it were not the greatest in a free state, the mistress of the world, where all the citizens were equal by right and constitution, to be incapable of suffering any equal in power and authority."⁴

Cæsar.

"Cæsar forma omnium civium excellentissimus, vigore animi acerrimus, munificentia effusissimus, animo super humanam et naturam et fidem evectus: magnitudine consiliorum, celeritate bellandi, patientia periculorum, Magno illi Alexandro, sed sobrio neque iracundo simillimus: qui denique semper et somno et cibo in vitam non in voluptatem uteretur." "Cæsar, besides excelling all the Romans in the beauty of his person, surpassed them still more in the force and superiority of his genius, in munificence and liberality to profusion, and in valour and ability above either human nature or belief. The greatness of his projects, the rapidity of his conquests, and his intrepid valour in confronting dangers, make him entirely resemble Alexander the Great, but Alexander sober, and free from rage. Food and rest he used only for refreshment, not for pleasure."⁵

TACITUS.

TACITUS (*C. Cornelius Tacitus*) was older than the younger Pliny, who was born in the year of Christ 61. Vespasian first raised him to dignities, in which Titus continued him, and to which Domitian added greater. He was prætor in the reign of the latter, and in that of Nerva was substituted consul to Verginius Rufus, whose panegyric he composed.⁶ He married the daughter of Cn. Julius Agricola, famous for the conquest of Britain, A. D. 77, or 78. He had been four years out of Rome with his wife, when Agricola died, A. D. 93. Lipsius believes that Tacitus left children, because the emperor Tacitus said, he was descended from him or from the same family.⁷ Learning rendered Tacitus more illustrious than his dignities.⁸ He plead even after he had been consul, with great reputation for eloquence, of which the peculiar character was weight and majesty. He had been highly esteemed from his first appearance. Pliny the younger was one of his earliest admirers, and they contracted a great friendship with each other.⁹ They mutually corrected each other's works; which is of great service to an author.¹⁰ This I experience every day with the utmost gratitude, and am conscious that I owe the success of my labours to the like assistance of no less learned than affectionate friends.

It appears that Tacitus published some orations or pleadings.¹¹ He also composed some pieces in verse; and there is a letter of his among those of Pliny. But he is only known in these days, by his historical writings, to which St. Sidonius¹² tells us he did not apply himself, till after he had endeavoured in vain to persuade Pliny to undertake his subject. He composed his *Description of Germany*¹³ during Trajan's second consulship: at least there is room to conjecture so. *The Life of Agricola*, his father-in-law, appears also from the preface to have been one of his first works, and written in the beginning of Trajan's reign. He employs part of the preface in describing the tempestuous times of a cruel reign at enmity with all virtues: *Sæva et infesta virtutibus tempora*. This was that of Domitian. He concludes it with observing, that he dedicates that book to the glory of Agricola his father-in-law; and hopes that the respect and gratitude which induced him to undertake it, will either recommend it to favour, or be its excuse: *Hic interim liber honori Agricolæ socii mei destinatus professione pietatis aut laudatus erit, aut excusatus*. He then proceeds to his subject, and explains the principal circumstances and actions of his father-in-law's life. This piece is one of the finest and most valuable fragments of antiquity; in which soldiers, courtiers, and magistrates, may find excellent instructions.

The great work of Tacitus is that wherein he wrote the history of the emperors,¹ beginning at the death of Galba, and concluding at that of Domitian: which is what we call his *Histories*. But of the twenty-eight years contained in this history, from the year sixty-nine to ninety-six, we have only the year sixty-nine and part of seventy. To compose this work, he asked memoirs of particular persons, as he did of Pliny the younger, concerning his uncle's death.² Such as were desirous of being known to posterity sent him accounts without application, which we find from the same Pliny, who was in hopes of being immortalized by that means.³ The letters which he wrote him upon that head, seem to be of the year 102 or 103, whence we may judge at what time Tacitus applied himself to that work.

He intended, after having finished it, if God prolonged his life, to write also the history of Nerva and Trajan: happy times, says he, in which a man might think as he pleased, and speak as he thought. *Rara temporum felicitate, ubi sentire quæ velis, et quæ sentias dicere licet.*⁴ But it does not appear that he executed this design. Instead of that he resumed the Roman history from the death of Augustus to the reign of Galba; and this is the part that he calls his *Annals*, because he endeavoured to introduce all the events under their respective years, which, however, he does not always observe in relating some wars. In a passage of these annals, he refers to the history of Domitian,⁵ that he had written before: which shows that the *Histories* were prior to the *Annals*, though the latter are placed first. And it is observed that the style of his histories is more florid and diffuse than that of his annals, which is more grave and concise, without doubt, as he was naturally inclined to brevity, from his having grown stronger in that habit the more he wrote. Of the four emperors, whose history Tacitus wrote in his annals, Tiberius, Caligula, Claudius, and Nero, only that of the first and last are come down to us almost entire; we, however, want three years of Tiberius, and the latter part of Nero's reign. Caligula is entirely lost, and we have only the end of Claudius.

He designed also to have written the history of Augustus: but St. Jerome⁶ seems to have known nothing more of his, except what he treated of from the death of that prince to that of Domitian, which, says he, made thirty books.

If what Quintilian says of a celebrated historian of his times, whom he does not name, is to be understood of Tacitus, as some authors have believed, it seems that he had been obliged to retrench some places in which he was too free and bold. The passage of Quintilian says,⁷ "There is an historian who still lives for the glory of our age, and who deserves to live eternally in the remembrance of succeeding times. He will be called by his name hereafter, at present it suffices that we know him. This great man has admirers, but no imitators; his freedom and love of truth having done him hurt, notwithstanding his having suppressed part of his writings. In what remains, however, we perfectly discern the elevation of his genius, and his bold and noble manner of thinking."

It is a misfortune that we are no better informed in the circumstances of the life of so illustrious a writer; nor do we know any thing regarding his death. The emperor Tacitus, who held it an honour to descend from our historian's family, decreed, that his works should be placed in all libraries, and that ten copies should be made of them every year at the expense of the public, in order to their being more correct.⁸ This was a wise and laudable precaution, which, one would think, might have preserved entire a work so

worthy in all its parts of being transmitted to posterity.

Tacitus boasts of having written without passion or prejudice, *sine ira et studio*, and of having strictly adhered to truth in every thing, which is the principal duty of an historian. To effect this, Tacitus had occasion not only for a great love of truth, but a very fine discernment, and much precaution. For he observes himself, in speaking of the histories of Tiberius, Caligula, Claudius, and Nero, that whether they were written during their lives or after their deaths, falsehood was equally notorious in them, fear having dictated some of them, and hatred others: *Florentibus ipsis, ob metum falsa; postquam occiderunt, recentibus odiis composita sunt.*⁹ "There are," says he, "two failings highly apt to injure truth: either abandoned adulation, or revengeful hatred against those that reign. It is not to be expected, that historians, who are either flatterers or declared enemies, should have any great regard for posterity." *Veritas pluribus modis infracta*—libidine assentandi, aut rursus odio aduersos dominantes. Ita neutria cura posteritatis, inter infensos vel obnoxios.¹⁰ "We are presently disgusted with the sordid flattery of a writer, but hear slander and reproach with pleasure: for adulation bears the odious brand of slavery, and malignity the specious show of freedom." *Sed ambitionem scriptoris facit aduerseris, obtractatio et livor pronis auribus accipiuntur: quippe adulatione factum crimen servitutis, malignitati falsa species libertatis inest.* Tacitus promises to avoid these two extremes, and professes to be above all prejudices. *Incorruptam fidem professus, nec amore quisquam, et sine odio dicendus est.*

The part which we have of Tiberius' reign is judged Tacitus' masterpiece in respect to politics. The rest of his history, say the same critics, might be composed by another as well as by him; Rome not wanting declaimers to paint the vices of Caligula, the stupidity of Claudius, and the cruelties of Nero. But to write the life of a prince like Tiberius, required a historian like Tacitus, who could unravel all the intrigues of the cabinet, assign their real causes to events, and distinguish pretext and appearance from actual motives and truth. It is useful and important, I confess, to unmask false virtues, to penetrate the mists and obscurity, in which ambition and the other passions conceal themselves, and to set vice and guilt in full light, in order to inspire the horror of them. But is it not to be feared that a historian, who almost every where affects to dive into the human heart, and to sound it in its most secret recesses, gives us his own ideas and conjectures for reality, and frequently lends men intentions they never had, and designs of which they never thought? Sallust throws political reflections into his history, but he does it with more art and reserve, and thereby renders himself less suspected. Tacitus, in his history of the emperors, is more attentive to exposing the bad, than showing the good: which perhaps is because all those whose lives we have from him are bad princes. As to the style of Tacitus, we must own it very obscure: it is sometimes even hard and stiff, and has not all the purity of the good authors of the Latin tongue. But he excels in expressing much sense in few words, which gives a very peculiar force, energy, and spirit, to his discourse. He excels also in painting objects, sometimes with brevity, and sometimes with greater extent, but always in lively colours, that in a manner set what he describes before our eyes, and (which is his peculiar character) suggest much more than they express. Some examples will prove this better than what I say; which I shall extract solely from the life of Agricola.

Passages of Tacitus full of spirit.

1. Tacitus speaks of the Britons, who voluntarily supplied recruits, paid tributes, and submitted to all other impositions, when the governors sent from Rome acted with lenity and moderation, "but suffered cruelty and violent treatment with great reluct-

ance, sufficiently subjected to obey, but not to be used like slaves." *Hæc (injurias) agræ tolerant, jam domiti ut pereant, nondum ut serviant.* Cap. xiii.

2. "Agricola, having applied himself from the first year of his government to put a stop to these disorders, reinstated the desire of peace, which before, either through the negligence or collusion of his predecessors, was no less terrible than war. *Hæc primo statim anno comprimendo, egregiam famam paci circumdedit, quæ, vel incuria vel tolerantia priorum, haud minus quam bellum timebatur.* Cap. xx.

3. Domitian's reception of Agricola at his return from his glorious campaigns, is one of the finest passages in Tacitus, but the spirit of it cannot be rendered in a translation. *Exceptus brevi osculo, et nullo sermone, turbæ servientium inmixtus est.* "After a short cool embrace, in which the emperor did not say one word, he was left to mix with the crowd of courtiers attending." Cap. xi.

4. The same may be said of what immediately follows. Agricola, who perfectly knew the genius of the court, and how offensive the reputation of a successful general is to idle courtiers without merit, to soften the lustre of it, and to elude envy, thought proper to lead a quiet life remote from business. *Ceterum, ut militare nomen, grave inter otiosos, aliis virtutibus temperaret, tranquillitatem æque otium penitus ausit.* "He retained a moderate equipage, treated every body with affability, and went abroad in the company of only one or two friends; so that the generality of people, who usually judge of the merit of men by the splendour and magnificence of their train, when they saw and considered him, asked themselves whether that was the so much celebrated Agricola, and could scarce believe it was him under such an appearance." *Cultu modicus, sermone facilis, uno aut altero amicorum comitatus: adeo ut plerique, quibus magnos viros per ambitionem æstimare mos est, quærent famam, pauci interpretarentur.* How are we to render these two last phrases, *quærent famam, pauci interpretarentur*, which have a profound sense, that it is almost necessary to guess? The historian has provided for this, in telling us, people generally judge of great men by the splendour that surrounds them; *plerisque magnos viros per ambitionem æstimare mos est.* He distinguishes two kinds of spectators. The one, which is the most numerous, in seeing the modesty of Agricola's outside, inquired upon what his reputation could be founded, not perceiving the usual marks of it: *ut plerique quærent famam.* The other, which is the smallest in number, did not judge by vulgar opinion, but comprehended, that great merit might be concealed under a simple and modest appearance, and that the one was not incompatible with the other: *pauci interpretarentur.*

5. Tacitus sometimes mingles his facts with very judicious reflections. This he does in a wonderful manner, where he extols the wisdom and moderation with which Agricola managed and soothed the violent temper of Domitian, though himself had frequently experienced bad treatment from it. "Proprium humani ingenii est, odisse quem læseris. Domitiani verò natura præcepit in iram, et quo obscurior, eò irrevocabili, moderatione tamen prudentique Agricole leniebatur: quia non contumacia, neque inani jactatione libertatis, famam fatumque provocabat. Sciunt quibus moris illicita mirari, posse etiam sub malis principibus magnos viros esse, obsequiumque ac modestiam, si industria ac vigor adsint, eò laudis excedere, quò plerique per abrupta, sed in nullum reip, usum, ambitiosa morte inclinarunt." Cap. xlii. "Though it is of the nature of man to hate him whom he has injured, and Domitian was excessively prone to anger, and the more irreconcilable the more he concealed it, Agricola knew how to pacify him by his prudence and moderation. For he never aggravated his rage by contumacious behaviour, and was not so eager after fame, as to urge on his fate for the empty reputation of a generous freedom of speech. Let those who admire such a rashness of generosity, learn from him, that great men may live under bad princes; and that submission and modesty, if support-

ed with vigour and industry, may acquire greater fame, than many have aspired to by a bold and hardy behaviour, without any emolument to the public, and with no other fruit to themselves, except a more distinguished death."

QUINTUS CURTIUS. (RUFUS.)

I HAVE already observed elsewhere, that the time when Quintus Curtius lived is not precisely known. The learned are very much divided on this head, some placing him in the reign of Augustus or Tiberius, and others, in that of Vespasian, and even of Trajan.

He wrote the history of Alexander the Great, in ten books, of which the two first have not come down to us, but which have been supplied by Freinshemius. His style is florid, agreeable, and full of wise reflections; and he has many very fine harangues, but generally too long, and sometimes in the spirit of declamation. His thoughts, which are full of wit, and often very solid, have, however, an affected glitter and conceit, which do not seem to belong to the Augustan age. It would be surprising enough, that Quintilian, in his enumeration of the Latin authors, should have omitted to mention a historian of the merit of Quintus Curtius, had the latter lived before him.

He is reproached with many faults of ignorance in respect to astronomy, geography, the dates of his events, and even the most known effects of nature, as having thought the moon indifferently eclipsed when new, and when at the full. *Lunam deficere cum aut terram subiret, aut sole premeretur.*¹

There is an excellent French translation of this author by M. Vaugelas.

SUETONIUS. (CAIUS SUETONIUS TRANQUILLUS.)

SUETONIUS was the son of Suetonius Lenis,² a tribune of the thirteenth legion, who was at the battle of Bedriacum, where the troops of Vitellius were defeated by Otho. He flourished in the reigns of Trajan and Adrian. Pliny the younger had a great affection for him, and was very desirous of having him always with him.³ He says, that the more he knew him the better he loved him, on account of his probity, politeness, good conduct, application to letters, and erudition; and did him many services.

Suetonius composed a great number of books, which are almost all lost. Only his History of the first Twelve Emperors, and part of his treatise upon the celebrated grammarians and rhetoricians have come down to us. This history is very much esteemed by the learned. He confines himself in it less to the affairs of the empire, than the persons of the emperors, whose particular actions, domestic behaviour, and inclinations in general, good or bad, he relates. He does not observe the order of time, and no history ever differed more from annals than this. He reduces the whole to certain general heads, setting down under each all that relates to it. His style is strong and simple, in which it plainly appears, that he was more intent on truth than eloquence. He is blamed for having given too much license to his pen; and for being as loose and debauched in his narrations, as the emperors, whose history he writes, were in their lives.

LUCIUS FLORUS.

FLORUS is believed to have been a Spaniard, of the family of the Senecas, and to have had the names of *L. Annaeus Seneca* by birth, and of *L. Julius Florus* by adoption.⁴ We have an abridgment of his, in four books, of the Roman History from Romulus down to Augustus, which seems to have been written in Trajan's time. It has not the usual fault of abridgments, of being dry, barren, and insipid. Its style is elegant, agreeable, and has a kind of poetical vivacity in it: but in some places it has too much emphasis and pomp, and sometimes even bombast. It is not an abridgment of Livy, with whom

¹ Iab. iv. c. 10.

² Plin. l. x. Ep. 100.

³ Sueton. in Othon. c. x.

⁴ Vossius.

he often differs. We have said before, that it is doubted whether the epitomes or summaries at the head of the books of Livy were written by Florus.

JUSTIN.

JUSTIN is believed to have inscribed his abridgment of the History of Trogius Pompeius to Titus Antoninus: but that is not certain, there having been several emperors of the name of Antoninus. Trogius Pompeius was one of the illustrious writers of the time of Augustus, and is ranked among the historians of the first class, Livy, Sallust, and Tacitus. His work was of immense extent, and contained the Greek and Roman history entire down to the reign of Augustus. Justin has abridged it in the same number of books; for which we are not obliged to him, if it be true that his abridgment occasioned the loss of the original. We may judge of the purity and elegance of Trogius' style from the speech of Mithridates to his troops, which Justin has inserted entire in his thirty-eighth book. It is very long and indirect. For Justin takes notice, that Trogius did not approve the direct harangues introduced by Livy and Sallust in their histories. It is at the end of this speech, after having represented to his soldiers, that he is not going to lead them into the frightful solitudes of Scythia, but the most fertile and opulent region in the universe, that Mithridates adds: "Asia expects them with impatience, and seems to offer them her hand, whilst she loudly invokes their aid: so much have the rapaciousness of proconsuls, the oppressions of tax-farmers, and the vexations of unjust tribunals, inspired them with hatred and detestation for the Romans." "Tantumque se avida expectat Asia, ut etiam vocibus vocet: adeo illis odium Romanorum incussit rapacitas proconsulum, sectio publicanorum, calumnie litium." The style of Justin is clear, intelligible, and agreeable: we find in him from time to time fine thoughts, solid reflections, and very lively descriptions. Except a small number of words and modes of speech, his Latinity is sufficiently pure; and it is very probable that he generally uses the words and even phrases of Trogius.

AUTHORS OF THE AUGUST HISTORY.

THE lives of the Roman emperors from Adrian to Carinus is called *The August History*. Those authors are Spartianus, Lampridius, Vulcatius, Capitolinus, Pollio, and Vopiscus. They all lived in the reign of Diocletian, though some of them wrote also under his successors. I shall not enter into a particular account of their works, which have no relation to my history.

AURELIUS VICTOR.

AURELIUS VICTOR lived in the reign of Constantius, and long after. He is believed to have been an African. He was born in the country, and the son of a very poor illiterate man. He seems to have been a pagan at the time he wrote. His History of the Emperors begins at Augustus, and goes on to the twenty-third year of Constantius. We have also, of the same author's, an abridgment of the Lives of Illustrious Men, almost all Romans, from Procas to Julius Cæsar. Others ascribe this little work to Cornelius Nepos, Æmilius Probus, &c., but Vossius maintains that it is Aurelius Victor's. This abridgment contains little more than proper names and dates, and for that reason does not suit children, who cannot learn much Latinity from it.

AMMIANUS MARCELLINUS.

AMMIANUS MARCELLINUS was by nation a Greek, of a considerable family in the city of Antioch. He served many years in the Roman armies in the time of Constantius. He afterwards quitted the troops, and retired to Rome, where he wrote his history, which he divided into thirty-one books. He continued it from Nerva, where Suetonius ends, to the death of Valens. We have now only the last eighteen books, which begin at the end of the year 353, immediately after the death of Magnentius. Though he was a Greek, he wrote it in Latin, but in a Latin

that savours much of the Greek and the soldier. This defect, says Vossius, is made amends for by the author's other qualities, who is grave, solid, judicious, very sincere, and a great lover of truth. His zeal for idols and their adorers, particularly for Julian the apostate, whom he makes his hero, is very evident; and on the contrary he appears much the enemy of Constantius. He does not, however, fail to treat both the one and the other with justice.

EUTROPIUS.

EUTROPIUS wrote his Abridgment of the Roman History in the reigns of Valentinian and Valens, but by order of the latter, to whom he inscribes it. To judge of it by his style, one would believe him rather a Greek than a Roman.

CHAPTER III.

OF ORATORS.

INTRODUCTION.

I AM to speak in this place of that part of polite learning, which has the most beauty, solidity, greatness, and splendour, and is of the most extensive use, namely, Eloquence. This is a talent, which exalts the orator above the vulgar of mankind, and almost above humanity itself; which renders him in some measure the guide and arbiter of the most important deliberations; which gives him an empire over the mind, the more admirable as it is entirely voluntary, and founded solely upon the force of reason placed in all its light: in a word, which enables him to sway the heart to his purposes, to overcome the most obstinate resistance, and to inspire such sentiments as he pleases; joy or sorrow, love or hatred, hope or fear, compassion or resentment. If we represent to ourselves the numerous assemblies of Athens or Rome, in which the greatest interests of those states are considered, and where the orator, from the tribunal of harangues, reigns by his eloquence over an immense people, who hear him with a profound silence interrupted only by applauses and acclamations; of all that the world ever contained of magnificent in appearance, and most capable of dazzling the mind of man, is there any thing so grand, so soothing to self-love as this?

What still greatly exalts the value of eloquence, according to the judicious reflection of Cicero, is the amazing scarcity of good orators in all ages.¹ If we look back into all other professions, arts, and sciences, we find numbers distinguished for excelling in them, generals, statesmen, philosophers, mathematicians, physicians, in a word, great persons in every way. We cannot say quite the same respecting poets; I mean such as have attained perfection in their art: the number of these has always been extremely small, although much greater than that of good orators. What I now say ought to seem the more surprising, as in respect to the other arts and sciences, it is generally necessary to imbibe them from sources devious and unknown, and not of common use; whereas the talent of speaking is a thing merely natural, that seems to be within every one's capacity, that has nothing in it obscure or abstracted, and of which one of the principal rules and most essential virtues is to express one's self clearly, without ever departing from nature. It cannot be said, that, among the ancients, the success of the other arts proceeded from a great number of persons being induced by the allurements of rewards to apply themselves to them. As well at Athens as Rome, the two great theatres in which the talents of the mind shone out with most lustre, no study was ever cultivated more universally, nor with greater application and ardour, than that of eloquence. And we ought not to wonder at it. In republics like these, where all the affairs of the state were examined in common; where war and peace, alliances and laws, were deliberated upon either before the people or senate, or with both; and where every thing was determined by plurality of voices: the talent of speaking must necessarily have prevailed. Whoever spoke in these as

¹ Lib. I. Orat. n. 6-16.

vanities with most eloquence, became by necessary consequence the most powerful. Hence the youth, of any ambition, did not fail to apply themselves with the utmost diligence, to a study, that alone opened the way to riches, credit, and dignities. Whence therefore was it, that, notwithstanding the application and efforts of so great a number of excellent geniuses, the great advantages in respect to fortune, and the attraction of so soothing a reputation, the number of excellent orators has always been so small? The reason is evident, and we ought to conclude, that of all the arts which are the object of human study, eloquence must necessarily be the greatest, the most difficult, and that which requires the most talents, and talents entirely different and even opposite in appearance, for succeeding in it.

Every body knows that there are three kinds of style, the great or sublime, the common or simple, and the mediate or florid, which holds the mean between the other two.

In the sublime kind,¹ the orator employs whatever is most noble in the thoughts, most lofty in the expressions, most bold in the figures, and most strong and pathetic in the passions. His discourse is then like an impetuous torrent, incapable of being stopped or kept in, which in its violence bears away those that hear it, and forces them, whether they will or not, to follow it wheresoever it hurries them. But this is not the place for treating of this subject, which would alone prove the extent of the talents necessary to eloquence.

The simple style² is quite different. It is clear, pure, intelligible, and nothing more. It has no thoughts of soaring, and endeavours only to be understood. It values itself solely upon a peculiar purity of language, great elegance, and refined delicacy. If it sometimes ventures upon ornament, that ornament is entirely simple and natural. Horace's expression, *simplex munditiis*, is the best I can use to describe this style; of which Phædrus and Terence are the most perfect models.

A third species of eloquence is in a manner the mean between the other two, and is therefore called the mixed, florid, or mediate style.³ It has neither the delicacy of the latter, nor the force and thunder of the former. It borders upon both, but without attaining to, or resembling either. It participates of the one and the other, or, to speak more justly, it is neither the one nor the other. The orator, in this way, designedly uses the glitter of metaphors, the glow of figures, agreeable digressions, harmony of disposition, and beauty of thoughts; retaining always, however, the mild and temperate character peculiar to it: so that it may then be compared to a stream, that rolls its silver waves through flowery banks shaded with verdant trees.

Each of these kinds of eloquence is highly estimable in itself, and acquires all writers that succeed in them great reputation. But the sublime⁴ rises infi-

nitely above the other two. It is this kind of eloquence which excites admiration, ravishes applause, and sets all the passions of the soul in motion; that sometimes by its impetuosity, its thunders, throws trouble and emotion into the mind, and sometimes insinuates itself with a majesty of sweetness, a dignity of softness, irresistibly tender and affecting.
